Has postal service improved as a result of decentralization and the creation of 15 regional levels of management? We must accept public opinion for the answer. It is generally agreed that postal service has disintegrated during the past 5 years. The broad jokes and barbed criticism about postal service which appear in public print and are heard and seen over radio and television are reflections of public thinking. And, while it hurts us as employees we must wryly admit it is true. So, the first objective of the regional system, better postal service, has not been realized.

Has regionalization reduced postal costs? Vice President Lundeen has come up with some interesting figures based on a study of the 5-year operation of the regional system. Mr. Lundeen's findings show that as a result of decentralization, there are 546 fewer employees in the Department in Washington. But 6,679 people are employed in the regional setup, and some of these positions pay salaries as high as $14,800.

We can only conclude that decentralization has been a costly failure in terms of economy and service.

The solution to the problem is not the elimination of district transportation offices which operated efficiently and economically for decades prior to decentralization. We believe it is a serious mistake to discontinue this grass roots P. T. S. management. Only minute savings can be made through their elimination. And, we should keep in mind that many of the savings now being claimed by management through the elimination of district operation offices are costs they created when they established regions.

During the past 5 years, postal transportation clerks have suffered a continual decline in the standards of their craft because of the dilution of the PTS function. We submit that strengthening, rather than discontinuing, district transportation offices will result in improved postal service and a more economical operation.

Under the new reorganization, mobile service officers and field service officers will be performing the same function formerly allocated to the old chief clerks of the railway mail service. This function should remain with the district transportation managers. Given adequate manpower and authority, district transportation managers could insure the proper makeup and dispatch of mails by post offices and arrange for swift transportation and accurate distribution en route, thereby providing the most expeditious handling of mail from point of origin to destination.

American Merchant-Marine Policy Resolution of Mississippi Valley Association

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mrs. SULLIVAN. Mr. Speaker, as a member of the Committee on Merchant Marine and Fisheries, I am pleased to submit for inclusion in the Appendix of the CONGRESSIONAL RECORD a thought-provoking resolution on American merchant-marine policy adopted recently at St. Louis by the Mississippi Valley Association, as follows:

MISSISSIPPI VALLEY ASSOCIATION—MERCHANT-MARINE RESOLUTION FOR 1958

We pledge our active support to the promotion and maintenance of a strong, well-balanced privately owned and operated United States Merchant Marine to provide the shipping services essential to our industry, agriculture, and commerce in time of peace, capable of implementing our international policies and ready to serve our national security in time of war.

We strongly urge that United States industry voluntarily patronize American-flag ships in order to assist in developing and strengthening the American Merchant Fleet. We commend the Chairman of the Joint Chiefs of Staff for his forthright declaration of the continuing need for an American Merchant Marine for the defense of our Nation; and the maritime industry for its efforts to demonstrate that in addition to its defense role the industry makes a substantial contribution to the economic welfare of our country.

We reaffirm our support of the 50–50 law requiring that at least 50 percent of the cargoes generated by the United States Government should be transported in United States flag ships to the extent they are available at reasonable rates.

We reaffirm our support of the basic principles and procedures of the 1936 Merchant Marine Act and its program of Government support, based upon the principles of parity and of essential trade routes operated by American companies which are domiciled, owned, and controlled in the domestic areas which they serve.

We condemn certain practices of foreign nations, direct or indirect, which discriminate against American flag shipping, and we urge increased effort by the Department of State to seek their elimination.

We commend the efforts being made by industry and the administration, with congressional support, to begin the largest peacetime vessel replacement program in our history, and we urge adequate appropriations by the Federal Government so as to insure that, when combined with private investment, there will be sufficient funds to maintain an orderly and economic replacement schedule.

We recommend an expanded Government research program on ship design, ship propulsion, and port facilities so that the latest and best information will be available to various segments of the American merchant marine.

We recommend that, in the event of mobilization, the merchant marine be placed under the jurisdiction of the Maritime Administration so that the experience and knowledge of the management of privately owned steamship companies may be effectively utilized.

Declaration of Members of the German Federal Parliament

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. BOSCH. Mr. Speaker, on the occasion of the 10th anniversary of the Communist seizure of Czechoslovakia which has affected the lives of Czechoslovaks, Sudeten Germans, and others, I bring to the attention of the Members the declaration of the German Federal Parliament on this subject:

BONN, GERMANY, *February 24, 1958.*

DECLARATION OF MEMBERS OF THE GERMAN FEDERAL PARLIAMENT OF SUDETEN GERMAN ORIGIN

On the 10th anniversary of the Communist takeover in Prague, we publicly state our firm belief that freedom and human dignity are inseparable. The expellation of the Sudeten Germans from their own ancestral homes was the prelude to the annihilation of democracy in Czechoslovakia. Where men can be expelled, freedom loses its home.

Fully conscious of the innumerable ties which linked our people to the Czech as well as the Slovak races, we greet those men and women of both nations fighting for the restoration of liberty. Passed-by events cannot justify an untimely perpetuation of old discords. We are convinced that the recognition of every nation's right to its ancestral home is preconditional for a permanent peace in Europe. We sincerely desire the reestablishment of freedom and self-determination for Czechs and Slovaks. For ourselves, we want nothing else.

Today, we solemnly repeat what we already declared in the charter of the German expellees: We renounce every idea of hate and retaliation. It is the sincere desire of the Germans to live in peace and harmony with all their neighbors. There is no German spirit of revenge, except in Soviet propaganda. A peacefully united Europe is the ideal of German youth. We expect the races of east central Europe to draw their own conclusions from the experiences they made and are making still with all sorts of dictatorships.

Never we shall put up with the present division of Europe. We shall continue to work toward a peaceful solution of this problem. It would be in the best interest of Soviet Russian policy to restore freedom to the east European races, like Britain did to the people of India. Just as the arbitrary separation of the two parts of Germany slows down the necessary process of general pacification, so the continuation of the present status for Poles, Czechs, Slovaks, and Magyars—nations under foreign yoke and dominion—aggravates international tensions. We appeal therefore to the Soviet leaders: Give that self-determination to the nations of Eastern Europe which you advocate in favor of the races of Asia and Africa.

We are convinced that the promotion of a liberal development in Czechoslovakia is a German interest. The German Bundestag has, by a declaration passed on June 23, 1950, taken the right of the Sudeten Germans to their ancestral homes under the custody of the entire German Nation. The freedom of the Czechs and Slovaks is preconditional to the restoration of this right.

In view of this declaration, we ask the German Federal Government to devote special attention to the situation of those Germans still living in Czechoslovakia. The Government in Prague has failed until now to show understanding with regard to the reunion of families—contrary to the Polish Government which appeared cooperative at least in this respect. Likewise, we recall that the improvement of the international relations between the Federal Republic and Czechoslovakia depends on whether the Prague Government will be inclined to comply at last with the laws of humanity by liberating the German prisoners still in Czech detention.

Signed by the Honorable Hans Schuetz, Member of Parliament; the Honorable Richard Reitzner, Member of Parliament.

Lithuania's Desperate Ordeal

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mrs. GRANAHAN. It had been my purpose to join on Thursday, February 13, in the tributes in the House to the people of Lithuania and their determination again to be free. Unfortunately, illness prevented my being here at that time.

Had I been in attendance, I would have made the following statement:

LITHUANIA'S DESPERATE ORDEAL

Mr. Speaker, the city in which my congressional district is located, the city of Philadelphia, is much like our capital City of Washington, D. C., in that it is a city built around the concept of freedom. On every side, we in Philadelphia have reminders in

brick and stone of the events which led to America's own freedom and of great men who helped to bring about our freedom. It is almost possible, while walking near Independence Hall and our other shrines of the Revolution, to see those events of so many years ago.

Consequently, we in Philadelphia are very much aware of the yearnings of all peoples in all countries where freedom is denied to enjoy the blessings of liberty as we enjoy them.

Each day, our hearts go out to those held captive by the yoke of communism in those nations behind the Iron Curtain, and we symphathize in their desperate ordeal and dedicate ourselves to do everything we can to speed the day when they will again be free. On this day, we feel particularly sorrowful for the people of Lithuania, as they recall other times in other eras of their history when they enjoyed freedom.

The enslavement of Lithuania is one of the worst crimes of the Soviet Union. God grant that deliverance comes soon.

Primary Election Principle Periled by Boss Control

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MACK of Illinois. Mr. Speaker, under leave to extend my remarks I wish to include the last of a series of editorials by V. Y. Dallman, editor of the Illinois State Register, on problems and responsibilities of party organizations. In this concluding and challenging editorial, Mr. Dalman states that, since public inaction and boss action have made the direct primary election system ineffectual, an entire new system must be devised. The immediate recourse is a writein campaign where necessary.

The article follows:

[From the Illinois State Register of January 28, 1958]

PRIMARY ELECTION PRINCIPLE PERILED BY BOSS CONTROL

The State Register has enjoyed this exploration into the field of popular opinion as relates to primary elections in Illinois.

We rejoice in the encouragement received from voters (not bosses) of both parties. We are very happy to say that here in Sangamon County, where Republicans have played the musical chairs game in the county courthouse for so many years, we have received many verbal messages of vigorous approval from Republicans as well as Democrats.

We regret that a supine Republican press, satisfied with official handouts and censored press releases, has no time for news that disturbs the equanimity of the powerful patronage bosses in the statehouse and courthouse. The old racket gains power.

At this very hour the evils of boss control of which we have written prevail to a greater degree than ever. Bravely, some Republican candidates are venturing to oppose the heavily entrenched patronage hierarchy deeprooted in local and State patronage. But those heroic souls are standing forth in a good cause. Win or lose they deserve applause.

Over on the Democratic side we see some evidence of an awakening. Some candidates symbolize independence from boss domination. We hope they win. We're for them, but they are in peril of being trapped in the bipartisan snares operated by State administration trappers who want to continue control of Sangamon County's offices.

We rejoice in the magnificent new spirit of independence that is welling up. Many people who have heretofore been disinterested have been aroused by our editorials. One powerful individual in public thought and action pointed out only yesterday that the primary election laws have placed the primary system directly in the hands of the bosses.

No understanding person can deny that startling challenge.

The State Register confesses that when we helped to destroy the old, boss-ridden convention system of selecting local, district, and State candidates, we thought the people would exercise their powers under the direct primary election system.

We regret that public inaction and boss action made those ideals ineffectual.

An entire new system must be devised. The immediate recourse is a write-in campaign where necessary.

Bosses will laugh at that idea, but it has the potentials of a protest.

As the two-party system has been wrecked by bipartisan deals, some observers suggest that in local and State elections candidates be presented on their merit rather than under party designations.

We love this exploration. We rejoice in finding so many kindred souls who are protesting against slatemakers and boss-control now at its greatest peak in the statehouse, and to a revolting, but somewhat lesser degree, in the courthouse.

A crusade is needed. We're enlisted for the duration.

Harry Had a Good Time

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 9, 1958

Mr. MINSHALL. Mr. Speaker, I thought my colleagues would be interested in reading the following editorial that appeared in the February 24, 1958, issue of the Cleveland Plain Dealer:

HARRY HAD A GOOD TIME

The Democrats have every right to criticize the Republican administration, and also the inclination. But when they selected former President Harry S. Truman as the chief denouncer at their $100-a-plate dinner in Washington Saturday, they invited people to make some comparisons.

The business recession, of course, was the most joyful topic at the Democratic feast. Mr. Truman called it the Republican recession, and accused the Eisenhower administration of not doing anything about it. Well, it comes to mind that there was a similar business slump in 1949 and the early part of 1950. In fact, unemployment today is said to be higher than at any time since 1950.

Q. Who was President at that time?
A. Harry S. Truman.
Q. Did he call that a Democratic recession?
A. No.
Q. How did we get out of that recession?
A. The Korean war ended it.

One indication of the extent of the current recession is the drop in the industrial production index, as recorded by the Federal Reserve Board. It reached its peak in December 1956, when it stood at 147 percent of the 1947–49 average. Last month it was down to 133 percent, which is a distressing drop of 14 points. But it is still 33 percent above the 1947–49 average, when Mr. Truman was President.

Mr. Truman poked fun at the administration because it had trouble launching an earth satellite. He may have forgotten that last November Dr. Wernher von Braun, the leading American missile expert, was asked by the Associated Press how he accounted for Russia's apparent ability to outstrip the United States in reaching into space. He replied: "The main reason is that the United States had no ballistic-missile program worth mentioning between 1945 and 1951." Who was President then? You guessed it.

Mr. Truman also denounced the "crisis of confidence in our leadership abroad." It's a matter of opinion as to how much confidence there was in our leadership when Mr. Truman was President. It was then that the Reds took over China and that we got into the Korean mess. That was leadership?

Oh, well, Harry had a good time giving 'em hell, as he always does, and we are glad so many Democrats could afford to pay $100 to hear him, in spite of the "Republican recession."

Supporting Our Mutual-Security Program

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. HILLINGS. Mr. Speaker, I think the necessity of supporting our mutual-security program is excellently detailed in an article by William Randolph Hearst, Jr., editor in chief, Hearst newspapers.

Mr. Hearst's thought-provoking analysis of this important subject follows:

Again this year President Eisenhower has asked Congress for $4 billion for the mutual-security program—oftentimes critically but erroneously referred to as our giveaway program.

It looks like he is going to have even more trouble getting Congress to ante up the desired sums this year because of our own money troubles here at home.

You may remember the United States Senate last year asked me—among others—to inspect and report our findings and opinions of the value of the tremendous amounts of taxpayers' money for mutual security in the various corners of the world each of us visited.

Regular readers of this newspaper may also remember that editorially we have been—to say the least—dubious, and often frankly critical, of the program in the past. The Senators must surely have known this when they appointed me, but they chose men whom they thought would call the shots as they saw them.

It is, therefore, relevant to today's peace that with the exception of specific detailed criticism of waste or excessive personnel, the Senate's 10 representatives who went into the field unanimously reported that the various military and economic investments had been and were necessary and approved the concept behind the program.

As concerns waste, United States Comptroller General Joseph Campbell told a closed session of the House Foreign Affairs Committee a couple of days ago that military aid has never been subject to systematic and continuous audit.

If this is so—and Mr. Campbell ought to know—it is the urgent duty of the administration and Pentagon to conduct such an

audit and make it known to the people. Waste must be eliminated. But it is in American self-interest not to confuse it with the value of the program itself. Let's not throw out the baby with the bath water.

In Editor's Report, of last August 25, when the issue was under debate, I wrote:

"My first point is that foreign aid is a misleading—sometimes erroneous—term. It suggests a giveaway or boondoggling waste of money you and I contribute to Government. Actually, as it works today, we are buying defense at bargain rates."

Of the $3,900,000,000 the President is asking from Congress, more than half, or $2,600,000,000, would be used for military aid, either direct or for defense support of friendly powers. Most would be direct, that is, $1,800,000,000 to our allies such as those in NATO, the Baghdad Pact nations, and SEATO (Southeast Asia Treaty Organization). Another $835 million would go to defense support of 12 nations, 70 percent of this to Korea, Nationalist China, Vietnam, and Turkey.

When I was in Turkey a few years ago, I learned that a Turkish soldier could be equipped, trained, fed, housed, and clothed for $200 a year. That is correct, $200 a year. The cost may have gone up a little since, but it is still infinitesimal compared to the cost of maintaining an American soldier.

Similarly, when the Hearst task force was on its world tour in the spring of 1956, we learned that the cost of equipping, training, feeding, housing, and clothing more than 20 divisions of ROK troops in South Korea was equivalent to the cost of maintaining 2 American divisions. If this cost has gone up, it is only by a minute fraction.

You don't have to be an Einstein to figure out that military aid is bargain-rate defense, whether given directly in the form of arms or indirectly to support the economy of nations which otherwise could not afford troops or modern weapons in the amounts needed for adequate defense of our vital world perimeter.

NIXON GIVES IMPRESSIVE FACTS

Vice President DICK NIXON, in a speech in Los Angeles this past week, added to the impressive data. He said it costs 5 times as much to maintain 1 American soldier for 1 year as it does a soldier of one of the allied nations on the perimiter of the Communist empire.

These are facts that back up the President's warning of the consequences that would threaten us if the mutual security program were wrecked. He listed such consequences as:

"A severe dislocation and basic impairment of free world power.

"A certain crumbling, under Sino-Soviet pressures, of our strategic overseas positions and a forcing of these positions progressively backward toward our own shores.

"A massive increase in our own defense budget, in amounts far exceeding mutual security appropriations, necessitating increases in taxes.

"A heavy increase in inductions of American youth into our armed forces.

"Ultimately, a beleaguered America, her freedoms limited by mounting defense costs, and almost alone in a world dominated by international communism."

This is just about the same warning that Adm. Arthur W. Radford, former chairman of the Joint Chiefs of Staff, gave to the Senate Appropriations Committee last year.

So much for military aid, and I'll rest that phase of the case right here.

When you get into economic aid, for which the President is asking $1,300 million, the evidence is not nearly as clear, but in my opinion it remains vitally important.

Suppose I approach it this way:

In the long interview Frank Conniff, Bob Considine and I had with Nikita Khrushchev last November one point he emphasized was his absolute conviction that communism (socialism, he called it) was invincible and would inevitably conquer the world without the need for war.

In other words, he was counting on the weapons of economic penetration and subversion to make it easy to win.

These are not weapons merely in the figurative sense. In the Russian strategy they are weapons in a cold, hard literal sense; weapons of actual conquest.

RUSS AID MUST BE BIG

No one knows, of course, how much money Russia is spending to neutralize governments friendly to the United States (for example, the economic thrust of the Kremlin into Latin America); or how much it is spending to win over the allegiance of the so-called uncommitted nations (the economic thrust into Africa); or how much it is spending to turn into satellites nations that are tilted toward Russia and away from the West (Egypt, Syria, Yemen).

The amount must be tremendous. The Soviet Union is able to spend this money by depriving its people of essentials and comforts, by reneging on its bond issues—things that we would not and could not do here.

But that is not an excuse for forfeiting this life-and-death game. It is surely worth the effort to help nations out of the poverty that makes them susceptible to Soviet enticements, particularly since such aid is changing toward a loan basis, however "soft" those loans may be. And it is certainly to our advantage to help nations—which have shown themselves worthy of help—toward economic independence that would attract the interests of our private enterprise.

I wish to make it clear that I am not advocating blind acceptance by Congress of the President's program. Neither is he. I am not urging that it be voted without any survey or any cuts. Neither is he.

I am saying that the program ought to be considered item by item, nation by nation—thoroughly, fairly, and on the basis of what are the best interests of the United States in this battle for survival in which every American is engaged, whether he or she knows it or not.

Peerless Second District of Illinois

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. O'HARA of Illinois. Mr. Speaker, it is a secret that I have gone all out to share with my colleagues that the Second Congressional District of Illinois leads the Nation in dynamic challenge and in sheer richness of human quality, material achievement, and cultural attainment.

The Chicago Tribune, in its issue of February 24, 1958, starts a series of articles with the purpose of showing the attractiveness of the city of Chicago as a place to make one's home. Quite naturally it selected as the subject for the first story in the series an institution in the Second Congressional District, the Museum of Science and Industry, located a little more than a stone's throw from the Chicago office of the Second District's Congressman.

Mr. Speaker, with no thought of unnecessarily kindling the envy of my colleagues, but solely with the desire to contribute to their general education on the choicest of spots where man may make his home, I am extending my remarks to include the article in the Chicago Tribune of February 24, 1958, as follows:

(By Jacquelin Southerland)

It's fun to live in Chicago. It's an exciting mixture of the unusual, the exotic, the ordinary.

Walk a few blocks off your beaten path and you'll find yourself in a neighborhood where nobody speaks your language. Duck into a restaurant new to you and you'll find costumed Serbians singing their native songs or German chefs preparing frothy desserts as luscious as those that sleeping youngsters see in their dreams of candy land.

A FREE WORLD

It's probably the greatest inexpensive vacation land in the world—with free beaches, free baseball diamonds, free tennis courts, free parks, free fishing, free swimming, free ice skating, and free zoos.

There's the Adler Planetarium, where the skies roll above your head while astronomers explain the heavens—for 25 cents or less.

There are the science museum for free, the Chicago Natural History Museum, free some days, 25 cents on others, and golf courses at $1.50 or less.

LAND OF FUN

The Tribune proposes to prove to doubting Thomases that it's fun to live in Chicago, especially where family fun is concerned, and perhaps to open the eyes of longtime Chicago residents to the pleasures at their doorsteps.

The Tribune picked the science museum at 57th Street and Lake Shore Drive for the first story.

This museum is probably extremely misunderstood by people who have never seen it. Its full name—the Museum of Science and Industry—possibly has frightened away scores of non-science-, non-industry-minded citizens. The name reeks of test tubes and machines and sounds about as interesting as a book on income-tax regulations.

A BRIGHT SPOT

No one who has never toured it would ever guess it's one of the brightest recreation spots in town, both for families and for individuals.

Tourists who go because it's in their guide books, and therefore think they ought to go, end up playing and staying for hours. Reluctant kids dragged in by determined parents and teachers can't be dragged away.

Most of the 2,866,681 persons who visited it last year stayed 3 hours each. And motorized, mechanized Americans don't stand on their feet for 3 hours at a stretch unless they're powerfully interested.

Just what fascination does the museum have?

FAIRY TALES, TOO

It has Colleen Moore's fabulous doll house, a half-million-dollar fairy tale castle where the chandelier is made of diamonds and a weeping willow weeps real tears.

It has telephones that have you talking to yourself—so you can hear what you sound like. It has machines where you can test your own hearing.

It has a coal mine, where an elevator carries you down to waiting cars that rumble down the tracks of dark corridors to a mine where experienced miners show visitors how they take coal from the inside of the earth.

It has a real nickelodeon, grinding out movies of Mary Pickford and other early motion picture stars.

LIVING FOOD EXHIBIT

It has chickens hatching from eggs and baby ducks and pigs in the food for life exhibit.

It has the Harvester farm, a life-sized reproduction of a farm—with sound effects.

It has the story of human birth and a model kitchen for heart patients.

It has a real submarine, the German U-505, the first enemy war vessel captured in battle on the high seas since 1815.

It has exhibits of airplanes, automobiles, atoms, time, television, electricity, glass, metals, and more. For the hungry, it has a cafeteria and luncheonette.

The museum, in the words of one of its brochures, tells the story of how American industry and scientific research have helped to give the world the fullest life in recorded history.

But, better than that, it's fun.

The Teaneck Teen Commonsense Code

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 4, 1958

Mr. OSMERS. Mr. Speaker, in these days when our newspaper headlines herald the almost unbelievable accounts of teen-age violence, it is indeed comforting to know that there are citizens whose faith in youth prompts an unselfish desire to guide and help our teen-agers over the hurdles.

Such is the case with the Teaneck Committee for Mental Health of Teaneck, N. J., and its sponsoring organizations. The committee has published a well-illustrated and informative booklet titled "The Teaneck Teen Commonsense Conduct Code."

The code is the result of questionnaires answered by more than 4,000 teen-agers in the Teaneck public and parochial schools and consists primarily of a guiding set of principles.

The booklet discusses such things as allowances, dating, teen-age-family relationships, dress, and proper social behavior. It is not what parents think should be a teen-age code of behavior, but rather what the teen-agers themselves believe to be proper conduct in their relations with others.

In order that this fine code may reach the widest possible audience, I ask unanimous consent that it be printed in the Appendix of the RECORD.

THE TEANECK TEEN COMMONSENSE CONDUCT CODE

FOR GRADES 7 THROUGH 12

The Teaneck teen commonsense conduct code is a set of guiding principles to be used by parents and teen-agers to aid in establishing a wholesome, happy social life for our youths in Teaneck.

Its purpose is to define and give a clear picture of what the majority of our teen-agers feel should be their guiding principles. Its object is to set a pattern that the majority of teen-agers have themselves agreed should be their code of behavior. It is not how parents should rear their children at home, but a guide for the teen-ager in relation to others.

The Teaneck teen commonsense conduct code was developed as a result of questionnaires answered by over 4,000 teen-agers in the Teaneck public and parochial schools. The code was sponsored by the Teaneck Committee for Mental Health with the cooperation of the Teaneck secondary public schools and the parochial schools.

FAMILY

The family is one of the most important factors influencing social conduct, both in the home and outside of the home. All of the facts mentioned in this conduct code are touched by the basic attitude found in the home. The solution to the following points are found exclusively in the home:

1. Emphasis on belief in God enhances respect and character.

2. Self-respect, through a wise choice of friends and personal responsibility, is essential for a good reputation.

3. Children should be responsible to their parents, and parents should be responsible for their children.

4. Family discussions are necessary to maintain good family cooperation.

5. Consulting parents in regard to home social activities is a good practice.

6. Using the bus for transportation during the daytime is considered a good idea. Parents should not be expected to supply all transportation.

7. An allowance is usually felt to be good and should be given in accordance with the means of the family and the needs of the teen-ager. Extra money can be earned by the teen-ager.

8. Dating during the week is a privilege. Therefore, teen-agers should cooperate fully with their parents concerning this situation.

"HOME AND CHILDREN

(By Edgar A. Guest)

"My father often used to say when children
he'd discuss:
'If ours are happier away, there's something
wrong with us.
I'd think it shame my lifetime through
if this should ever be:
They'd rather eat a neighbor's food than
stay with us for tea.'

"My father wasn't social wise; grave books
he'd never read.
He thought the mother should be home
to see her babies fed.
'It is a lifetime job,' said he, 'that parents
all assume.
I'd rather keep the children's love, than
keep a tidy room.

" 'I'd hate to think the neighbors gave what
often we deny;
Our cookies kept on topmost shelves and
theirs left handy by.
I'd think it shame if down the street lived
gentler folks than we,
Who made a home a happy place where
children liked to be.

" 'So have the cookies near at hand and
give these rooms to fun.
Let children all be happy here until the
day is done.
Let's keep this home with joy aglow and
free from fret and fuss;
For should they rather elsewhere be the
fault would lie with us.' "

SCHOOL

School plays an important part in the life of the average teen-ager. A person's character and outlook on life is partially developed in school. Therefore, the following opinions formed by you and your friends should help you in developing this outlook.

1. Dress and behave according to the standards set forth by the school.

2. Dress appropriately for school dances. Don't come as you are.

Function	Boy	Girl
Formal	Tuxedo (winter)—White jacket (summer).	Formal (flowers).
Semiformal	Suits and ties	Party dresses.
Informal	Sport clothes	Skirts and blouses or dresses.
Special	Dance committee will decide the type of dress that should be worn.	

3. Partners should be exchanged at dances.

4. The New Jersey law is as follows concerning fraternities and sororities:

"No secret fraternity or sorority shall be formed or maintained in any public school. The board of education of every school district shall adopt rules and regulations providing for the necessary disciplinary measures to enforce this section." Remember: It is against the law to break a law.

THE COMMUNITY

The community involves many things: streets, public places, and private property. Our township is the property of its residents and therefore its welfare and growth become the charge and responsibility of all.

1. Dress according to the occasion. Short shorts and halters should be avoided in public places. Bermuda shorts, slacks, or school clothes are considered suitable for the library, movies, and other public places.

2. Act in a suitable manner. Respect other people's property at all times.

3. Courtesy, orderliness, and consideration of others should be observed at all times in public places.

4. While driving, observe the following rules: respect the rights of others, obey the motor vehicle laws at all times and avoid overcrowding. Hitchhiking is dangerous and illegal. Share maintenance of the car with your parents.

5. Obey the rules and regulations at the Teaneck Recreation Center.

6. Quiet and orderliness should be observed in the library at all times.

7. Be considerate of others while in the movies. Maintain your self-respect and personal dignity.

SOCIAL

The teen-ager associates with other young people every day of his life. In his social attitudes, the teen-ager reflects his home environment and sense of responsibility to his community.

1. Parents should be at home to greet guests and should remain at home to act as chaperones.

2. Don't be a party crasher, wait for an invitation.

3. A boy should call for his date at the girl's home and should return his date to her home after the end of the evening.

4. Going steady is a practice of continuously dating and being in the company of the same person for any length of time. The tabulated results in the junior high and parochial schools showed the students to be overwhelmingly against the practice of going steady. A boy and girl going steady may find friendly companionship with each other, but it is suggested that it be in the company of other teen-agers. Since the whole question is highly controversial and personal it is suggested that it be discussed carefully with your parents.

5. State law prohibits the serving of alcoholic beverages to teen-agers in public places. Such drinks should not be served at teen-age gatherings.

6. Teen-agers should not smoke without parental knowledge and approval.

7. The teen-ager who shows a contempt for accepted social behavior should be ignored if he does not wish to become a part of the group.

8. Don't be a night owl, get home before dad starts hooting.

Hours for ending functions

Function	Junior high	Senior high
Formal	[1] 12:30	1:30
Informal	[1] 11:30	1:00
Home party	[1] 11:30	12:30
General dating	[1] 11:30	11:30–12:00

[1] Should be 1 hour earlier for 8th graders.

MYSELF

I want to live with myself and so
I want to be fit for myself to know.
I want to be able as days go by
Always to look myself straight in the eye.
I don't want to stand with the setting sun;
And hate myself for the things I've done.

I don't want to keep on the closet shelf
A lot of secrets about myself.
And fool myself as I come and go,
Into thinking that nobody else will know
The kind of person I really am;
I don't want to dress myself up in a sham.

I want to go out with my head erect,
I want to deserve all people's respect:
But here in the struggle for fame and self
I want to be able to like myself;
I don't want to look at myself and know
That I'm bluster and bluff and empty show.

I never can hide myself from me;
I see what others may never see;
I know what others may never know,
I never can fool myself, and so
Whatever happens, I want to be
Self-respecting and conscience free.

How Much for India?

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. HARRISON of Virginia. Mr. Speaker, we need a full and frank disclosure of the prospective financial commitments of the United States to India. There are strong indications that current loan negotiations may well have the effect of obligating us, over and above the initial advances, to substantial but uncertain amounts in supplemental credits over an uncertain period of years. The public deserves to know the full extent to which we may be tied to India's economic programs—plans which seem to be both unstable and unrealistic. It is my understanding that present negotiations involve approximately $227 million in credits from the Export-Import Bank and the development loan fund and $65 million in surplus agricultural commodities.

Last week, in his foreign aid message, the President recommended that the development loan fund be set up as a Government corporation, thereby making it another semiautonomous disbursing agent for the United States dollars. Before the Congress takes this step, there should be a clear understanding of the extent to which we expect to make so-called soft-currency loans on a political basis rather than on a basis of financial soundness.

The Indian loan package is a prime example of a political loan. The proposition was given a cold look by the International Bank which recognized the shaky foundation of India's second 5-year plan—the plan for the advancement of which we now are planning to extend more than a quarter of a billion dollars in financial help.

If we are going to undertake the support of Nehru's economy by backing a plan which even many Indian observers regard as ill advised, we should understand that it is a political venture rather than a solid business proposition. We should also know that, once embarked, we shall be expected to continue support of the Indian plan—a matter of possibly a billion to two billion dollars in credits over the next few years. If we do not continue, we shall have to write off our initial political investment and face a resentful Indian Government and people. If we follow through, and the plan fails in its grandiose objective of revolutionizing the Indian economy, we shall be tied inevitably to its failure.

It might be well to recall that Mr. Benjamin Fairless, chairman of the President's study group on foreign aid, cautioned against adventures in the soft currencies, in which the lender inevitably becomes a major factor in the currency management of the borrower, acquires a substantial and largely unwanted interest in that currency and creates a climate in which forgiveness of the loan often seems the easiest course. This is the type of deal which so easily converts a loan into a gift, contrary to the stated intent of the legislation setting up the lending authority.

An experienced American engineer, observing the Indian plan in operation, has written home in this vein about our efforts to assist India:

One of the fundamental weaknesses of Indian plans is the omission of references to the necessity for changing the cultural path of society. You cannot superimpose a large industrial complex on a poverty-stricken agricultural country regardless of financial resources. Our money will be wasted until this is recognized. How long that will take is certainly a matter of several generations. Under our present policy we are merely postponing the final day of recovery and exerting very little, if any, effort to influence current planning or economic philosophies.

An Indian writer, in the Times of India, has written:

The only known factor about the plan is that it has an infinite capacity to grow irrespective of the availability of resources.

This writer, in detailing the expansion of the plan by the Indian Government has pointed out that India will have to go into heavy deficit financing to provide its domestic contribution to the costs. He writes:

Loans or deferred credits may take care of the foreign exchange component of these projects. But what of the rupee finance which may be expected to account for at least 50 percent of this outlay?

No thought is being given to this problem. There is an astonishing attitude of indifference. Reason and caution have fallen by the wayside in a reckless pursuit of splendor.

Very little has appeared in the American press about these Indian-loan negotiations. More should be made known, as the available evidence indicates we are to become the principal guarantor of not only dollar but also rupee deficits in a very flexible open-ended scheme of indeterminate total cost.

Mr. Speaker, under leave to extend my remarks in the Appendix, I include an interesting article which appeared in the Times of India on January 29, 1958:

A MANY SPLENDORED THING

(By B. G. Verghese)

The exuberance that not unnaturally marks the commencement of another year of the Republic, coupled with the prospects of loans and credits from the United States, Germany, and Japan has generated a wave of optimism about the plan. The defeatism of the intellectuals as Mr. Nehru describes it has been talked out. At Gauhati the congress resolved, as always, to lead the country to glory. And, exhilarated by this verbosity, the government has decided to enlarge the plan.

EVERGROWING

The only known factor about the plan is that it has an infinite capacity to grow irrespective of the availability of resources. It was announced some months ago that the financial outlay on the plan would have to be limited to Rs. 4,800 crores. The cost of the plan, however, is about Rs. 1,000 crores in excess of this. Instead of determining ways and means of reducing the overburden in an orderly manner, fresh commitments are being made in respect of projects not included in the plan at all.

The drug industry is to be expanded through an expansion of the Pimpri plant with the assistance of a United States firm and the establishment of intermediate and antibiotic manufacturing plants with West Germany (Bayers) and Soviet collaboration respectively. The Piet drug plant, which may cost about Rs. 21 crores was never contemplated. Then a raw film factory is to be established in Ooty with the assistance of the East German firm of Agfa at a cost of Rs. 8 crores. Negotiations are afoot for the construction of oil refineries at Gauhati and possibly Barauni with Soviet and Rumanian collaboration. All the projects are undoubtedly worthwhile in themselves and are to be taken up for execution largely because the necessary foreign credits are being made available.

There is not yet a sufficient awareness in the highest levels of the administration, de-

spite warnings from below, of the considerable external liability that the country is so readily piling up by way of repayment of loans and credits after 1961. The Government is busy mortgaging a good part of the third plan so that the splendor of the second might not be dimmed.

But apart from this, nearly half the outlay on these projects will have to be in terms of rupee finance and nobody seems concerned about where this is to come from. One suggestion made is that a sum of about Rs. 10–15 crores still available with the National Industrial Development Corp. for financing the modernization of the cotton textile industry might be diverted to meet the cost of the drug projects. But this is no more than robbing Peter to pay Paul.

A LARGE DOSE

The internal-resources position is by no means bright. It is estimated that the outlay during the first 2 years of the plan may total about Rs. 1,515 crores and that this will have been achieved by resort to a proportionately large dose of deficit financing of the order of Rs. 550 crores. Inflationary pressures have been held in check thus far on account of the fact that the large import surpluses of the past 2 years have been financed from out of the country's foreign exchange reserves, namely, the sterling balances and the Rs. 92-crore loan from the International Monetary Fund. This cushion has now been virtually exhausted and so it is imperative that the future financing of the plan must be predominantly noninflationary in character. In other words, the volume of deficit financing will have to be significantly curtailed while additional investment will have to be financed from out of additional savings, including taxation.

This is the problem of the 1958–59 budgets at the center and in the States. As far as the States are concerned they have benefited by the substantial transference of funds from the center recommended by the finance commission and have shown little enthusiasm for augmenting their tax revenues.

LESS ON DEFENSE

At the center, although the capital outlay on defense may be a little less than during the current year, nondevelopment expenditure may be expected to increase under other heads. The interim award of the pay commission alone will cost Rs. 12 crores in a full year. And the introduction of the metric system of weights may cost the exchequer another crore of rupees.

On the revenue side, there is little scope for additional direct taxation after last year's budget. The finance minister has himself said that a gifts tax may be all that might be expected during the rest of the plan period apart from marginal adjustments in tax structure. There may be some import and excise duties. On the other hand the record of loans and small savings has been poor. There is some hope that market borrowing may improve. But the outlook for savings is dismal. Against an annual target of Rs. 100 crores per annum, small savings totaled only Rs. 61 crores last year and a meager Rs. 32.4 crores during the first three quarters of the current year. This is a very poor performance at a time when savings are being extolled as the bulwark of the plan.

Viewed against this background, it is difficult to see how a budgeted-plan outlay of Rs. 950 crores for 1958–59 is going to be actually financed. Rupee expenditure, not foreign exchange, is the real problem. Yet, the plan is being enlarged.

If the plan lacked balance at the outset, it is now becoming definitely lopsided. A ceiling of Rs. 4,800 crores has been proclaimed, but it is evident that the industrial and mining programs included in the plan will account for nearly Rs. 250,300 crores more than originally envisaged. Irrigation and power projects outside the core are likely to be delayed and there may be some shortfall in respect of social services. In short, the process of rephasing is likely to increase the relative share of industry in the total investment under the plan. Commensurate transport capacity is not being developed.

The plan, as framed, provided Rs. 690 crores for large-scale industry and mining in the public sector. The commitments already made under this head within the compass of the core and outside, however, are estimated to cost Rs. 750 crores. Additional commitments in respect of projects relating to drugs, oil, fertilizers, machine tools, aluminum, and other schemes on the anvil are estimated to cost Rs. 193 crores. Loans or deferred credits may take care of the foreign exchange component of these projects. But what of the rupee finance which may be expected to account for at least 50 percent of this outlay?

No thought is being given to this problem. There is an astonishing attitude of indifference. Reason and caution have fallen by the wayside in a reckless pursuit of splendor.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Scott, Symington, Talmadge, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Clark, Proxmire, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Clark, Proxmire, Beall, Morton, Javits, and Hoblitzell.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Lausche, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Thurmond, Yarborough, Smith of New Jersey, Ives, Purtell, Goldwater, Allott, and Cooper.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Scott, Neuberger, Church, Yarborough, Proxmire, Carlson, Jenner, Langer, Martin of Iowa, Morton, and Hoblitzell.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, ———, Martin of Pennsylvania, Case of South Dakota, Kuchel, Cotton, Hruska, and Revercomb.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Talmadge, Curtis, Cooper, Javits, and Case of New Jersey.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4531 Hutchins Place.
Mr. Justice Burton, of Ohio, the Dodge.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 6920 32d St.

OFFICERS OF THE SUPREME COURT

Clerk—John T. Fey, 2931 Cathedral Ave.
Deputy Clerk—Edmund P. Cullinan, 4923 Reservoir Road.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Drive, Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Road.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Burton. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

STANDING COMMITTEES OF THE HOUSE

Committee on Agriculture

Messrs. Cooley (chairman), Poage, Grant, Gathings, McMillan, Abernethy, Albert, Abbitt, Polk, Thompson of Texas, Jones of Missouri, Watts, Hagen, Johnson, Anfuso, Bass of Tennessee, Mrs. Knutson, Messrs. Jennings, Matthews, Hill, Hoeven, Simpson of Illinois, Dague, Harvey, Belcher, McIntire, Williams of New York, Harrison of Nebraska, Dixon, Smith of Kansas, Krueger, Teague of California, Tewes, Burns of Hawaii, Bartlett, Fernós-Isern, ———.

Committee on Appropriations

Messrs. Cannon (chairman), Mahon, Sheppard, Thomas, Kirwan, Norrell, Whitten, Andrews, Rooney, Gary, Fogarty, Sikes, Preston, Passman, Rabaut, Yates, Marshall, Riley, Sieminski, Evins, Shelley, Boland, Magnuson, Natcher, Flood, Denton, Steed, Alexander, Boyle, Santangelo, Taber, Wigglesworth, Jensen, H. Carl Andersen, Horan, Canfield, Fenton, Scrivner, Coudert, Clevenger, Wilson of Indiana, James, Ford, Miller of Maryland, Vursell, Ostertag, Bow, Budge, Jonas, and Laird.

Committee on Armed Services

Messrs. Vinson (chairman), Brooks of Louisiana, Kilday, Durham, Rivers, Philbin, Hébert, Winstead, Price, Fisher, Hardy, Green of Pennsylvania, Doyle, Miller of California, Bennett of Florida, Lankford, Huddleston, Byrne of Pennsylvania, Morris, Kitchin, Arends, Gavin, Norblad, Van Zandt, Patterson, Cunningham of Iowa, Bates, Hess, Devereux, O'Konski, Bray, Wilson of California, Osmers, Mrs. St. George, Messrs. Reece of Tennessee, Gubser, Becker, Burns of Hawaii, Bartlett, and Fernós-Isern.

Committee on Banking and Currency

Messrs. Spence (chairman), Brown of Georgia, Patman, Rains, Multer, Addonizio, Barrett, Mrs. Sullivan, Mr. Reuss, Mrs. Griffiths, Messrs. Ashley, Vanik, Healey, Rutherford, Coad, Anderson of Montana, Breeding, Talle, Kilburn, McDonough, Widnall, Betts, Mumma, McVey, Hiestand, Bass of New Hampshire, Seely-Brown, Siler, Henderson, and Chamberlain.

Committee on the District of Columbia

Messrs. McMillan (chairman), Harris, Abernethy, Smith of Virginia, Teague of Texas, Davis of Georgia, Morrison, Dawson of Illinois, Williams of Mississippi, Wier, Multer, Dowdy, Matthews, Mrs. Granahan, Messrs. Mitchell, Simpson of Illinois, O'Hara of Minnesota, Talle, Miller of Nebraska, Auchincloss, Allen of California, Kearns, Patterson, Broyhill, Hyde, and Holt.

Committee on Education and Labor

Messrs. Barden (chairman), Powell, Bailey, Perkins, Wier, Elliott, Landrum, Metcalf, Mrs. Green of Oregon, Messrs. Roosevelt, Zelenko, Thompson of New Jersey, Udall, Holland, Teller, McGovern, Dent, Gwinn, Kearns, Hoffman, Bosch, Holt, Rhodes of Arizona, Wainwright, Frelinghuysen, Nicholson, Ayres, Griffin, Haskell, and Lafore.

Committee on Foreign Affairs

Messrs. Gordon (chairman), Morgan, Carnahan, Zablocki, Burleson, Hays of Arkansas, Mrs. Kelly, Messrs. Hays of Ohio, Byrd, Selden, Pilcher, O'Hara of Illinois, Fountain, Fascell, Coffin, Farbstein, Saund, Chiperfield, Vorys, Mrs. Bolton, Messrs. Merrow, Judd, Fulton, Jackson, LeCompte, Radwan, Morano, Mrs. Church, Messrs. Adair, Prouty, Bentley, and Curtis of Massachusetts.

Committee on Government Operations

Messrs. Dawson of Illinois (chairman), Holifield, McCormack, Chudoff, Brooks of Texas, Fountain, Hardy, Blatnik, Jones of Alabama, Garmatz, Moss, Kilgore, Fascell, Mrs. Griffiths, Messrs. Reuss, Brooks of Louisiana, Mrs. Kee, Mrs. Granahan, Messrs. Hoffman, Riehlman, Mrs. Harden, Messrs. Brownson, Meader, Brown of Ohio, Lipscomb, Knox, Minshall, May, Michel, Mrs. Dwyer, ———.

Committee on House Administration

Messrs. Burleson (chairman), Byrd, Friedel, Ashmore, Hays of Ohio, Jones of Missouri, Rhodes of Pennsylvania, Lesinski, Smith of Mississippi, Long, Thompson of New Jersey, Abbitt, Elliott, Mrs. Green of Oregon, Messrs. LeCompte, Morano, Schenck, Carrigg, Harrison of Nebraska, Corbett, Bennett of Michigan, Hillings, Lipscomb, Halleck, and Ray.

Committee on Interior and Insular Affairs

Messrs. Engle (chairman), Aspinall, O'Brien of New York, Rogers of Texas, Mrs. Pfost, Messrs. Haley, Shuford, Powell, Edmondson, Metcalf, Christopher, Sisk, Udall, Diggs, Rutherford, Baring, Ullman, Miller of Nebraska, Saylor, Wharton, Berry, Dawson of Utah, Westland, Pillion, Hosmer, Rhodes of Arizona, Chenoweth, Utt, Thomson of Wyoming, Weaver, Collier, Burns of Hawaii, Bartlett, and Fernós-Isern.

Appendix

Address Delivered by Hon. Chapman Revercomb, of West Virginia, at Lincoln Memorial Dinner

EXTENSION OF REMARKS
OF

HON. CHAPMAN REVERCOMB

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 26, 1958

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the remarks I made at Wheeling, W. Va., on February 8, at the Lincoln memorial dinner held under the auspices of the executive committee and the Republican Women's Committee of Ohio County, W. Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

We are assembled here to honor the memory of a great American—a statesman whose wise and courageous leadership transcends political party lines.

We are gathered to pay tribute to the memory of Abraham Lincoln, who belongs to the peoples of all lands, wherever the spark of liberty and human freedom burns in the breasts of men.

In the last tragic moment of Lincoln's life it was said: "Now he belongs to the ages." Therefore, it is proper and fitting that we pay homage to a great leader who has been an inspiration not only to Americans but to all people.

I do not come here this evening to tell you that all is well in the world. It is not. We live in an era when international tensions are great. We live in the most rapidly changing age in history. We live in a period that gives rise to new and pressing problems.

However, let me remind you that we live in an age that presents great challenges—an age that offers mankind great hopes—hopes of peace, hopes of freedom from fear and want.

Lincoln met the problems of his time with courage and resoluteness, with calmness and compassion. If Lincoln were alive today, how would he view the perils and problems that confront the America that he loved?

Looking at the troubled Nation more than 100 years ago, Lincoln observed:

"We live in the midst of alarms; anxiety beclouds the future; we expect some new disaster with each newspaper we read."

He spoke those words in 1856—at a tragic time in history. The very survival of the Nation hung in the balance, and with it the world's greatest hope for liberty and equality.

We know from history that Lincoln did not panic. He spoke no words of bitterness or hatred. He was God fearing, but he was not afraid of the world's threats. His words of calm, clear appraisal rose above the babble of discordant, hysterical voices, and the message he uttered then has real meaning for us today. He said:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our case is new, so we must think anew, act anew."

And so Lincoln rode out the storms of his time. The Nation was given that "new breath of freedom" he prayed for so eloquently at the Gettysburg battlefield. With the flame undimmed, Lincoln passed on the torch of liberty and freedom which still inspires and lights the world.

Today we, too, live in the midst of alarms. Scientific discoveries, undreamed of a few years ago, have transformed our lives.

The free world is at grips with a slave world, just as freedom saved slavery in Lincoln's time. The fear of enslavement has become so strong that Russia's launching of the first earth satellite only a few months ago sent many of our people into a state of hysteria and confusion. Indeed, the whole world was apprehensive.

Lincoln never acted like this in the Nation's darkest tragedy. Sorely beset though he was on every hand, he remained calm, firm, clearheaded, and unafraid.

In the circumstances that have confronted this Nation in recent months, we can profit a great deal by one of Lincoln's favorite stories about the man who was riding along a backwoods trail and was caught in a storm.

"He kept plodding ahead until his horse gave out, and then it grew dark. He had only the lightning to show him the trail. The thunder was terrifying, and, when one bolt seemed to crash at his feet, he fell on his knees. 'Oh, Lord,' he prayed, 'if it be all the same to You, give us a little more light and a little less noise.' "

New scientific achievements have been much in the news of late. Russia's launching of the first uncontrolled earth satellite gave rise to fears everywhere.

But when we turn a little less noise and a little more light on sputnik we shall see that there are no reasons for fear and alarm. The Soviet satellite gave Russia a propaganda advantage, for the moment, in the cold war, to be sure. It was a blow to our prestigate and a shock to our complacency.

But tonight, as our own earth satellite orbits the earth, we know that scientific progress in America has not been at a standstill.

We know—and the world knows—that the sum total of this Nation's technological and productive capacity far exceeds that of Russia, and the launching of satellites has not altered America's defense capabilities.

But there are some valuable lessons to be gained from these achievements.

The Russian satellite, launched last October, filled the world with apprehension. The American satellite, on the other hand, has served as a powerful force to allay those fears.

Our Explorer satellite, in my judgment, can be used to mark the turning point in the cold war. The world knows that America will not attack any other Nation, however secure we insist on being. Our immediate objective, then, must be to capture the hearts and minds of men and utilize nuclear power to improve the lot of mankind.

The No. 1 objective of our Government must be to work for conditions that assure not only security, but also peace for us and the world. Some sound course must be found that will bring an end to the armaments race and usher in an era of international understanding. It has been proved time and again that war cannot do this, for out of each war arises a new division in the world.

Peace, then, is our No. 1 objective. And I say to you that the Eisenhower administration is firmly dedicated to that task. The proof of our success to that end may be stated simply: No American boys have died in battle since President Eisenhower was inaugurated.

If a political party—any political party—is to live it must be guided by high principles. It must meet the challenges of the times. It must prove capable of solving new problems as they arise.

Let us examine, then, the other problems we face, the other challenges we must meet.

Here, as I see it, are the other main objectives the National Government must seek to achieve.

1. A modern defense system that will give this Nation maximum security until effective disarmament agreements can be achieved.

2. A free and expanding economy—an economy capable of supporting our defense needs and at the same time providing for an ever-increasing standard of living for all Americans.

3. Freedom of the individual—freedom for his choice of religion, for his choice of occupation, and in his pursuit of happiness. For I need not remind you that it is this principle of individual freedom that has made this Nation the leader of the free world.

4. Equality of rights—a principle on which the Republican Party was founded, and which it has pursued throughout the years.

5. Government assistance in those areas where the people cannot help themselves. This applies to the aged, the infirm, the handicapped. We must never forget that the Government has a responsibility to care for those who cannot care for themselves.

Let us examine briefly the record of the Eisenhower administration and see just how these objectives are being met.

On the question of defense, the Nation is militarily strong—and it is growing stronger every day. The Soviet satellite has by no means canceled out our strategic air force, which will remain the greatest deterrent to attack for a long time to come. It has not canceled out our powerful fleet armed with a wide variety of missiles carrying nuclear weapons.

If attacked by any aggressor nation, we are in position to strike back from land, by sea, in the air, from all directions of the compass, and with overwhelming force.

Let me emphasize, however, that our strength is not in armaments alone.

Lincoln wisely knew that there was much more to national defense than military installations. In this regard, he said:

"The bulwark of our liberty and independence is not our frowning battlements, our bristling seacoasts. Our reliance is in the love of liberty which God has planted in us. Our defense is in the spirit which prizes liberty as the heritage of all men, in all lands, everywhere."

And we can all be thankful that President Eisenhower is equally dedicated to this high principle. In his state of the Union message, the President said:

"The world thinks of us as a country which is strong, but which will never start a war. The world also thinks of us as a land which has never enslaved anyone and which

is animated by humane ideals. This friendship, based on common ideals, is one of our greatest sources of strength."

Ladies and gentlemen, the Republican Party is dedicated to that objective. We have preserved peace for the last 5 years. And our goal now is and always must be to seek conditions in the world that will free people everywhere of the fears and horrors of living in an armed camp.

As for meeting the new problems unfolding in this great industrial age, a look at the record of the past 5 years reveals many remarkable accomplishments.

It is a record of a prosperous Nation with new high levels of employment, rising income, and increasing purchasing power.

It is a record of more jobs, better incomes, more homes, more leisure, and more recreation.

It is a record of increased productive capacity.

It is a record of renewed confidence by the people that the American way of life will be preserved.

When the Eisenhower administration took office in 1953, there was a proposed budget expenditure of nearly $78 billion for 1954.

There was a deficit of nearly $9½ billion for 1953, and a planned deficit of nearly $10 billion for 1954.

Continuing inflation had reduced the purchasing power of the dollar to 52 cents.

That is what the Eisenhower administration inherited. What did we do?

First we reduced and then entirely eliminated deficit spending. Fiscal year 1955 was the last year of deficits. Since then we have balanced the budget and retired some of the public debt.

At the same time, the American people were given a tax reduction, the largest in history, that has already saved our people nearly $25 billion in taxes.

The record of this administration's domestic policies reveals that more people own their own homes today than ever before. There are now nearly 30 million home-owners in America—an increase of 13 percent in only 4 years.

The largest industrial expansion in history has taken place. Business and industry have spent an all-time high of over $152 billion in new plants and equipment compared to $123 billion in the preceding 4 years.

The gross national product rose to an all-time high of $439 billion in 1957.

Personal income last year jumped to an annual rate of approximately $346 billion—another all-time record.

Last year an average of 65 million of our people were gainfully employed—an increase of 3,700,000 in only 4 years.

Average weekly earnings of factory workers are at a record high, with the average weekly pay now $83.20. In 1952, the average weekly pay was $69.23.

Trade unions have the largest membership in history, 18,477,190. Less time has been lost by strikes than at any period in the last decade.

Ladies and gentlemen, these are facts—and they will not be drowned out by the gloom and doom critics who would have us believe that America is woefully weak militarily and ready to collapse economically.

A business decline set in late last year, it is true—and there is no reason to ignore it. I am convinced, however, that this decline will be short lived. The same thing is happening now that happened in 1948 and again in 1953. We are in a period of readjustment, resulting from the vast expansion of the Nation's productive capacity. Most economists are predicting a business upturn by midyear, followed by a period of long, steady growth of the economy as American industry prepares to meet the needs of a growing Nation, increasing in population at the rate of over 3 million a year.

I say to you that the Republican Party is prepared to meet the challenges of this age. It is prepared to meet the problems of our times.

I do this, however, we must ourselves stand united. We must not allow minor difference of programs or policies to blind us to the great principles on which we are agreed and which are vital to the welfare of our State and Nation.

Not since Lincoln's time has the Republican Party faced a greater challenge, or a greater opportunity. We can meet that challenge if we carry home to the people the principles we espouse, and if we are prepared to make the same fight for those principles that Abraham Lincoln did.

Collective Security—Address by Hon. H. Alexander Smith, of New Jersey, Before Woodrow Wilson School of Public and International Affairs, Princeton University

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, February 26, 1958

Mr. CASE of New Jersey. Mr. President, my senior colleague from New Jersey [Mr. SMITH], made a significant address before the Woodrow Wilson School of Public and International Affairs, Princeton, N. J., on February 24.

The senior Senator from New Jersey has made a thoughtful presentation of the nature of many world problems and the interreliance and interdependence of the free world in furthering the cause of freedom in the face of these obstacles. I know that it will be of great interest to my colleagues and to the country at large. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COLLECTIVE SECURITY

(Address of Senator H. ALEXANDER SMITH, Woodrow Wilson School of Public and International Affairs, Princeton University, Princeton, February 24, 1958)

I am highly appreciative of the honor you do me in asking me to address you today. My subject is collective security, and certainly no more appropriate subject, in my judgment, could have been found for an audience in this distinguished school which takes it name after the father of the concept of collective security in American foreign policy.

And I would like to add a very personal note. When I was an undergraduate in Princeton some years ago, Woodrow Wilson was our favorite professor. This was by vote of many successive graduating classes. He was the inspiration to many of us to study law—especially constitutional law, and to feel the urge of public service. I recall well when Wilson made his speech, famous to all Princetonians—Princeton in the Nation's service. Princeton can well point with pride to our participation in World Wars I and II, and more recently to the post-war period—1945 to today. This record reflects the impact of Woodrow Wilson on the youth of America.

I

Early steps

The idea of collective security did not, of course, originate with Woodrow Wilson. But it was Wilson who first attempted to make it a cardinal point of American foreign policy. If he had succeeded, we would today live in a far different world.

In his last public words, spoken to a group of people gathered outside his house on Armistice Day 1923, Wilson delivered a reaffirmation of faith, tinged with bitterness. He said:

"I cannot refrain from saying it: I am not one of those who have the least anxiety about the triumph of the principles I have stood for. * * * That we shall prevail is as sure as that God reigns."

It took a Second World War, even ghastlier than the first, plus the evolution of the threat from Moscow—the seeds of which were laid during Wilson's administration—to convince the American people of the rightness of Wilson's position. Yet even now, I am not entirely sure, and the doubt is a little frightening, that we have fully learned the lessons of the intervening years.

II

The United Nations

A quarter century after the Senate turned down American participation in the League of Nations, it approved, by a vote of 89 to 2, American membership in the United Nations.

I was elected to the Senate in the fall of 1944; 1945 was my first full year. That year saw V–E Day and V–J Day and the setting up of the United Nations. The proudest moment of my early Senate career was my participataion in approval of membership in the U. N.

The U. N. has since surmounted the frustrations of repeated Soviet abuse of the veto power in the Security Council. Despite its handicaps, the U. N. has become an important force for peace and justice. This in itself is significant and is indicative of the tremendous urge throughout the world to make the U. N. work. If this urge had not existed, if the overwhelming preponderance of the world's people had not been determined that the U. N. must work, there is little doubt that it would long since have gone the lamented way of the League of Nations.

Another thrilling and inspiring experience that I personally enjoyed 8 years after my vote for the U. N., was my membership in the United States Delegation to the Assembly in the fall of 1954.

Far from withering away in impotence, the U. N. has done much to implement the principle of collective security. As examples, one need only cite its armed resistance to aggression in Korea and its intervention in Suez. The U. N. emergency force still helps to keep the peace in the Middle East and is the forerunner, I hope, of a permanent international police force.

III

Soviet obstruction

The U. N. can never be fully effective, of course, so long as one of its most powerful members shows such utter disregard and even contempt for its principles. The United States, therefore, has been forced to take additional measures in the interests of its own security. These additional measures, it needs to be emphasized, are supplementary to the U. N. and in no way conflict with the U. N. Charter. In fact, so far as these measures involve regional collective arrangements for defense, they are specifically contemplated by article 51 of the charter.

Now, for our purposes of discussion today, we may say—I hope without too much oversimplification—that our world, like Caesar's Gaul, is divided into three parts:

1. The Soviet bloc.
2. The 42 countries which are allied with the United States in formal collective defense treaties.
3. The remaining countries and territories which are neither dominated by the Soviet Union nor allied with the United States.

IV

Collective security alliances

I want to talk today particularly about these last two categories—our allies and the neutrals—about how they fit into a policy based on the principle of collective security, and about the relationship of our mutual security program to this policy.

First, let us consider the countries which are formally allied with us. In these days when it is popular to reexamine our position in the world, it is well to spend a moment in reexamining these alliances and asking again the old but always pertinent question, Do they serve our national interests?

These alliances are based on the simple, often repeated, and—I hope—well understood premise that we cannot live alone, whether we like it or not. I am sure this audience understands that, and I am not going to bore you with a tedious repetition of all the facts which underlie it. I do, however, want to emphasize just two points which seem to me to be of controlling significance:

First, Western Europe, with which we are allied through NATO, is the biggest repository of industrial capacity and technical and scientific skills outside the United States and the Soviet Union. At the time NATO was organized in 1949, it was argued that if Western Europe fell under Soviet domination, the Soviets would be raised to a par with the United States in the matter of industrial capacity and technical and scientific skills. Such has been the remarkable economic growth in both the Soviet Union and Western Europe in the meantime, that today it can be said that if Western Europe fell under Soviet domination, the Soviets would surpass the United States in these fields. To take a single key statistic, the production of steel in 1957 in the United States was 113,200,000 tons, in the other NATO countries it was 94,600,000 tons, and in the Soviet Union it was 56 million tons. Thus, NATO, including the United States, has a preponderance of 207,800,000 tons to 56 million tons. But if NATO production is subtracted from the United States and added to the Soviet Union, the advantage shifts to the Soviets: 150,600,000 tons to 113,200,000 tons. A policy of collective security as embodied in NATO has, therefore, become of increased importance to the United States. Nor is there any reason to expect this trend to be reversed; on the contrary, there is every reason to expect it to move even faster.

Second, southeast Asia and Latin America, with which we are allied through SEATO and the Rio Treaty, comprise two of the principal sources of the strategic and critical raw materials without which American industry could not operate a single day. We may be sure that our dependence on foreign sources of raw materials will continue to increase.

On both these counts, then, our alliances become more and more important to us, and it becomes less and less possible to imagine a world in which we stand alone.

Now, if we are to have alliances—and it is clear that there is no practical alternative—then it follows that it is in our interest that those alliances be strong. Therefore, as a part of our mutual security program, we supply military assistance to strengthen the armed forces of our allies, and we supply defense support assistance to strengthen the economic capability of our allies to maintain armed forces.

The preponderance of both military assistance and defense support goes to such countries as Korea, Taiwan, Vietnam, Pakistan, and Turkey. It is obvious that such countries could not begin, with their own resources, to maintain the defense forces which are necessary. We are faced, then, with three possible courses of action:

1. We can abandon our alliances and let our erstwhile allies get along as best they can by themselves. I have already given some reasons, and I am sure you can think of others, why this course would be disastrous.

2. We can undertake to do it all ourselves. This would be incredibly and unbearably expensive, in terms of manpower, money, and natural resources. It costs from 10 to 20 times as much to maintain an American soldier overseas as it costs to maintain a Turk or a Korean. This course likewise has political disadvantages abroad. One of the important political advantages of a policy of collective security is its collectiveness, its mutuality, the sense of working together as equals which it gives Americans, Turks, Koreans, and all the others. That would be lost if we tried to defend other people instead of helping them defend themselves.

3. We can do what we have been doing—that is, supply our allies with the critical margins of military and defense support assistance without which they could not maintain their present levels of military effort. This is the middle course between doing nothing, which would be fatal, and trying to do everything, which would be futile. It makes good sense to me, and I hope it makes good sense to you, too.

V

The neutral or uncommitted countries

Let us look now at the neutral or uncommitted countries. To begin with, let me say that I do not equate neutralism with procommunism, nor do I demand that countries stand up and be counted as for us or against us. I see a vast difference in a world with a neutral India, for example, and a world with a Communist India. Countries such as India and others which follow a policy of neutralism are only doing what their national interest, as they see it, dictates. It is well to recall, in this connection, that we Americans ourselves were neutral for as long as we could get away with it. It is also appropriate to recall the scriptural dictum that "he that is not against us is for us."

The fact that a country such as India chooses not to sign formal alliances does not, in my judgment, diminish the importance of India to the security of the United States. If India is threatened, we are threatened, and that is the essence of the concept of collective security.

In the case of countries in this category, however, a policy based on this concept cannot be implemented through military assistance and alliances. Sometimes, as in the case of the Eisenhower doctrine for the Middle East, it can be implemented—with the consent of the countries concerned—through a unilateral declaration on our part. More frequently, it can be implemented in major part only through assistance to the people of India and similar countries in creating the internal conditions that will enable the people to maintain their freedom, independence, and self-determination. This is the function of that aspect of our mutual-security program which deals with economic development loans and with technical assistance.

I would not for one minute downgrade the importance of our military-oriented programs, the results which they have achieved, or the importance of continuing them at a high level. But I do believe that the purely economic programs are assuming increased importance and that this trend is likely to continue.

In part, the reason for this is precisely that the military programs have been successful. As overt Communist aggression has been blocked in Europe and in the Far East, the expansive forces of international communism have looked for softer spots to probe and have been directed more and more to the uncommitted nations of Asia and Africa. And as the locale has shifted, so have the Communist tactics. A velvet glove has been drawn over the iron fist. The voice which once thundered threats of imminent ruin—and which occasionally still does when it talks to Europe—now addresses Asia and Africa in the dulcet notes of a cooing dove.

As a result of our firm stand through alliances such as NATO and through joint executive-legislative policy statements such as the Eisenhower doctrine, I am reasonably confident that we will not soon again be confronted with overt aggression from the Soviet bloc. But I am even more confident that the free world will be confronted for a long time to come with penetration, subversion, and threatened coups d'etat. This threat is more subtle, more complex, and in many ways more difficult to meet than the open military threat.

But it can be met, and our allies can help us meet it. Indeed, they have as big a stake in the matter as we do. The United States is expected to take the lead, and certainly the United States has more resources available to throw into the battle, but it is a great mistake to think of the battle as a peculiarly American one.

It may well be said that our military aid is the negative and defensive side of our mutual-security program, while the economic development loans and technical assistance are the positive and constructive side.

Here is another place where allies and a policy of collective security can pay dividends. The objective is to keep the neutral countries neutral—that is, to keep them out of the Soviet bloc—and the attainment of this objective is as important to our allies in NATO as it is to us. In fact, because of Western Europe's dependence on Middle Eastern oil supplies, it can be said that the security of the Middle East is of even greater immediate importance to Europe that it is to the United States.

VI

Multilateral activities in less developed countries

It strikes me that more could be done through existing international organizations to multilateralize the free world's approach to the problems of these areas. Much, of course, is being done already. Through the Colombo plan, the more developed countries of the Commonwealth plus Japan and the United States are aiding the less developed countries of South Asia. The United Nations has done much good work through its technical assistance program, and we can expect even more as a result of the action of the General Assembly last fall in making possible a threefold expansion in that program, up to a total of $100 million. The International Bank for Reconstruction and Development has made a substantial contribution, and the International Finance Corporation holds great promise. Some of the European countries are carrying on small programs of their own, as, for example, the Norwegian fisheries project in India.

Several interesting suggestions have recently been made toward broadening the activities of European nations in regard to economic development in Asia and Africa. Most of the plans so far proposed are variants of a suggestion for a NATO technical assistance and economic development program. NATO still has a good many problems of its own in Europe, and I am not sure that NATO, as such, is ready for elaborate economic activities in Asia and Africa. Maybe it would be better to start with a

few bilateral programs, coordinated perhaps through the North Atlantic Council or the Organization for European Economic Cooperation. The Germans and Italians are particularly interested in these possibilities and have a particular contribution to make, resulting from their own prosperity (especially in the case of Germany) and from their lack of recent colonial background.

Such programs would not only make a positive contribution to the problems all of us face in Asia and Africa; they would also result in a clearer recognition of the fact of increasing interdependence in the world. So long as any nation is insecure—tiny Jordan or enormous India—no nation is secure.

Programs of the kind I am talking about would also afford another important advantage in the skilled technicians which they would make available. It is significant that in the Soviet economic offensive in underdeveloped areas, various countries of the Soviet bloc participate according to their peculiar talents or resources. Thus Czech technicians might be used in one country, East German equipment in another, and Russians in a third. It seems to me that it would be useful if the West could pool its resources in something of the same manner, so that we might have Americans here, Germans there, French, or Italians, or British somewhere else.

VII

Interdependence and the free world

Now, although economic assistance, through the mutual-security program, through the U. N., or through other cooperative ventures of our allies, is an indispensable part of our policy of collective security, it is by no means the only thing we can or should do to strengthen the free world. Our foreign-trade policy has an important bearing on the general economic strength of our allies. Like many slogans, "trade, no aid" is of something less than universal application. It is difficult to envisage a world in which the foreign trade of, say, Korea or Vietnam had grown to the point to make possible the suspension of American aid. But it is, nevertheless, true that to the extent that world trade is expanded and particularly to the extent that other countries can earn more dollars through access to the American market, less outright aid will be required from the United States.

This is one reason why it is so important that Congress act favorably upon President Eisenhower's request for a 5-year extension of the Reciprocal Trade Act. But it is not the only reason. Although greater world trade has the effect of strengthening our allies and this in turn is good for us, greater world trade is also, on balance, of direct benefit to the United States. It not only creates new export markets for our farms and factories, it also provides more goods for our consumers.

Another thing we can do to strengthen our alliances is in the political field of recognizing and promoting the sense of mutuality of purpose as between ourselves and our allies. In all of our alliances, we are looked to for leadership to a degree which is quite striking, and we should meet the responsibility which history has thrust upon us. But we should remember that it is leadership which is expected of us—not dictatorship. We cannot tell other people what to do and expect them to do it; nor can we go off on unilateral adventures of our own and expect them to follow.

The way to avoid these pitfalls is through constant, close consultation with our allies. I think our record on this score is pretty good, especially in the North Atlantic Council of NATO, where there has been more real consultation, not only on our part but also on the part of the other members, in the last 12 months than for a long time previous. The record, as I say, is pretty good, but this is something which needs to be worked at every day. It is all a part of this age of interdependence.

After 40 years, one cannot yet say that we have achieved Wilson's goal of making the world safe for democracy. It may well take another 40 years. However, like Wilson, I have not the least anxiety about the triumph of the principles that he stood for then and that President Eisenhower and Secretary Dulles stand for now.

I think the American people are coming increasingly to understand this, and further to understand what is required of them in the form of short-term sacrifices for the sake of long-term gains.

VIII

Conclusions

This, then, might be described as a program of interdependence for the free world.

But while we strengthen our alliances, and while we help the uncommitted nations maintain their independence, we must also recognize that, over the long run, we must come to some kind of understanding with the misguided Russian people themselves. We must seek to replace international distrust with international confidence. I do not have time to explore this intricate problem in detail, but I do want to make particular mention of one bit of recent progress which is extremely encouraging and which I think will prove to be of increasing significance. This is the Lacy-Zaroubin agreement for increased cultural exchanges between the United States and the U. S. S. R. This agreement represents a new experimental approach in United States-Soviet relations and is important on two counts. First, it indicates that private conversations on the ambassadorial level can indeed make progress and bear fruit. At this time, these quiet lower level talks offer more promise than would a summit meeting held in the glare of worldwide publicity. Second, I can hardly overemphasize the importance of the exchange program provided for by the agreement. The exchange of persons is the best—maybe it is the only—way in which the American people and the Russian people can get to know and understand each other better. And that kind of knowledge and understanding must underlie any long-term accommodation between our two countries. This sort of accommodation may be far in the future, and in the meantime we must continue our other programs to build free-world strength.

For myself, I must confess that the more I reexamine these foreign-policy questions in the light of sputnik, which seems to be the cause of most of our soul-searching, the more I am forced to the conclusion that sputnik does not require us to do anything which we ought not to have done anyway. Sputnik does increase the urgency with which we should do it, but that is a matter of degree and not of basic policy. We must continue to steer our course between panic, on the one hand, and complacency on the other.

If we meet the problems head on, we will solve them. And in doing so, we will bring about the kind of world that Wilson dreamed of and that Eisenhower is striivng for.

In his state of the Union address, President Eisenhower concluded: "I am fully confident that the response of the Congress and of the American people will make this time of test a time of honor. Mankind then will see more clearly than ever that the future belongs, not to the concept of the regimented atheistic state, but to the people—the God-fearing, peace-loving people of the world."

In these few words, it seems to me, are summed up both the opportunity and the responsibiliy which we face.

Oregon Beef Candy

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, February 26, 1958

Mr. NEUBERGER. Mr. President, on February 25 it was my privilege to serve as senatorial sponsor for the distribution of beef candy from Oregon to the tables in the Senate dining room, and to Members of the Senate at their offices. Many compliments have been received from my colleagues regarding this delicacy from the great Pacific Northwest.

Beef candy is the result of a process developed by Mr. and Mrs. Ed Coles, of Prineville, Oreg., on the high grazing plateau of the central portion of our lovely State. Dehydrated beef is the base for a delicious and nutritious sweetmeat.

Actual presentation of the beef candy from Oregon was under the personal auspices of some of my guests from Oregon: Mrs. David Campbell, of Bly; Mrs. Frank Obenchain, of Bly; Mrs. Henry C. Gerber, of Klamath Falls; Mrs. Julian Arrien, of Vale, and Miss Margaret Gerber, of Klamath Falls. They and their families were likewise my guests at luncheon in the Senate dining room.

Because many Senators have asked me about the actual ingredients and preparation of our beef candy, I ask unanimous consent that a statement from my office, dated February 25, 1958, be included in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Senators were treated to sweetmeats today when the Oregon Cow-Belles, auxiliary of the Oregon Cattlemen's Association, distributed high-protein beef candy on Capitol Hill.

Senator RICHARD L. NEUBERGER, of Oregon, arranged for the Cow-Belles to distribute the confection in Senate dining rooms as a means of publicizing a new potential market for beef products. The distribution was handled by Mrs. Dave Campbell, Bly, Oreg., president of the Cow-Belle delegation; Mrs. Frank Obenchain; Mrs. Henry C. Gerber, Klamath Falls; Mrs. Julian Arrien, Vale; Margaret Gerber, also of Klamath Falls. The Cow-Belles were accompanied by their husbands.

Mrs. Campbell disclosed that the beef candy was the result of a process developed by Mr. and Mrs. Ed Coles, of Prineville. The process combined dehydrated beef with sweets. Fresh beef contains approximately 17 percent protein and 60 to 65 percent moisture. By removing the moisture from the fresh beef, the resulting dehydrated beef as used in this candy contains approximately 56 percent protein, or about 3 times as much protein as in fresh beef. This candy contains 25 percent dehydrated beef, which makes an ounce of the product the approximate equivalent animal protein of three-fourths of an ounce of fresh beef. The high animal protein content of this candy not only assures quick but also lasting energy.

Before arrival of the Cow-Belles, Senator NEUBERGER had urged the Department of the Army to study inclusion of the high-protein product in military rations. The Army reported that the Quartermaster Corps tech-

nologists were familiar with this product and have in fact made some suggestions to the manufacturers on ingredients and formulations for its improvement and have tested some of the sample products.

The Oregon Senator was informed that Army food experts would follow development of the candy so that prompt application can be made if the need should arise.

Organ Recital by Jerald Hamilton

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a criticism of Mr. Jerald Hamilton's performance in the Washington Cathedral.

Mr. Hamilton is a young organist from Kansas who received a Fulbright scholarship in 1954 to study in Paris. His success is but another evidence of the effectiveness of this program in offering opportunities to our young people as well as improving our relations wtih foreign countries.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star of February 3, 1958]

NEWS OF MUSIC—ORGANIST IS FETED

Talented young organist Jerald Hamilton was honored at a reception yesterday afternoon following his concert at the Washington Cathedral.

The reception was given at St. Alban's parish house, by the District of Columbia Branch of the National League of American Pen Women, which also sponsored the concert.

Mr. Hamilton is assistant professor of organ and theory at Washburn University in Topeka, Kans., and also is organist for Grace Cathedral in that city. He was a Fulbright scholar in 1954 and 1955 and studied under Andre Marchal in Paris.

A reception committee assisted Mrs. John Hobart Wallace, branch president.

HAMILTON IMPRESSIVE ON CATHEDRAL ORGAN

(By Irving Lowens, contributing critic)

Jerald Hamilton, organ, Washington Cathedral program: Prelude and fugue in E flat, Bach; Noel Etranger, d'Aquin; variations on My Young Life Hath an End, Sweelinck; chorale prelude, Deck Thyself, My Soul, With Gladness, Brahms; chorale prelude, Blessed Are Ye Faithful Souls Departed, Brahms; God Among Us, Messiaen.

Heard yesterday at the customary first-Sunday-of-the-month organ recital at the Washington Cathedral was an exceptionally impressive young artist, Jerald Hamilton, organist and choirmaster at Grace Cathedral in Topeka, Kans.

Mr. Hamilton's program, while not especially daring, was a musically solid one which was more than sufficient to test his mettle as both interpreter and virtuoso.

The largest work offered was the Bach E-flat prelude and and fugue usually nicknamed the St. Anne because of the resemblance of the first fugue subject to the familiar hymn tune of that name. This is a piece of blazing inspiration and uncommon grandeur, qualities which are all too often lost sight of as the ordinary organist scrambles after the notes.

Technical difficulties were nonexistent for Mr. Hamilton, however, and he succeeded in projecting the masterwork in the same spirit of luminous power in which it must have been conceived.

Mr. Hamilton followed the Bach with excellent readings of slighter works by d'Aquin, Sweelinck, and Brahms and closed his recital with one of those mystifying cryptic pieces by Olivier Messiaen—this one called God Among Us—which for some reason beyond this reviewer seem to enchant organists and organ buffs.

The Messiaen was, truth to tell, an overpowering affair, and Mr. Hamilton drove its hysterical utterances with considerable authority, but I'll take Bach (or even Sweelinck) any time.

The recital was sponsored by the District of Columbia Branch, National League of American Pen Women.

The Definition of a Bribe

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. PROXMIRE. Mr. President, the Capital Times in Madison, in its usual hard-hitting fashion, has called attention in a recent editorial to the tendency on the part of Washington officials to forget the importance of conforming to standards of absolute honesty.

The Capital Times says it is just about time that we recognize exactly what a bribe is. In a vigorous editorial on Monday, February 24, it speaks out on this subject.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT HAPPENED TO WORD "BRIBE"? WHY HAS IT BEEN BURIED?

"A price, gift, or favor bestowed or promised in order to pervert or corrupt a person in a position of trust, as an official."

The above definition of a bribe is one that can be found in any standard dictionary.

It is a good time to remind ourselves what the word "bribe" means. We seem to have lost the use of this word.

There was a time when the word was used to describe some of the things going on in Washington today. But the word has been lost. The Madison Avenue hucksters have coined new words to describe what is going on today.

What this country needs, if it is going to clean up the mess in Washington and generally restore some decent standards of public morality, is to begin calling a spade a spade.

We need to rediscover some of our good, forceful old words which have been buried. One of these is the word "bribery."

Salute to the Czech People

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a statement entitled "Salute to the Czech People."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SALUTE TO THE CZECH PEOPLE

Towering over the Moldava in the once Golden City of Prague in Czechoslovakia stands a concrete statue of Josef Stalin. It is 120 feet high.

It is perhaps the largest monument to human slavery, oppression and dictatorship, ever erected by human hands. It is an impressive and ever present reminder of an arrogant, aggressive tyranny which has liquidated freedom wherever it has spread and which has extinguished the hopes of hundreds of millions of human beings who have become enmeshed in this poisonous web.

Only 10 short years ago, Czechoslovakia became the victim of this conspiratorial tyranny. Through treachery at home and the aid of Red Communist forces, directed from Moscow, the lamp of liberty and independence was snuffed out for a happy, liberty-loving people.

After the forces, which were generated in the crucible of World War I had tumbled so many monarchial despotisms in Europe, the brave young state of Czechoslovakia which had been established as a democracy, struggled ever so valiantly to preserve its newly won independence and make a truly positive contribution to stability and world peace.

Then came the Nazi wave to strangle that independence and place the iron heel of despotism upon the Czech people. At the end of World War II, the Republic of Czechoslovakia was restored, and a government which was administered by a coalition of independent political parties was established.

But the Communist cancer was at work. Slowly, silently, and relentlessly this destructive force operated through the police force, the Security Corps, and the Ministries of Finance and Agriculture.

In February of 1948—10 years ago this month—the new republic had been so weakened that the subversive Communist forces within and without compelled the surrender of the democratic elements in the republic and a new government under Communist domination was established. Every instrument for the safeguarding of individual rights—the press, the schools, the courts, the Parliament—were purged and became organs for totalitarian control. Thus was another bastion of liberty liquidated.

The loss was not quite total. The tragedy of Czechoslovakia awakened a prudent fear in the free world. Three months later, in May of 1948, Britain, France, Italy, Belgium, Holland, and Luxembourg signed a mutual-assistance pact for collective defense against Communist encroachment. Less than a year later, the North Atlantic Treaty Organization came into being, with the United States as a member.

Monstrous as the tregady of Czechoslovakia was, it generated a vigilance among free nations and a sense of concern in free men that must and will express itself in the

form of eternal hostility toward this brutal and degrading concept of communism. And there can be no easy conscience in the citadels of free men until at long last the thralldom of the Czech people has been ended and their right of self-determination and freedom has been restored.

On this the 10th anniversary of the blackout of Czech independence, let us salute the Czech people both here and in their ancestral home for the resolute and sacrificial struggle which they are waging in the noble cause of human freedom.

Need for Navaho Dam in New Mexico

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. CHAVEZ. Mr. President, I ask unanimous consent that an editorial which appeared in the Albuquerque Journal of Sunday, February 23, 1958, entitled "Folly of Dam Delay," which has to do with reclamation and employment, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOLLY OF DAM DELAY

With the Eisenhower administration planning public works projects to take up the employment slump, congressional pressure is building up to get the administration's slowdown order on reclamation projects relaxed.

Vital to New Mexico is obtaining $1.8 million appropriated by Congress for work on the Navaho Dam, an integral part of the Colorado River project. This money was diverted to the Flaming Gorge project by the Budget Bureau under the President's order against starting new projects as an economy measure.

Since that time, however, has come the so-called recession and the planning of new work projects, some of which, as in the instance of construction of new postoffice buildings and renovating of others, would, though desirable, contribute nothing to the development of the Nation's resources as in the case of the Colorado River projects.

No longer can economy be called an excuse for any delay on the Navaho project; no longer can those in the executive branch, or the Budget Bureau defend their position when there is an urge to provide jobs for the unemployed. Especially when a crew of engineers is on the ground, homes and offices have been provided for them, and they are prepared to start the Navaho construction. Otherwise, they will have to be transferred and a costly delay ensue.

It would also mean a delay on the Navaho reclamation project for which the Navaho Reservoir would furnish the water. This project would provide for the irrigation of 110,000 acres of Navaho wasteland, and contribute to the economy of Indians, the State, and the Nation.

The Navaho Reservoir is also the key to the San Juan-Chama diversion project which would divert the surplus water to the Rio Grande for the benefit of Albuquerque, and the existing irrigation projects on the Rio Grande.

When all these things are taken into consideration, it is utterly ridiculous to retain the slowdown order on Colorado River projects which the administration recommended and was given a great share of credit in passage by Congress.

More credit would be forthcoming in pushing these projects toward completion in the present unemployment emergency, and thus speeding up development of our water resources by permanent works that would contribute to the economy of the West.

We were surprised during the visit of Republican Minority Leader MARTIN here to address a Lincoln Day dinner when he said he had never heard of the Navaho Dam. But the executive department and the Budget Bureau have. And MARTIN and the others will hear more of it as pressure comes in Congress for rescinding of the slow order on reclamation projects. It's time for the executive department to back out gracefully from the economy order on approved reclamation projects.

River Tolls?

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. COOPER. Mr. President, I ask unanimous consent that an editorial entitled "River Tolls?" appearing in the February 3 edition of the Cincinnati (Ohio) Enquirer be printed in the Appendix of the RECORD. This editorial opposes the suggestions which have been made that charges be imposed upon the use of our Nation's waterways.

I am sure that there will be discussion of this matter later, in the appropriate committees, and perhaps in the Senate itself. I did want to submit the editorial for the RECORD, and indicate the concern in Kentucky and Ohio—in fact, the concern in the entire Ohio Valley region—over the proposal.

I recall the early, and continuing, interest of the Cincinnati Enquirer and of its editor, Mr. Glen Thompson, who was at one time its representative in Washington and who was instrumental in bringing about the construction of new locks and dams in the Ohio River Valley, which have meant so much to the development of that area.

I support the purpose of the editorial, which opposes the imposition of charges for the use of our Nation's waterways.

I am quite aware of the plight in which the railroads find themselves. I hope legislation will be enacted which will give relief to our railroads. At the same time, I do not want to see burdens placed upon another great form of transportation, namely, river transportation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIVER TOLLS?

Although Congress at this session may hear some further argument for imposition of user charges—tolls—on river freight, the case for such a basic change probably is weaker even than when river tolls first were proposed several years ago.

A very large part of the total barge trade on the Ohio-Mississippi system, for example, is in fuels, both coal and petroleum. Neither is mainly competitive with rail movement. If tolls made it uneconomic to haul crude petroleum from the Gulf to points on the Ohio, most of that petroleum probably would be moved by pipeline, or in some cases by ocean tanker and pipeline, not by rail.

In the case of West Virginia and Kentucky coal, the very large increase in its use results from establishment of great steam powerplants along the Ohio. And, with modern methods of delivering electric power several hundreds of miles at high voltage with little loss, the tendency is to move generating stations back toward the coal mines, not toward consuming centers. So, if river tolls made the barging of coal uneconomic, the trade would not go mainly to railroads. The powerplants would be built, increasingly, at the coal mines.

In any case, it is not good public policy to change the rules in the middle of the game. Many great industries, such as steel, aluminum, and oil refining, have been established along the Ohio in order to take full advantage of the economics and convenience of barge freighting. It would be inequitable to impose toll charges that in many cases would increase transport costs by 25 to 50 percent.

The steel industry traditionally has been concentrated in the area between Pittsburgh and Chicago, and between the Ohio and the Great Lakes. In recent years, it has spread to the east coast and the west coast, especially as overseas sources of iron ore have been opened up. If the movement of ore and coal on our inland waterways were subjected to tolls, we might see this migration of the steel industry to the two seaboards greatly accelerated. That would be a paralyzing blow to the now thriving economy of the Ohio Valley and Great Lakes region.

General Electric Co. Abandonment of Fair Trade

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. PROXMIRE. Mr. President, this morning's New York Times reported that the General Electric Co. will abandon its leadership of fair trade. The impact of this decision on small business in Wisconsin and throughout America can hardly be overestimated. I invite the attention of Senators to the New York Times article analyzing the consequences of this decision by General Electric, particularly the necessity for national legislation in behalf of small business.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A JOLT TO FAIR TRADE—AN ANALYSIS OF WHERE THE PRACTICE STANDS, NOW THAT GENERAL ELECTRIC HAS QUIT IT

(By Alfred R. Zipser)

Consternation will strike fair-trading businessmen today when they learn that their most powerful ally has deserted to the free-pricing camp.

Abandonment of the principle by the General Electric Co. may make many feel that time is running out for fair trade. This is the system, backed by laws in 32 States, that permits manufacturers to fix and enforce minimum legal retail prices on their products.

General Electric's defection follows a number of fair-trade defeats in State courts in the last few years. Advocates of the principle feel that effective State administration is doubtful and are pressing for a national fair-trade law. Such a Federal statute has been prepared by the National Association of Retail Druggists and was recently introduced in the House of Representatives by OREN D. HARRIS, Democrat, of Arkansas.

The bill, an amendment to the Federal Trade Commission Act, would charge the Commission with enforcing fair-trade prices. Under it, manufacturers anywhere in this country or its Territorial possessions, could stop price cutters and collect damages from them.

With General Electric gone, the ranks of the fair traders still include makers of drugs and cosmetics, hardware, and tobacco, among others. If the Sunbeam Corp., General Electric's big rival in the small-appliance field and another stanch fair trader, shifts to free pricing, a speedy end to all fair trading of these products is almost certain.

DEPRESSION MEASURE

Fair trade was born in the depression of the thirties, although many manufacturers had gone into court long before that to enforce retail prices on their products. During the slump, the Millard Tydings Act was passed. This exempted manufacturers from the antitrust laws with regard to retail price fixing where State laws permitted it.

Most States passed legislation setting floors on store prices. This was done to protect small-business men, thousands of whom were going out of business at the time, from cut-price competition from giant retailers with superior buying power and ability to take losses on some goods.

Vermont, Texas, Missouri, and the District of Columbia never passed fair-trade laws. All other States had them until 1951, when the United States Supreme Court declared the Millard Tydings Act unconstitutional for goods moving in interstate commerce and automatically voided fair trade everywhere.

A price war on former fair-trade items raged in New York and elsewhere in the summer of 1951. The next year the McGuire Act permitted States to set up fair-trade laws again.

COURTS ROUGH ON PRACTICE

But since then, courts in 11 States have made fair trade unenforceable, by declaring the controversial nonsigner clause unconstitutional. This permits a manufacturer to force all retailers in a fair-trade State to observe prices he has fixed in a contract with at least one retailer in that State.

Without the nonsigner clause, retailers who don't sign simply cut prices merrily and fair trade within the State is dead.

Nebraska and Virginia, by action of their high courts, have thrown all fair-trade legislation out the window.

Also, the Supreme Court has decided that there is nothing to prevent a store in an area without fair trade from advertising and selling by mail at cut prices, products that are price-fixed in fair-trade areas.

The fair-trade faction is far from through. The 32 States with fully effective laws (including nonsigner clauses) include such populous and rich areas as New York, Pennsylvania, and California.

New England's Interest in the Mutual-Security Program

EXTENSION OF REMARKS
OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 26, 1958

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Tom W. Gerber on New England's interest in our mutual-security program which appeared in the Boston Sunday Herald, February 23, 1958.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Boston Sunday Herald of February 23, 1958]

NEW ENGLAND HAS $270 MILLION STAKE IN MUTUAL SECURITY OUTLAY

(By Tom W. Gerber)

WASHINGTON, February 22.—New England has a $270 million stake in the Nation's mutual-security program.

This is the approximate amount the Government pays to New England firms for products sent overseas to help United States allies in defense and economic recovery.

Despite this whopping sum spent in New England alone, few persons recognize that more than 75 percent of mutual-security funds are spent in the United States.

President Eisenhower only this week asked Congress for $3.9 billion to be spent in the free world's defense-against-communism campaign.

And the President anticipated the annual roar of protest from opponents of the program, both in Congress and elsewhere. He said:

"I am conscious of the feeling of some that desirable developments should be accomplished in this country before funds are used for development abroad."

His recognition of this attitude indicates a widespread misunderstanding of where mutual-security funds are spent.

And for the New England area, the mutual-security program is a bargain-basement buy.

For the $3.9 billion the President requested, New England's tax share would be about $195 million.

BASED ON TAXES

This figure is based on the fact that New England contributes slightly more than 5 percent of the Nation's tax revenues.

Thus the mutual-security program, established 10 years ago to help foreign nations, actually is a $75 million bargain for the regional economy.

These figures stem from a little-noticed study conducted last year by the nonpartisan National Planning Association at the request of the Senate Foreign Relations Committee.

The study was titled "The Foreign Aid Programs and the United States Economy."

And it shot full of holes the widely accepted thesis that foreign aid was, in effect, money down the rathole.

Among other things, the study showed that the mutual-security program was directly or indirectly responsible for nearly 24,000 jobs in the 6-State region.

Nearly half of these were in Massachusetts, the manufacturing center of New England. The Bay State's share in mutual-security funds spent in New England was in the vicinity of $120 million, or almost half the regional total.

RANKED NINTH

Massachusetts was the ninth-ranking State in the Nation in this regard. States with a larger stake in the mutual-security program were Ohio, Pennsylvania, New York, California, and others with a preponderance of heavy industry.

Despite these huge Government outlays to domestic industry and agriculture under the mutual-security program, impressions persist that the United States Government simply hands a fat check to recipient nations.

"The very opposite is true," the President said on this point.

Here is how the mechanics of the program work:

1. The two governments—the United States and the recipient nation—agree on the scope of the program.

2. They then enter into further agreements on specifically what the dollars will be spent for.

3. The recipient nation then calls for worldwide competitive bidding on contracts to supply the materials called for in the detailed contract.

4. The International Cooperation Administration, which administers the mutual-security program, says an average of 78 percent of these contracts go to United States firms.

5. The winning bidder is paid directly by the United States Government when he delivers the goods. No money changes hands between the United States and the recipient nation.

Thus, if Congress passed President Eisenhower's requested amount for mutual security, United States industry would get a $3 billion workload.

INDIRECT BENEFITS

And not all of the domestic benefits of mutual security are direct. The NPA study of 1955 mutual-security expenditures said:

"Those industries which produce items for foreign aid utilize the products and other services of other industries in order to make their finished goods."

The NPA study indicated that New England firms produce about 7 percent of the products shipped abroad under the mutual-security program.

President Eisenhower, in his message to Congress, was even more succinct in describing the alternatives to the mutual-security program.

He foresaw:

"Ultimately a beleaguered America, her freedoms limited by mounting defense costs, and almost alone in a world dominated by international communism."

Both Massachusetts Senators—SALTONSTALL and KENNEDY—favor the mutual-security program and likely will support it.

Senator SALTONSTALL, in fact, probably will lead the administration's fight for the full $3.9 billion in his role on the Senate Appropriations Committee.

Senator KENNEDY probably will back the bill from his post on the Senate Foreign Relations Committee.

BRIDGES HOSTILE

But Senator SALTONSTALL'S GOP senior on the Senate Appropriations Committee, Senator STYLES BRIDGES, Republican, of New Hampshire, has misgivings about one facet of the program.

In a statement today, Senator BRIDGES sharply criticized the $98 million in the 1958 mutual-security program credits for aid to Poland.

The President's $3.9 billion request is for fiscal 1959, which begins in July. BRIDGES' criticism of aid to Communist-dominated

Poland was considered a forerunner of opposition to come.

"I am as critical of, and as much opposed to, the extension of foreign aid to the Communist regime in Poland as I am to its being extended to the Communist regime in Yugoslavia," he said.

Winner of Cherry Pie Baking Contest

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. SPARKMAN. Mr. President, in the hustle and bustle of these times in the consideration of missiles, earth satellites, and similar things sometimes we are prone to overlook some of the good old qualities of homemaking.

Last week a young lady from my home town of Huntsville, Ala., was selected as the nationwide winner of the Cherry Pie Baking Contest. This young lady, Barbara Chisholm, a junior in the Butler High School, of Huntsville, Ala., has been a visitor to Washington yesterday and today, along with Mrs. Mary Burkhardt, her home economics teacher.

We are very proud of this honor that Barbara has brought to Huntsville.

In the Huntsville (Ala.) Times of February 21 the story was told of Barbara's winning.

I ask unanimous consent, Mr. President, to have this news item printed in the Appendix of the RECORD along with an editorial from the Huntsville Times.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

DEFEATING 197,000 OTHERS—BARBARA CHISHOLM BAKES WAY TO NATIONAL CROWN

Butler High School's Barbara Chisholm brought the national spotlight on herself, her school, and Huntsville in a new way yesterday afternoon.

From more than 197,000 entrants from the 48 States, Canada, Hawaii, and Alaska, Barbara was chosen as National Cherry Pie Baking Contest winner. She was the second Butler student to win the honor in 5 years. In 1953 Maxine Walker took the national honors in the contest.

Barbara appeared astonished at the decision, crying out, "Oh, no." Tears of joy filled her eyes as she said: "I thought my pie was good but not that good," the Associated Press reported from Chicago.

When Barbara arrived in Chicago earlier this week for the final baking competition she said:

"If hoping and wishing will enable me to make the best cherry pie, then there is no doubt in my mind that I can bake the best cherry pie."

On Tuesday, 16-year-old Barbara will present the proof of the pie to a dignitary in Washington, D. C.

This morning she took more bows on the Dave Garroway show Today on NBC television. She left a sample of her culinary skill with Garroway and his cast.

It was reported that more than 5,000 students from Michigan alone competed in the contest. Barbara was the only entry from Alabama, representing Butler High and Alabama.

Barbara told Garroway this morning she had baked about 75 cherry pies since entering the local contest in December. Contestants were also asked to bake an original cherry dessert as a warmup for the finals.

The excitement of Barbara's national success has carried to her family, teachers, and friends.

Her mother, Mrs. G. H. Chisholm, watched nervously this morning as her daughter appeared on TV. The announcement that her daughter had won really shook me up, she told the Times.

Proud Principal J. Homer Crim said, "I am always proud of our students, that is our greatest pay." Out of all the entrants, "It's good to have the No. 1 of the Nation," he added.

The first winner, Maxine Walker, is now a member of the science faculty at Butler. Her engagement to be married was announced recently.

The 1958 winner is accompanied by Mrs. Mary Burkhardt, home economics teacher at Butler. Mrs. Burkhardt also sponsored Miss Walker in 1953.

In other years Butler High has placed 3 runners-up and 1 regional winner in the contest, sponsored by the National Cherry Growers Association.

Other winners were Shirley Sanders, southern regional winner in 1952; Evelyn Dailey, southern regional runner-up in 1954, and Wanda Renegar, southern regional runner-up in 1956.

Chamber of commerce official Dan Boone said this morning that plans were being made to honor Barbara on her return. No definite plans have been made yet.

The contest was sponsored by the National Red Cherry Institute, a trade promotional organization. Barbara's prize was a $500 college scholarship, an electric range and all expenses paid for her trip to New York and Washington.

Barbara, who is 5 feet 6 and now weighs 125 pounds, said her secret in cherry pie baking is the use of cream in the crust and tossing the crust mixture lightly with a fork before the dough is shaped.

She used frozen red tart cherries in the filling.

She told newsmen she hasn't done much cooking at home except the cherry pies and that her boy friend, Howard Gentle Jr., 17, hasn't yet tasted one of her creations but he will now.

She said she plans to use the scholarship to continue her education in home economics at Auburn after graduation from S. R. Butler High School.

She summed up her feelings about her victory in these words:

"It's the most."

CONGRATULATIONS

It's no mean honor that has come to Barbara Chisholm of Butler High School, who yesterday won the national cherry pie baking contest.

She won over 49 girls and a lone boy from the 48 States of the Union.

These state winners prevailed over more than 197,000 contestants across the land.

In addition to the great honor and publicity, she will receive a $500 college scholarship, an electric range and an educational trip to New York City and Washington.

Congratulations to her; to her teacher, Mrs. Mary Burkhardt; to Prof. Homer Crim and all the faculty and students of Butler High School. They deserve them.

"Wild Bill" of the Plains

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from Coronet magazine for February 1958, regarding one of our beloved fellow colleagues, Senator WILLIAM LANGER. I found the article interesting, and I think that most of my colleagues will also.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"WILD BILL" OF THE PLAINS

(By Irwin Ross)

WILLIAM "WILD BILL" LANGER, the senior Republican Senator from North Dakota, has earned the reputation of being the oddest member of that august body of United States lawmakers.

When Winston Churchill was expected to visit the United States in 1952, for instance, the Senator, who has an old isolationist's suspicion of the British, promptly dispatched a telegram asking the pastor of the famed Old North Church in Boston to hang two lanterns in his belfry—to warn the citizenry in the same fashion that Paul Revere had been alerted in 1776. "Believe our fellow countrymen should be equally warned and alerted today," wired an alarmed LANGER.

A year ago, just as a Senate committee meeting was about to begin, "WILD BILL" announced to his colleagues that a song had recently been written about North Dakota. He proceeded to sing it to a rapt audience. Then he asked Senator ESTES KEFAUVER if he cared to render the Tennessee Waltz. KEFAUVER declined.

His colleagues never know quite what to expect of "WILD BILL." In the Senate since 1941, he has left the disconcerting impress of a personality that is at once imprudent, gaily irresponsible, arrogant, kindly, and high minded.

He has many critics, few enemies, some admirers and no followers in the Senate.

Physically, the 71-year-old LANGER is a hulking, shaggy, gray-haired man with a large nose, bushy eyebrows and deep-set eyes. When aroused by a pointed question or implied rebuke, he still pounds his desk with an enormous fist and emits a bellow of annoyance.

LANGER'S eccentricities are as famous as his tirades on the Senate floor. He never smokes or drinks, but has a passion for chewing cigars in their cellophane wrappers. He is beguilingly absent minded and never embarrassed when caught in the act of strolling out of the Senate cloakroom with a colleague's overcoat, which has led to the remark, "He wears no man's collar, but any man's overcoat."

Though a lifelong Republican LANGER is like no other Republican who bears the label. In domestic affairs, he votes with the liberal wing of the Democratic party; in foreign affairs, he votes neither with the Democrats nor with the modern Republicans, having a thorough disdain for all the international commitments this country has assumed since World War I.

He voted against lend-lease, against selective service, against the reciprocal trade agreements. He was 1 of 2 Senators to vote against the United Nations. He opposed all foreign aid appropriations except UNRRA.

Such views, while more extreme than those of many of his constituents, have always appealed to the predominantly isolationist sentiment in his home State. So does his liberalism in domestic politics and his anachronistic railing against Wall Street and big money. For the wheat farmers, always suspicious of eastern bankers, have never forgotten the beating they took in the depression.

The key to Langer, in short, is that he is an old-fashioned agrarian radical. But no label really fits him. An agrarian radical he may be, but he has also frequently sided with union labor—he opposed the Taft-Hartley Act, for example—a cause hardly dear to a farmer's heart. Similarly, he has always been strong for civil rights, and equally impassioned in defense of the filibuster—a unique combination of views in the United States Senate.

"I'm for the filibuster 100 percent," he says. "Why? This is the only place left in the world for untrammeled debate. You limit debate on a civil-rights law, and you may find the big business lobby trying to pass a law against the farmers."

Langer's contradictions hardly trouble his constituents. In 1952 they reelected him with his largest majority ever. His basic strength is that they regard him as representing their interests—corporately and individually. He is indefatigible in doing favors for them—interceding with Government bureaus, helping with a pension problem, staving off a deportation.

Typical of the man was the way he got into the Dixon-Yates investigation, which became one of the major Democratic battle cries during the first Eisenhower administration. The bizarre operations of the Senatorial seniority system, after the 1952 Republican sweep, had made LANGER chairman of the Judiciary Committee—an appalling development to orthodox Republicans. LANGER also made himself chairman of the Antimonopoly Subcommittee of the full committee and hired as counsel an energetic, liberal lawyer named Sidney Davis.

He asked Davis, "What do you think will be the toughest lobby to tackle?"

"The power lobby," said Davis.

"Well, let's fight them," said LANGER.

The Senate Rules Committee, however, disagreed with LANGER's judgment and withdrew its $75,000 grant when it discovered what he was up to. Whereupon LANGER put Davis on his personal staff and cheerfully carried on without any funds at all.

Before long, Davis had come across the administration's project to have the Messrs. Dixon and Yates build a privately owned powerplant in the TVA area and thus undercut that monument to public power. The subsequent outcry went on for months, and ultimately the Dixon-Yates plan was killed. It was a major defeat for the administration, in which LANGER gloried.

Part of the LANGER legend is the enormous resourcefulness of the man. Back when he was North Dakota's attorney general, he was a brash young man eager to make a reputation as a crusader. The city of Minot was a tough, wide-open town, and he decided to give it a real cleaning. He went there incognito, accompanied by 51 private detectives disguised as workingmen.

In 3 weeks, they gathered all the necessary evidence. LANGER then staged a trial raid and discovered that as soon as his men entered a house of prostitution, all the other joints in town were alerted by phone.

The next night, when his big raid was scheduled, LANGER marched up to the telephone exchange with three armed men and took possession. The telephone company's lawyer then got another armed band and laid siege to the building. By the time LANGER was thrown out, the raids were over and 156 people had been arrested.

In his moment of triumph, LANGER found himself under arrest by city police on a charge of inciting a riot. Acquitted, he was promptly rearrested for illegally seizing the telephone lines. Once again he won his freedom and left town a hero to all the solid citizens.

Nothing in LANGER's early life foreshadowed the flamboyance of his mature career. He was born on a farm in Cass County, N. D., on September 30, 1886. He attended a country school, then grade and high school in nearby Casselton. At the age of 15 he worked on a neighbor's farm; and boasts in the Congressional Directory that as a result of his ability to handle large crews of men he was appointed foreman.

But his real achievements were scholastic. He graduated from high school at 16; 2 years later he had gotten through the law school of the University of North Dakota and passed the bar exams.

He was too young to practice, however, and so his parents packed him off to Columbia University, where he enrolled as an undergraduate—a surprising reversal of the normal academic routine.

After graduation, LANGER was offered a job by a well-known New York law firm, but preferred to return to North Dakota. He started practicing in Mandan and was soon up to his neck in politics. In 1914, he was elected State's Attorney for Morton County, 2 years later he became Attorney General for the State. In 1918, he married Lydia Cary, a girl he had met at a concert in New York; they subsequently had four daughters.

LANGER's early political career coincided with the rise to power of North Dakota's Non-Partisan League, a militant organization, founded by Socialists and others, which proceeded to capture the Republican Party. The League's program was considerably to the left for the times and designed to free the wheat farmers from the economic squeeze imposed by the private millers.

BILL LANGER, though himself hardly an oppressed farm boy and never a Socialist, became a League firebrand. In 1920, he was defeated for Governor.

For the next 12 years he held no elective office. Then in the early thirties, when half the State's farmers were on relief, he revivified the old Nonpartisan League and in 1932 was elected Governor.

His tenure in office was stormy. To his impoverished constituents, he was a hero; to the moneyed interests, a threat. He established an old-age pension system, declared a moratorium on farm mortgages, embargoed wheat shipments from the State until the price was pushed from 49 cents to 72 cents a bushel, and was boisterously high-handed in defending the underdog.

Oddly, despite his long record as a progressive Republican, LANGER was no friend of the New Deal. The New Dealers, on their side, openly distrusted him. Federal investigators came up with accusations that LANGER and his followers were putting pressure on employees in Federal relief agencies to subscribe to the Leader, the Nonpartisan League weekly. The Governor was thereupon brought to trial in Federal court, convicted and sentenced to 18 months in jail.

This was the low point in the LANGER career. He appealed the verdict, but meantime was removed as Governor by the State supreme court. Moreover, he was also not permitted to practice law and had to borrow money to live on.

When his case finally reached the United States circuit court of appeals, the conviction was reversed. A second trial resulted in a hung jury. The third acquitted him.

Thoroughly rejuvenated by this brush with political death, the following year LANGER again ran for governor and was reelected.

In 1940, he made his first try for the Senate and won easily. But before he could take his seat, a group of opponents petitioned the Senate to exclude him on grounds of election fraud and other corruption. The Senate allowed LANGER to take his seat provisionally, while the Committee on Privileges and Elections investigated his case.

The probe dragged on for months, and in the end the committee voted 13 to 3 to unseat him. (Every Republican voted against him.)

LANGER was saved, eventually, by the oratorical skill of redoubtable Republicans like Senators Tobey and Taft who argued, in sum, that it was unfair to throw out a man after the voters had examined the same charges in many elections yet always returned him to office. The full Senate reversed its committee and kept "WILD BILL" in his seat.

He has been there ever since—a thorn in the side of the Republicans and a source of endless perplexity to the Democrats. And he has solid accomplishments to his credit—notably improvements in the operation of Federal penitentiaries and an upward revision, some years ago, in the pay scales of postal employees. To lawyers seeking help for underprivileged clients, he is regarded as the softest touch on Capitol Hill.

On occasion, his lack of discrimination has brought LANGER vigorous criticism—as when he held up the deportation of alien Nazis by putting in private bills; and when he spoke at an alleged Communist-front meeting in behalf of Morton Sobell, who was convicted in the Rosenberg spy case.

"I didn't appear in behalf of Morton Sobell," LANGER explains. "I appeared to help him raise money for his defense. Sobell has the right to appeal to a higher court."

But what about appearing on an alleged Communist platform? LANGER shrugged amiably. "It was the principle that counted."

No other Senator could get away with so quixotic an attitude. But LANGER's towering eccentricity seems to beget forgiveness—or indifference.

A final question in regard to LANGER is inevitable: Why does he remain a Republican?

His answer is blandly decisive: "I believe that I'm one of the best Republicans in the Senate."

Clergy Urges Support for Foreign Aid

EXTENSION OF REMARKS

OF

Hon. EVERETT McKINLEY DIRKSEN

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, February 26, 1958

Mr. DIRKSEN. Mr. President, this being Brotherhood Week, I think it is interesting to note an article in the past Friday morning's Washington Post stating that religious leaders of four major faiths—Protestant, Catholic, Jewish, and Eastern Orthodox—urge support of the administration's $3.9 billion foreign-aid program. I ask unanimous consent that this article be inserted at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CLERGY URGES SUPPORT FOR FOREIGN AID

Religious leaders of four major faiths—Protestant, Catholic, Jewish, and Eastern

Orthodox—yesterday urged support of the administration's $3.9 billion foreign-aid program.

The statement was issued through the Foundation for Religious Action in the Social and Civil Order, of which the Reverend Charles W. Lowry is chairman. The Reverend Edward R. Elson, minister at the National Presbyterian Church here, is cochairman.

"For the United States to discontinue or cripple its mutual-security program would please the Communists more than any one thing I can think of," said the Reverend Norman Vincent Peale, minister of the Marble Collegiate Church, New York City.

Rabbi Norman Gerstenfeld, minister of the Washington Hebrew Congregation, said foreign aid "is not only good religion but enlightened self-interest."

The Reverend James L. Vizzard, S. J., vice president of the National Catholic Rural Life Conference, said "all people of informed Christian conscience recognize in the mutual-security program our Nation's answer to a religious and moral imperative."

Two Eastern Orthodox clergymen of Washington, the Reverend Demetrios Kalaris and the Reverend John Tavlarides, said that "in the interest of man's welfare and the manifestation of our Christian charity, special support should be given the policies of foreign aid of the United States."

Continuing Rise of Consumer Prices

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. PROXMIRE. Mr. President, the New York Times reported this morning that the Consumer Price Index for January not only reached a new high, but rose more sharply last month than in any month since July 1956. That is more than a year and a half. I call particular attention to a paragraph in this article which states that "even though special factors helped account for the food price increase, today's statistics indicated that the recession has had no impact yet in bringing their rise to a halt."

Mr. President, I think this article constitutes a solid argument against increasing postage rates to 5 cents for first-class users.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONSUMER PRICES RISE TO A RECORD DESPITE RECESSION—INDEX IS UP SIX-TENTHS OF 1 PERCENT TO 122.3 AS FOOD LEADS ADVANCE—BUYING POWER DROPS

(By Edwin L. Dale, Jr.)

WASHINGTON, February 25.—Consumer prices rose sharply to another record in January despite the business recession, the Bureau of Labor Statistics reported today.

The United States Consumer Price Index for January was 122.3 compared with 121.6 in December. The base of 100 equals the price average for the years 1947–49. The rise from last December amounted to six-tenths of 1 percent and was the steepest since July 1956 when the increase was seven-tenths of 1 percent.

Sharply higher food prices, led by fruits, vegetables and meats, accounted for four-fifths of the January increase. But there was also a net rise in the prices of all other goods and services, despite January white sales, declining prices of new cars, and a slight dip in apparel.

BAN MAY BE LIFTED

Thus, even though special factors helped account for the food price increase, today's statistics indicated that the recession has had no impact yet in reducing consumer prices overall, or even in bringing their rise to a halt. Wholesale prices, except for raw industrial items, also have not fallen.

In another development today, Senator WILLIAM F. KNOWLAND, Republican of California, disclosed that the administration was considering lifting its ban on new reclamation projects. The ban was imposed in President Eisenhower's budget and has already aroused Republican ire in Congress.

Senator KNOWLAND talked to reporters after the regular Tuesday meeting of legislative leaders at the White House. He said the Secretary of the Interior, Fred A. Seaton, was present at the meeting and had been requested to review the reclamation picture and make a report.

A special analysis in the budget revealed that the Bureau of Reclamation had only $300 million worth of projects planned to the point where contracts could be let quickly, though planning for $2 billion more worth of projects was in process.

BUYING POWER DROPS

On the price front, Commissioner Ewan Clague of the Bureau of Labor Statistics said the next couple of months don't promise much in the way of lower prices. However, he said he believed that by summer and fall a combination of seasonal movements in food prices and pressures stemming from the recession would bring prices down somewhat.

The January price increase meant automatic wage increases of 2 or 3 cents an hour for 1,350,000 workers with escalator wage contracts, most of them in the automobile industry.

The price increase, together with a further reduction in the average workweek for factory workers, meant another sharp dip in the buying power of the average factory worker's weekly paycheck. The index of real earnings fell 2 percent to 118.5, compared to 124.3 a year ago.

The freeze in Florida was the main cause of the big increase in fruit and vegetable prices in January, Mr. Clague explained. He attributed the rise in meat prices to lower marketings of cattle and hogs. Both reflected reductions in supply rather than increases in demand, he noted.

Elsewhere, price increases were recorded for gas and electric utilities, rents, fuel oil, sporting goods, newspapers, group hospitalization, hospital rates, face cream, toothpaste, barbers, beauty shops and automobile insurance. Some of these increases were limited to individual cities, but still affected the nationwide index.

Lower prices were recorded for eggs, home furnishings, apparel and new and used cars. The home furnishings decline included price reductions for household textiles, vacuum cleaners, washing machines, toasters and some furniture.

Despite the drop in new-car prices as dealers widened discounts from list prices, the buyer still paid about 2 percent more for a new car in January than a year ago. This was because of a 4-percent increase in the factory list prices of the 1958 models.

Since the current wave of consumer price inflation began in April 1956, prices have risen from 114.7 on the index to last month's 122.3. Over the 21-month period they have risen every month but 3, and in 2 of those they remained stable.

Mr. Clague stressed that the Consumer Price Index was a lagging economic indicator and that it reflected basic business conditions only belatedly. He said he expected consumers ultimately to benefit from wholesale price reductions in such items as rubber, copper, lead, zinc, hides, and wool.

The index measures price changes in a fixed market basket of goods and services usually bought by city families of moderate incomes.

PRICES AT RECORD HERE

Bad growing weather for foodstuffs and a continued rise in the prices of many services during January combined to send the New York City Consumer Price Index to a record level after 5 months of relative stability.

The January index was 120, or 20 percent above the 1947–49 level, Robert R. Behlow, regional director of the United States Labor Department's Bureau of Labor Statistics, announced. This was a rise of 1.1 percent from the 118.7 level of December 1957. It was the largest since the 1.2-percent increase of July 1952.

Transportation costs remained unchanged. Apparel prices, overall, declined three-tenths percent here. All other groups contributed to some degree to the rise. But the principal push came from the food group, the prices of which rose 2.4 percent overall here.

Fruit and vegetable prices rose 13.1 percent in January. Fresh green beans more than doubled in price soaring 24 cents a pound. Tomatoes were up 9 cents a pound. Oranges rose 6 cents a dozen, frozen orange juice more than 5 cents a 6-ounce can. Lettuce rose 3 cents a head. Bananas rose 1.5 cents a pound.

Meats and poultry also rose in price. These price rises included chickens, up 1.5 cents a pound; leg of lamb, 5 cents; pork chops, 3.5 cents; ham, 5 cents; round steak, 3 cents; bacon, 2.5 cents; and veal cutlets, 7 cents.

Price decreases were shown for sheets, women's coats, men's shoes, and new automobiles.

United States

	Index for January 1958	Percentage change from—		Point change from December 1957
		December 1957	January 1957	
All items	122.3	+0.6	+3.5	+0.7
Food	118.2	+1.8	+4.8	+2.1
Housing	127.1	+.1	+2.7	+.1
Apparel	106.9	−.7	+.5	−.7

Is Recession Talk Healthy?

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. SPARKMAN. Mr. President, many divergent views are expressed by the economists these days regarding the current recession. I believe there is one thing upon which they all agree and that is that there is a recession.

It was noticeable that in the hearings before the Joint Economic Committee, with the exception of a few of the Government officials, all of the witnesses talked freely about the recession and had no reluctance in referring to it as a recession.

We are told by a great many people that we should not talk about it. Some take the attitude that even to admit that there is a recession is dangerous. Personally, Mr. President, I see no need of becoming panicky, but I believe we ought to be willing to look at the facts in the case and accept them for what they are. When we do this, we should resolve to take every step necessary to stop the present downslide in our economy. I believe it can be done if we act timely and forthrightly.

One of the best economic writers is Sylvia Porter. She has been quite realistic in her discussion of this recession. In yesterday's Washington Evening Star she wrote a column entitled "Is Recession Talk Healthy?" It is a sensible column. I commend it to the reading of every Senator. Therefore, I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IS RECESSION TALK HEALTHY?

(By Sylvia Porter)

Never has a business downturn been so widely advertised or elaborately documentated as this decline of 1957–58.

I have been thumbing through newspapers published during previous important business setbacks—the collapse of 1929–33, the slump of 1937–38, the mild recessions of 1948–49 and 1953–54.

Certainly, stories were printed about drops in production, employment, sales in those periods. But the publicity about the previous slides was picayune in comparison with the publicity now being given to the business statistics.

News about this recession is prominently publicized every day. Jobless figures hit the front pages, are not buried in the back sections. Cities in distress are listed in detail. Retail sales are charted weekly. Production decreases are headlined. So it goes.

We know we are going through a general business retreat, that we have been experiencing one for months, that it is the responsibility of Government to do all it can to cut it short.

THEORIES ON PUBLICITY

Is the wide advertising about the recession healthy? Is the publicizing of the facts good or bad for the economy?

These are hardly superficial questions. There is a large group—including professional as well as amateur economists and public-relations men—which insists advertising of the recession is unhealthy, publicizing of the facts is bad.

This group argues even mention of the word "recession," frightens businessmen into pulling back on plans, scares consumers into reducing buying. This group insists the bad news in itself will intensify bad news.

I am not a member of this group. I believe the advertising is healthy, the publicizing of the facts is good for the economy. Here's why:

1. Because we know the facts, there is no danger that a sudden shock will smash confidence. We have been informed about the decline, we are aware of its proportions and there is no threat of panic.

One reason the violent depression of 1929–33 went so far and lasted so long was that we didn't have the facts. In 1929, we had nothing approaching our present statistics on incomes, production, installment debts. In 1929, figures on unemployment were wild guesses. In 1929, the Consumer Price Index was computed only twice a year, came out so late that it was valuable only as a record of what had happened long before.

HOOVER RECALLED

Thus, President Hoover could assure us prosperity was just around the corner—even though millions were jobless, going bankrupt, losing their homes. We didn't know what was happening until the situation became chaotic. Then the shock was devastating and the panic was on.

2. Because we know the facts, we are in a position to demand action to cushion the drop and to take action to revive business.

The knowledge of recession is behind the rising clamor for antislump tax cuts, major public-works programs, expanded jobless benefits, constructive foreign trade policy. In prewar days, we couldn't formulate antirecession programs because we didn't have facts on which to base the programs.

3. No one can fool the man out of a job or the man losing sales or the neighbor and families of this man anyway. It's futile—in fact, it's downright dangerous—to try.

It is my firm conviction that our awareness and our determination to cushion the recessions of 1948–49 and 1953–54 helped keep them mild. It is my firm conviction that our awareness and determination to act will help us handle this decline properly, too.

Farm Conditions

EXTENSION OF REMARKS
OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, February 26, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the GTA Daily Radio Roundup, prepared by the Farmers Union Grain Terminal Association, February 10 through February 13, 1958.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

GTA DAILY RADIO ROUNDUP, FEBRUARY 10, 1958

The family farm—is it in trouble? What can be done to help save it? GTA has been working to get the answers for a long time. Through the GTA Family Farm Survey, facts and figures have been gathered on more than 4,000 family farm operations typical in the GTA area. These findings cover 7 full years of farming—1950 through 1956. They've shown farmers in trouble, in all too many cases forced to throw in the towel and quit farming. Further, GTA has been pointing out time and again the fact that farmers cannot depend on the free market, to get prices they can survive on. Better farm programs are needed. That has been the position of this grain cooperative, owned by the farmers themselves.

Now, it's heartening to see others coming to lend a helping hand, and to get this story of the plight of farm families across to the people in the towns and cities. More and more people, for instance, are reading and talking about that series of articles in the Minneapolis Tribune, describing what is happening to our small towns, and the Main Streets, where cash registers don't ring like they used to, because farmers are going broke, and fewer and fewer are around to trade in these towns.

And, we'd recommend also that you read what Prof. Phil Raup, an agricultural economist at the University of Minnesota has to say about these schemes to move farmers off the land wholesale, as a way to solve all our farm problems and our food problems. We'll tell you more about that later in another broadcast.

Right now, we want to mention a book that can help give some sensible answers to some serious farm questions. The book goes on sale today. It's called, Farm Prices—Myth and Reality. The author is Dr. Willard W. Cochrane, professor of agricultural economics at the University of Minnesota. Professor Cochrane explodes the great myth of the so-called self-sufficient farmer. He labels as just a myth the theory that if agriculture is left alone it will stabilize at some desirable level.

In his book, he comments that the free-market approach to reducing farm surpluses seems to appeal particularly to economic logicians and others who aren't affected by the free market. He includes such people as publishers of newspapers enjoying local monopolies and chairmen of boards of corporations producing monopolistic products.

This is one book that every member of Congress ought to have and read and understand. Maybe it would be a good book for each of the 10 candidates who are running for Congress in tomorrow's special election in Minnesota. It's the First District, you know—a farm area, and a good one, in the southeastern part of the State. These candidates—Republicans—who are trying to repudiate Secretary Benson and Democrats, who say that the only way to repudiate Benson is to repudiate Republicans—all of these candidates ought to read Dr. Cochrane's book. And, especially the two who win in the primaries and make the runoff on February 19.

We'll certainly try to send a copy of Farm Prices—Myth and Reality at least to the two winners as a special gift of the farmers. It's important, because the whole Nation is watching now to see how the Republicans and Secretary Benson and the Democrats will get along with farmers in the fall elections.

The thousands of farmers who own GTA and make these broadcasts possible thank you for listening. This is GTA, the co-op way.

GTA DAILY RADIO ROUNDUP, FEBRUARY 11, 1958

Can the farm problem be solved by pushing a certain number of farmers off the land and into jobs in the cities? You've all heard this advanced as a cure-all for what ails agriculture. Latest and most prominent source was a businessmen's group that calls itself the Committee for Economic Development—or CED, for short.

Last December CED put out a report with widespread coverage by the press, and it recommended, in a nutshell, that price supports be dropped below disaster levels and so-called marginal farmers be resettled in city jobs. The survivors were then to enjoy prosperity. Is this a good idea? Carl Rowan, a reporter of the Minneapolis Tribune, has written a series of articles on the plight of farm families and how the loss of farm purchasing power is hurting Main Street. In the course of his interviews, he's brought up this question of whether getting rid of farmers is the happy answer to the farm dilemma that its advocates claim it is.

First, Rowan talked to people out in the country, and he reported that he found the proposal "not overly popular in our farming areas." Rural people, he said, called the idea everything from a "dangerous step for

the Nation's economy" to a "prize suggestion" that farmers be "moved to more rewarding jobs that don't exist." A look at unemployment figures from big cities will help tie down that point.

What does a country editor think of the idea? Rowan quotes the Springfield Advance-Press as saying that if the farmer loses his support program "in an economy where everyone in one way or another is subsidized" then thousands of factories, shops, and stores will have to close in both big cities and small towns, with unemployment the reward for both workers and farmers.

Then, Rowan talked to a University of Minnesota professor of agricultural economics, Dr. Philip M. Raup. He asked, what about this assumption that the farm problem will solve itself once the land is free of marginal farmers? Raup replied that this may turn out to be the most tragic kind of wishful thinking. Raup went on: "We have several counties which are not wealthy enough now to provide adequate services. What will it be like when they plow under the little farmer? "They are going to find that they are also plowing under some little businesses, some little towns, some little governments, and so forth."

Furthermore, Professor Raup says, it is a big mistake to assume that managerial ability is the sole test determining the survival of a farmer. He says many other factors enter in, over which the farmer may have little or no control, and which push toward success or failure.

We haven't time on today's program, but if you'll tune in tomorrow, we'll outline the factors which Professor Raup says have so much influence on family farm survival. And thanks for listening to GTA—the co-op way.

GTA DAILY RADIO ROUNDUP, FEBRUARY 12, 1958

Some of the problems facing the family farms and Main Streets of America have been forcefully presented by writer Carl Rowan in a series of Minneapolis Tribune articles. To find some answers to the rural problems, Rowan then talked with Dr. Philip Raup, professor of agricultural economics at the University of Minnesota. Raup said that just being a good manager today doesn't assure a farmer of success. The spread between profit and loss is so small, the farm situation so crucial, that the accident of family status can even be the key factor, Raup explained. He gave the example of one farmer on a half section who may lose money, while the farmer on the adjacent half section shows a fair profit.

But, what the books don't show is that the farmer with the profit happens to have two teen-age sons, a ready-made source of free labor, while the farmer who loses money may have two daughters, or sons who are away from home, and thus not available for labor. And, when you add a minor "accident" like this to differences in managerial ability, credit supply, or the accident of location, it becomes clearer that farm mortality is not a matter of survival of the fittest. Too many other things enter into the picture. Raup added that the real tragedy of our rural areas may be the fact that so many people have resigned themselves meekly to the notion that what is happening is inevitable.

Reporter Rowan seconded this statement. He said he found the feeling of inevitability to be widespread, even in some of the towns where business development corporations have been formed to attract industries. Raup made the point that this meek resignation to the inevitable is disastrous. The result, he said, is that we get decay by default. But, he emphasized that, "We can do something about it. The question is, What are we going to do about it?"

He lashed out at the idea that the answer is simply moving a certain portion of people off the land. This talk, he said, is based on the assumption that income will be divided among fewer people who will produce less, thus solving the surplus problem and raising the level of family income. "The error here is that the land factor is neglected," Raup explained. "We have no reason to believe that technological progress will stop, so if the land is still there, we may find fewer farmers producing more, not less. In that case, the surpluses will continue and income will remain low."

To help the family farm, Raup wants to see a rural credit system that doesn't belong to the horse-and-buggy age. And, he deplores having "suitcase" farmers who are helping drive land prices up. He said he was referring to doctors, lawyers, and merchants who are taking advantage of their superior credit position to invade the field of farming. Raup wound up his discussion with reporter Rowan by saying that, "No matter what, we ought not to be bashful in talking about ways of getting farm income up."

That's the real need—to get farm income up. It's the chief objective of GTA, the co-op way.

GTA DAILY RADIO ROUNDUP, FEBRUARY 13, 1958

Last year, President Eisenhower's farm at Gettysburg, Pa., got Federal payments under various farm programs totaling up to about $4,000. The President has a good farm there, nationally famous, and his farm manager qualified portions of the land under the soil bank, and so forth. But, it does serve as an example, to point up some flaws in present farm laws, which allow, in many cases, payments larger than the entire net income of most family farms. The latest GTA family farm survey, for example, shows that the average family farm in this area had a net income in 1956 of only $3,000, before taxes.

A columnist for the St. Louis Post-Dispatch commented on payments like these recently. He observed that this $4,000 of net income paid to a nonworking farm was more net income than was earned by 90 percent of America's working farmers last year. Now, this writer asserts that farms like the one at Gettysburg are in no sense working farms, because they are not operated to earn a living for their owners. A hobby, or a pleasant place to live, yes. Or perhaps as an investment, or in certain cases for the purpose of establishing tax losses. He says there are thousands of these farms operated in the country today. And, he maintains that there is something wrong with a program that enables nonworking farmers to collect more money from Government for literally doing nothing, than working farmers with their life's capital invested and putting in a 50- to 70-hour week are able to earn from their entire operation.

He goes on to point out the big investment required to farm and the many hours of labor it takes. Says he is talking about that group of family-sized farmers who produce a big part of our food supply—doing it with investments, on the average, of $50,000 or more in land, equipment, and livestock. These are farms, he adds, that require from 300 to 600 man-days of labor per year. Let no one call this kind of farmer "marginal," declared this writer.

He summed it up this way: "When we say that a farmer operating a business of this size and kind is marginal, that he is not fully employed, that he should go to town and get a job and run his farm on the side, or that he ought to give his farm to some big operator who can run it efficiently, we are plainly talking through our hats." But, he adds, "This is the kind of talk we hear on all sides today, no little of it coming from the Department of Agriculture, various economists, and at least one large farm organization that has come to represent big farmers."

We, of course, agree wholeheartedly with this writer for a big city newspaper. He's got an appreciation of the fact that the farm family deserves a lot better break than it's been getting for its contribution to the Nation's welfare. His views deserve the attention of Senators and Congressmen, particularly, for it's up to them to write the laws to give the needed help to America's working farmers.

Changing Agriculture in the United States

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. TRIMBLE. Mr. Speaker, on February 3, 1958, Dr. Lippert S. Ellis, dean of the College of Agriculture, University of Arkansas, made an inspiring and instructive address to the Association of Southern Agricultural Workers, at Little Rock, Ark.

This address has so much value that I want to insert it in the RECORD as a part of my remarks.

CHANGING AGRICULTURE IN THE UNITED STATES [1]—AN ADDRESS BY LIPPERT S. ELLIS, DEAN AND DIRECTOR, COLLEGE OF AGRICULTURE AND HOME ECONOMICS, UNIVERSITY OF ARKANSAS

Farming in the United States represents an important factor in the Nation's economy. But this business of farming is made up of many small, competing units. A recognition of these two fundamental facts is essential to an appreciation for the importance of agriculture to our total economy and for an understanding of the problems facing a rapidly changing industry.

Realized gross farm income in 1956 was over $34 billion. Compare this with the income of General Motors Corp., our largest industrial enterprise, that had sales of a little less than $11 billion in 1956. Agriculture, including production, processing, and marketing of farm commodities, accounts for approximately 40 percent of the total disposable income of the United States. The Bureau of Labor Statistics of the United States Department of Commerce has estimated that 41.1 percent of the disposable income of United States consumers is spent for food and clothing.[2] Another 4.1 percent is spent for tobacco and alcoholic beverages which have their origin in agriculture.[3] Without question, this agricultural industry of ours is an important factor in the economic life of our country. This is entirely aside from the fact that it is from the land and those who manage it that we secure most of those things that make up our food and clothing.

Agriculture, taken as a whole, is a significant factor in the economic life of this country. But the agriculture of this country is made up of relatively small, competing units. As a matter of fact, there are about 4.8 million of them. This means that the bargaining power of agriculture is relatively low compared with that of big business and organized labor. This is one of the funda-

---

mental problems facing the agricultural industry.

A CHANGING AGRICULTURE

The significance of the business of farming to the welfare of this country is well understood by members of this association. The changes which have been taking place in agriculture are likewise well known to those present here this morning. There is evidence, however, that the farm problem is not well understood by many urban dwellers. A step toward an understanding of the farm problem is an appreciation of the changes which have taken place within the industry in recent years.

These changes have not even been recognized by some. The real significance of some of the changes has not been appreciated by others. It seems appropriate, therefore, that we at this convention give some thought to the changes which have taken place. But we should not stop there. We need to consider the problems which a rapidly changing agriculture faces in its relations with other elements in our society. Hence the general theme Public Relations for a Changing Agriculture for this conference.

It is intended that my paper today will serve as a background for Dr. Miller's presentation tomorrow. I want to list some of the changes and touch on their significance. Dr. Miller will deal more specifically with the question of public relations.

FARM POPULATION AND RURAL INFLUENCE

One of the most obvious and yet most significant changes on the American agricultural scene is that of population. While total United States population has increased from 106 million in 1920 to 172 million in 1957, farm population has declined from 31.4 million to 20 million during the same period. Farm population now accounts for 12 percent of our total population.

At the time of the first census in 1790, the farm population accounted for 80 percent of our total population. In appraising the current situation, we need to remember that the shift of population from the farm to industries, the trades, and the services has been going on for a long time. However, the rate increased tremendously in the years after 1940. Between 1940 and 1957 farm population declined from 30 million to the present 20 million.

At this point it is well to pause and remind ourselves of the influence which the predominately rural population has had upon the development of this country. Dr. B. W. Allin has described the American creed as a blend of three principal dynamics, namely, belief in enterprises, belief in democracy, and belief in technology. Dr. Allin goes on to say, "The social and economic institution in America that provided the fertile seedbed for the growth of the American Creed was family enterprise in an environment of abundant opportunity, and the family farm was the most widespread application of family enterprise. * * * Responsibility for management encouraged independence of thought as well as deference and respect for the opinions of others."[4]

This influence has been reflected in many ways. It is seen in the rural-reared leadership found in all aspects of our society. It is seen in the early activity of organized farmers in securing regulatory controls to curb monopolies and to regulate freight rates, to the end that a greater share of the national income be returned to farmers. An example of early political effectiveness of farmers was the railway legislation or granger laws of the 1870's. These laws eventually resulted in the Interstate Commerce Commission. Farmers have exerted and still are exerting political influence. Some believe such influence will diminish as farm population continues to decline. This need not necessarily be the case. The extent of political influence to be exerted by farm people will depend more upon how farmers use their potential than upon mere numbers. Farmer influence will depend upon the type of organizations he develops and upon the type of men and women he chooses to place in position of leadership. It will depend upon the character of the lobbies these organizations maintain at the national level. It will depend upon how well the membership of organized groups are informed both politically and economically. Dr. Allin has pointed out that "1 politically and economically alert farmer is worth 100 of the other kind and that their number can grow much faster than the total number of people on farms is declining."[5]

This places a very special responsibility on farm organizations to see to it that their members are well informed. The extent of agricultural influence will depend in no small measure on how effective the industry is in informing the general public with respect to its problems and its position in the general economy of the country.

FARM LABOR FORCE AND AGRICULTURAL EFFICIENCY

At the same time that farm population was declining, the labor force on farms quite naturally declined, also. The number of workers on farms declined gradually from 13.5 million in 1910 to 9.5 million in 1940. Since 1940 the decline has been very rapid, reaching 5.8 million in 1957. The farm labor force now represents 9 percent of the national labor force.[6]

Industries and the services have continued to absorb the manpower released from agriculture. But we all know how farm production has continued to climb. Actually, farm production has increased an average of 2 percent per year, a rate somewhat higher than the rate of increase in total population. In other words, the efficiency of the American farmer has continued to rise. The output per man-hour of farm labor has nearly doubled in the past 15 years. The end of this upward trend in the production per farm worker is not in sight.

The increase in the output per farmworker is likely to continue as long as farm managers are free to make use of the new technology which is being made available through research and education. For this reason, caution should be used in formulating farm programs which interfere with the managerial responsibility of the farm operator. In addition to the use of technical information, the increase in output per farmworker is the result of the substitution of mechanical energy for human labor; an increase in the use of capital; an increase in the size of farm; and an increase in the competence and importance of management.

The average farmworker today produces as much in one hour as he did in two hours in 1940. It required three hours for him to produce the same amount in 1910. The vast expansion in demand following the outbreak of war in Europe, with the accompanying favorable prices, accounted for the rapid increase in productivity after 1940. Rising prices and incomes enabled many farmers to adopt new techniques which they were not able to afford in the years during the depression. The important point for consumers to remember is that the farmers of the United States have continued to increase their efficiency and that the benefits have been passed on to consumers.

SIZE OF FARM INCREASING

The increase in the productivity of agriculture in this country has been accompanied by a decreasing number of farms and an increase in the average size of farm. The total number of farms declined from 6.4 million in 1910 to 6.1 million in 1940. This was a decrease of 300,000 in 30 years. But during the 14 years after 1940 the number of farms decreased 1.3 million down to 4.8 million in 1954.[7] The size of farm has risen from an average of 138 acres in 1910 to 242 acres in 1954. For those who are attempting to understand the farm problem, note should be taken of the fact that the number of farms and the number of persons living on farms have been declining at a rapid rate since 1940. These are not new phenomena peculiar to the agricultural situation of the 1950's, but the rate has increased greatly since 1940.

But these figures and comparisons do not reveal the true problem facing the agricultural industry of this country. A breakdown of the farms by type will come nearer revealing the underlying problem represented in the number and size of our farms. Of the total of about 4.8 million farms, there are about 2.1 million commercial farms that sold products valued at more than $2,500. These account for 91 percent of the value of farm products marketed in the United States. In other words, about 44 percent of our farms sold products equal to 91 percent of the value of all farm products produced and marketed in the United States. The problem for this group of 2.1 million commercial farmers is how to secure bargaining power in an economic society dominated largely by big business and big labor.[8]

But what of the other 56 percent or 2.7 million farms? Of them, 0.9 million can be classed as residential farms, occupied by retired persons who are not dependent upon the income from the farm for their livelihood or by persons having a business in town but who prefer to live in the country. These farms accounted for 0.26 percent of the market value of farm products. They do not constitute a serious factor in the overall farm problem except as the produce from them may represent a competitive factor in the market.

Of the remaining 1.8 million farms, about 1.2 million are operated by full-time operators and about 0.6 million by part-time operators. In general, these are the small, undercapitalized farms that have not been able to take advantage of modern technology or to make use of laborsaving equipment. This 37 percent of our farms produced less than 9 percent of the farm products going to market. The problem for this group of 1.8 million farmers and their families is one of adjustment.[9]

For those of us in the South, it should be noted that there is a heavy concentration of these small, low-income farms in the southeastern part of the country. Other smaller concentrations are found in the north central lakes' region and in the extreme northwestern part of the country.[10]

DIVISION OF RETAIL FOOD DOLLAR

Well, there are many other aspects of this changing agriculture that need to be recognized by the general consuming public. All of them cannot be discussed in the limited time available on this occasion.

Consumers, I know, are concerned with the high price of all commodities, including those in their food budget. Consumers need to know that the farmer is receiving less of the food dollar now than he did several years ago. For example, in 1945 the farm share of the retail food dollar was 53 cents. In 1951 it was 49 cents. The farmer's share of the food dollar has continued to decline since that time, and in 1957, it was 39 cents.[11] The marketing margin in 1957 of 61 cents represented additional services such as transporting, packaging, processing, and other items representing built-in maid services. It also included the higher labor costs in these items. Prices of food products at the farm have not been responsible for the high prices at the retail level.[12]

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

PURCHASING POWER OF FACTORY LABOR

The purchasing power of an average hour of factory labor has increased with reference to most food products since 1939. In that year the income from an average hour of factory labor would purchase 8 loaves of bread. On a basis of records for the first 8 months of 1957, an hour of factory labor would purchase 11 loaves of bread. An average hour of factory labor during the first 8 months of 1957 would purchase more beefsteak, milk, butter, bacon, eggs, potatoes, oranges, and other farm commodities than could be purchased with the income from an hour of factory labor in 1939.[10]

COST-PRICE SQUEEZE

While a larger share of the retail food dollar has been going for marketing services, and while the food-purchasing power of factory wages has been increasing, farmers have been caught in a cost-price squeeze that has become almost unbearable for large numbers of them. The index of prices received by farmers declined between 1951 and 1955. In 1951 it was 302. By the first quarter of 1956, the index had fallen to 228, but by the third quarter of 1957 some recovery had been made and the index stood at 246. During the same period, the cost squeeze was on. The index of prices paid by farmers stood at 282 in 1951 but with some variation continued to increase until the index was 301 on January 15, 1958. At that time the estimated parity ratio was 82, down from 107 in 1951.

A complete analysis of the nature and effect of the cost-price squeeze on various groups of producers would be impossible in this paper. Any one generalization will not hold true under all circumstances. The prices received by farmers for different commodities have varied greatly. Likewise, the prices of various cost items have varied greatly. However, the cost-prize squeeze has been and still is very real for large numbers of producers. For some it has meant disaster.

But adjustments have been taking place. Some of them have already been mentioned. Since 1940 there has been an average annual loss from the farms of nearly 600,000 persons. Income of farm people from nonfarm sources has been rising steadily since 1935, until now approximately one-third of the total farm income is from non-farm sources. This merely represents an attempt to adjust to the problem created by the cost-price squeeze. Farmers have substituted mechanical equipment for labor. They have increased the size of their farms in order to make more effective use of equipment. They have made use of technical information made available through research and education. These and other means have been taken by farm operators to adjust to the cost-price squeeze with which they have been plagued since 1952. The most efficient operators have benefited by the adjustments, but so have all consumers.

SUMMARY

I have commented very briefly on some of the changes which have been taking place within the agricultural industry in this country. It is to be hoped that the farm problem will be better understood by the general public as time passes.

We have noted the declining farm population, the increase in mechanization, the trend toward larger farms, the increasing importance of the management factor in modern farming, along with the expanding use of agricultural technology.

The consuming public needs to recognize that, along with all of these changes, the efficiency of the American farmer has increased greatly. The consumer has been the beneficiary of that increased efficiency. The consuming public needs to recognize that the prices received by farmers have not been responsible for the prices which have been asked at the retail level.

Also, the consumer needs to appreciate the severe problem facing farmers since 1952 in the cost-price squeeze. While the farmer has been faced with generally declining prices and increasing costs, he has received a declining proportion of the dollar paid for food at the retail level. Consumers need to recognize that an hour of non-farm labor will generally buy more food now than it would a few years ago.

This picture of agricultural change in the United States leads one to the inevitable conclusion that there is a need for:

1. A realistic public-relations program that will interpret agriculture to the public in general.

2. For agricultural groups to work together to achieve a sound national program for agriculture that will give farmers adequate bargaining power in an economic society dominated by big business and big labor.

3. Recognition on the part of organized groups that the strength of agriculture today lies, not solely in the number of farm votes, but in the extent to which the membership of organized groups is well informed and able to speak intelligently on farm problems.

Those of us in agriculture need to accept our full share of responsibility. Only then can we expect the sympathetic understanding of the general public that is needed by agriculture.

Finally, may I add a footnote for the special benefit of those of us who are in the business of training the agricultural scientists of tomorrow? There is a real challenge in this changing agricultural situation for those of us who are engaged in educational work, primarily in our land-grant institutions. We need to take a sharp look at what we are offering the agricultural students of today in our college curriculums. We need to ask ourselves if our course offerings are meeting the needs of the agricultural student who is concerned with a highly scientific and highly mechanized industry that must be operated on sound business principles. It is abundantly clear that farming must be conducted on sound business principles if it is to return a satisfactory living and life.

---

[8] One approach to this is through Government control of production. Another would be through cooperative effort by farmers themselves.

[9] This will mean different adjustments for different farmers. For some it means additional acres in order to have an efficient farm unit. For others it may mean additional capital in the form of livestock, equipment, or other means of production in order to operate on an efficient basis. For still others it may mean employment outside of agriculture.

United States-Soviet Cultural and Educational Exchanges

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Wednesday, February 26, 1958

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by George W. Oakes entitled "Exchange Holds Bright Promise." This article appeared in the Washington Star, on February 9, 1958, and is a very interesting and informative discussion of the operation of the exchange programs in which this country participates.

I feel sure my colleagues will be interested in reading this article, which points out the value of the exchange program in spreading good will and understanding between citizens of foreign countries and citizens of the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Sunday Star of February 9, 1958]

EXCHANGE HOLDS BRIGHT PROMISE

(By George W. Oakes)

The new United States-Soviet agreement on cultural and educational exchanges finds this country with 10 years experience in international exchange programs.

And if the experience is any indication, the agreement will be one cold-war activity from which both sides benefit. For it is almost certain to bring about a beter understanding between the Russian and American people, which can only be to the good.

From the point of view of the East-West competition, the agreement indicates that both parties acknowledge that military and economic strength are not the only weapons. Intellectual and social attainments, the knowledge of which can be spread only through the exchange of opinion-forming individuals, are important, too.

It is clear that the United States and Russia are now competing for global intellectual leadership, with the rest of the world's peoples, the committed and the uncommitted, an interested audience. This gives exchange programs, both between the two nations and with other nations, special meaning.

Just what has been our experience in international exchange over the past 10 years?

SIX THOUSAND A YEAR

The State Department's current exchange activity falls into two main categories: The Fulbright program for teachers, lecturers, research scholars and graduate students, and the leader-specialist program for influential individuals and experts in particular fields.

Six thousand persons a year are currently involved—two-thirds are foreigners coming to the United States from more than 80 countries and the rest are Americans going abroad. In the last 10 years 50,000 exchanges have taken place—36,000 foreigners and 14,000 Americans.

The Fulbright academic program operates as a series of binational efforts between the United States and the participating foreign countries. Joint educational commissions pick 4,000 out of 40,000 applicants and direct their course of study, and academic supervision is in the hands of the Board of Foreign Scholarships appointed by the President from among America's leading educators. Under its direction more than 5,000 private American citizens assist in the program's operation.

Through contractual arrangements with the Institute of International Education and other privately financed organizations, the foreign visitor is able to receive a visiting professorship or fellowship offered by an American university or research institution. Thus the Government's main expense is to cover the cost of transportation.

This meshing of public and private funds has been so successful that it is estimated that more than $10 million of private money here and abroad has been attracted to the academic exchange activity. The actual costs of conducting the academic exchanges, involving currently about 2,700 foreigners and 1,750 Americans, is only about $9.5 million, aside from governmental overhead.

SELECTION IS IMPORTANT

Out of some 40,000 foreign students now in the United States, slightly less than 3,000 are Government sponsored. In contrast to the vast majority who study independently in the United States, the Fulbright program offers the advantage of selecting individuals with specific qualifications who can effectively utilize their American experience when they go home. For example, many courses in American studies have been established abroad as a result of the program.

A recent survey has shown that, on the whole, Government-sponsored foreign students have tended to do better than those here under private grants. This is because the official visitor is usually chosen as the result of competition and because his planned curriculum offers a considerable advantage.

Although many American teachers who have gone abroad for tours of duty in foreign schools have been outstanding in their fields, some competent observers of the academic program believe that often the calibre of foreign professors and teachers visiting the United States has been higher.

FINANCIAL REASONS

There are reasons for this. For one thing it is often difficult to make it financially attractive for an outstanding American scholar to leave his universnity for a year abroad. A professor who accepts a foreign academic assignment may be $2,000 a year out of pocket, because the Government does not pay the cost of dependents' travel or his continuing stateside expenses.

Although such financial sacrifices will often be made for a European post, qualified Americans are less keen to go to Asia, Africa, or Latin America. On the other hand, nearly every topflight academic figure from all parts of the world wants the chance to visit the United States.

Just a few teen-age exchanges occur, and some educators believe that this part of the academic program should be expanded on the theory that an American experience would make a lasting impression on students of high-school age whose ideas have not become too fixed.

The leader-specialist program, concentrating on the exchange of influential adults, is generally agreed to be a marked success.

Ten years ago last month, President Truman signed the Smith-Mundt Act originating this exchange of opinion-formers. Today some 800 leaders, such as Government officials, top figures in education, religion, and labor, editors, parliamentarians, and others visit this country for 60 days each. Also, 200 specialists in fields like public administration, law, public health, and communications spend 4 to 5 months studying their professional interests in the United States. American specialists go abroad for 6 months and establish health clinics or organize recreational facilities.

Three present Prime Ministers visited the United States under the leader program before they assumed office. Gaillard of France, Eghbal of Iran, and Karamanlis of Greece.

These influential tourists, on their return home, pour forth their impressions through speeches, books, articles, and personal discussions. One Japanese journalist not long ago gave 100 lectures after his American tour.

More important, they absorb a feel that is bound to influence their future thinking on all matters affecting this country. As one of them put it, "the fact that I have freedom of movement to see and do almost anything at Government expense except spend the whole time on Miami Beach is most impressive."

AID TO UNDERSTANDING

Not too long ago a Danish editor spent some time in Little Rock and for the first time really began to appreciate what a complicated problem school integration is in a southern community.

Soviet propagandists have used United States race difficulties effectively, yet when influential foreigners see the situation for themselves they have, on the whole, been impressed by the progress being made and find that conditions are much better than they had expected. This result in itself may justify the $5 million spent to bring leaders and specialists to this country.

These are frequently expressed views—in many cases correcting previous misconceptions—that have been expressed by visitors:

That the United States has a genuine culture and deep interest in cultural affairs.

That Americans work hard—especially women in the home despite all the electrical appliances.

That family life and religious life are strong in America.

That Americans are hospitable.

PRIVATE SPONSORS HELP

In more than 1,000 American communities, private sponsors contribute time and hospitality to the entertainment of foreign visitors brought here under the leader-specialist program. And the hosts find that they benefit as much from this contact as the visitor. Groups planning the foreign visitors' tours have been continually impressed by the genuine enthusiasm that exists all over the country for the program. It permits the average citizen to participate personally in foreign affairs.

Here are the suggestions of a particularly qualified individual, an admitted enthusiast, who for many years played a vital role in both the academic and leader-specialist programs:

Stress quality rather than numbers in the exchanges.

Conduct greater research into the backgrounds of exchangees and more intensive followup after the foreigner has returned home.

Although the State Department has requested the same amount of money in the new budget as it now spends on the exchange program—$20.8 million—additional funds would enable more exchanges, especially from the increasingly vital areas of Asia and Africa, to have an American experience. Most supporters agree that the program should be increased perhaps 50 percent over the next few years.

The $20.8 million in the new budget includes $282,000 to finance visits by 35 persons from Communist bloc countries to this country and by 31 Americans to those countries. Under this program, 15 Americans would go to Russia and 15 Russians would come here.

Financing of exchanges under the agreement has not been worked out, since there is no good estimate of how many people will be involved or to what extent the Government will have to foot the bill. It may be that Congress will be asked for additional funds for the new program.

The Federal-Aid Highway Program

EXTENSION OF REMARKS
OF

HON. EMMET F. BYRNE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 26, 1958

Mr. BYRNE of Illinois. Mr. Speaker, last month I had the privilege of attending the third annual convention of the National Crushed Limestone Institute at the Hotel Statler here in Washington, D. C. One of the addresses given at the convention concerns the Federal-aid highway program. It was delivered by Mr. James L. Shotwell of the Bureau of Public Roads. As a member of the Public Works Committee, I am deeply interested in our road program and I think it timely and appropriate to call this fine address to the attention of other Members of the House. I appreciate consent to have Mr. Shotwell's address reprinted in the RECORD.

The address follows:

THE FEDERAL-AID HIGHWAY PROGRAM

(Address by James L. Shotwell, assistant to the Deputy Assistant Commissioner, Office of Engineering, U. S. Bureau of Public Roads, at the third annual convention of the National Crushed Limestone Institute, Inc., Washington, D. C., January 24, 1958)

Mr. Mount, members of the National Crushed Limestone Institute, and distinguished guests, I am very happy to be here with you in the morning period. My only regret is that Highway Administrator Tallamy could not come. He was also very

sorry he could not be here, but he is on a very heavy program now. As you've noticed in the papers, the Senate Committee on Roads has been holding hearings for the past 2 weeks; the House committee starts next week on the highway-program hearings, and this morning Mr. Tallamy is discussing the highway programs with the President and the Cabinet.

I enjoyed the film, Mr. Mount, that your institute produced. Probably, I should give a little credit to the ARBA, even though General Prentiss left—Captain Curtis is still in here. I have been looking forward to seeing that film and I think it presents our problem very well. You will notice that in the beginning it mentions the accident rate. That is one thing that all in the highway field are very much concerned about today. We want to design our highways and make them as safe as possible for traffic. The yardstick that we use is the number of fatalities per hundred million vehicle miles of travel. And I hope you will remember that, as it is said, "The fatality rate on freeways is only one-half of that as on our regular highways, without the control of access."

There has been a recent study which has put a price tag on the cost of these accidents. They compared two similar highway facilities—and I say similar because they were in the same general area—but one had control of access, and the other did not have control of access. That is the respect where they were not similar. They handle the same volume of traffic—about 30,000 vehicles per day. Both of them were four-lane divided highways. The cost of accidents per year, per mile, on the facility without the control of access was $82,000. The cost of accidents per year, per mile, on the facility with controlled access was $19,000. Now then, what does that mean to us? Putting it in other terms, if we figure the life of a highway is 20 years, and we know it is much longer, we can afford to spend over a million and one-quarter dollars per mile for control of access and still save the highway user money. So you can see why we are very much concerned about this accident problem, and there is one thing that the Interstate System will have, and that is control of access.

The part of the movie in connection with the hearing is also very interesting to me. And when you go back to your homes, all of you will probably have an opportunity to appear before one of these hearings before our highway program is finished. We hope that you will, in working through your group, make an unbiased evaluation as to the proposed highway project, consider the good that it will do for the entire community, and work for it. We find that quite often the opposition to proposed facilities is organized and far more vocal than those in favor of them. Those in favor of the highway just take it for granted that it is going to come, while those that are against it get out and work hard. So, when you are in favor of it, we hope that you will work hard.

We had several very interesting hearings in New York State recently; one of them, Mr. Newsom, in connection with the highway going through a highly rural section. It cut off the back ends of quite a few of the farms. The State then faced damages for the areas that are isolated and, as shown in the movie, they can trade with the adjacent farmers. But the opposition was terrific that night. The hearings went on for several hours. The farmers got up and testified about the very high prices for the value of their ground per acre and everyone was amazed. Near the end of the hearings, an unknown individual got up from the back and said that he was not involved in this particular project, but he certainly was glad that he had attended the hearings that night. He said that he had just been appointed to the board of assessors and they were getting ready to have a new assessment and had no idea that those farms were that valuable. Of course, they all arose as one and wanted it stricken from the record, but it had already been taken down by the tape recorder. In that one instance, though, I would like to say that the State studied other alternates and located the highway down in the valley. And the State engineer, working with the representative from the State department of agriculture, went out and contacted each of the farmers, explained the problem, and when they had a new hearing, the opposition to it was negligible. They were glad to have it there. In fact, I was told that the only ones who opposed the location down in the valley were the farmers up on the hill who were going to be left alone and allowed to continue farming there. They were very much disappointed that they weren't going to be able to sell their ground to the State.

I am not supposed to talk about that—I'm supposed to talk about our program—so, I have a few statistics here that I would like to give you this morning. As you know, our program now is a year and one-half old; and the progress made by the States has been very gratifying. Construction has proceeded according to our expectations, and the highway trust fund receipts are running close to their earlier estimates. Between July 1, 1956, and December 31, 1957, obligations for Federal aid totaled $3.6 billion. Trust fund receipts exceeded $2.5 billion. Also, during the first 18 months of the program, 3,175 miles of construction had been advertised, put under way, or completed at an estimated cost of $1.7 billion. Preliminary engineering and right-of-way acquisitions authorized in these same periods amounted to $1.2 billion. At the end of last year, there was $1 billion worth of work in program status which is the initial step in launching the Federal-aid project. At this time there was a total of $4 billion of Federal-aid work in program status, of which $3.3 billion was Federal-aid funds. At the end of last year, there remained $1.5 billion of Federal-aid funds apportioned to the States that were not yet programed to specific projects.

Now, even though the overall progress for the program has been good, all States have not responded uniformly in expanding their interstate program. On December 31, 1957, there were 8 States still obligating their 1957 funds, 33 States were using their 1958 funds, and 8 States were into their 1959 funds. For the country as a whole, an amount equivalent to 72 percent of the 1958 funds had been obligated. Now the 1956 highway bill also included a provision to permit the States to go ahead with their interstate construction—even ahead of allocation of Federal funds. That was, if they had sufficient money of their own. That was termed advanced construction interstate. There is one State that is already proceeding on that basis.

Now, title I of the 1956 Highway Act authorized Federal-aid interstate funds for the next 13 years. However, title II, or the revenue portion of this act, includes a section which will not permit apportionments of the fund unless the money will be available in the highway trust fund. The 1956 act authorized $2.2 billion for the fiscal year ending June 30, 1960. But initial estimates indicate that the full amount will not be available, and probably only around $1.8 billion will be apportioned for the Interstate System for that fiscal year.

As a whole, the State highway departments, the construction industries and material suppliers have demonstrated their ability to gear their operations to the schedule of construction for the Interstate System. I have a few charts here that I'll show you in a moment.

The 1956 Highway Act required the State highway departments and the Bureau of Public Roads to make several very important reports or studies, and report to the Congress. One referred to by Mr. Newsom this morning was the section 108 (d) study, which is an estimate of the cost of completing the Interstate System. The purpose of this estimate is to establish factors for allocations of the funds for fiscal years ending June 30, 1960, 1961, and 1962. Now, this report has already been submitted to the Congress and, as mentioned earlier, it exceeds the previous estimate which was made in 1954 and 1955 by approximately $10 billion. This increased cost is attributed to several factors. One of these is the estimate of traffic for 1975, which is now higher than it was estimated several years ago. Increased traffic, of course, will require additional traffic lanes, which will represent increased costs. Another factor is the additional traffic lanes, which will represent innow and was not estimated in 1954. And then the third factor is the general increase in construction costs. The estimate was based as of July 1, 1956.

Now I'd like to take a couple of moments to show you several of the charts which indicate the progress of the program. This chart shows the progress of the Federal-aid highway program, including all types of funds. While this is not an accumulative chart, it shows the volume of work which has been obligated during the past 12 months. You will notice how along here in mid-1956 we were working at a little over $800 million, whereas the chart shows that now we are way up here over $2.4 billion. These arrows indicate the schedule, so you see this increased volume of work here is getting along just about at the estimated schedule.

This is a similar chart showing the primary, secondary, and urban funds combined. There is a little lag right here, but we anticipate that will be recovered before the end of the fiscal year. The third chart is for the interstate funds. I would like to call to your attention as to how we were working in through here with about $175 million or so a few years ago. A tremendous increase is shown and now, as of December 31, we have a schedule that was not anticipated until the end of the year. This volume, running at about $1.7 billion, covers not only construction but engineering and acquisition of right-of-way, and includes a considerable amount for right-of-way, which is of course one of several of things that you have to take care of.

Now, here is one other that I would like to show you. The top line shows the authorization as proposed in title I of the 1956 Highway Act. As I pointed out, these funds cannot be apportioned to the States unless there is sufficient money in the highway trust fund. So the broken lines indicate the estimate of allocation that would be made in future years. In 1960, instead of being around $2.2 billion, it appears that it will be around $1.6 billion. For 1961 it might drop even a bit more. But notice that there is a steady increase from there on. So, in the last years of the program where the initial estimates indicated that the volume of the construction would be going down, it will probably continue up for several years beyond the 1969 period.

Briefly, that is the progress of the program. I am so happy to have been here with you this morning. Thanks a lot, Mr. President.

Bond Speculators Profit

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. MULTER. Mr. Speaker, I comment to the attention of our colleagues the following article which tells the story of big profits to speculators in bonds as a result of the Federal Reserve Board's switch from a tight-money policy. The article appeared in U. S. News & World Report of December 27, 1957:

BOOM IN BONDS: SOME INVESTORS REAPED BIG PROFITS OVERNIGHT

Bonds, out of favor only a few weeks ago, now are riding a new crest of popularity.

With business turning down, people want an investment of the soundest sort.

Result: A spectacular rise in bond prices.

Now, though some experts are suspecting that most of the rise is over, that stocks might be a better buy at this time.

One group of investors has struck it rich in recent days. These are the investors who had bought bonds in the months before November 14.

That was the day the Federal Reserve System shifted away from a policy of tight money. Borrowing began to get easier and cheaper. The market for bonds zoomed upward.

Almost overnight an investor who had bought a long-term Government bond for $890 found his bond was worth $910, for a $20 profit. The same bond now is worth $951—up $61 in a month. Some other Government bonds are up even more.

There was a quick boom, too, in many issues of utility and corporation bonds. People who had scorned bonds only a short time before scrambled to buy, once officials had flashed the signal that money was to be made cheaper.

The accompanying table gives you an idea of what has hapened in the market for bonds of various kinds. The price changes shown are described by bond dealers as the most dramatic shift we've ever seen in the market, and a once-in-a-lifetime experience.

Result for some Wall Street speculators who bought bonds on small margins has been a doubling of their money—the money they actually put up in cash.

This rise in bond prices has occurred at a time when prices of stocks have been tumbling, many to new 1957 lows. Bad news for stockholders—a slowdown in business—has become good news for bondholders, who benefited when the Government decided that more and cheaper money was needed to stem recession.

Exception, railroads: Even in the midst of a boom in bond popularity, not all issues shared in the price rise. Railroads, many in trouble, continued in some cases to go lower. Some toll roads that have not been doing so well also drifted on down. But most bonds joined the most buoyant rise in the memory of the average bond dealer and investment banker.

Look, for example, at what happened to some individual issues.

A huge issue of American Telephone & Telegraph bonds had been selling very slowly at an offering price of 101⅜. On November 14, two-thirds of the issue was still unsold. But, when the bond market opened November 15, after the money-policy switch, investors rushed to buy. The issue was cleaned out immediately, and jumped in price to 104, then to 108.

Said a New York bond dealer: "It's the happiest day I've known in 20 years."

At 4:30 p. m., the afternoon of November 14, dealers still held two-thirds of the $39 million issue of bonds of the New York Port Authority. Then when the news of easier money came the account was closed out in 1 hour.

Holders of scores of bond issues benefited, at least on paper.

For example, the 4⅞ percent bonds of San Diego Gas, issued at par in October, now bring 108½—up $85 for a bond of $1,000 par value.

Pacific Telephone & Telegraph's 2¾ percent bonds of 1985 have risen from 73⅝ on September 25 to 82 recently—up 11 percent.

High-grade municipal bonds, tax-free, have risen 3 to 6 percent in price.

Yields: down. As bond prices rise, of course, the yields to be expected by new purchasers go down.

Take long-term Government bonds, for example. Average yield on those was 3.58 percent on November 12. Latest official calculation shows it at 3.44—and it's slipped somewhat since.

Treasury securities maturing in 3 to 5 years offered an average yield of nearly 4 percent, if bought early in November, but little more than 3 percent, if bought recently.

It's the surest investments, however, that people are buying, now that business has turned down. Yields actually have risen on some of the more speculative bonds.

Kansas Turnpike 3⅜-percent bonds of 1994 have gone from a yield of 4.90 percent to 5.25 percent. New York Central 4-percent bonds of 1998 sell at a price that means a yield of 8.01 percent, against 6.75 earlier.

WHAT'S NEXT?

If you ask bond dealers and investment bankers what bond prices will do in weeks and months ahead, you get a variety of answers. But the consensus points to caution.

A New York dealer puts it this way: "If business really declines seriously, bond prices will go higher. If we have only a mild downturn, you can make a real case for selling bonds now and buying stocks. Personally, I suspect the Federal Reserve Board is surprised—and not to happy—that the bond-market reaction has been as spectacular as it has. I'm not at all sure officials will take any added steps to make money cheaper."

He adds: "This may be a good time to get into the stock market. There are a lot of bargains, especially in industries that are affected by the downturn in business."

And a bond expert for a large dealer says that "the recovery of bond prices has already outrun the basic recession facts and, in Government securities, this recovery may have been overdone."

But not all dealers agree with that view. One says, "The trend to higher bond prices will go on until a new recovery in business becomes headline news, and I don't look for that to happen before mid-1958."

Another bond expert notes: "It looks like we will have somewhat lower interest rates. There is a big flow of institutional money buying bonds. It looks like there will be a big decline in the demand for credit next year. There will be a fight again to get money invested. Prices from the long-range standpoint don't look too high."

From this standpoint, the outlook suggests that, with low interest rates, bond prices will stay at present levels at least, and may go higher.

It's agreed, however, that further rises in bond prices will depend on the speed of the business downslide, and on Federal Reserve action to apply brakes.

What happens to bonds when money eases—prices and yields of some recently issued bonds

	Price when first issued	Price now [1]	Yield when first issued	Yield now [1]
			Percent	*Percent*
U. S. Government, 4 percent, 1969	$100.00	$105.88	4.00	3.59
U. S. Government, 3¼ percent, 1974	100.00	104.63	3.88	3.51
Michigan Bell Telephone, 4¾ percent, 1992	101.72	108.00	4.65	4.31
Consolidated Natural Gas, 5 percent, 1982	102.00	108.00	4.86	4.47
Wisconsin Telephone, 4½ percent, 1992	101.25	107.50	4.43	4.09
Ohio Power, 4⅞ percent, 1987	100.87	105.25	4.82	4.55
American Telephone & Telegraph, 5 percent, 1983	101.46	108.00	4.90	4.47
Pacific Gas & Electric, 5 percent, 1989	100.80	110.00	4.95	4.41
Northern Natural Gas, 4⅛ percent, 1977	100.00	105.50	4.63	4.21
Columbia Gas, 5 percent, 1982	100.00	104.50	5.00	4.69
Jersey Central Power & Light, 5 percent, 1987	101.56	107.50	4.90	4.53
Essex County, N. J., 3.10 percent, 1973	100.63	103.20	3.05	2.85
Los Angeles Department of Water and Power, 3½ percent, 1977	101.52	104.68	3.40	3.19
Maryland State Roads, 3.40 percent, 1972	99.50	102.95	3.44	3.15
Boston, Mass., 3½ percent, 1975	99.34	105.44	3.55	3.10
Chicago Park District, 3½ percent, 1971	101.66	103.90	3.35	3.15

Brotherhood of the White Folk

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. NEUBERGER. Mr. President, some of us forget that there are problems of integration in the North as well as in the South. In some of our criticism of the South, we occasionally overlook the mote in our own eye. For that reason, I think it would be appropriate to include in the Appendix of the RECORD an effective and thoughtful editorial from the Salem (Oreg.) Statesman of February 18, 1958, written by Marguerite W. Wright, associate editor of that daily newspaper, under the title of "Brotherhood of the White Folk." I ask unanimous consent for that purpose.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BROTHERHOOD OF THE WHITE FOLK

Salem hasn't had any lynchings—no howling mob of vigilantes on the courthouse lawn. Our schools are unsegregated, and there have been no stabbings or rapes on the playgrounds.

The billboard boasting that Salem's population was about 99.44 percent pure white native American is at least 10 years gone

from the downtown building where it once looked down on passers-by.

A nonwhite or foreign-born citizen here can get transportation, a meal and a place to sleep, even buy a house and vote.

That's what we like to hear during this Brotherhood Week, sponsored by the National Conference of Christians and Jews to draw attention to its year-round crusade against bigotry and for creation of a climate of opinion leading to better cooperation among men of good will.

But wait. Underneath, latent, there are still live foci of the infection that kept know-nothingism and the Ku Klux Klan active in this area a generation or two ago—the same infection that has made race relations the most crucial moral issue not just in the South but all over the United States today.

Education for brotherhood should be a preventive measure. Why wait to promote good race relations until after latent misunderstanding and bad feeling erupt in ugly scenes?

It could happen here. Salem is trying to attract new industry. Industrialization attracts new residents. Most of them will come from other areas of the Nation where, perhaps, civic responsibility is not at the same high level we now find here. Some of them may be colored escapees from the South. More likely, many newcomers will be another breed of southerner: the white Protestants of early American, Anglo-Saxon stock.

An article in the current issue of Harper's magazine shows that in Chicago, for example, the toughest integration problem has nothing to do with Negroes. It involves the migrants from the South who are usually poor, proud, primitive, prejudiced, fond of liquor, and fast with a knife.

In Salem we might well look ahead to the same sort of integration and race relations problem that Midwestern cities are now struggling to solve. A legislative migrant study interim committee already has been set up, after prodding by the Oregon Council of Churches. It may point to concrete steps the State and cities can take. Meanwhile, a good way to begin is to make sure that all the flattering things Brotherhood Week speakers will tell us this week are so firmly established that no influx of the great unwashed and unenlightened will revive some of the least pleasant parts of Salem's own past.

Secretary Benson

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. DIRKSEN. Mr. President, I ask unanimous consent to insert in the RECORD an article entitled "Secretary Benson's Fate," which appeared in the Chicago Sunday Tribune on February 23, 1958.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Chicago Sunday Tribune of February 23, 1958]

SECRETARY BENSON'S FATE

A new demand for the resignation of Secretary of Agriculture Ezra Taft Benson has been made by a group of House Republicans. When he refused to quit, they said they would carry their case to President Eisenhower.

The trouble with Secretary Benson is that he believes what is morally right is also politically right. Most politicians give lip service to this theory, but Mr. Benson really believes it and acts on it. As a result, he has been an easy target for all the left-wingers, demagogs, and crackpots who make a living out of organizing protest movements among the farmers.

The latest demand for his resignation comes chiefly from dairy farming districts, which are sore about his order to reduce price supports on dairy products on April 1. This resentment appears to have been a factor in the near defeat of the Republican candidate in a recent Minnesota special election.

Dissatisfaction of the dairy farmers has been fired up by the left-wing National Farmers Union, which is fairly strong in Minnesota and Wisconsin. The legal counsel of the union is Charles Brannan, a former Democratic Secretary of Agriculture who is touting a new nostrum for the farm problem called the production-payment system.

In Iowa many farmers are kept in a jittery state by steady feedings of anti-Benson propaganda by a Des Moines newspaper and a farm magazine. Illinois and Indiana farmers, we are glad to say, are keeping their heads.

The strangest thing about the agitation against Secretary Benson is that even the leading agitators admit that his departure from Washington would not remove the farmers' troubles or bring an end to the farm policies which he advocates. There is no rational explanation for the campaign against him. Probably he is hated because he is too honest to preach that prosperity for farmers can be legislated, or that there is a quick and easy way to repair the damage done to agriculture by unwise Government action.

Some of the House Members who are crying for the Secretary's head have strictly selfish motives. They see their seats in Congress disappearing as the rural population declines, and they know that a further decline will be necessary if agriculture is to be restored to health. A Congressman does not like to vote for the liquidation of his own constituents.

There is some danger that the clamor of the anti-Benson Congressmen will be mistaken for the voice of all American farmers. Many of them are becoming increasingly unhappy with Government controls and subsidies and are not impressed by the mumbo-jumbo of the Democratic Party's witch doctors.

The Farm Journal, which has 3.4 million subscribers all over the country and is considered the leading farm magazine, recently polled its readers on what they wanted from the Government. Three out of five farmers who voted in the poll asked the Government to cut back on the farm programs or eliminate them. A surprising 50.1 percent voted that the Government should get clear out of farming.

Two out of five who voted in the poll were not sure what they wanted. Some favor price controls or supports; some want production payments and controls; some want conservation payments to retire land completely; some want the two-price plan; some want higher supports and fewer acres to plant, and some want lower support and more acres to plant.

Trying to satisfy all these groups is Mr. Benson's job, and of course the task is impossible. President Eisenhower has done well to resist the pressure to get rid of him. Now that the heat on the President is increasing he must not overlook the fact that if he fires Mr. Benson, the Republicans are likely to lose more votes among the 88 percent of the people who are consumers of farm products than they stand to gain among the 12 percent who are producers. The consumers are getting tired of supporting farm programs that have cost almost $25 billion in 25 years, without solving anything.

Moreover, if the Republican Party's chances in the November election are so feeble that it must stoop to betrayal of an honorable man it is time to make a reappraisal of all the party's policies and principles.

The American Merchant Marine

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have prepared dealing with the American merchant marine.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

As my colleagues in the Senate know, I have frequently made known my views on the American merchant marine, with stress on its great economic importance in domestic and world trade and its value as this Nation's fourth arm of defense.

Our continuing role as a maritime leader in the free world is due in large part to the support our American-flag fleet has received under authority of the Merchant Marine Act of 1936. Our globe-encircling cargo fleet has been able to survive, and continues as one of our strongest links to the free world through support by Government assistance in the form of parity payments to offset low-cost foreign competition.

I bring this to your attention today because of a recent article in Barron's, a national business and financial weekly, which I believe misinterprets the policies and denies the soundness of the 1936 act. The article tends to confuse the reader as to the straight course the act is steering to assure our country economic prosperity and defensive strength through an adequate merchant marine.

The article was entitled "Faulty Compass—The United States Needs a New Shipping Policy." In referring to the National Maritime Union (AFL–CIO), it stated that the NMU long has been riding buoyantly on a sea of Federal subsidy. To keep both captain and crew afloat in recent years has cost the taxpayer heavily. I say this is not so. Statistics compiled for me by the Committee of American Steamship Lines, representing the 14 subsidized lines, show that during the 10-year period from 1946 through 1955, 85 percent of net operating subsidy costs paid out by the Government have been offset by Federal income taxes paid in by the shipping companies and their employees, including the members of the seamen's unions. And this does not take into account the tax returns, and the economic benefits to the many industries, and their thousands of employees, which service the subsidized vessels, keep them in repair, et cetera.

What a small price to pay for a ticket to survival. Gen. Nathan F. Twining, chairman of the Joint Chiefs of Staff, has summed up that importance very clearly. He has said that in case of a surprise and devastating nuclear attack that might knock out land transportation the merchant marine's availability to ply the great high-

way of the seas with strategic materials and foodstuffs might well be the one source of free world strength to pluck victory from chaos.

The Barron's article also stated that, and I quote, "The Government, acting through the Maritime Administration, gradually has extended its control over the (shipping) industry." Again, this is not a correct statement. An underlying theme of the 1936 act was that this important industry was to be built on private enterprise—and there has been no change to the contrary. What it adds up to is a unique Government-industry partnership. In essence, the Government is paying for a service. The 14 contract lines, to qualify for subsidy payments, must travel the 34 essential trade routes that are part of the partnership bargain, on regular schedules, thus assuring our country's products, industrial and agricultural, free and regular access to the markets of all the world.

The United States has become an island in a world made painfully small by swishing earth satellites and long-range guided missiles. These 34 trade routes have proven to be the very lifelines in and out of this country when it comes to taking homemade products overseas and returning with vital raw materials and other goods our country lacks. Our regular and dependable liner service on these routes has helped develop trade for major coastal areas. Not only have United States-flag carriers contributed to this but their service has forced competing foreign-flag ships to offer improved services. American-flag service on essential trade routes has had a stabilizing effect on freight rate structures, with enormous savings to importers and exporters, particularly in periods of national emergency. Development of ports on all coasts has benefited farmers, industry and transportation services generally, including domestic and other segments of the oceangoing merchant marine.

The facts throw a more accurate light on the situation than the lines in the Barron's article that say, "The trouble is that Congress has been steering by a faulty compass, the Merchant Marine Act of 1936 as amended;" and later stating: "handouts from Washington have kept the Stars and Stripes waving over certain so-called essential water routes." Such extravagant language adds nothing to honest consideration of maritime policy.

A further statement, or, rather, misstatement, in the article is to the effect that the Maritime Administration is proposing to expand the cost of the subsidy program and that there will be, and I quote, "A great and useless drain on the public purse."

It might be said that this useless drain doesn't add up to a drip when one is truly knowledgeable as to how these subsidies work. Subsidies awarded contract lines simply help make up the difference between high American costs and low-wage foreign competition. The operating and construction differential subsidies requests made by the President in his budget message to Congress are to provide that equalizer. Admittedly, 80 percent of the operating differential goes to equalize the pay of ship crews. All of the construction subsidy payments go to the shipyards. This is a product of our superior living standard. We must have these subsidies or scrap our fleet in favor of having our country's products carried under foreign flag. This would not only knock the props from under the $5.3 billion economic contribution annually made by the merchant marine, but would force us to rely on foreign cargo fleets in time of war, which history has proved to be a reef-strewn course to follow.

Barron's also surprises me with the statement that "shipping subsidies, whether for construction or operation, have not served the national interest." Again a realistic record of the lines operating under operating subsidy agreements will refute this. It is impressive. Here are some of their achievements.

1. They represent a combined net worth of $558.7 million in 1955 compared with less than $79 million in 1937. Thus the 1938 act, and prudent management, have strengthened the industry as was intended.

2. A fleet of 504 highly competitive vessels are engaged today in cargo and passenger services from all major United States ports, providing some 35,000 seafaring jobs, roughly half the total on United States ships.

3. A record of 16,509 voyages sailed in the 10-year period, 1947–56, with combined mileage equal to 8,000 trips around the Equator.

4. Contractual commitments to build about 200 new ships over the next 10 to 12 years.

Subsidy as a fleet preservation measure becomes even more important when one looks toward Russia. The Reds are fast building up their merchant marine and the Soviet economic offensive has moved into high gear. The recent Afro-Asian People's Solidarity Conference in Cairo clearly indicates the direction of future Soviet bloc economic effort.

At the end of 1957, the State Department issued a statement about Russia's economic penetration, which said, in part: "In the last two and a half years the Soviet bloc has made agreements with 10 underdeveloped nations to provide them with $1.5 billion in economic aid. * * * United States economic aid to the 10 countries over the same period is estimated at $900,000. * * *"

Barron's points out that, as time goes on, subsidy costs will mount sharply, adding: "For at the urging—and with the financial support—of the Maritime Administration, the major United States shipping lines all have embarked on a massive replacement of their fleets. The Government, of course, will foot part of the bill directly." What Barron's did not stress is that the major investment will be by private enterprise.

What the Barron's article also ignored completely was the enormous advantage accruing to our Government in the event of war or sudden emergency, from the fact that these subsidized vessels represent a fleet in being—they will be available to the military at once, in time of urgent need.

In World War II victory was delayed many months, and casualties undoubtedly greatly increased, because we lacked cargo vessels and passenger ships to service our far-flung battle stations. Every merchant vessel now in active service—every cargo and passenger vessel constructed under the current vessel-replacement program which the Barron's article disparages, will be so much added insurance that the United States will have available in the future an adequate number of potential military auxiliaries for any need.

And the Government will get these vessels at peacetime cost, depreciated—not at fantastic wartime costs, as was the case in World Wars I and II.

The long-range ship replacement program which all of us—Congress, the administration, and industry—have worked so hard to develop is termed by Barron's as massive replacement. Evidently Barron's is outraged by the size of the program but this is just what we need. The 1936 act states that all ships of the contract lines must be replaced by new vessels at the end of 20 years. Most of the subsidized fleet's ships were built during World War II and are fast approaching the 20-year age. If the lines waited until the closing months of this agreement there would be such a race and scramble to build ships that our yards could not handle the orders and there would result what is commonly known as block obsolescense. Incidentally, it is worthy to note that there were 1,569 freighters under construction last year in foreign nations. Not one was being built in the United States. In contrast, the President's budget only proposes the building of 17 or 18 new ships.

Barron's concluded that, "For what ails American shipping is not too little Government, but too much. For the good of its merchant marine and its own best interests, the United States would do well to change helmsmen and try a different tack." Prior to the 1936 act our maritime policy suffered from too many helmsmen and too frequent changes of course.

Any other tack than the one we are now on might well prove disastrous. Subsidy is a form of insurance. Because of it, America is able to maintain an efficient fleet of dry-cargo freighters and passenger ships to carry out national policies of trade and defense—policies reaffirmed by this administration. Without it our high standard of living and high costs of doing business would literally drive our merchant marine off the high seas.

The Reciprocal Trade Issue

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. TALMADGE. Mr. President, one of the important issues which will be considered by Congress at this session is the proposed extension of the Reciprocal Trade Agreements Act.

An astute analysis of that question and its ramifications was written recently by Hon. Donald Comer, of Birmingham, Ala., chairman of the executive committee of Avondale Mills, in a letter to the editor of the New York Times. I ask unanimous consent, Mr. President, that the letter be printed in the Appendix of the RECORD.

I also ask unanimous consent, Mr. President, that there be printed, along with Mr. Comer's letter, a list of the revisions in the Reciprocal Trade Agreements Act proposed and supported by the American Cotton Manufacturers Institute, Inc.

There being no objection, the letter and list were ordered to be printed in the RECORD, as follows:

The EDITOR,
The New York Times,
New York, N. Y.

DEAR SIR: The Sunday February 16 New York Times headlined a news item "Big Trade Debate Opens Tomorrow." Their Monday paper editorially supports the administration's position.

This is in connection with the President's request for a 5-year extension of the miscalled reciprocal trade agreement. We are informed that five members of the Cabinet are to appear as his witnesses at the congressional committee hearings—Secretary of State, Secretary of Commerce, Secretary of Agriculture, Secretary of Labor and Secretary of Defense. In addition to these there will also be junior officers of these several departments. These are termed "liberalists." The opponents of this legislation as administered are labeled "protectionists."

On February 15, 1955, when this legislation was renewed at the request of the President, he wrote Congressman JOSEPH MARTIN of Massachusetts, it would be so administered as to hurt no American industry and

called attention to a protective clause. This escape clause gave an injured industry the right to prove its case before the Tariff Commission.

The fishing industry of New England complained that they were suffering from imports of cheap fish from Iceland. They proved their case before the Tariff Commission but the President refused to carry out the recommendations of the Tariff Commission. His refusal might have been influenced by the fact that we were seeking air bases in Iceland at that time.

Mr. Henry Kearns, the Assistant Secretary of Commerce, recently addressed the Synthetic Organic Chemical Manufacturers Association in New York City and he is quoted in the New York Daily News Record as saying that it was the responsibility of the Government to consider the effects of tariffs and quotas upon the country as a whole. There seems to be a departure here from the President's promise that no American industry would be hurt.

In discussing the impact of imports on domestic textiles, Mr. Kearns conceded that, "There have been great entries into specific areas, but it is difficult to attribute all economic ills to the tariff program." Admitting that there are other causes for some of our economic ills certainly doesn't justify the addition of another backbreaking cause with a threat of an increase of that invasion. He also seeks to minimize our complaint by referring to the fact that while we imported $646 million in textiles, we exported $668 million. There are over a thousand individual units in our industry, all of them sharply competitive and making I don't know how many different kinds of fabrics. But if the West Point Manufacturing Co., which makes heavy industrial duck, can find a market for conveyor belting to be used in loading nitrates in Chile, bananas in Colombia, and iron ore in Venezuela, etc., there is certainly no reason why Avondale Mills, which makes tissue ginghams, should have to balance these West Point exports by imports of Japanese ginghams. Just because Louisiana and Arkansas export rice to Cuba is certainly no reason why Idaho and Maine should have to accept imports of potatoes.

The textile industry's demand for protection in their home market against foreign imports from countries where wages are so far below our own, and as in the case of Asia, where living standards are so different, have been called greedy by some of our critics. Here is a short answer to that. We pay the American standard wages, the highest in the world. Our hours, ages of our employees, and our minimum wage are all fixed by our Government. The price of our raw material—cotton is fixed by our Government—and at a price that is known as a parity price to the cotton farmer. Under this arrangement up until now, the cotton farmer has raised more cotton than the American mills used, and since the American price was much higher than the world price, millions of bales accumulated. Last year the Government began disposing of this cotton to foreign countries at world prices and so we had Japanese buying American cotton, the same that we buy, at 6 cents less than we paid for it and manufacturing it into the same cloth patterns that we make, with labor costs one-tenth of ours and with machines equal to ours in every way. The loss of 6 cents per pound between what the Government paid the farmer and sold it to Japan for, becomes an additional Government expense for which our industry shares the tax. These goods from Japan, and there could be additional quotas from Asian countries, are only copies of our goods. They have nothing of style or quality to add. The only reason why they are here is because they are cheaper, cheaper because they are made of cheaper cotton by cheaper labor than our own.

We do not consider ourselves greedy or high protectionists, when we ask that these differences be equalized by a fair tariff and before considering the question of quotas, and we think until then that the findings before the Tariff Commission should be final.

Mr. Kearns said it was the responsibility of the Government to consider the effects of tariffs on the country as a whole. If he includes Congress and the Supreme Court in that statement, of course we all agree. He is arguing for the executive, the right to kill one industry by imports in order that another industry may be built up to export. If the Congress wants to hold such a threat over American industry, that's one thing, but they certainly shouldn't delegate such authority. Who does Mr. Kearns propose to be such an all-powerful arbiter? And, certainly, he doesn't come before Congress with such a suggestion with authority from the President because the President in the very beginning promised that no American industry would be injured.

We believe in reciprocal trade. We believe in selling the other countries what we have in overabundance that they need, and taking in pay what they have in overabundance that we need—and there could be some three-way trading, too. It doesn't have to be bilateral. We are concerned about a foreign market for our cotton. Our cotton farmers are asked to support this Government program because Japan buys some of our cotton. In answer, I'd like to refer to an article which I wrote for Liberty magazine in 1936 in which I said "When Japan buys our cotton, whether she turns it into gun cotton and shoots bombs at us, or whether she makes it into cloth and ships it to us, there will be casualties in either case." Of course, there was no thought of Pearl Harbor in 1941. I was only thinking of our closed mills because of these Japanese imports. Concern for the cotton farmer and his foreign customers was so well expressed by the president of Avondale Mills, Mr. J. Craig Smith, in a recent issue of the Cotton Trade Journal, of Memphis, Tenn., and I am enclosing a copy of his statement.

I am under the impression that under our present trading that the other countries only take from us what they need, while we take from them what we do not need. Those on the other side of this argument, speaking of our needs across our border, will always refer to copper, nickel, tin, iron ore, rubber and coffee, but Japanese cotton goods are never mentioned, although when trading time comes we find our industry, and that of our garment manufacturing friends, traded off for Japanese and Hong Kong goods and garments, of which we already have an overabundance, and we are told to stop whining.

The Secretary of Labor publishes the statistics of the unemployed, but the figures fail to include that part of the million textile workers who are working 4 days and 3 days of the week. But the statistics of corporate earnings continually show the poor financial operating result of our industry—the industry which, during the last war, Secretary Knox called second only to the steel industry in our national defense. When some member of our industry tries to find a glimmer of hope, he is just singing in the rain.

We would like to help the President build a bridge of goodwill between Japan and America, but we do not see how serious damage to an American industry can accomplish this. I have made three trips to Japan and I would like to see an increase of tourist travel to beautiful Japan and its friendly people encouraged. Let's know each other better, and tourist dollars can help build that bridge.

Very truly yours,

DONALD COMER,
Chairman of the Executive Committee, Avondale Mills, Birmingham, Ala.

[From Textile Information Service of February 21, 1958]

The textile industry is in favor of changes in the Reciprocal Trade Agreements Act which will achieve these objectives:

Restore effective congressional control over trade policy.

Require bilateral trade agreements, separately negotiated without using the machinery of any international agency.

Withhold additional authority for the further reduction of tariff rates but remove present ceiling on allowable increases.

Require public disclosure of Tariff Commission findings in connection with peril-point proceedings after completion of agreement negotiations.

Require the Tariff Commission in peril-point proceedings to take into account the differences in production costs, the productive capacity of the exporting country, the adequacy of the United States productive capacity for the commodity concerned, the nature of the commodity—whether it is strategic or not—and the employment impact on the United States labor force.

Require Tariff Commission findings in escape-clause cases to be final unless disapproved by Congress, and require importers to prove that any increase in imports which reduces domestic production or tends to depress the normal growth of domestic production is not injurious if relief is to be denied domestic industry.

Establish as a major criterion of policy the maintenance of tariffs sufficient to equalize United States and foreign raw material costs and to equalize foreign labor costs with United States minimum-wage requirements.

Make physical and tariff quotas recognized instruments of United States policy.

Establish a multicolumn tariff distinguishing between imports from Iron Curtain countries, discriminating countries, favored-nation countries, and preferential countries.

Provide for mandatory review of tariff classifications and rates every 3 years to determine readjustments needed because of technological and price-level changes.

Establish the principle of differential rates in connection with the degree of processing involved.

Elimination of State Department domination of trade policy.

Require the use of private citizens who are bona fide representatives of United States producers on United States trade agreement negotiating teams.

Herbert Hoover at Valley Forge

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. DAGUE. Mr. Speaker, my home county is a proud county of a proud State, Chester County, Pa. It is the oldest rural county in Pennsylvania and all of its land titles date back to William Penn. It has many places of historic greatness and because it originally embraced an area now occupied by 23 other counties it continues to lay rightful claim to many historic spots outside its present confines. One of these hallowed shrines is Valley Forge.

Each year on Washington's Birthday in commemoration not only of the birth of the Father of Our Country but also as reminder of the great heritage we have in the ordeal endured by the ragged Con-

tinentals in the winter of 1777-78, a great and increasingly influential organization known as Freedom's Foundation—which has its headquarters at Valley Forge—holds its Awards Day when recognition is made of those who have contributed in some manner toward keeping alive and on the ascendency those principles and that fortitude which are synonymous with Valley Forge.

This year the foundation's highest award—its George Washington Medal—was bestowed upon America's most distinguished living American, Herbert Hoover, who came to Valley Forge to receive the decoration and took the occasion to deliver a timely address, at the conclusion of which he pointed that he had delivered identically the same speech on the same spot 27 years previously at a time when America was faced with a grave economic crisis. Mr. Hoover pointed out that that was a period of anxiety and discouragement.

"But," he said, "we rallied to a period of greatness as we will again today."

Anyone who heard Mr. Hoover at Valley Forge last Saturday and then later in the day heard the tirade of vilification that came from another former President of the United States here in Washington could not help but make a comparison and conclude that training and associations leave their marks.

More About Reuther, IV—Walter Reuther's Friends Do Not Like a Look at His Record

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. HOFFMAN. Mr. Speaker, now that the McClellan committee of the Senate, which has exposed the activities of other violators of the law, has let it be known that it expects to give the public a view of Walter P. Reuther, the reaction of Reuther and some of his friends might be helpful. To that end, read the article by George Todt which was published in the Valley Times of California on January 31, 1958:

WHAT STRUCK REUTHER SO TELLINGLY?

"Anger is momentary madness, so control your passion or it will control you."—Horace, Epistles.

What was it that Senator BARRY GOLDWATER said at the Republican dinner in Detroit on January 20 which so unbalanced Walter Reuther that he momentarily became hysterical and screamed childish imprecations steeped in vicious personal abuse at the young Arizonan?

Why did the usually outwardly calm labor dictator suddenly lose his former poise and degenerate quickly into a nervous, ranting, rabble-rouser who was reduced to hurling rank epithets, personalities, and malicious spleen at his accuser?

And, finally, when will Mr. Reuther actually answer up to the devastating charges Senator GOLDWATER made concerning his unlawful, unpatriotic, and un-American attempt to usurp a great political party in our country to carry out his socialistic political aims?

In previous articles I have given you an insight into the ideological backgrounds of these two protagonists through their own words. Today I am going to give my readers the real reason why Mr. Reuther had no recourse to answer Senator GOLDWATER recently in anything except terms of slanderous personal abuse—but no facts on the line. For the Senator had Mr. Reuther dead in his sights. In truth, he had no ready answer forthcoming. So he reacted in the only way he knew how—he tried to becloud the issue with his malignant and totally unjust diatribes.

What Senator GOLDWATER said which got into Mr. Reuther's craw so much that he caved in and lost himself in momentary madness is to be found, in its entirety, on page 506 of the Appendix contained in the United States CONGRESSIONAL RECORD of January 23 of this year. I commend its reading to every patriotic Democrat and Republican in our Nation today. It tells the story of how Marxist Social Laborites in America, boring steady from within, captured a great political party in the State of Michigan. It is a grisly tale of Hitlerite violence and duress.

Here are a few excerpts from Senator GOLDWATER'S address which will give us some quick insights into the sickening picture:

"In 1950, I understand the traditional Democrats made a last vain attempt to take back their party from the CIO politicians of your State (Michigan).

"The Calkins investigation (NOTE.—This document, written by a CIO expert named Calkins, tells the growth of CIO union power inside the Democratic Party of Michigan, and how the seizure of this party machinery was first decided upon and how it was carried out) shows how this last attempt was smashed by equipping each of the Wayne County district conventions with small squads of men ready to use force to prevent the regular Democrats from regaining power.

"The leader of the armed squad which took over the Democrat convention in the 15th District told Calkins he was equipped with 6 men, 20 clubs and 2 pistols.

"As the terrorists completed their final outrages on the dying remnants of the old party, George Fitzgerald, Democrat national committeeman, said, and I quote his comments to the newspapers: 'I have just watched socialism take over the Democratic Party by Communist processes.'

"Mrs. Nellie Riley, former Democrat national convention delegate, warned, and again I quote: 'Socialists are in complete charge of the Democratic Party machinery.'

"The Democrat national committeeman subsequently refused to attend the State convention of his own party, saying he refused to attend a convention the delegates to which had been picked, and I quote his statement to the newspaper: 'With storm troopers guarding the doors and the chairman presiding with a baseball bat.'"

Now this is only a small sample of what may be read in Senator GOLDWATER'S well-documented address which is filled with facts, not hysteria. It is too bad that the same cannot be said concerning Mr. Reuther's rude and churlish outburst aimed at the courageous Senator.

There are two categories of thoughtful citizens in these United States who should rush to the nearest library and get their hands on the CONGRESSIONAL RECORD without delay to view Mr. GOLDWATER'S remarkable speech for themselves—or write to the Senator for a copy of it.

These two groups, for whom first priority should be reserved, are (1) the real Democrats and (2) patriotic American societies and individuals.

Every traditional Jeffersonian-type Democrat ought to know what Mr. Reuther's crypto-Socialist COPE political machine has done to muscle in on the regular party organization—and how the latter lost out to the socialistic CIO forces in Michigan. It could happen here?

And the American patriots ought to read Senator GOLDWATER'S exposé of Mr. Reuther and the COPE machine—and quickly thereafter bury the hatchet among themselves. If these people cannot learn to stop bickering over the unimportant issues of the moment in order to concentrate on the one great overriding issue of the day in the United States of America—then it's really later than we think.

California Teamwork

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. HILLINGS. Mr. Speaker, I don't believe the remarkable demonstration of teamwork within the California congressional delegation over the years should pass unnoticed.

The California congressional delegation, which is composed of representatives of both political parties, is the only delegation in Congress to meet on a relatively regular basis to handle nonpartisan problems that frequently confront our rapidly growing State and require attention at the congressional level.

This teamwork has not only produced unity on these matters within the delegation of 30 members and two senators but also has provided a spirit of good fellowship and cooperation.

The end result has been that the delegation, meeting on a bipartisan basis, has tackled and solved nonpartisan problems that could not possibly have handled if left to individual representatives and senators.

I think probably the best and most recent demonstration of this teamwork resulted in the assignment of considerable new ship construction work to private yards at San Pedro, San Diego, and San Francisco.

Working together for the assignment of new ship construction to California yards, practically dormant since World War II, were Republicans and Democrats. I think, if history is traced, the award of contracts to the yards at San Pedro, San Diego and San Francisco culminates almost 10 years of effort by our representatives and senators.

After World War II, you will recall, our California shipyards virtually died on the vine for lack of work after meeting a tremendous challenge by turning out hundreds of oceangoing vessels for our wartime commerce, and troop transport.

Credit for persuading the Maritime Administration and the appropriate committees of Congress to revive major ship construction in California yards can appropriately be given to Senators WILLIAM F. KNOWLAND and THOMAS H. KUCHEL, and Representatives JOHN ALLEN, Oakland Republican; GEORGE MILLER, Ala-

meda Democrat; WILLIAM MAILLIARD, San Francisco Republican; JOHN SHELLEY, San Francisco Democrat; BOB WILSON, San Diego Republican; CRAIG HOSMER, Long Beach Republican; CECIL KING, Los Angeles Democrat, to name a few.

I might add there was considerable support lent to this group by inland representatives and there should be special mention given to GORDON MCDONOUGH, Los Angeles Republican, and Representative HARRY SHEPPARD, Yucaipa Democrat.

They are, respectively, chairman and vice chairman of the bipartisan delegation and they probably are the two most cooperative people in Congress to work with when a specific nonpartisan problem comes up that requires delegation attention and support.

Statement of C. C. Walther Concerning Extension of Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement filed by C. C. Walther, president, Walther Bros. Co., Inc., Walther Paint Co., Inc.:

The Honorable WILBUR D. MILLS,
Chairman, House Ways and Means Committee, United States Congress, Washington, D. C.:

My name is Curtis C. Walther, president of Walther Bros. Co., Inc., and Walther Paint Co., Inc., of New Orleans, La. I have been a resident of New Orleans since 1920, being a native-born Louisianian. Living in this important port city of the United States, I, early in my business career became interested in foreign trade.

I was one of the original organizers of International House and was president of that organization for the years 1951–52. I am a past president of the Chamber of Commerce of the New Orleans area, having served two terms in 1949–50. I was one of the organizers of the International Trade Mart of New Orleans and presently a member of it's board of directors. I am presently president of the Foreign Policy Association of New Orleans, and was chairman of the Mississippi Valley World Trade Council for the years 1955–56.

During my presidency of International House, I headed trade missions of business men and women to Guatemala, Mexico, Colombia, and Cuba, and in the year 1954 headed the International House Trade and Travel Mission to seven European countries, where we visited international trade fairs in Milan, Italy, Hanover, Germany, Brussels, Belgium, and London, England. On all of these trips our group program was arranged officially by the heads of foreign trade departments of these foreign countries, which brought us into direct contact with our counterparts in those countries. Forums and panel discussions were the order of the day, which gave us a most comprehensive insight into the problems that beset those who engage in foreign commerce.

On the basis of my personal experience that resulted from manifold contacts as outlined in part in the foregoing paragraph, I have formulated a basic conclusion that motivated my request for permission to file a statement, namely; if we are to have world peace, we must have world trade. If we are to have world trade, we must eliminate as many trade barriers as possible.

I sincerely request that your committee approve the extension of the Trade Agreements Act for a period of at least 5 years and continuing authority for a tariff reduction of not less than 25 percent.

1. The Trade Agreements Act is the legislative basis for United States trade policy for the past 24 years. The United States as the leader of the free world and the Nation with the largest volume of international trade obviously exerts the greatest influence on the course of the world trade and on the trade policies followed by the other nations. For the past 10 or 12 years United States leadership has been decisive in maintaining so large a part of world trade in private hands and in steadily reducing, on a worldwide scale, tariff and other artificial barriers to the international exchange of goods. We have made substantial progress toward world multilateral trade and convertibility of currencies which are major United States foreign economic policy objectives. A failure on our part to continue this legislation in an adequate form could only cause us to lose our leadership and gravely jeopardize the progress already made in these directions. It could spark a chain of events which would reverse the process of expanding world trade and lead to the development of mutually exclusive regional blocs economically insulated from each other and from the United States. Such regional trading areas are already forming. The direction in which they develop and whether, by increasing trading opportunities on a world basis, they realize the full potential benefits of the larger free market area they are designed to comprise, depends heavily on United States action on this extension of the Trade Agreements Act.

2. Expanding exports and imports are essential to an expanding United States economy. Our continued economic development, our increasingly high standard of living, our greater productivity all depend upon higher volumes of trade. Four and a half million people, or 7 percent of our labor force, are directly or indirectly employed in this two-way trade. About 9 percent of our movable goods are exported; this includes 11 percent of our machine tools, 26 percent of our mining and construction equipment, about one-fifth of our agricultural production. We cannot maintain or increase these exports unless imports increase. It is only through pursuit of a liberal trade policy on our part that our trading partners can themselves pursue such a policy; aside from our foreign aid and foreign investment it is only through increasing exports to us that other countries can earn the dollar to pay for our exports. The United States is a low-cost producer of a tremendous variety of products, in great demand around the world. The major limitation on our export sales is the dollars these countries can earn. Tariffs protecting our less efficient and generally low wage industries directly limit potential exports of our efficient, high wage industries and work to prevent the kind of specialization on an international scale that has served us so well domestically in greater productivity and efficiency. With larger imports we would make perhaps fewer bicycles, less velveteen, less decorated chinaware, or glassware—but more electronic equipment, construction and mining machinery, transport equipment. Our highly productive industries would expand and, as more dollars were available to other nations, this would extend to a wide range of consumers' goods for which we are still the lowest cost producers in the world. These greater exports would lead automatically to greater United States imports of noncompetitive raw materials or components, to the benefit of both sides.

3. We need at least 5-year extension of the Trade Agreements Act to provide a minimum of stability in our foreign trade. One of the major problems in the forward planning so necessary in the conduct of any business has been the uncertainty caused by the successive expirations of the Trade Agreements Act and the questions raised each time about its renewal. This is damaging to confidence in the continuity of a liberal policy on our part and seriously inhibits full realization of the benefits such a policy can bring forth, both to ourselves and to the rest of the world.

(4) The 6 European countries—France, Germany, Italy, Belgium, Netherlands and Luxembourg—have now ratified the treaties which will set up, over a period of 12 to 15 years, a common market free of tariffs and quotas for the products of 160 million people. The first phase of this operation will take place in the next 4 to 6 years, during which period tariffs among the 6 will be reduced by 30 percent, and a common tariff at a level of the average of present tariffs will be established against all outside countries. We consider this development a major step in the right direction—the greater specialization, the increase in productivity brought about by large-scale production in this wider market area can only result in higher living standards for all of the 6 countries. It can mean greater two-way trade between the area and the United States provided we are able, through the extension of this Trade Agreements Act, to negotiate a reduction in the level of the average European tariff to be maintained against us. Our mutual trade can certainly increase as it has always done as countries increase their developments and raise their standards of living; but if we give notice, by failure to pass this legislation in meaningful form, that we are not prepared to maintain our liberal trade policy, there is the considerable danger that the direction which the 6 nations take in their development will be away from closer economic relations with us and toward the kind of closed trading system so disastrous to our goals of freer worldwide multilateral trade. It could lead to the kind of bilateralism and regionalism against which we have exerted our influence for many years. It could lead increasingly to our mutual economic isolation and reduction of our very considerable mutual trade instead of its increase as both of our economies demand.

There is no real solution as many have maintained, in greater United States investment in plant and equipment inside the common market area in order to supply that market tariff free. Remittance of earnings in dollars and repatriation of capital will depend on European dollar earnings through increased exports of the area to the United States, and this can only be accomplished through a reciprocal reduction of tariffs.

5. Extension of the Trade Agreements Act is particularly important in view of the current business downturn. There can be no doubt that the recent decline in our exports has been a basic contributing factor in that downturn.

For the sake of our economy, for the preservation of United States jobs which depend on exports, we need now the boost that passage of this legislation would give to our rate of business activity by removing the uncertainty, the crisis of confidence among our foreign customers that our trade policy is in danger of going backward. We cannot afford the kind of a downward spiral in our foreign trade that failure to extend this act would entail. Its inevitable consequence would be further pressure on our

employment, our investment in plant and equipment and our economic activity.

6. Above all extension of the Trade Agreements Act is essential to free world unity and security. All nations in this world of mutual dependence, rely for their economic strength to foreign markets for their exports and to foreign sources of raw materials and other essentials for their imports. No alliance, political or military can be strong unless it is supported by common economic ties and full faith by each in the cooperative effort of all. In the face of the new Soviet economic offensive—the new challenge to the United States in the field of trade, issued by the Kremlin—these ties and these opportunities become more crucial than ever to the security. A large part of the world is at stake. If we default we may lose, for our principles of freedom and of competition, much of that world. The drive for economic development, for higher standards of living is irresistible everywhere, and will be satisfied either within the traditions of freedom or by forced growth at the tragic sacrifice of the individual, characteristic of the Soviet system. This extension of the Trade Agreements Act will be a central factor in the choice the world makes as to the direction it will go.

Curbing the Supreme Court

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Curbing Supreme Court," from the February 22, 1958, issue of the Augusta (Ga.) Chronicle.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CURBING SUPREME COURT

There should be full and free discussion in the Senate of the Jenner bill—S. 2646—to limit appellate jurisdiction of the United States Supreme Court.

The bill has been offered as a means of curbing a recent tendency in the court to assume powers that are not authorized by the Constitution of the United States. It sets up five categories in which the Court shall have no jurisdiction, these being cases involving activities of congressional committees, action to protect the Nation from subversion in the executive department among its employees, State legislation or action to control subversive activities within the State, action by boards of education to control subversive activities of teachers, and action of States or boards of bar examiners in relation to admission of individuals to the practice of the law.

These specific recommendations are not the result of ideas dreamed up in a fanciful mind. They hit at certain practices of the Supreme Court whose rulings in specific cases have created a wave of uneasiness throughout the country.

Great care must be exercised, however, in effecting changes that involve fundamental rights of the individual, which, it must be conceded, could be endangered by unwise legislation depriving the Supreme Court of its assigned role as the arbiter of law in the Nation. It is this difficult question that makes it hard to draw a line beyond which the Court shall not pass.

It must be realized, however, that the courts of the country cannot be permtited to transform themselves into legislative bodies, nor can the Supreme Court assume the power to nullify congressional action at will. Their function is to interpret the law as enacted by Congress. Congress remains the paramount agency for making the laws by which this country is governed. Once a law is made the Court has no authority to reverse such a law—except on the ground that it violates the Constitution of the United States.

The Constitution is the fundamental law of the land. Neither Congress nor the Supreme Court has the right or the power to nullify the provisions of the Constitution, which can be amended only by a two-thirds vote of all the States.

The function of the Supreme Court is to guard that Constitution against all encroachments, from any and all sources.

Recently, however, arrogant decrees of the Supreme Court have galvanized honest Members of Congress into a realization that the Court itself is actually destroying fundamental provisions in the Constitution by which the rights of the people and the security of the Nation are guaranteed.

In order to undo the damage already done Congress will have to summon up supreme courage to deal with the current situation in a manner that will reestablish Congress as the Nation's lawmaking body.

The Jenner bill is an effort to achieve such a restoration of congressional powers. It may need some modifications to make certain that proposed limitations on the powers of the Court will not act also as a limitation of the right of the people to appeal to high authority, but there is no question at all about the need for restoring the Supreme Court to its original function as protector of the Constitution rather than a legislative body.

General Harrison's Statement Before the Armed Services Subcommittee

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein a most impressive, penetrating, timely, and able statement by my friend, Maj. Gen. William H. Harrison, Jr., president of the National Guard Association of the United States, and outstanding leader of the National Guard in my own State of Massachusetts.

It was my privilege to attend the meeting of the Subcommittee on Armed Services before which General Harrison gave this brilliant testimony and am in strong approval of and in agreement with his statement.

I think that he not only touched upon the crux of the present unenviable and dangerous position of the National Guard, due to reduced appropriations, but he also made a complete explanation of the readiness of the Guard to cope with emergency problems, arising from its dual role in the first line of our defense and as a ready force during public emergencies and disasters.

I most earnestly urge that the Congress take immediate action to insure that the National Guard shall be kept at an authorized strength of 400,000 men, exclusive of the 6-month trainees, and I hope that we can secure favorable results on this vital problem in the near future so that the Guard can continue its service without crippling and destructive reductions:

STATEMENT OF MAJ. GEN. WILLIAM H. HARRISON, JR., PRESIDENT OF THE NATIONAL GUARD ASSOCIATION OF THE UNITED STATES, BEFORE SUBCOMMITTEE NO. 1, COMMITTEE ON ARMED SERVICES, HOUSE OF REPRESENTATIVES

Mr. Chairman and members of the committee, it is an honor for me to appear before this committee as the representative of almost half a million volunteer citizen-soldiers and airmen who are members of the National Guard of the States, Territories, the District of Columbia, and the Commonwealth of Puerto Rico.

We are aware of your great responsibility concerning the security of our Nation. In the exercise of that responsibility you have had presented to you certain proposed programs and policies for the common defense which vitally affect the Reserve components of the Army, and in particular this country's largest and most effective Ready Reserve force—the Army National Guard. Upon your deliberations and recommendations may well depend the lives of millions of our citizens and the future well-being and independence of these United States. You are entitled to, and must have, all possible information bearing upon these matters.

Mr. Chairman, the National Guard is strongly in favor of every program designed to weld the economic, scientific, and military potential of this country into a more effective instrument for national survival. However, while the attention of the Nation is focused on the fantastic pushbutton weapons of the future and the increased emphasis placed upon their development, we seriously question the wisdom of downgrading, slashing, and reducing the effectiveness of our existing conventional forces, both active and reserve—the men and organizations which constitute our shield of survival now. This doubt is shared by many Members of Congress. We can and must maintain a sufficient balance in our forces to prevent the enemy from gaining a decision in an area and with a force of his own choosing.

While our enemy maintains overwhelming land forces, vast air fleets, and extensive naval armadas; while he continues to incite local disturbances on the periphery of the free world; and while our national policy dictates the use of countermeasures after the first blow has fallen, we must be prepared to meet and grapple with him, notwithstanding the type and character of his attack or the locale in which it commences. In other words, we must be prepared to press the nuclear button, if necessary, and equally prepared to transport, equip, and supply the conventional forces required to cope with so-called brush-fire actions.

The opinion expressed by many in high places at the close of World War II, that the atomic bomb precluded the struggle of land-massed arms, had scarcely echoed before we were engaged in such a struggle in Korea. Our failure to adequately prepare for that action caused the needless and extravagant sacrifice of young Americans. Subsequently, we have tensely watched the explosions in Indochina, the Israeli-Egyptian war, the Suez Canal incident, the fight in Greece, the French and Spanish-Moroccan disturbances,

and the smoldering flames on Formosa and in the Middle East.

Sputniks I and II caused us to redouble our efforts to regain technical and scientific leadership. The widely distributed pictures of the Russian Army parading in Moscow's Red Square on October 5, disclosing extensive advances in weapons and equipment, are not calculated to soothe our national pride. Our vaunted technical superiority in weapons, equipment, and techniques, upon which has been based the slashing reductions in our forces, may no longer stand the scrutiny of close examinaton in the light of these revelations.

An integral part of our balanced force is the Reserve force, and in particular the Army National Guard. Conscious of the need for a strong Reserve and for a plan which would provide equity of military obligation, President Eisenhower, in 1953, assured the country that he would seek to strengthen our national defense by building a 2-million-man Ready Reserve. The Defense Department subsequently called for 2,900,000 men in the Ready Reserve and 2 million more in the Standby Reserve. I need not remind you gentlemen, most of who sat through the extensive hearings on the Reserve Forces Act of 1955, that time and again, under questioning, leaders of the Defense Establishment reiterated that (1) a 2,900,000-man Ready Reserve was a service requirement which had the approval of the services, the Joint Chiefs of Staff, the Secretary of Defense, the National Security Council, and the President; (2) the proposed plan was a long-range plan; and (3) that if the proposed plan was not adopted the entire national defense would have to be reoriented.

The Reserve Forces Act of 1955, embodying a majority of the features called for by the Defense Department, was subsequently enacted, and the Army undertook a multi-million-dollar publicity and advertising campaign to sell its features to the country at large. The immediate results were far from satisfactory.

Nevertheless, early in 1957 the Army announced that the 6 months active duty training requirement in that act was being extended to the Army National Guard. After considerable discussion before this committee, there was developed a memorandum of understanding, which modified the period of obligated service required under the act and specifically set the strength of the Army National Guard at 400,000 officers and men. Both the President and spokesmen for the Army announced that major reliance was placed on the existence of a strong, ready Army National Guard, and the Secretary of the Army guaranteed to do everything in his power to insure that the strength of 400,000 would be maintained. It was categorically stated then, and again later, that the Army would accept every man sent to it for the 6 months training, and at the time the States wanted to send them.

Notwithstanding these assurances and the splendid support rendered by Mr. Brucker, the Secretary of the Army, when the Congress was considering appropriations for the support of the Army National Guard for fiscal year 1958, officials in the Office of the Secretary of Defense blocked the inclusion of funds for the support of thousands of volunteers for the 6-month training program.

Almost immediately, the Department of Defense imposed a strict limitation on funding, and it became necessary to fix quotas on the number of nonprior servicemen who could be enlisted to enter the 6 months' training program in fiscal 1958.

The limited appropriations caused us to "borrow from Peter to pay Paul" with respect to putting young guardsmen into the 6 months' training program during the current fiscal year. We have been permitted, under monthly quotas, to enlist only a few thousand youths to start training within 120 days. Concurrently, we have had to enlist and stockpile high-school students and others who could be deferred from entering training until next July 1. The result was graphically illustrated in a chart displayed by the Chief of the National Guard Bureau, which indicated that those on board prior to July 1 must be funded in the 6 months' program out of fiscal 1959 appropriations. The chart projected only approximately 4,000 new 6-month trainees in fiscal 1959, or less than 1 per Army National Guard unit. In other words, from the standpoint of funds, most of next year's crop has been already harvested.

Efforts have been increased to obtain the enlistment of veterans, and so-called obligors—those who have performed 2 years of active service and who have a remaining obligation to participate in Reserve training. You have already heard testimony to the effect that only about 65 percent of the returning obligors are being involuntarily assigned to Army Reserve units, and only about 73 percent of those are actually attending the prescribed training assemblies. Such a procedure cannot be termed an equitable one. Experience in the States indicates that of the total number of obligors referred by name to the Guard the vast majority cannot be contacted because of incorrect addresses. The geographical location of many precludes their availability. Others express unwillingness to participate, have too much rank for available vacancies, or possess the wrong MOS. Less than 25 percent are ultimately enrolled.

Great stress has been placed on the utilization of obligors. This is a matter which is worthy of detailed consideration, and which members of this committee noted during the testimony delivered this past Monday. All are aware of the furor created by the recall and use of prior servicemen during the Korean conflict. Most of you remember the plea of President Eisenhower who had this to say on July 23, 1953, and I quote:

"I am confident that it is the will of this Nation that the responsibilities for its defense should be shared as equally as possible by all of its citizens.

"And yet, as our veterans of Korea return home they find themselves under legal compulsion to shoulder a 6-year Reserve obligation. Our only effective military Reserve under this present system is—and apparently will remain—composed almost wholly of men who have already served the Nation in the Korean war, World War II, or both.

"I also find that under the present system thousands of our young men have not yet assumed any military obligation to our country. Men who have not been inducted for Korea not only escape the ordeals of that conflict, they also undertake no reserve obligation.

"Thus our system requires our soldier of today also to carry the future national defense burden ahead of the man who has received no training, has done no service, and has assumed no reserve obligation.

"These inequities appear to me to directly contravene some of the most basic principles of our society."

Under the existing system, and as programed for the future, more and more emphasis is being placed upon the continuing military obligation of men who have already performed 2 or more years of active military service, and fewer and fewer opportunities are being afforded for young men without prior service to volunteer for active duty training, followed by a period of reserve training. Thus, the inequities of which the President spoke are being perpetuated and aggravated.

Pentagon sources have been quoted to the effect that the enactment of the new pay bill may make unnecessary the continuation of the draft. Under such circumstances obligors will no longer be available.

Today we have an Army National Guard at a higher state of readiness than was ever deemed possible a few short years ago, and its readiness is constantly and effectively being increased.

The Army National Guard is organized into more than 5,400 combat and combat-support units, located in more than 2,500 separate communities—a dispersal calculated to minimize the effect of any all-out nuclear onslaught. This factor alone might prove the difference between life and death for millions of our citizens in the initial stages of any nuclear war.

It is engaged in an active air defense mission, on an around-the-clock basis, and its units are now being trained to take over Nike-Ajax launching sites.

Inspections conducted by officers of the Active Army, assigned by various Army commanders during field training last summer, attest to the state of training of National Guard organizations. Seventy-five percent of 5,454 Army National Guard units inspected were given ratings of very satisfactory or better. Units awarded superior ratings totaled 12.1 percent, and 32.3 percent received ratings of excellent.

To conduct more advanced type training and make full use of equipment available for training, an increasing number of Army National Guard units are performing weekend outdoor training sessions in lieu of night training in the armory. This gives twice the amount of training time at no increase in cost.

A total of 4,165 officers and 3,924 enlisted men attended courses conducted at Army service schools during fiscal year 1957. Such participation would be greater if more funds were provided. A total of 41,769 Army National Guard men are presently enrolled in extension courses provided by these schools.

The past 2 years have seen an expansion of the National Guard's officer-candidate program. This expansion was undertaken to assure a continuing flow of qualified, properly schooled second lieutenants in guard organizations. The program provides for attendance at Regular Army officer-candidate courses, special National Guard officer-candidate courses conducted at the Infantry School, Fort Benning, and the Artillery and Missile School at Fort Sill. In addition, 34 States and the District of Columbia are conducting officer-candidate schools.

To qualify for promotion to the next higher grade an Army National Guard officer must successfully complete an appropriate course at an Army service school or an extension course commensurate with his grade.

The States, unassisted, have constructed and maintained hundreds of armories and other facilities, with hundreds of millions of dollars; other millions have been invested in facilities under a Federal-State program.

Because of the existence of long-experienced State military departments, the National Guard saves untold millions of dollars which would otherwise be required for the maintenance of wholly Federal Reserve forces.

The Army National Guard imposes a minimum support requirement upon the Active Army. It plans and conducts its own convoys of more than 400,000 men, up to distances of hundreds of miles to and from field-training sites; it performs its own administration, feeding, and general housekeeping, and conducts effective field-type training.

Despite limitation, restrictions, quotas, conversions, reorganizations, and redesignation, the Army National Guard today is still the largest and most effective Ready Reserve force in the arsenal of this Nation.

It is paradoxical and confusing that the more we reduce our forces the stronger we

are supposed to get. This is a dangerous philosophy and one which requires careful scrutiny. In this respect, we are greatly disturbed by proposed plans of the Army as disclosed to this committee. We fail to see wisdom or economy in any plan which arbitrarily directs the inactivation and destruction of Army National Guard divisions for which a requirement exists in the overall structure. Nevertheless, testmony before this committee included no reasons, valid or otherwise, for such projected action. We suggest that such a plan is not motivated alone by the desire for efficiency. Moreover, we seriously doubt that any war plan directs the inactivation of Army National Guard divisions. We do not take issue with the war plan as such, but we state categorically that if the total number of Reserve forces divisions must be reduced, economy and sound planning dictate the establishment of reasonable criteria for evaluating all Reserve forces divisions, to the end that those determined to be least effective be removed.

Such factors as strength, equipment, facilities, state of training, ratio of numbers of officers to enlisted men, unit and field training attendance, administration, supply, community support, potential, and others, appear to be a reasonable yardstick against which organizations may be measured.

The National Guard Association strongly urges that while this Nation vigorously pursues its nuclear and scientific programs, concurrent attention be directed to the maintenance and increased effectiveness of our existing conventional Active and Reserve forces, in order to provide adequate security under any and all circumstances.

Specifically, we recommend that—

1. The strength of the Active Army be maintained at 925,000;

2. The strength of the Reserve forces of the Army be maintained at 700,000;

3. The strength of the Army National Guard be maintained at 400,000;

4. The 6-month active duty training program be expanded to assure an adequate source of nonprior service volunteers to maintain the Army National Guard at 400,000;

5. Sufficient funds be included in the appropriations for fiscal 1959 to support the foregoing prescribed strengths;

6. Language concerning Army National Guard strength and Army Reserve strength be made uniform in respect to the inclusion or exclusion of the 6-month trainees;

7. The committee direct the Army to proceed with development of plans for a revised Reserve Forces troop basis, coordinated with the States and Territories through the National Guard Bureau and coordinated with the Army Reserve; and

8. That prior to implementation of any such revised troop basis it be submitted to this committee for final approval.

The guard is aware that conversion of its existing organizations to the pentomic concept will generate reductions in numbers of units. It is eager to initiate this conversion in order that it may have the powerpacked, mobile type of organizations needed to fight effectively, to survive on the atomic battlefield, and to provide a balanced force. Reorganization and conversion is an old story to the Army National Guard, but only participation in the planning stages will permit the orderly development of mutually satisfactory solutions to this desirable program.

Finally, it is our fervent desire to be able to support the Army as it should be supported, and to have a program of sufficient stability to enable the Army National Guard to perform its historic and legal mission as an integral part of the first line of defense of this Nation.

Houses for Tomorrow: Precut, Prefabricated

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. PORTER. Mr. Speaker, there will come a day when the houses we live in will never be built on the site, any more than we would think about building an automobile in a machine shop. My congressional district is the leading lumber producer among the 435 districts. Our Douglas-fir is the source of building lumber of the highest quality. Great influxes of population are expected on the west coast, so it is natural that persons like my friends Alison Wysong and George Seelye, as leaders on an industrial committee in Springfield, Oreg., take the leadership in the promotion of mass production of housing.

The following story from the Springfield News for February 6 is an excellent account of the progress being made in this important field:

UNIVERSITY OF OREGON SCHOOL OF ARCHITECTURE SUGGESTS PRECUT, PREFAB HOUSE PLAN FOR LOCAL PRODUCTION, PLUS IDEA FOR SPECIAL SITE TREATMENT

The first recommendation for Springfield to provide a major boost for its own lumber manufacturing economy to come from the University of Oregon School of Architecture by way of the Springfield Committee for Industrial Promotion, is a plan for mass production of precut, prefabricated houses that would provide site and housing project development as part of a package deal.

Wallace Hayden, professor of architecture, and Allison Wysong, industrial committee secretary, unveiled the first housing project model Wednesday afternoon at the Municipal Power office. The suggestion will be reviewed in detail next Wednesday night, February 12, at a meeting of the Springfield committee at the public library.

Wysong and George Seelye showed the model to Governor Robert Holmes at Salem on Monday and reported he was "greatly pleased" and said the project fits in with the industrial-development program he has been advocating. The school of architecture is working with the Springfield committee at the Governor's request.

The houses proposed by the school of architecture could be produced by the local corporation, the pieces coming from efficient use of standard dimension materials, then cut, numbered, and packaged for delivery to the site. Plans are in the making for 1- and 2-story single-family houses, plus 2, 3, or 4 apartment structures, Hayden said. The service would be available either to someone who wanted to buy a house for do-it-yourself construction or a developer who wanted to erect a dozen or hundreds of houses. "America needs houses in quantity. Springfield needs more manhours per thousand board feet of timber. This may be a solution," said Professor Hayden.

Basically, the plan recognizes that land use and house use cannot be separated, Prof. Hayden said. The "idea service" that would go with each house would fit it to a lot or a project.

Wysong and Prof. Hayden said the plan to be submitted to the committee includes formation of a local company, with stock sold locally and with local management, to go into the house manufacturing business, providing the houses on a competitive basis and offering extra services designed to make for long-time consumer enjoyment of the project. The plan takes into consideration the fact that present rectangular street layouts often do not fully utilize sites for their best potentials. "We realize," Prof. Hayden said, "that the housing problem from a national point of view, can only be solved by tract development." He said developments should no longer be a single unit duplicated many times, but instead providing enough ranges in space to fit different family sizes, incomes, and preference. A tract, the professor stated, is no longer limited to minimum survival, but may be beautifully developed.

The plan envisions a step toward solution of the neighborhood community problem, the professor said, providing as it does, a model of a neighborhood, a unit designed for the neighborhood. The Springfield firm would, he pointed out, provide a layout service, actually an idea factory, providing for such differences as terrain, different appearance, difference in requirements—it is something that has never been done—a whole service.

Every house, he continued, would have the same advantages in exposure, privacy, sheltered terraces, wind protection, access to children's play areas and public services, and each site would be approached by a neighborhood traffic way, zoned free from through traffic.

He described the tract plan also as a complete project service, with individual units keyed and matched to a pattern known to the producer. Each house would be designed for a particular size and shape of lot and yet each would be cut in the Springfield plant.

The University of Oregon students are continuing their studies on space requirements, utilization of good but reject material (people in the know use reject box car siding for much building) and like subjects. Wysong and Prof. Hayden look forward to an extremely interesting meeting of the local committee next Wednesday night.

Dateline 1980

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, February 26, 1958

Mr. STENNIS. Mr. President, I ask unanimous consent to have printed, in the Appendix of the RECORD, Mrs. Lucy Somerville Howorth's stimulating and thought-provoking article, entitled "Dateline 1980," published in the February 1958 issue of the General Federation Clubwoman. Judge Howorth has done more than uphold the high literary standards of this magazine, in her penetrating analysis of some of America's future problems, if cretain trends continue to develop for the next two decades.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DATELINE 1980

(By Lucy Somerville Howorth, national consultant, women's archives, Radcliffe College)

Robert Frost recently said that "the beauty of life lies in struggle and change and taking tough decisions." Mrs. Clubwoman, 1980, will have known that kind of beauty. She will have been confronted by many changing social factors, eight of which I have selected as of particular significance to women's organizations. They are outlined below:

1. There will be 4 persons for every 3 today. In 1957 United States population was 171 million, in 1980 it will be 215 million. This estimate is well under that of most authorities. To grasp its meaning, imagine one additional person in every home and two more in many. Pressure from this growing population is already being felt. A student of the subject, Robert C. Cook has stated, "sheer numbers wil restrict our mobility and completely change our life, compressing our society and culture into molds utterly inconceivable to us now."

2. The trend toward early marriages will continue. Strong social pressures on boys and girls to marry will continue. This trend, which began about the time of World War II has prevailed through one generation and is continuing into the next, consequently some of the adjustments to it have been made. The full effect of this development on the social structure has not yet been felt. One of the problems—and a most poignant one—is the age old problem of the girls who help their boy husbands to educate themselves to go up in the world and then cannot follow, having sacrificed their own education for their husbands.

3. The 4-day workweek will be general. There is agreement that this will happen. Most women are opposed; in 1957 a gallup poll reported 67 percent voted "no" and a trendex poll showed a majority against. Men are more doubtful. The question most men ask is "what to do with the time?" Women sourly comment "What can we do with a man underfoot 3 days in row?" (A comforting thought, perhaps, the days probably wouldn't be "in a row.") Women see no reduction in homework. Aristotle, yes Aristotle, 384–322 B. C., said: "The proper use of leisure is the test of the educated man." Twenty-five years ago the proper use of leisure was a measure only of the leisure class. In 1980 most adults will have to find "what to do with the time." The abuse of leisure may present a critical moral problem.

4. Families will continue to be moderately large. This would seem obvious, if the population is to grow. But it isn't. Population could grow from immigration, lowered death rate, or concentration of many births in a segment of the population. Instead the growth will be diffused throughout the population. This means, for one thing, a tendency for club leadership to be concentrated in older-age groups.

5. The movement of women will continue to paid jobs outside the home. This trend seemingly is inconsistent with the shorter workweek; nevertheless the two will develop concurrently. In November 1957 the Census Bureau reported that every year for the last 10 another half million women have taken jobs outside the home. It is a well-known fact that in every type of social order, women have been economic producers. In some societies they have been almost the only producers. In the United States, the story of the flow of women's work from the home to the factory is familiar. Most women currently entering the labor force are married and past 35. The average American woman can expect to be in the labor force during some period of her life. Unfortunately, there is no evident trend toward higher pay or higher positions for any appreciable percentage of women. In 1980, as in 1957, it will be news when a woman wins a top position.

6. Families will move with greater frequency. As industry and Government continue to decentralize, a trend accelerated by sputnik, transfers of employees will increase. There may appear to be a conflict here with the earlier statement that population growth will restrict mobility. The mobility there referred to is movement for pleasure, to get away from things by seeking a new environment. Here we are considering mobility as the Army and Navy have always known it. This factor presents many problems to organizations.

7. College education will be predominantly coeducational. This trend is clearly apparent. The older and more famous women's colleges are in no danger. There will always be a place for them, as for the private men's colleges. Smaller and less well-established women's colleges and State institutions for women face mergers, reorganization and extinction. In the past, leadership in organizations has come largely from graduates of women's colleges. They must now begin to look elsewhere for leaders.

8. Women will continue to live longer than men. This is a sad fact, that has happened in this century. There is nothing in sight to close this gap. The 4-day week should, but unwise use of leisure may well cancel possible benefits. It is estimated that by 1980 there will be 3,750,000 more women than men in the United States, most of them widows past 60.

These factors are not what I would choose to have happen, nor what I would advocate. They are what students of social forces say will happen. It rests with the people of the United States—and particularly the organized women—to turn these developments to mean a good society.

Mr. David Warren

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. ROGERS of Texas. Mr. Speaker, I have the sad duty to advise this body of the passing of one of Texas' and the Nation's most illustrious sons. I was deeply moved when I received the sad news that Mr. David Warren had passed on. A fine citizen and an outstanding newspaper man has been removed from our midst and countless friends mourn his passing.

Mr. Warren was born in Missouri, and was a graduate of the University of Missouri School of Journalism. His newspaper career began in Texas in 1918 as a reporter on the staff of the Amarillo Daily News and the Daily Panhandle, later becoming managing editor and serving in that capacity until 1926 when he founded the Borger News-Herald. He was chairman of the Panhandle banks and for many years publisher of the Panhandle Herald and Borger News-Herald which he sold in recent years. He also controlled a string of newspapers in the Panhandle of Texas and eastern New Mexico, but had disposed of these to give more time to his personal affairs.

He had served as president of the Texas Press Association and the Panhandle Press Association, and for many years was on the board of regents of the University of Texas. He was honored many times in Texas and in his native State of Missouri. He received the distinguished service award of the University of Missouri Alumni Association in 1956, and previously, the Missouri honor award for distinguished service in journalism was bestowed upon him. He was president of the Missouri Journalism Association in 1954–55, and his most recent recognition was a plaque naming him honorary member of the Missouri State Historical Society, 1 of only 11 to receive that honor.

Warren was a life member of the Texas State Historical Society and had been president of the Panhandle-Plains Historical Society. The American Association for State and Local History in 1950 presented him with the association's award of merit in ceremonies held at the University of Texas. Gov. Price Daniel appointed him member of the governor's committee to make plans for the observance of the 75th anniversary of the University of Texas. His life was a full and generous one, marked with success all along the way.

Among the newspaper tributes to his life and memory ran the theme that was his outstanding characteristic—and that was, that he was a Christian gentleman whose life was motivated by the highest principles. Always an idealist, always working for a better America, he never paused to rest on his laurels.

But Dave left his own monument—a dedicated Christian life founded on character, integrity and ability. He never hesitated to stand up for what he thought was right. Personally, I held a deep respect and affection for him and feel I have lost a good friend. I shall miss him very much and will always revere his memory. May I say to Mrs. Warren and the family that although these words of mine cannot ease their grief or be of much comfort, I extend my deepest sympathy in their sorrow and great loss.

Jewish Memorial Hospital

EXTENSION OF REMARKS
OF
HON. HERBERT ZELENKO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. ZELENKO. Mr. Speaker, it is a great pleasure to report on a communal achievement in the heart of the congressional district that I represent, an achievement that deserves to be known by my colleagues in Congress and by humanitarian-minded men and women throughout the country.

Recently the metropolitan newspapers of New York City and the medical publications of the country carried the following news story about a pioneering achievement of Jewish Memorial Hospital, Broadway at 196th Street, New York, of which, incidentally, I am also a trustee:

The dental service of the Jewish Memorial Hospital, under the direction of Dr. Julius M. Goldberg, announces a completely integrated clinical program for the dental treatment of mentally and physically handicapped children now in effect at the hospital located at Broadway and 196th Street. This program, the first of its kind in the Borough of Manhattan, is under the supervision of Dr. Jerry J. Adelson, chief of the pedodontics service of Jewish Memorial Hospital's dental clinic. Dr. Adelson is also the president of the Dental Guidance Council for Cerebral Palsy.

The program provides for the full dental needs of handicapped children under comparative routine procedures as well as a special operating unit for those who must be treated with general anesthesia.

This unit has been functioning for the past year for children of the Handicapped Children's Clinic of Columbia University College of Dental and Oral Surgery, headed by Dr. Solomon H. Rosenstein.

The program includes training courses in dentistry for the handicapped child, given by Dr. Adelson at Jewish Memorial Hospital both for members of the hospital dental staff and for the postgraduate pedodontics students of Columbia University College of Dental and Oral Surgery.

"This service," Dr. Goldberg said, "is intended for handicapped children of the low-income groups with dental requirements that cannot be treated normally without these special clinical provisions.

"Heretofore, such children have suffered an inadequacy of care due to their physical or mental handicap. It is the purpose of this clinic to help these children with the latest in dental skill and equipment."

Jesse H. Barkin, president of the board of trustees of Jewish Memorial Hospital, hailed the new clinic as "another step in the hospital's expanded program as a community institution serving the growing population of Washington Heights, Inwood, Riverdale, and West Bronx."

This account is only another example of the work of a volunteer institution that for over 50 years has been serving the people of its community in their health and medical needs and contributing increasingly new and important values to the well-being of thousands upon thousands.

Nor is this the only development in which Jewish Memorial Hospital has pioneered. Its record is an extraordinary one. For years it has been conducting research in leukemia, work that is still being carried on in the hospital's research laboratory building, largely through the generous aid of still another volunteer organization, the Marcia Slater Society.

Jewish Memorial Hospital has also pioneered in educational programs stressing freedom from fear of hospitals and in a program inviting the youth of the community to the hospital so that they might know firsthand how a hospital works and be inspired to public service.

It was this hospital, too, which developed an arts and crafts program for the children of the mothers who were attending the outpatient department.

And these are only a few aspects of a long and honorable history.

Jewish Memorial Hospital was founded in 1905 by representative New York citizens who felt the urge to do something for the welfare of the community and the well-being of their fellow men. From a small institution, the hospital has developed until it now has over 200 beds and bassinets, with expansion plans approved by the Hospital Council of Greater New York to add 140 more beds based upon the population growth and reasonably estimated needs.

In the course of its history it has secured approval of all of the important hospital and medical associations and has attained a distinctive reputation for its high standards, its unsurpassed administration, its fine medical staff, and its dedicated board of trustees, a group of philanthropically minded citizens.

Research at the hospital has included important work: Work on the Rh blood factor—a dramatic achievement some years ago was a complete blood transfer to save a new-born baby; on leukemia—you may recall the Louis boy story, a Sing-Sing prisoner who offered himself for experimentation to save the life of 6-year-old Marcia Slater and who was later pardoned for this deed.

Research at Jewish Memorial Hospital expanded to such a point in recent years that it was necessary to add a new wing to the present hospital building. When the new research laboratory was dedicated, it provided an occasion for community celebration and for tributes from outstanding Americans.

Directing and carrying on the work of the institution is a medical board of first rank, a director and administration that cannot be surpassed, and a board of trustees of extraordinary men and women constituting one of the finest service groups in the city of New York.

It is gratifying to report on the progress of the hospital on the eve of its 53d annual dinner which will take place at the Waldorf-Astoria Hotel grand ballroom on Saturday evening, March 29.

I wish my colleagues could be with me that evening to see one of the flowers of American freedom and volunteer service in full bloom: an institution sustained by men and women of good will and of compassion for humanity; an institution that is an adornment to the greatest of American cities and to all Americans.

Communists in Korea

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. DEROUNIAN. Mr. Speaker, remembering the 37 broken promises of the Soviet Government, out of a total of 40 agreements made at top-level conferences over the past 15 years, I request that there be placed in the RECORD the following editorial which appears in the February 20 issue of the Long Island Daily Press:

HEADS WE WIN, TAILS YOU LOSE

The announcement that Red China will withdraw its troops from North Korea is designed to put the United States on the spot.

The joint communique by Chinese Premier Chou En-lai and North Korean President Kim Il-sung says the first phase of the withdrawal will be completed by April 30. It adds that the remainder of the troops will be out before the end of the year.

The Red leaders claim this is proof of their sincere desire for peaceful reunification of the divided country. They say that if the United States and its allies have any sincerity they would likewise withdraw.

That makes good propaganda, from their point of view. But what of the facts?

The Chinese have about 350,000 troops in North Korea. They only have to pull them back across the Yalu River to be within the letter of their announcement. They'd still be in ready striking position. They have rebuilt the North Korean Army and given it new weapons.

We have only two divisions in South Korea—plus the few token forces of our allies.

We have no place to move our troops but far, far away. It would have to be to Hawaii or the States.

Japan is out; all but a few of our troops have departed from there under Japanese pressure. Okinawa is overcrowded by one Marine division.

While we may take a propaganda lashing, how about just telling Chou and Kim: "That's fine. Pull out the troops. We will when we're certain the political problem is settled and we can expect a free, united Korea."

We also might remind them that the United Nations—which the Chinese Reds want so eagerly to join—branded the Chinese Communists as the aggressors in Korea back in 1951.

All that the Chinese Communists and their North Korean stooges are saying is: "Heads we win, tails you lose."

Salary Increases for Federal Classified and Postal Workers

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a statement which I made yesterday to the House Committee on Post Office and Civil Service. My statement was in support of salary increases for Federal classified and postal workers. I was pleased to note that, following the submittal of my statement yesterday, the House committee voted to give a pay boost to these deserving public servants.

My statement follows:

A STATEMENT IN SUPPORT OF SALARY INCREASES FOR FEDERAL CLASSIFIED AND POSTAL WORKERS

Mr. Chairman, I am grateful for this opportunity to appear before your distinguished committee to express my support of legislation for proper adjustments in the basic compensation rates of the employees of the Federal Government, before us today. As we refuse Federal employees the right to bargain for their wages and working conditions, they must depend upon the fair play of Con-

gress to maintain their equitable position in the economy.

The challenge of Soviet scientific achievements has reawakened America to the necessity of having the ablest and the best trained personnel in our Federal service, working for our national preservation. In recent years we have witnessed a marked deterioration in the prestige of our civil service. Government personnel directors can testify to the serious difficulties they have faced in recruiting trained personnel for Government jobs. The Federal agencies have been unable to compete with the alluring offers from private industry.

In addition, the civil service has been losing valuable, skilled employees through the enticements of higher-paid positions elsewhere. Turnover rates as high as 25 percent among highly trained employees have been cited. In the interests of our national welfare and the retention of a high caliber civil service, we must authorize immediate and substantial pay increases for our Federal classified and postal employees; so that they can regain lost ground in our expanding economy.

The continued and accelerated upward spiral in the cost of living have left Federal employees bearing the brunt of the inflation. The cost of living has far outdistanced the meager increases in the Federal pay rates. We have had a more than 6 percent rise in the cost of living since the last Federal pay raise in 1955. The pressure of the never ending treadmill of trying to purchase the necessary goods and services for their families and themselves with dollars of declining relative value has led many Federal employees to take secondary jobs or to have their wives go back to work.

Recent surveys indicate that for a family of four to maintain a modest, but adequate standard of living, their annual income must be at least between $4,700 and $5,000. Yet, the median wage for Federal classified employees is $4,075 and for postal workers it is $4,410. In other words, more than half of our Federal civil servants are receiving substandard wages. This is a disturbing situation which calls for immediate action.

Over the past decade while workers in private industry, with the assistance of their unions, have considerably improved their conditions, both in wages and in added fringe benefits, Government employees, precluded from the advantages of collective bargaining, have steadily lost ground. Federal workers have been given only 1 general wage increase of 7½ percent for classified employees and 6 percent for postal workers in the last 6 years, while many workers in the business world have been getting annual wage boosts commensurate with their increased productivity and the rise in the cost of living.

In the 3 years since the Federal employees received their last pay raise, wages in manufacturing have gone up 14 percent, in wholesaling 13 percent, and in mining they're up 21 percent. One has only to compare the changes in real income of Government employees with various other occupational groups over a 17-year period from 1939 through 1956 to realize how poorly the civil service has fared in our growing economy. Bituminous coal miners have enjoyed the largest increase in real income of 107 percent. But other groups have also prospered; lumber workers up 73 percent; textile workers up 64 percent; chemical workers up 58 percent, meatpackers up 47 percent; even schoolteachers are up 36 percent and retail clerks up 24 percent, to mention only a few. And where do we find the Federal Government workers?—at the bottom of the list with a modest 14-percent increase in their real income. To raise Government salaries to the pre-World War II status would require a pay raise of at least 25 percent, a much greater figure than anyone is proposing.

The disparity in wage increases and real take-home pay is not confined to a comparison of Federal employees with other occupational groups. Even within the Government service this disparity extends to the relationship of classified employees' salaries and the earnings of nearly 700,000 Federal employees whose rates of compensation are not set by the Congress, but rather are based upon the prevailing wage rates in the communities where they are employed. These Federal wage-board workers have received repeated upward adjustments which have kept their wages in line with the cost of living, but which have also placed them far ahead of their fellow classified employees in terms of increased income. The Department of the Navy reports that its wage-board employees have received pay raises totaling 25.8 percent since 1951, while the postal workers have had to settle for 6 percent and the Federal classified employees 7½ percent. Numerous situations have been created where classified supervisors are paid lower salaries than the wage-board workers they supervise. If this condition is allowed to continue, we will witness a further decline in the morale of our Federal service, which we can't afford in these perilous times.

Today the median salary in the 927,822-man classified service is $4,075 compared with that of the wage-board employees of $4,597. This is quite the reverse of the picture in 1950 when the classified service salary median was $3,225 as against the wage board's $3,099. These figures clearly illustrate the unjustified inequities in our Federal pay system. We in Congress are now faced with the responsibility of removing these detrimental inequities before they endanger the whole quality of our civil service.

In American industry it is a common practice to measure wages on the basis of adequate compensation for work performed. This is the principle behind the whole system of incentive wages. Postmaster General Summerfield has testified that the productivity of postal workers has increased 17 percent over the past 6 years. The administration seems to recognize the fairness of rewarding employees for extra productivity in private industry, but it has wanted to deny any increase to postal workers on the same grounds. By 1959 it is estimated that the average pieces per clerk man-year will have risen 6 percent over the 1955 figure and the cost of living has risen by another 5 percent. Are the postal workers to continue to labor diligently without any incentives or rewards, and see their real wages decreasing? This, it seems to me, would be contrary to the principles of our American economic system.

Of course, most Government activities do not lend themselves to productivity measurements. But it would be absurd to claim that Federal employees are not entitled to productivity increases just because the work they perform cannot be measured in terms of pieces completed per hour or some other exact productivity measurement.

Our economy-minded friends in both Houses argued last year that we could not afford to grant Federal pay increases; because the cost would add to the already huge Federal expenditures and precipitate an increase in the Federal debt limit. I favor Government economy wherever possible, but I say to these colleagues we can't afford not to authorize some upward adjustments in our Federal pay scales. It would be faulty business logic and false economy to allow a slow deterioration of our Government service in the name of economy. The replacement costs of training new, skilled employees would far outweigh the savings gained from not giving a pay raise. The Hoover Commission reports that it costs $3,000 to recruit and train a new Federal employee.

Another argument propounded by opponents to a Federal pay increase was that these raises would start an inflationary chain reaction. This appears to be a case of confusing cause and effect. Actually, the Federal employees have become the special victims of the inflation. Why should this one small segment of our economy be singled out to hold the line in the fight against inflation, by foregoing justified salary increases, in the face of the complete failure of the administration's efforts to restrain price increases in other segments of the economy?

We are confronted here with the almost unbelievable spectacle of the richest country in the world today keeping a majority of its Federal employees on what is subsistence pay or less. To authorize a pay increase would only by remedying an inequality.

Postal and classified pay legislation must be considered on its own merits and not tied to the endorsement of postal rate increases. It would be unfair to continue to make the postal employees and other Federal employees the whipping boys for the administration's inability to get congressional approval for its proposed higher postal charges. Loyal civil servants should not be made to absorb the costs of our growing postal deficits.

National self-interest requires us to improve the wages of our postal employees and other Federal employees and to return them to an equitable position in our economy. I know I need not belabor the importance of our civil service to the workings of our whole society. In recent years, the Federal Government has grown to have such a vital role in the economy and in the preservation of our way of life. It is essential that our Government be manned by the most capable and best trained of our citizens. We cannot hope to entice qualified personnel into Government service with our present inadequate pay scales. It would be sheer folly to let this pressing problem go unsolved any longer. I, therefore, Mr. Chairman, hope that your committee will take action immediately to favorably report legislation to the House so as to enable that body to vote for a salary increase which these public servants so richly deserve.

Pulp and Paper Industry in the State of Maine

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. McINTIRE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an article from the February 23, 1958, issue of the Portland Press-Herald.

As the article concerned so vividly points out, the paper-pulp industry performs as a dynamic economic factor in the State of Maine. This industry has a unique disposition for employing modern methods of production and for instituting innovations as a consequence of technological developments. This tendency combined with sound management promotes expansion of industry and success in operation.

The paper-pulp industry of Maine is an industrial complex that effectively blends together the three ingredients basic to economics—land, labor, and capital. And as it is an industry that contributes much to the State of Maine, so is it a vital element in our national economy.

[From the Portland Press-Herald of February 23, 1958]

MAINE FINANCE

(By Harold J. Boyle)

The paper-pulp industry is the biggest thing in the Maine economy. It accounts for about 29 percent of all the industrial activity in the value of its product. It has an annual payroll of around $81 million paid to 17,421 workers who averaged $4,664 apiece in the latest year for which wages are available.

SHARE

What happens to the $400 million this Maine industry takes in every year? How much of it stays in Maine and who gets it? One Maine paper manufacturer, S. D. Warren, at Cumberland Mills, answers that question in its 1957 annual report. It breaks down on a single-dollar basis the $58,286,000 it received last year in exchange for the 166,167 tons of paper and pulp products it sold all over the United States.

Here's the way this company traces the 100 cents in the average dollar it collected for all its production last year:

Cost of materials it had to buy (pulpwood, chemicals for turning the wood into pulp, China clay, and other products needed to make paper), 33 cents.

Wages, 31 cents.

Other mill expenses (power, steam, repairs, pensions, city taxes), 20 cents.

Headquarters expenses (advertising, bond interest, selling expenses, etc.), 6 cents.

Federal income taxes, 5 cents.

Dividends to stockholders, 3 cents.

Kept in business for future improvement and expansion, 2 cents.

LABOR

The same distribution of the Maine paper dollar would hold for most other companies manufacturing paper pulp in this State. It takes about 33 cents of every dollar to pay for the woodpulp and other materials to make the paper. The employees get another 31 cents for their part in making the paper. The third largest expense—20 cents of every dollar—is for electricity to operate the mills, repairs on the high-speed machines used in modern paper mills, city of Westbrook realty taxes, etc. Those 3 expense items—materials, wages and power, taxes, etc.—take 84 cents of every dollar. Uncle Sam collects 5 cents in Federal income taxes, stockholders get 3 cents, and the company holds onto 2 cents to spend for new machinery, etc.

A safe guess is that at least 65 cents of every one of those paper-company dollars circulate in Maine. Employees get 33 cents, the owners of the wood purchased every year receive probably another 25 cents. The city of Westbrook collects $425,000 in realty taxes. The paper industry, as these figures show, generates a large measure of prosperity in Maine.

Mutual Security

EXTENSION OF REMARKS

OF

HON. EDWIN H. MAY, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 26, 1958

Mr. MAY. Mr. Speaker, the mutual security debate in Congress is now officially underway. The citizens of the United States will have the opportunity through their elected Representatives to express their opinions in the months ahead.

The very significant conference on Foreign Aspects of United States National Security was a resounding success here in the Nation's Capital. The people will now have more of an opportunity to get the complete facts on the case in question.

As a new Member of Congress who has always been vitally interested in international affairs, and one who has supported our mutual-security program this past year, I find to some extent the forthcoming debate somewhat unfortunate. It is hard to believe that the true facts of the case are not more thoroughly understood by the people. Any Congressmen who decry the mutual-security program, I am sure feel they are representing the people in their respective districts. It is not easy to have people understand a program overseas for waging peace as it is to understand the necessity of a particular public-works project nearby. In my opinion, individual leadership on the part of the Members of Congress should supplement the high quality of bipartisan leadership exhibited by President Eisenhower and other Republican and Democratic leaders.

Significant facts so eloquently and forcefully stressed by the President last night should be reasserted again and again to the people throughout the land. The President's statements pointed out that the aid program is as urgent as the missile program. He further repudiated the fortress America concept, stating:

We might as well try to find peace by building another Chinese wall. * * * Our hope for permanent security and peace today is not in fortifications and walls. * * * It is in the hearts and minds and unity of purpose of the people whose ideals we share throughout the free world. The program has thwarted the Communist hope of encircling and isolating us by taking over vulnerable smaller countries, through aggression or subversion * * * the urgency of the times and the opportunity before us calls for greatness of spirit transcending all party considerations.

Many other factors could be mentioned—such as the recovery of Europe and the saving of Greece, Iran and South Vietnam from Communist domination.

As one Member who was honored to be with a congressional committee investigating phases of the mutual-security program in Europe last fall, I became increasingly impressed with the necessity of extending the mutual security program. We all want the most efficient and economical program in this area of waging peace. There have been mistakes which obviously occur even in our most reliable businesses in America. However, the inescapable conclusion is that the net overall effect of our investment has been good. We all hope the day will some time arrive where more of these funds can be diverted to domestic use; however, while our eye is for efficiency and economy at all levels of the Federal Government, we must look beyond to the important objectives of long-range security for our children and the future of America. Russia is unrelenting in its aggressive imperialism by military and economic means. Not to recognize this on the part of Congress and the people would be as the President stated so well last night—"pennywise economy and above all, outright refusal to look at the world as it really is."

Liberty and Security

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 26, 1958

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Standard-Times of New Bedford, Mass.:

LIBERTY AND SECURITY

The American Civil Liberties Union, in its 112-page annual report, has several interesting comments on national security. It suggests, for example, that the Federal Government can attract needed talent for its increasing defense needs only if its security system insures civil liberties.

The report says United States security is a twofold problem that involves keeping the wrong people out of Government service in such a way as to get the right people into it. The best men, it continued, can't be got and kept if they feel they are being scrutinized as potential traitors.

These are vague generalizations and difficult to assess; a definition of terms might help, including a determination of what right and wrong people are.

The ACLU does get specific, however. Patrick Murphy Malin, executive director, remarks that public opinion has matured considerably in its understanding of which measures do—and which do not—really serve national security.

The report then mentions the studied seriousness of recent Supreme Court decisions and of the Commission on Government Security and contrasts them with the hysteria and near terror of only a few years ago.

American Communists and sympathizers "now are a tiny and puny crew," Mr. Malin concludes, and "the police job necessary to internal security can concentrate on the relatively few and relatively conspicuous agents sent in from abroad."

It would be tragic if any greater number of Americans accepted the views of Mr. Malin and the ACLU. The recent Supreme Court decisions to which the report refers have virtually brought to a halt State and Federal prosecution of top-level Communists in this country by wrecking the Smith Act and preventing States from prosecuting in sedition cases. In addition, there have been innumerable Supreme Court decisions involving persons identified with communism, in which lower-court findings were reversed and the efforts of the law-enforcement agencies concerned were negated.

To suggest, moreover, that Communist agents are relatively few in number is absurd. Mr. Malin has no idea how many there are, nor has anyone else outside the Red conspiracy. To describe them as relatively conspicuous is foolhardy. The Red spies who have done the greatest damage to this country escaped detection until their principal tasks were accomplished.

J. Edgar Hoover, Director of the FBI, has declared, "Let no one for a moment allow himself to be lulled into believing that the

Red network ceased to exist with the Rosenbergs. On the contrary, the espionage attacks against our institutions continue unabated."

The ACLU may not concede that Mr. Hoover is better informed on the subject of national security than Mr. Malin, but most Americans think so.

Mileage Allowance for Rural Letter Carriers

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. BURDICK. Mr. Speaker, the present mileage allowance of 9 cents per mile paid to rural letter carriers for use of their privately owned vehicles to deliver the mail was established in 1951. During the 7 years since that 9 cents per mile rate was set, all costs of operation, maintenance, and replacement have risen sharply. These rising costs are well known by all of us who own and drive automobiles. The problem has been more acute to the rural carrier, however, due to the weather and road conditions he endures and the numerous stops to render a full mail service to the American rural public.

Our individual experience with the difference in driving costs between 1951 and 1958 should be all that would be necessary as proof that the increased costs are a real and positive fact. They have not only greatly increased but are progressively moving higher each year.

The rural carriers of this country comprise a devoted group of employees on the public payroll who are rendering a valuable and indispensable service to rural America. In my State of North Dakota, 621 carriers on 6 days of every week make the daily round to deliver the mail including letters, newspapers, and parcel post, and in addition provide every postal service to each and every family right at their mailbox. The more than 30,000 miles of rural delivery route in the State of North Dakota causes these carriers to travel every day on all kinds of roads and often under weather conditions, particularly in the winter, which requires the use of special equipment. These factors take a toll on wear and tear of equipment, increase gasoline consumption, and cause maintenance costs to soar.

The testimony of Mr. Ray L. Hulick, president of the National Rural Letter Carriers' Association, graphically illustrates the extent to which these costs have risen. Tabulation of cost accounting sheets of rural carriers as submitted to the Internal Revenue Department, as well as the cost accounting appearing in the 1957 report of our Postmaster General, clearly indicate that the present cost of equipment maintenance to these rural carriers is in excess of 11 cents per mile.

Under these conditions, the rural carrier is required to personally absorb a portion of the operating cost of his vehicle while performing a duty to which he is obligated. Such conditions impose a financial loss on a Government employee without just cause. This is certainly not intended and should not be condoned by our legislative body.

Trade and Aid

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. MAY. Mr. Speaker, I wish to commend to the attention of my colleagues an excellent editorial which appeared in the New Britain Herald of February 22.

The editor of the Herald has placed the mutual security and trade agreements programs in their proper perspective. It should do much to add to understanding on the part of the public of these two vitally necessary programs.

TRADE AND AID

The two words "trade" and "aid" have been bandied about by all sorts of people from world statesmen to ordinary politicians and from relatively unknown experts to better known personages who are not so expert. These two words obviously must be of some importance to have so many people talking about them.

As an insight into the importance of these words let's examine what three persons had to say about them recently. We have picked three persons who should be well known to New Britain area residents—President Eisenhower, John Davis Lodge, former Connecticut Governor and present Ambassador to Spain, and Prof. Albert E. Burke, who is scheduled to give his second talk before the YMCA foremen's night group next week on resources and foreign policy.

Of the three men, Professor Burke made the clearest explanation. This is probably due to the fact that he has devoted his life to teaching and lecturing. He stresses the importance of trade over aid. This is what he contends:

The United States lacks 68 natural resources in sufficient amounts to keep our industries rolling at today's rapid pace. We are desperately dependent on other nations for these raw materials. As a result our economic system is dominated by countries outside the United States. Russia operates an economic as well as a political bloc; therefore, it is independent of the rest of the world. Resources flow freely in the Communist bloc without trade barriers. "If we do not find a way to unite the free world economically, we will go down," Professor Burke concluded in the first of his talks to the foremen.

Ambassador Lodge, in a speech Thursday at the opening session of the American Bar Association's meeting in Atlanta, backed up what Professor Burke said and added to it the factor of security. This, in part, is what he said:

"We live increasingly in an interdependent world, a world in which political boundaries no longer coincide with economic frontiers. Indeed, our security and our prosperity depend upon the security, the stability, and the unity of our allies. Their security and continued stability depend, in turn, in large measure, on economic conditions. Their unity can hardly be achieved without American economic aid." He made a plea for congressional support of both the mutual security and the trade agreements programs.

President Eisenhower made a dramatic appeal on Wednesday for an appropriation of $3.9 billion for foreign aid under the mutual security program. He has also asked for renewal of the reciprocal trade program.

Professor Burke and Ambassador Lodge have both shown why the President's requests are vital. One cannot help but wonder, however, if the word "trade" has not been neglected in comparison to its counterpart, "aid."

Technology Transforms the Farm

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I am inserting in the CONGRESSIONAL RECORD an editorial which appeared in the Kansas City Star of Sunday, February 9, 1958, entitled "Technology Transforms the Farm." This interesting editorial discloses many of the significant changes that have taken place in agriculture since World War II. It has real merit. I commend its reading to my colleagues:

TECHNOLOGY TRANSFORMS THE FARM

When President Eisenhower sent his special farm message to Congress recently he said agriculture was experiencing a "veritable revolution in productivity." The rapid changes, he explained, were largely the result of a breakthrough in science and technology.

What has happened to agriculture? You have only to look back a little to get a general idea of the situation. Farming has changed so much in recent years that the impact, with all its ramifications, has even authorities on agriculture puzzled. The layman comes to conclusions that are based far too often on inadequate facts.

The misunderstanding itself is a contributing factor to the perennial agriculture problem, both on and off the farm.

Roy Battles, of Washington, an official of the National Grange, recently commented that the impact of the technological revolution on agriculture is so great that it cannot be fully appraised until far more information is gathered. By the time this information is obtained it will be out of date.

But cold figures do tell part of the story. Since 1910 farmers have doubled their total output in the United States, tripled their output per man-hour and now are operating their farms with a third less manpower. Most of the big progress in productivity, however, has come since 1940. Output per man-hour on the farm has doubled since that year.

In 1910, the farm population made up 31.9 percent of the total in the United States; today it makes up only 12 percent. Percentagewise, the farm population has declined throughout the period, but the big drop in actual farm population has come since 1940.

In Kansas and Missouri, the farm population hasn't declined at the national rate. Almost one-fourth of each State's population still lives on the farm. Still these States, too, have experienced a big shift to the cities. When you drive back to the old home community, you see farmhouse after house standing vacant and empty little rural schools. The people just aren't there any more.

But the land is there.

The people who are farming that land in larger units are getting bigger harvests than ever before, more production per acre, more meat per unit of livestock. Even with Government acreage controls, total farm output last year equaled the previous all-time high.

One man does what two could do in 1940 through the use of new machinery, better seeds (hybrid corn, hybrid sorghums), fertilizer, hormones that increase beef output, antibiotics that make growing animals more healthy, chemicals that kill weeds, pesticides that save crops from insects and drying devices that permit harvest of wet crops. Why should there be greater employment in agriculture? There doesn't seem to be any reason for more farmworkers despite the political tears that are shed over the declining farm population.

With fewer people on farms, the Nation has agricultural surpluses. This is the one fact best known across the land. It is the basis of the farm-price problem. Less well publicized is the fact that the market for farm produce has increased immensely. Since 1900, the total population of the United States has doubled. Simple arithmetic would indicate that we are consuming twice as much food.

Right now, the cattle on feed are double the count of 1930. Significantly, the Nation is eating all the beef produced.

The same holds true for many other products, but not all. Despite the growing population, farmers can increase production faster than the rising need. Wherever that is done we have surplus troubles.

One factor of the farm-population decline bears on the general economy. If production per man had not increased, we wouldn't, nor couldn't have many of the devices which are part of modern-day living. People couldn't buy and the labor supply couldn't produce as many radios, TV sets, refrigerators, and air conditioners. A century ago, a worker on the farm produced enough for himself and three others. Today he provides for 20 others.

President Eisenhower said that the changes in agriculture during contemporary man's lifetime have been greater than all the changes in the previous 2,000 years.

There really have been three revolutions. The first, about a century ago, came when farmers began to put their implements on wheels, utilizing horsepower. Then in the era just before, during and after World War I power farming developed. The technological revolution came with World War II.

Since 1940, the output per man-hour with meat animals has increased 25 percent; milk cows, 59 percent; poultry, 106 percent; hay and forage crops, 137 percent; feed grains, 349 percent.

The farm population decrease and production increase are not the only great changes in agriculture. Contract and integrated farming are becoming a way of farm business. Under contract farming, the farmer, feed dealer and processor enter into agreements on sale prices, feed used and quality of product to be produced. In integrated farming, all the operations are controlled by one man, usually the processor or feed dealer. The farmer, in effect, works for a salary or wage. In either case the farmer has more assurance of a certain income from his efforts. But in return for his insurance against loss, he also loses the opportunity to take advantage of rising prices to make much larger profits.

It is estimated that 80 to 90 percent of the broiler business and almost all of the vegetable and canning business is now operated under the integrated type of farming. Contract farming is just now being introduced into swine and cattle feeding operations.

Needless to say farmers are watching this development with concern. Some are opposed to the idea; others hope it offers the opportunity for stability in farm income.

The changes in agriculture are not all confined to the farm. The great packing industry was built around terminal markets with adequate rail facilities. Then came better highways, trucks and great shifts in population.

In many cases it was cheaper to build new packing facilities nearer the centers of production than to modernize old plants. The result has been a wider distribution of the packing industry. There is more competition in the meatpacking industry today than ever before. Yet a committee of the American National Cattlemen's Association recently reported that only 30 percent of the business is handled by the 4 major packers.

The change in retail markets also is involved in the agricultural revolution. The supermarkets can assert an influence which was not possible for the thousands of smaller grocery stores that they have replaced.

The standardization of products in the supermarkets, where the housewife is in the habit of buying by the package, influences processors and producers, too. Research proceeds rapidly toward the development of new tenderizing agents for meat. Market experts predict that the time is not far away when all meat will be tenderized at the packing plant and put up in packages of various weights. The housewife will pick up packaged 1-pound steaks or 5-pound roasts of identical quality, just as she now selects a 1-pound package of white flour or a 5-pound package of cornmeal.

The change in agriculture has affected farmers' buying habits. Surveys now show that there is little difference between the purchases of farmers and city people. Farmers still raise some of their own food, but for their modern homes they need and use all the devices that are found in urban residences.

Nearly all farm homes now have electricity. Most farmers have cars, radios, television sets, and refrigerators. They live on good roads. Their children dress the same as city children and go to modern consolidated schools.

In the best of the good old days small farms would not have supported this type of living. On the other hand, farmers today need more money to cover actual farm operations—cash for gasoline, machinery, fertilizer, pesticides. Thus the high cost of things farmers need in their business has become a major part of the farm problem.

Yes, the changes have been tremendous and as yet there is no halt. Ten or fifteen years from now we may look back again and find that further progress has equaled anything we have yet known.

Certainly all indications for the future point to fewer farmers on bigger acreages. The farmers will be better equipped than ever to keep pace with the technological revolution in agriculture. Fewer in number and with larger capabilities, they may be able to cooperate in some kind of a program to gain bargaining power in the market place, something they haven't yet achieved under Government programs.

If this comes about, agriculture may be more nearly equal to industry and labor as a major factor in the economy.

Mr. Truman

EXTENSION OF REMARKS

OF

HON. EDWIN H. MAY, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 26, 1958

Mr. MAY. Mr. Speaker, on Saturday evening February 22, former President of the United States Harry S. Truman gave vent to inexcusable partisan spleen before a $100-a-plate dinner held by the Democrat Party in Washington, D. C.

As usual, he resorted to his vicious fusillade of half-truths and misleading innuendos. It was certainly in poor taste, if nothing else, for a speech of this nature to be given by a former United States President on the birthday of George Washington.

The following editorial, which appeared in the Hartford Courant on February 25, demonstrates quite clearly the effect that Mr. Truman's speech had upon thinking people.

[From the Hartford Courant of February 25, 1958]

MR. TRUMAN MAKES A PARTISAN ATTACK

Over the weekend former President Harry S. Truman, whose reputation for being able to give 'em hell, holds up better than does his accuracy, made one of the more violently partisan attacks of even his career. At a memorial dinner honoring George Washington, reputed never to have told a lie, Mr. Truman made a great many statements that were half truths and outright falsehoods. There is a certain amount of latitude in politics. But Mr. Truman went way into the area that must be labeled demagoguery.

Much of what he said is demonstrably false. He taunted Republicans on unemployment, while his own administration was bailed out of an unemployment period worse than the present one only by the Korean war. On July 16, 1949, the Courant carried this headline: "Connecticut Stands Sixth in Jobless." The story went on to tell that 13 percent of the State's labor force was out of work. If the partisan Mr. Truman had gone back further, he would have found that when Mr. Roosevelt was first elected there were approximately 11.5 million unemployed in the country. Two years later this had risen to 13.2 million. And not once during the 10-year period until 1940 did unemployment—with a vastly smaller labor force than today—drop below 10 million. That was the prosperity Mr. Truman professed to see under Democratic aegis.

It would be futile to try to answer Mr. Truman point by point. The Republicans, he said, are against cleaning up polluted streams. They are against slum clearance. Yet our streams in Connecticut were never in better shape than they are today. And the redevelopment programs now in progress in New Haven, Hartford, and dozens of other communities give the lie to Mr. Truman on slum clearance.

The speech was, in short, a rag-bag full of unsupported statements and farfetched conclusions. If one were to adopt Mr. Truman's reasoning there would be some interesting parallels. For example, Mr. Truman says all Republican illusions end in economic disaster—as in 1873, 1893, and 1929. To which Republicans can with equal justice retort that all Democratic illusions seem to result in war; under Wilson in 1918, under Roosevelt in 1941, and under Mr. Truman himself in 1950. If this is an oversimplification, so is Mr. Truman's statement.

There is little to be gained by trying to oppose Mr. Truman in an art that he has perfected over many years in politics. But as Republican National Chairman Meade Alcorn says, this was one of Mr. Truman's weaker speeches because of its very intemperance. Mr. Truman told his listeners what they wanted to hear. But it would have been more in keeping with the high office he has held if he had hewed a little more closely than he did to the line of truth. Except for thick-and-thin partisans, a balanced view of the facts is more persuasive than the exuberance of giving hell to political enemies.

A Week in Washington Program

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. COAD. Mr. Speaker, for the past 4 years the Iowa Citizenship Clearing House, in cooperation with the Democratic and Republican State Central Committees, has sponsored a Week in Washington program, which provides for expense-paid visits for selected professors and students from our colleges and universities.

Each year, outstanding young men and women are selected from throughout Iowa to spend a week in Washington as my house and office guests. Each group consists of 1 Democrat and 1 Republican, who have been selected on the basis of scholastic standing, leadership qualities, and interest and ability in the field of political science. The program is designed to intimately acquaint these future Iowa leaders with the actual operation of our national Government. Last week two college professors participated in this program. The following is a letter from Professor C. E. Gilmour from Grinnell College, which typifies the type of response this program receives from those who are privileged to participate in the week's activities:

Hon. MERWIN COAD,
United States Representative,
Washington, D. C.

DEAR CONGRESSMAN COAD: You will recall, upon several occasions during the past week, I expressed verbally my appreciation of the opportunity afforded by you and the Iowa Citizenship Clearing House to participate in the Week in Washington program for professors. I wish here to revise and extend my remarks for the record.

I feel that the past week was, by far, more productive, in terms of learning results, than any other comparable period in my rather extended study career. I learned more about more important things with more ease and in less time than at any time in my college or graduate training. I am most grateful for this experience.

In the 4 years since the Week in Washington program was inaugurated, I have always vigorously encouraged students to participate. However, I am now better equipped to recruit participants, being able to speak from actual program participation.

My enthusiasm for the program is hard to contain. It offers much that cannot come from textbook or teacher. It gives the participant a real sense of the reality of democracy at work. One cannot help but be impressed with the unique and precious heritage that is ours. And one cannot ignore the obvious fact that this rich heritage will be retained, refined, and extended only if each of us is as mindful of the responsibilities of citizenship as of its privileges.

I earnestly feel that if every college student would be given the experience I had with you last week, the objective of the parent Citizenship Clearing House, to encourage on the part of college students and graduates more effective participation in politics, would be achieved to a much greater degree.

I suggest, therefore, that you might well attempt to have this program expanded in Iowa, through the cooperation of more Iowa Congressmen. I shall suggest that the Iowa Citizenship Clearing House make a similar effort. Further, I shall suggest that an effort be made by the parent Citizenship Clearing House to have this feature, now unique to Iowa, become common for the other State and regional clearinghouse programs.

Sincerely yours,

C. EDWIN GILMOUR.

Farmers and the Space-Age Budget

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. COAD. Mr. Speaker, in Life magazine, January 27, 1958, appeared an editorial entitled "Farmers and the Space-Age Budget." This was an editorial which promoted the Benson farm proposal of lowering supports on agricultural commodities to as low as 60 percent of parity. The editorial also makes reference to figures which are grossly inconsistent with the facts.

It is my happy pleasure to present for insertion in the RECORD a reply to the Life editorial appearing in the Hardin County (Iowa) Times on February 11, 1958.

The editorials from Life and the Hardin County Times follow:

[From Life magazine of January 27, 1958]

FARMERS AND THE SPACE-AGE BUDGET

Are Americans politically capable of the mild sacrifices called for in the President's 1959 "space budget"? The first test is the new farm program, presented to Congress last week. It appears that Congress is prepared to flunk it.

Federal farm expenditures come to a huge $5 billion a year, mostly subsidies. The new Eisenhower-Benson program would cut this by a mere $300 million or so. It reduces the permissible floor under subsidies for 6 basic crops and dairy products from 75 percent to 60 percent of parity. It gives Secretary Benson more discretion in setting support levels and acreage allotments. It is a cautious toughening of the established Benson aim—to cut back our farm surpluses by gradually reintroducing a free price system.

These surpluses still pile up, not only because of the subsidies but also because of the scientific revolution in agriculture, which the President called "irreversible and continuing." The Benson policy hasn't made much inroad on the surpluses because it has been too cautious to keep up with this revolution. The new program is a partial effort to catch up. It is full of compromises and euphemisms. The 2 million marginal farmers whom the revolution has passed by, and who would be much better off in industrial jobs, are given incentive both to keep and to leave their farms, so that the administration can be accused of "blatant liquidation of agriculture" on the one hand and of encouraging inefficiency on the other. Moreover, the increased surplus dumping provisions alarm our allies and contradict our foreign policy.

Nevertheless, Benson is trying to inch this mountain of old vested interests forward toward the day when subsidies can taper off and an efficient, modern United States agriculture can be self-supporting in a reasonably free market.

Congressmen from farm States immediately greeted the Benson program with defiant catcalls. They heckled his opening testimony unmercifully and all but called him a liar. It looks like a battle resulting in veto, stalemate, and stopgap. It means no progress whatever on our No. 1 unsolved national economic problem, the farm revolution.

This is not pretty. It implies that United States politics, perhaps democracy itself, isn't equal to the obvious demands of a technological age whose gears have already shifted into the age of astronautics. The farm problem is complex enough without the further complication of sectional greed and inertia. The administration program is moderate enough, indeed too moderate. We urge every Congressman who is capable of a national viewpoint to support the guts of Benson's program. The repute of our political system is at stake.

IOWA FALLS, IOWA, *February 13, 1957.*

MR. HENRY LUCE,
Life Magazine, New York City.

DEAR HENRY: We hope you won't mind this bit of informality, but we just wanted to have a little buddy-buddy talk with you about the editorial in your January 27 issue, which is reprinted on this page. Our circulation is a little shy of yours, but we're right out here in the thick of this farm thing, and we're just a little astounded at some of your statements.

Frankly we kind of think you've laid an egg in this editorial.

Do you mind if we just run through it here together?

For instance, in this second paragraph you say that "Federal farm expenditures come to a huge $5 billion per year. Mostly subsidies."

Now, there's nothing particularly wrong with that statement, Henry, except that it just doesn't happen to be true. The President made that same mistake here a month or so ago, and the air was full of corrections and apologies for a week afterward. You should subscribe to a wire service for your editorial writers so that they could keep up on things like that. The facts are available. We get them out here right along.

You see, Henry, the so-called farm budget that you speak of is the overall budget for the Department of Agriculture. And that includes a multitude of services, a big part of which (from a strictly cost standpoint) are consumer services or benefits.

Let's run through a few. There's a good big $100 million or so for school-lunch programs. Do you consider that item for the benefit of farmers? Or for some you folks there in New York City, too? Then there's the maintenance and improvement of our forest resources in this country. That's all included in this farm budget. I'm sure that you would consider that expenditure in the total national interest, rather than as a farm subsidy. Too, Henry, there are such items in that budget as the Federal inspection of meat in the packing plants. That would seem almost a strictly consumer benefit, wouldn't it?

There's a good big item in that budget for the disposition of foodstuff abroad. Is that a farm subsidy or is it foreign aid?

And then of a strictly different nature, there's such loan programs as provided for the REA program. They run to several hundred million dollars, Henry. They are big. But it just makes us plain mad, out here in the country, where we have been repaying those loans—ahead of schedule, and with interest—to have them referred to as farm subsidies. When you pay off a note, with interest, do you feel as though you had been subsidized? We don't.

In short, Henry, if you will take the time to check up on this matter you will find

that the $5 billion farm budget is mostly not subsidies, at least not that get to the farmer.

So this mere $300 million cut that you refer, which is coming out of the soil bank and price support part of the farm budget is a pretty darn big percentage of the farmer's real share of that budget.

And if net income to any other major segment of our economy had dropped about 20 percent during the last 5 years (as agriculture has) and seen its costs go right on up (like all costs have) they would be screaming bloody murder at this stage, or sooner.

Farmers, of course, are just supposed to tighten their belt and take it.

Throughout your editorial you stand firmly behind Mr. Benson, lauding him for his tireless efforts to reduce subsidies and bring about an efficient modern United States agriculture that can be self-supporting in a reasonably free market.

That of course is just expressing a matter of opinion—and not an outright misrepresentation of facts as your farm budget statement was.

But even though it is just your opinion, which you certainly have a right to expound, may we offer these comments:

First, American agriculture is efficient—the most efficient the world has ever known. And it is for that reason that we are the best-fed Nation the world has even known.

Matter of fact, Henry, agricultural production has been increasing about 3 percent per year (on the same number of acres), or about twice as fast the population has been growing. This rate of increase in productivity is better than industry has been doing—just as a point of interest.

And that really brings us to the nub of our difference, no doubt.

Probably you are a great admirer of the steel industry. I select it only because it is rather in the news now. In your book it is no doubt self-supporting in a reasonably free market.

Well, perhaps. But right now they seem to be operating that industry at about 60 percent of capacity. Like corn and cotton and wheat and dairy products, there's too much steel.

So what do they do, Henry? They simply put their labor force on relief—which is maybe a kind of a government-sponsored soil-bank idea, come to think of it—and close down 40 percent of their mills and hold their price steady and firm. Yes, maybe even higher.

Now you say, why don't farmers do that. After all, they are only overproducing about 5 percent, not 40 percent as the steel boys would be doing, if they were sticking to the job.

Well, you see prabably a half a dozen men decide the productive rate of the steel industry, maybe even less than that.

There's about 5 million farmers in the business. They can't make a few phone calls and decide to let 5 percent of their land stand idle or turn 5 percent of their milk cows dry. The only way they have, at all, of cooperating together on such a decision is by working together through their government. And that's not a new idea, Henry. All kinds of your efficient industries do that. Oil, for example. They have all sorts of quotas, that they set up by cooperating together—through Government.

But it's funny. It always seems to be different when industry does something like that.

You say in the last paragraph that the "administration's program (of lowering price supports) is moderate enough, indeed too moderate."

Lowering price supports is, of course, simply a means of driving farmers out of production through lowering their prices. That's the way it is supposed to work.

Well, Henry, your fair-haired boy in the Agriculture Department has been doing that for 5 years now. Our corn supports have been eased off right along. Yet in the fall of 1954 we had about 350 million bushels of corn on hand. Last fall, after several years of the Benson treatment, we had 875 million bushels on hand.

We could quote you a lot of other crop figures that would tell about the same story.

It has to be that way, Henry. Here's a farmer with a 200-acre farm, $20,000 worth of livestock and equipment, probably a mortgage and in any case a lot of fixed expenses. That is, they are fixed in that they don't get lower.

If the price of corn drops 30 cents a bushel he has only one alternative; that's to raise more corn and try to keep his income up where it was. The lower the prices get, the harder he tries to do that. You remember Henry, that in the early 30's we had our biggest surpluses when corn was 10 cents a bushel.

You see Benson has been punishing farmers for several years now—trying to get them to cut production—and last June 30 the government's holdings of farm commodities was about $5.3 billion. In 1952 it was $1.1 billion.

Don't you think it's about time to take another look at the Benson approach? We think it's been a monumental failure.

The only way the Benson program will ever accomplish its purpose is to absolutely and completely bankrupt agriculture—to the place where some farms would stand idle and grow up to weeds. Then rural taxes would go unpaid, rural schools (in towns of 5,000 and more) would fail to meet their payrolls, country banks would close and towns, even the size of Des Moines, would be hit and hit hard. Then farm production might go down.

That's when the Benson program will succeed, and not before.

Is that what you folks want, Henry?

You say What's the answer? That you are tired of all this backing and filling and changing plans and all that.

We're with you there, Henry. It's a perfectly ridiculous performance that we have been going through and we don't blame city folks for getting tired of the whole silly business.

But it's really simple. All we need is something like the soil-bank idea (call it what you will). This is going to cost a little money, Henry. (But so does the steel and the oil business, although they have their assists arranged more inconspicuously.) Furthermore, it won't be one-half as costly as bankrupting agriculture. Actually that is just something that the Nation just can't afford to do.

But the result will be, in contrast to the Benson program which you admire so much, a healthy agriculture, with some land put in the bank for future use, solvent farmers that can buy tractors and cars (boy, wouldn't Detroit like that now?) and send their kids to college—just like you do.

It's as simple as that. But you've got to have an administration (and a Secretary of Agriculture) that thinks so—and believes in that kind of a rural America.

Well, Henry, that's the position of the Times-Citizen. Probably it dosn't make a hell of a lot of difference to you folks on Life. But when we pull a boo-boo, we try to correct it. Thought you might want to, too.

THE TIMES-CITIZEN,
Iowa Falls, Iowa.

Alcoholic Beverage Advertising

EXTENSION OF REMARKS
OF
HON. CECIL R. KING
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. KING. Mr. Speaker, today I am presenting a petition from my constituency protesting the advertising of alcoholic beverages. This petition was submitted by Mrs. Della Painter of 1215 South Grevillea Avenue, Inglewood, Calif., and was signed by constituents of the 17th Congressional District of California. The petition and signatures follow:

To CONGRESSMAN CECIL R. KING:

We, the citizens of the 17th District of California, again urge your support to remove the advertising of alcoholic beverages from our homes.

Dr. Walter Fraser, Mrs. Neva L. Fraser, 321 West 130th Street, Hawthorne, Calif.; W. T. Rouse, 8337 Belford Avenue, Los Angeles, Calif.; Hunter R. Hilton, 1211 South Grevillea, J. C. Davis, Jr., Loys L. Davis, 3352 West 116th Street, Betty Johnson, 3857 West 113th Street, Inglewood, Calif.; Ruth Mayfield, 1851 West 95th Street, Los Angeles, Calif.; Della L. Painter, 1215 South Grevillea Avenue, Mrs. Mary E. Padrick, Arthur L. Padrick, 832 Larch Street, Cheryl M. Korpi, Jacob L. Korpi, 829 Myrtle Avenue, Mrs. Mina C. Acton, 405 East Arbor Vitae, Mrs. Cora Levang, 828 South Larch, Inglewood, Calif.; Emma Sutter, 4803 West 121st Street, Hawthorne, Calif.; Mrs. Albertine Cunningham, 411½ East Kelso Street, Mrs. L. D. Chisholm, 330 East Tamarack Avenue, Mabel C. Holzmer, 142 West Kelso, Frances McCartney, 10228 1st Avenue, Inglewood, Calif.; Orvilla J. Glass, 2033 West 99th Street, Los Angeles, Calif.; Margaret Manor, 9800 5th Avenue, Florence Libaise, 8720 12th Avenue, Mrs. Mary Anna Jack, Alfred D. Jack, 4016 West Century Boulevard, Howard S. Somerville, 4056 Century Boulevard, Lorraine Santogeanis, 945 Orchard Drive, Mary Fenwick, 930½ Orchard Drive, Mrs. Fern D. Veitch, 444 West Queen Street, Inglewood, Calif.; Geraldine Albert, 11520 Judah Avenue, Los Angeles, Calif.; Louise M. Hamilton, 3518 West 78th Place, Inglewood, Calif.; Etta Knee, 11526 St. Andrews Place, Los Angeles, Calif.; Henry W. Stoody, 424 West Spruce Avenue, Miss Emma D. Eakin, 10528 Condon Avenue, Mrs. Lois D. W. Reeves, 10814 Firmona Avenue, Mrs. Hilda N. Shoemaker, 11003 Eastwood, Mrs. Gertrude E. Dore, 11216 Grevillea, Inglewood, Calif.; Mrs. Anna K. Haines, 4115 West 106th Street, Lennox, Calif.; Mrs. Verda Harwick, 10321 Buford, Mrs. Myrtis Beard, 4019 West 101st Street, Inglewood, Calif.; Mrs. Ruth Crone, 20837 South Normandie Avenue, Torrance, Calif.; Mrs. Elien Gjetley, 10935 Condon, Mrs. Nellie Eakin, 10528 Condon, Mrs. Gertrude Runyan, 1232 Truro Avenue, J. H. Miller, 3429 West 111th Place, Mrs. Alberta Mayberry, 3021 West 80th Street, Mrs. Lilian R. Milbauer, 1008 South Fir Avenue, Inglewood, Calif.; Gordon Cizek, 4111 175th Place, Torrance, Calif.; Mrs. Harriet J. Waian, 8804 10th Avenue, Inglewood, Calif.; Jolene Smalley, 5717 West 74th Street, Los Angeles, Calif.; Marian L. Hanson, John Hanson, 3519 West 185th Street, Torrance, Calif.; Howard E. Mall, Barbara Mall, 3500 West 83d Street, Inglewood, Calif.; Ronald Johnson, Bettye J. Johnson, 3937 West 115th Street, Hawthorne, Calif.; Anita P. Cizek, 4111 175th Place, Tor-

rance, Calif.; N. K. Hankins, 18027 Falda Avenue, Torrance, Calif.; Mrs. Emma G. Kaufman, Mrs. Leafy Routh, 317 Magnolia, G. W. Bowden, 3308 West 79th Street, Inglewood, Calif.; Harold L. Worthington, 437 East 234th Walk, Wilmington, Calif.; Catherine M. Brooke, 5041 West 123d Place, Hawthorne, Calif.; Ronald D. Smith, 409 East Buckthorn, Inglewood, Calif.; Marguerite Read, 9423 South Western, Los Angeles, Calif.; Mrs. S. W. Crowell, Samuel W. Crowell, 258 York Street, Hawthorne, Calif.

Drysdale Brannon, Courageous Editor

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. BEAMER. Mr. Speaker, a copy of a memorial written by W. H. McGrew has come to my attention and I include it in the Appendix of the RECORD under the unanimous consent of my colleagues.

I personally knew Dry Brannon for years. He assisted me immeasurably in the fight for the freedom of Bill Oatis. It always was a privilege to consider him as one of my sincere friends:

The late Drysdale Brannon, the courageous managing editor of the Marion (Ind.) Chronicle for more than a quarter of a century, possessed a many-sided personality that often was both the delight and despair of both his friends and his foes. But everyone admired him for his faithfulness to those he admired and respected.

It was typical of the Brannon philosophy of life that when a friend was in distress, no stone would be left unturned in his continuing efforts to provide assistance. Such was the case when on April 23, 1951, his friend and former fellow worker in the journalistic vineyard, William (Bill) Oatis, then the Associated Press Bureau chief in Prague, Czechoslovakia, was seized by Czech secret police and was charged with "hostile activities and spreading secret information."

Knowing full well that arrest in a Communist-dominated country almost inevitably would lead to imprisonment, Dry girded for a long and unremitting struggle to obtain his release from that prison. This epic struggle for a friend was destined to dominate Dry's thinking throughout the painful years of Oatis' imprisonment and the flow of stories about the slightly built Oatis did not end until he was released.

No Johnny-come-lately in a brass-knuckle battle, Brannon carefully drew up a blueprint of his planned assault against the red ramparts, and the attack continued without letup as the case of Bill Oatis was carried before the court of world opinion. Yet this was a labor of love for a man who knew no fear, even of the dread disease which eventually caused his death.

Thus began a long struggle that was to keep the Oatis case constantly "in the news" not only in Marion where Oatis began his journalistic career under the guiding hand of this master craftsman, but in the halls of Congress, in the State Department and even in the White House.

Dry Brannon had a deep and abiding affection for Oatis and could recall many of Oatis' eccentricities which were blazoned across the pages of the Nation's newspapers to excite interest in this strange, moody newsman who had spent his salad days in Marion and started his writing career on the Marion Leader-Tribune.

Within a matter of weeks the Oatis file began to grow; and that growth was destined to continue unabated until his final release. During the long struggle there was a certain grimness on the Brannon countenance as the weeks dragged on into months and years. But Brannon was relentless in his efforts and the barrage of stories continued to be written on a battered old typewriter which also had recorded other spirited battles for truth and honesty over the fruitful years.

Thus Bill Oatis became the martyr of journalistic freedom through the word pictures that were skilfully woven, either by Brannon himself, or through his suggestion and direction, by members of his staff. This fighting editor dredged deeply into his capacious memory to recall the many interesting facets of the Oatis personality; and all these were dispatched over press wires to an indignant free world.

It was typical of this aggressive editor and reporter that there should be no compromise with truth—either on the continuing Oatis stories, or any others of lesser importance. He hated sham and deceit and was ever alert to the danger of graft and corruption. And he came to hate communism, not only because it was a denial of everything that was decent and worthwhile, but because it had harmed a friend.

Lithuanian Independence Day

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. FASCELL. Mr. Speaker, although it has been almost impossible to penetrate the hermetically sealed borders of Lithuania since its occupation by the U. S. S. R. 12 years ago, let us take the opportunity of Lithuanian Independence Day, February 16, to especially express our hopes for the eventual emergence to freedom of this former Republic.

Today Lithuania is a dominated country; however, that she has retained her former culture and religion is apparent through the ideologies and desires voiced by those who have managed to reach the free world since Lithuania's annexation.

I join with the friends of Lithuania in commemorating the 40th anniversary of her independence.

Americans of Lithuanian descent, as represented by the Lithuanian Council of Miami, Fla., expressed themselves as follows:

Whereas the Soviet Union has consistently violated all the international agreements and political pacts signed between her and other states; and

Whereas as a result of such violations the Republic of Lithuania, as well as other Baltic States, in 1940, have become the unwilling victims of the Russian imperialism; and

Whereas the Soviet Union by offering the so-called peaceful coexistence to the United States strives to achieve the recognition of her unlawful domination in eastern Europe: Therefore be it

Resolved, That this great gathering of loyal Americans of Lithuanian descent commemorating the 40th anniversary of the independence of Lithuania, and the 795th anniversary of its origin as a nation with the coronation of its first king, Mindaugas, in 1163, urges the Government of the United States not to place implicit faith in the Soviet rulers' words about peaceful coexistence because the basic aims of the Soviet Union to conquer the world have not changed; be it further

Resolved, That this meeting urges the Government of the United States to not enter into any new political agreements or pacts with the Soviet Union unless the Soviet Union agrees to restore freedom and sovereign rights to the enslaved nations of eastern Europe; and be it finally

Resolved, That this meeting calls upon the Government of the United States to continue to support the efforts of the people of Lithuania, Latvia, and Estonia, as well as of the other captive nations to regain their freedom.

The Governor of our State, the Honorable LeRoy Collins, and the mayor of Miami, Fla., the Honorable Robert King High, have proclaimed February 16 as Lithuania's Independence Day in the following proclamations:

PROCLAMATION, STATE OF FLORIDA, EXECUTIVE DEPARTMENT, TALLAHASSEE

Whereas February 16 marks the 40th anniversary of the rebirth of a free, independent Lithuania after 120 years of Russian domination with Lithuania once again under that same yoke; and

Whereas February 16, 1918, is still being observed, for the love, desire, and hope of freedom still burns in Lithuanians' hearts; and

Whereas thousands of Lithuanians, guided by that love and desire for freedom, came to this great land of promise and became its loyal citizens, contributing wholeheartedly to its cultural and material growth, and have come also to our great State of Florida, contributing in like measure to its phenomenal growth; and

Whereas, as true sons of liberty, these American citizens of Lithuanian origin or descent continue to labor to secure those same blessings of human dignity they enjoy in this great democracy for their less fortunate brethren under the domination of Russia: Now, therefore,

I, LeRoy Collins, by virtue of the authority vested in me as Governor of the State of Florida, do hereby proclaim February 16, 1958, as Lithuania's independence day in Florida, and call upon our people to join with fellow citizens of Lithuanian descent in the hope and prayer that liberty and independence will soon be restored to that brave nation so wrongfully oppressed.

In witness whereof, I have hereunto set my hand and caused the great seal of the State of Florida to be affixed at Tallahassee, the capital, this 5th day of February A. D. 1958.

LEROY COLLINS,
Governor.

Attest:

R. A. GRAY,
Secretary of State.

A PROCLAMATION, LITHUANIA'S INDEPENDENCE DAY, 1958

Whereas 40 years ago, on February 16, 1918, the freedom-loving people of Lithuania through their representative council, the Taryba, at the historic capital of Vilnius, proclaimed to the world in the oldest living language the rebirth of a free and independent Lithuania after 120 years of Russian domination; and

Whereas people of Lithuanian origin or descent have helped this country to establish its independence and have contributed their share in the development of its natural resources, industry, and art; and

Whereas the United States granted recognition to Lithuania on July 28, 1922, and does not recognize the fruits of the Soviet-Nazi division of spoils which resulted in the occupation and purported annexation of Lithuania by the U. S. S. R.; and

Whereas citizens of Lithuanian origin or descent will hold a mass meeting commemorating the 40th anniversary of the independence of their homeland to reaffirm their faith in democracy and to renew their efforts to secure the liberation of their less fortunate brethren from oppression: Now, therefore,

I, Robert King High, mayor of the city of Miami, Fla., do hereby proclaim February 16, 1958, as Lithuania's Independence Day.

In observance thereof I urge all our people to join with fellow citizens of Lithuanian descent in the hope and prayer that truth and justice will prevail throughout the world and that true liberty and independence of a brave people will soon be restored.

In witness whereof I hereunto set my hand and cause the seal of the city of Miami to be affixed.

Done in the office of the mayor of the city of Miami, Fla., this the 11th day of February in the year of our Lord 1958.

ROBERT KING HIGH, *Mayor.*

Speech by the Honorable Adlai E. Stevenson

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 17, 1958

Mr. PRICE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address:

SPEECH BY THE HONORABLE ADLAI E. STEVENSON AT THE HARRY S. TRUMAN DINNER, BANQUET HALL, SHERATON-PARK HOTEL, FEBRUARY 22, 1958

The chairman has spoken to you, in words I greatly appreciate, of a man who wasn't President. I am here, however, to pay my respects—and yours to a man who was.

Several weeks ago a Chicago newspaper carried this headline: "Adams Insists Ike Really Is the President" (Chicago Tribune, November 19, 1957).

No newspaper ever had to write that kind of headline about the man we honor here tonight. For the Nation knew, without having to be told by a White House assistant, that in deed as well as name, on Sundays through Saturdays, from January through December, the President was—Harry Truman.

Some new concepts of the office of the Presidency have emerged in recent years of Republican rule. But the ideal President Truman held of the office he filled is, I think, still the ideal not just of Democrats, but of Americans. It is part of our tradition that ex-Presidents—at least the great ones—become very quickly in our minds not Republicans or Democrats, but great Americans. Especially is this true, it seems, in February, the shortest month in the year.

Others will speak tonight of various elements in the concept of the Presidency we identify with President Truman. I want to mention, in my brief moments, one of these qualities in particular.

It is candor.

Harry Truman stands before this political generation as the vigorous and pungent embodiment of candor and truthfulness in our public life.

Indeed I can assure you from personal experience that you never had to wonder where you stood with Harry Truman.

But more than that, he believed in telling the American people the truth about their condition. For politics is essentially an educational process, in which people grow to their full stature through participation in great decisions. But people cannot participate in great decisions unless they know the facts. The first condition of a successful democracy is an informed people. It is an indispensable part of the Presidential responsibility to make sure the people have the facts, no matter how grim and sobering these facts may be.

Harry Truman believed that the American people should know the score.

But at times his successor does not seem to even want us to know who is playing.

There are many dramatic contrasts between the Truman and the Eisenhower administrations—in the sharpness of decision, in the creativity of public policy, in the whole national temper and morale. But perhaps no contrast is more dramatic than the change in the relationship between the Government and the people.

That change can be briefly summed up: the Democrats regarded the people as responsible partners, able to take their own share in the labor of public policy; the Republicans regard the people as customers, to be bemused, beguiled, and manipulated—to be sold, not told.

Very early in this administration, a high official on the President's staff said: "We're going to merchandise the living hell out of the Eisenhower administration."

And that is precisely what they have done. These years of Republican rule have been stained by heavy failure in many areas—the excesses of McCarthyism, the disintegration of our alliances, the loss of confidence in us abroad, the decay of our military position, and now the decline in our economic vitality. But perhaps nothing has injured us more, or struck so deep at the jugular vein of democracy, as the abuse of the people's right to know. This administration's record of systematic and unblushing misrepresentation, concealment and half-truth has few precedents in our political history. And what makes it more offensive is that it has all been conducted in an atmosphere of such ostentatious piety.

I don't want to recite the familiar litany of foolish words and broken promises—the expenses that were to be cut, the budgets to be reduced, the secret agreements to be denounced, the prices to be stabilized, the schools to be built, the farm surpluses to be eliminated, and the great brains they were going to bring to Washington.

Do you recall all their wild talk about a lurid mess down here in Washington that they were going to clean up? Well, we've really got one now and they've made it worldwide; it's our biggest export commodity.

And that's what I want to talk about—candor and foreign affairs.

Back in the beginning they fooled the people with talk about liberating Eastern Europe, unleashing the Formosa Chinese, rolling back communism. Well, we have paid a heavy price for those empty, misleading slogans not only in the satellites, but in Western Europe and in the uncommitted nations.

Then they channeled American thinking into purely military concepts, ridiculed the intellectuals—and even the eggheads—pandered to complacency, and encouraged the illusion of American omnipotence. They ignored the progress of Soviet education, concealed the weaknesses of the Allied coalition, misrepresented Russian military strength and political penetration. As our prestige and influence and confidence declined, they reported every setback, every disappointment, every defeat as a triumph of statesmanship from which we had emerged more respected and invulnerable than ever.

Worst of all, they never stirred, stimulated, or spurred the American people. Instead, they lulled America into a dangerous slumber from which we were only recently awakened by the shock of sputnik.

Do you remember Operation Candor—the big project for telling the truth about atomic weapons? Other administrations have regarded candor as a prime obligation of Government. It is characteristic that an administration hypnotized and sustained by public relations experts regarded it as an operation. And it is even more characteristic that, in the end, they dropped the whole idea.

It wasn't long ago that the Secretary of State was solemnly assuring a congressional committee that Russia was on the point of collapsing. What was on the point of collapsing was Mr. Dulles' own foreign policy.

Do you remember all their rosy reports about the Geneva Conference and the President's great triumph? And what happened? The Soviets pushed confidently forward into the Middle East.

Do you remember all the assurances from the President and the Republican orators during 1956 that they had a patent on peace, that we were trusted, beloved, invulnerable, and our prestige was never higher? What happened? Could there have been a more disastrous proof of the lost confidence and desperaton of our oldest, best allies than Suez?

And how far behind would we have fallen in education and missiles if the Russians had not launched the sputniks?

I say that we have been misled from beginning to end about our most vital concerns—about our military strength, about the power of the Communists, about our broad position in the world.

But the truth is slowly emerging at last. The people, or too many of them, wouldn't believe us Democrats in 1956, for truth, like the sun, can be observed; but, like the sun, only for a time.

I think we could forgive the administration a good deal—indeed, we never expected much—if we felt that it had been honest with us and even honest with itself about our most important affairs.

We Democrats will have many powerful issues in the elections this fall. But none, I think, will and should be more fundamental than this one—the restoration of truth to Government. For if we Americans know the truth, the facts, the problems, there is in us the wisdom and the strength to meet the problem, to do whatever needs to be done, to face danger as part of achieving destiny.

But this is an issue which imposes an obligation on ourselves, too—an obligation to tell the truth even when it hurts.

If we don't live up to this obligation, we will not deserve the people's trust.

But if we do, we can look forward to victory not only in 1958 but in 1960.

A Southern Editor in Chicago

EXTENSION OF REMARKS
OF
HON. GEORGE M. GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. GRANT. Mr. Speaker, Grover C. Hall, Jr., editor in chief of the Montgomery Advertiser, on Monday of this week delivered a most interesting and enlightening talk before the Inlaid Daily Press Association at the Drake Hotel in Chicago. The association is an organization of 478 editors and publishers from 20 inland States.

A SOUTHERN EDITOR IN CHICAGO

Ladies and gentlemen, I'm not the first man connected with the Montgomery Adver-

tiser to speak to a Chicago audience on an explosive subject. Before me, there was a printer named Albert Parsons. He was an anarchist and his message to Chicago was, "workingmen of America, learn to manufacture dynamite." A little later (1886) Parsons was hanged here for heaving a bomb in the Haymarket riot.

I expect my trip to Chicago to be less eventful than that of Citizen Parsons, and I will hold up my end if you will hold up yours.

Anyway, let me assure you that I'm not an anarchist, even if I do deplore the Little Rock bayonets and argue that the 9 most energetic and mischievous Congressmen in Washington are the 9 Justices of the Supreme Court.

I'm more like a cotton Whig who wishes he could get together with you conscience Whigs.

I am pleased to come to Chicago to discuss with you the grievous race problem of the South—the south side of Chicago, where more Americans are in immediate physical danger because of race strife than in all the Southern States together.

Pietistical experting on the race disharmony in the Southern States is a convenient and easily mastered hobby, but if you want to talk about blood spilled, skulls cracked, deceit practiced, evasion and defiance of law on a grand scale—your dateline will be, not Little Rock, or Montgomery, but Chicago, Detroit, Philadelphia, New York.

HORSE LATITUDES

School desegregation in the South has hit the horse latitudes. Those visionaries in and out of the South who thought that once the Supreme Court had decreed desegregation it would follow like a point after touchdown are now getting their answer.

It has now taken $5,000,000 and the United States Army to enroll nine colored children in the Little Rock school. The result of this rash intrusion will be the derangement of the personalities of those pawned colored children, the reelection of that antic adventurer Faubus, and a discharge of more extremism into the Southern air.

The progress of school desegregation is well illustrated in North Carolina, which is endowed in the fantasies of the Northern press with lots of liberal mascara. In North Carolina, 9 colored children out of 320,000 are in white schools.

After 4 years, there are in Arkansas, North Carolina and Tennessee a total of 270. The figure for Mississippi and South Carolina is less spectacular.

Don't be misled by a few masochistic southern prophets who revel in the Little Rock bayonet and go loping around in circles whipping their own behinds like the self-flagellants of the Middle Ages. The reality seems to be this: If northern politicians, lick-spitting and honey-bunching the minority voting blocs in the North, impel the Federal Government to grind down upon the South, 1 of 2 things may happen. Much of the South will close its schools or there will be violence.

Until New York, Chicago, Detroit, and Philadelphia can quell their own state of guerrilla warfare between the races and crush the reign of rape and knife on schoolhouse staircases, their politicians and editorial jingoes should have the graceful forbearance to take sabbatical leave from their aggressions against the South.

HAMMUS ALABAMMUS

There is a growing rigidity of position being forced upon southern politicians by the holy-rolling of opportunistic northern politicians and the primitive NAACP with its swagger stick and shiny new jackboots.

You see this rigidity in the current race for governor in Alabama. One candidate has promised, "I will go to jail to preserve segregation." Another has spoken of arresting the FBI in certain circumstances to preserve segregation. A third one has vowed, "I will die to preserve segregation." So far none has taken a position on the use of atomic bombs to preserve segregation.

Mind, these are sophisticated men no more inclined to race-baiting than you are. What they say is just some hammus Alabammus made necessary by the fears and frustrations of a large element of voters. And please be certain that, by inversion, there is an equal supply up the way of hammus New Yorkus and Illinoisus.

A conservative editor, in the North or the South, has to fight a 2-front war all the time with the two extremes. Thumb back to your Thucydides and what he wrote of the class wars in Greece 2,500 years ago and you'll see something familiar. It was a time, Thucydides wrote, "when reckless audacity * * * came to be considered the courage of a loyal ally; prudent hesitation, specious cowardice; moderation was held to be a cloak of unmanliness; ability to see all sides of a question was accounted inability to act on any."

SOUTH'S BAR OF CONSCIENCE

The colored man is misused in both the North and the South, though he is far more deceived in the northern paradise. On this, however, there is one basic concession that the honest southerner must make to the North. In the North there is no resistance to the enfranchisement of qualified Negro voters. In some parts of the South, there is.

Like the citizens of Washington, D. C., southerners living in areas threatened by Negro government recoil. What they see existing and to come politically in Detroit and Philadelphia validates their fears. All the same, whereas a Southerner is sincerely easy in his conscience about separate-but-equal schools, he cannot so easily acquit himself before the bar of his own conscience on the question of denying a qualified colored man the ballot.

RACE STRIFE IS PORTABLE

At some point this country will work free of its fantasy that there is something different in the moral constitution of the southerner and northerner that makes of the one a white devil exploiting the colored man and of the other a compassionate deliverer and fraternity brother.

Already the North has about 40 percent of the colored population and the lemming tide rolls on—about 2,500 to Chicago every month, 1,700 to Los Angeles, 1,400 to New York, etc. Chicago already has 700,000 and New York a million, the same as Alabama.

Their migration has proved that race strife is quite portable. For it requires more policemen in one district of Chicago to restrain race warfare than among all the 40 million people of the Southern States.

Above all, the North will grasp the essential reality when it finally recognizes that a sorrowful fact of our national life is—wherever in America colored people migrate in significant numbers, they encounter resistance and rejection.

LOOK AWAY DIXIELAND

Your Illinois politicians applaud the Little Rock troop drop, but say nothing of the NAACP estimate that 90 percent of Chicago's elementary school children attend schools that are predominantly of one race, nor the charge that the Chicago authorities mean to keep it that way through the pattern of new school construction. Your Illinois politicians caterwaul about Jim Crow in Montgomery, Ala., but grapple not with the fact that, according to the National Conference of Christians and Jews, there is more residential segregation in Chicago than in Montgomery.

Last August in the Calumet Park area there was a race riot in which 37 persons were injured. Always in dread of a full-scale race war in the summer months, the Chicago authorities assigned 934 policemen to patrol the area. And on that very same day, Senator PAUL DOUGLAS, of Illinois, was receiving a group of Alabama Negroes in his office, making a national sensation of their woes and demanding action, not in his Chicago constituency, but in Alabama.

FLIGHT OF THE BUMBLEBEE

However, my favorite abolitionist is Gov. "Soapy" Williams, of Michigan, that exuberant collegian who is working his way on a Walter Reuther "scholarship."

In 1956 Governor Williams canceled a speaking engagement in Alabama because the dinner was segregated. A few months later I saw him land here for the Democratic convention, bringing with him something called the Michigan manifesto. This manifesto was another of those emancipation proclamations that freed the slaves in the Confederate States but said naught of those in the neutral border States.

To get the manifesto to Chicago, the Governor flew it over Dearborn and about 20 other Michigan cities where Negroes are totally or as nearly as possibly excluded from residence. Fifteen thousand colored constituents of Governor Williams work by day in Dearborn, but the valid boast of the mayor of Dearborn is that not a one is allowed to spend the night. Then Williams landed in Chicago, having borne the manifesto over Trumbull Park, where at that time 150 Chicago policemen were guarding 23 Negro families.

Whereupon, his excellency strode to the chancel of the Americans for Democratic Action temple and shook the manifesto at wayward Montgomery, where, by the way, several colored families live in peace on a street a few paces from the mansion of the Governor of Alabama.

CHAINED TO THE 19TH CENTURY

If only the South had as many new industries as it has ecstatic missionaries and hellmouth preceptors, it would be rich as Texas and might even consider, this time with more hope of success, another Civil War.

A basic reason why the national debate on the race issue is so irrational is the failure of the American press to report strife as eagerly and fully in the North as in the South. And the reason for this dereliction is mainly that northern attitudes are chained to the century before this one, when the South was the oppressor of the Negro and the North was his deliverer in a great war.

The otherwise virile Chicago press is joined with radio and TV in a formal code for muffling or suppressing spot coverage of race incidents. This is because, as both the Sun-Times and Chicago Defender have recently said, Chicago sits on a powder keg and the fuse is short. What about Montgomery, an international symbol of violence? When some dynamite was used, my newspaper published an extra.

LITTLE SQUIRT, PAGE 60

I have time to specify two examples of the scandals of omission in officious, self-righteous northern papers.

If the Reverend Martin Luther King gets a traffic ticket, that's news in Detroit. But when a Detroit mob of about 500 whites stone the newly bought home of a Cherokee Indian mistaken for a Negro, the 3 Detroit papers shrink it to brief items on page 3, page 16, and page 60. And only 1 of the 3 papers used the word "Negro" to explain to Detroit citizens what was happening in their city.

These Detroit papers could staff the Emmett Till trial in Mississippi, they had just run the empurpled Thunder Over Dixie series, they demanded that Dulles permit their reporters to cover Red China—but a violent mob of Detroiters within spitting dis-

stance of their city desks was a little squirt of type on page 60.

The New York Times owns large rugs and employs efficient sweepers. The dramatic at-sea race riot in Buffalo got a total of 11 inches in 2 days, pages 10 and 50.

BETTER, BUT STILL—

It is nevertheless my judgment that the northern press is now performing more faithfully and that it will land on its feet. After all, even Henry Luce can't blame the felonies and corruptions of the Puerto Rican schoolchildren in New York on their previous life in segregated Dixie.

But in predicting the rehabilitation of the New York press, I must nevertheless conclude on a guarded note. With 644 New York schoolchildren expelled from school and thus unleashed to make the streets as dangerous as the classrooms, the New York Herald Tribune button was still stuck on the faraway Little Rock 9. On February 14, the Herald Tribune carried a mawkish editorial, a kind of valentine in spots, demanding that the Little Rock school reinstate Minnie Jean Brown, who had been suspended for repeated misconduct, and encouraging Minnie Jean to throw soup right back at her white classmates.

Foreign Air Competition

EXTENSION OF REMARKS
OF

HON. JOHN V. BEAMER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 26, 1958

Mr. BEAMER. Mr. Speaker, a dozen years ago, directly at the close of World War II, a traveler contemplating a trip to Europe would not have had any great choice of air carrier, despite the fact that, at that time, three United States-flag airlines were operating across the Atlantic.

The trip was not the easiest, either. DC-4 equipment was the best available, and the traveler had midway stops at Bermuda, the Azores, Gander, or Goose Bay, depending upon his destination and depending upon the weather. No nonstop operations were even hoped for, and extended weather delays were not unusual.

Today, Mr. Speaker, the situation has undergone a remarkable change. United States carriers have been reduced to 2 because in 1950 American Overseas Airlines saw the handwriting on the wall and asked to be relieved of its transatlantic certificate. The handwriting was the rapid growth and expansion of a dozen foreign airlines which now parallel our carriers in the battle for transatlantic business—a battle which we are slowly, but surely, losing.

My attention was focused on this problem, Mr. Speaker, by a searching article recently published in the Wall Street Journal. It tells of the wide-open, no-holds-barred competition for the tourist dollar among airlines operating out of Miami into the Caribbean and into Central and South America.

Several years ago, Mr. Speaker, the Committee on Interstate and Foreign Commerce had the privilege of some wise counsel from Mr. J. T. Trippe, president of Pan American World Airways, in which Mr. Trippe expressed considerable concern over a policy of indiscriminate competition being pursued on international air routes by our Civil Aeronautics Board.

At that time, Mr. Trippe expressed greater concern over the impact of competition from foreign carriers than he did from competition between American carriers themselves.

In some quarters, his fears were taken lightly. At the time of his testimony before the House Interstate and Foreign Commerce Committee, in which he predicted the ultimate seriousness of foreign-flag air competition, our friends from abroad were not in a particularly strong competitive position. Their equipment, in most cases, was inferior to ours and their frequency of operations was far below our levels. Thus, shortsighted people involved in civil air transport, lacking Mr. Trippe's broad vision, could not anticipate any serious threat to our United States air supremacy in the international field from the flag lines of foreign countries.

How quickly the entire picture has changed.

For the past several years, the combined operations of foreign lines flying between Europe and the United States have been carrying more passengers than Pan American and TWA together despite the fact that Pan American and TWA have scheduled flights with frequencies that have done both the airlines proud in the matter of aircraft utilization.

These foreign lines, Mr. Speaker, are still pulling away from our United States-flag lines year by year, little by little, in total passengers hauled. And they are accomplishing this by flying the finest equipment available—equipment manufactured in the United States and paid for, directly or indirectly, with American taxpayers' money in the form of foreign-aid grants or loans.

As we all know, since the Bermuda Conference of 1946, we and the other nations of the world have been operating under bilateral air agreements. As an example, our carriers fly to Great Britain and BOAC in turn flies to New York. Pan American and TWA fly the Polar route from the west coast to Europe and so does SAS, the Scandinavian Airlines System owned by the governments of Norway, Sweden, and Denmark. However, this arrangement is not nearly as reciprocal as it may seem. The economic balance is heavily in favor of the foreign lines because New York is infinitely more valuable to KLM and Swissair than are Armsterdam and Geneva to Pan American and TWA, respectively.

Here is an interesting example: Qantas is the commercial air transport arm of the Australian Government. Through an arrangement with our Government, Qantas is now permitted to operate from Australia to Honolulu to San Francisco across the United States to New York and then on to Europe and beyond to Australia giving Qantas a true round-the-world operation which it so proudly advertises in our American newspapers and magazines. Pan American, on the other hand, does not have an around-the-world operation because the 3,000 miles separating our east coast and west coast are forbidden to Pan American by our Civil Aeronautics Board, although all Pan Am's United States competitors in the foreign field have lucrative domestic routes. How, Mr. Speaker, can Pan American compete with Qantas on a worldwide basis when our own Government will not allow our largest international airline to operate within its own borders?

The French are piqued at us right now because our State Department will not grant Air France extravagant additional concessions to an already profitable route it operates between France, the United States and Mexico. It is my understanding, however, that the United States has offered to give Air France a direct route to Los Angeles on the condition that Air France give up its route to Houston. Air France so far has not operated the Houston route, although it has had authority, under its bilateral, to do so since 1951.

Mr. Speaker, I could go on endlessly illustrating the disadvantages our carriers experience in keeping abreast of their foreign competition, all of it government-owned and highly subsidized. But a better example of what our carriers face from abroad is illustrated in a most engrossing article carried in the Wall Street Journal of January 29.

Mr. Cal Brumley has done a fine job of research in preparing his article, and under unanimous consent, I include Mr. Brumley's essay from the Wall Street Journal in the Appendix of the RECORD:

LATIN AIRLINES: THEY SWARM INTO UNITED STATES—LOWER FARES WIN TRADE FROM YANKEE RIVALS—THEY CUT COSTS WITH CHEAPER PLANES, LABOR—SOME DRAW BIG GOVERNMENT SUBSIDIES—FLYING THE BAREFOOT TRADE

(By Cal Brumley)

MIAMI.—"We taught the Latins to fly and now they are taking our business," grumbles an executive of the Latin American division of Pan American World Airways here.

When the roar of a Convair Super 340 passing overhead recedes, the executive adds: "And don't let anyone kid you. This Latin airline competition is serious. In our Latin division, where only 9 international airlines competed for traffic in 1945, there are more than 50 flying today."

The hard-pressed United States airline industry, already buffeted by rising costs and shrinking profits, is worriedly watching a flourishing number of Latin-owned air carriers slice off bigger and bigger hunks of the United States-Latin America traffic. Nearly 1.5 million travelers annually fly between the United States and the score of American republics that lie to the south, some 50 percent more than the number that fly between the United States and Europe each year.

And the Latins' inroads appear to be just beginning. Additional Latin airlines are planning to compete with United States carriers on United States-Latin American routes. And some of the Latin lines are laying plans for extending their operations to compete with United States carriers on Atlantic and Pacific routes.

LATIN LURE

The chief Latin lure: Lower fares, made possible by cheaper equipment, low cost labor and, in some cases, heavy government subsidies. For example:

The one-way fare from Miami to Guatemala City on Empresa Guatemalteca de

Aviacion, the Guatemalan government airline, is only $55, excluding taxes. Pan American's fare is 50 percent higher.

A flight from New York to Santiago, Chile, costs only $280 on Cinta, a Chilean line, while the cheapest fare on Panagra, its United States-owned competitor, is $412.

And it is $42 cheaper to fly from Chicago to Sao Paulo, Brazil, on Real Aerovias, a Brazilian carrier, than it is to take Braniff Airways.

FOREIGN COMPETITION

While more than 50 lines batle for Latin American traffic, including such United States carriers as Pan Am, Braniff Airways, American Airlines, National Airlines, Eastern Air Lines, and Pan American-Grace Airways, only 8 foreign carriers contend with Pan American Airways and Trans World Airlines for the transatlantic traffic, and only 2 foreign airlines compete with Pan American and Northwest Airlines for the cross-Pacific business to and from the United States.

Foreign-owned airlines raked in some $238 million from globe-trotting Americans in 1956. This was 44 percent of the total the United States travelers spent on international air travel that year and compared with 42 percent in 1955.

Growing foreign competition is particularly painful to American carriers now. The average profit margin of the United States carriers has plunged to about 3.3 percent from as high as 7 percent in 1952. One United States airline, Braniff, already is receiving a Federal subsidy on its South American routes; $ 89,000 for fiscal 1958, for instance. And there is talk in the industry that other lines, such as Panagra, soon might ask for Federal aid. Even an interim 6.6 percent increase in fares, granted this week by the Civil Aeronautics Board, is termed inadequate by many of the United States airlines to solve their growing financial troubles.

In addition, the toughening competition comes just at the time the Yankee lines are trying to raise more than $2 billion to purchase some 340 new jet and turbo-prop craft which they have on order.

PAN AM'S REVENUES

Pan American officials say the Latin competition is becoming so rigorous that its Latin division yields only 5.8 cents on each mile traveled by a paying passenger compared with a yield of 7.9 cents per passenger revenue mile on Pan Am's transatlantic flights.

For an idea of how the Latin airlines are swarming into this country, stroll down the flight line here at Miami's International Airport, the favorite port-of-entry for the Latin lines. No fewer than 22 Latin American airlines touch down here with such craft as DC–4's, Constellations, Viscounts and converted C–46's. Five of these lines have made their maiden flights to the United States within the past year. Ten years ago only two airlines from the south ventured this far north.

More newcomers are expected this year. "There probably will be 1 or 2 Argentine airlines, one from Haiti and another from Ecuador in Miami shortly," says Thomas R. Green who makes a practice of keeping track of such plans. Mr. Green is president of Dispatch Services, Inc., which contracts to operate ground crews and ticket agents for the foreign lines.

The United States doesn't permit foreign lines to compete with domestic carriers for business and passengers traveling between United States cities. However, a foreign line with proper permission can offer its international service to and from other points in the United States besides just such coastal spots as Miami. Consequently, many Latin lines are now pushing their service inland and to the busy United States-European runs to compete with the international service of United States lines.

Cinta, formally known as Linea Aerea Chilena, for example, began twice weekly service from Santiago to Miami in August, 1956. Just a year later Cinta spread its wings and added service to New York.

Now, says John Wells, Cinta's manager in Miami, "It is generally understood the company plans to fly the Atlantic." Rome is considered the most likely European terminal.

Other Latin lines are equally eager. Aeronaves de Mexico started Mexico City-New York flights in December. Empresa de Viacao Aerea Rio Grandense, a Brazilian airline known as Varig, is negotiating for approval to begin service to Europe this year. In these European operations, of course, the Latins also compete with United States airlines.

And at least one Latin line is hoping to invade the United States west coast and slice off a share of the transpacific business. Real-Aerovias Brazil System, which has been flying to Chicago for the past year, hopes to obtain landing rights at Los Angeles or San Francisco as a stopover for a planned route to Tokyo. "We also would like a New York terminal," says Arlindo Moura, United States general manager for Real.

When a foreign airline wants to enter the United States, or seeks to extend its service within this country, it must apply to the Civil Aeronautics Board and the State Department for approval.

UNITED STATES LINES COMPLAIN

Yankee lines complain the CAB and the State Department have been too freehanded in granting such permission. The agencies argue that permission is granted only on a reciprocal basis; when a Brazilian line, for example, is granted the right to enter the United States, Brazil, in turn, must grant similar rights to a United States line. The agencies say that no permission has been granted without repayment.

"By and large," claims an executive of one Latin American line, "the United States has given the Latin lines a shabby deal. Until the recent bilateral agreements between the United States and Mexico, there were nine United States lines operating into Mexico and only one Mexican line going into the United States and it was partly owned by Pan American."

There are some reasons besides lower fares that explain why Latin airlines are doing so well. For one thing, many South and Central Americans prefer to fly on lines operated by fellow countrymen as a matter of national pride.

LOWER FARES

But the main reason is the lower fares offered by many of the Latin airlines. In the words of a Honduran airline executive: "You might say we fly the barefoot trade."

Not all Latin airlines offer fares lower than their North American competition. Some of them, like most United States lines, belong to the International Air Transport Association which sets uniform prices on overseas runs. These include such lines as Cubana de Aviacion and Varig, a Brazilian line, which fly such up-to-date planes as the Viscount and Super-Constellation. A majority of the Latin lines, however, do not belong to the IATA, and consequently do not abide by the association's rules on fares.

One reason these lines are able to tempt passengers with lower fares is that they fly what the United States lines are inclined to class as jitney or secondhand equipment. Most bargain priced Latin international flights are made in DC–4's which lumber along at 225 miles per hour. A Constellation cruises at 300 and a Super-Constellation or DC–7 sails along at 340 to 360 miles per hour.

Cost of jitney equipment, most of which was purchased used or from Government surplus, is much lower than that of new planes used by the North American lines. Transportes Aereos Nacionales, a Honduran airline known as TAN, which flies four converted C–46's, paid only $5,000 for its first plane, says its vice president and general manager, C. N. Shelton. He declines to name the prices paid for the other three, but says, "We couldn't operate without the inexpensive equipment." A new DC–7B carries a price tag of $2,250,000.

Another reason that the Latins can operate on the low fare schedule is cheaper wage rates. The president of a line in Peru says wages in South America are a third less than in the United States.

Also helping the Latins keep their fares down is considerable aid from their own governments. The Air Transport Association complains that in a recent 8-year period Argentina put $83 million into its airlines either in direct cash subsidy or stock ownership. And some of the lines, of course, are government-owned and can get by with smaller profits than privately owned carriers.

LOWER TAXES

Too, many of the Latin flyers are not hit as hard by taxes as their Yankee competitors. For example, while United States corporations pay income taxes as high as 52 percent of their profits, Honduras, the home of TAN, has a tax rate of 20 percent to 25 percent, says TAN's Mr. Shelton. "There's no doubt about it," he says, "lower income taxes are one reason we can charge lower fares."

Another cost-cutting technique peculiar to the Latin lines: A freer mixing of cargo and passengers than the United States lines. "We may have diplomats and a consignment of monkeys, anteaters, snakes, tropical fish, or even penguins on the same flight," says George Poulos, district traffic and sales manager for Aerovias Panama. Thus, a flight short on passengers can make up the difference by increasing its cargo. TAN, for instance, equips its planes with fold-away seats to expand or contract the passenger and cargo compartments depending on the day's business.

Many passengers are lured to the Latin lines because they often offer more direct routes than a competing North American line.

NON-STOP FLIGHT

"We fly cheaper than anyone else because our route goes direct and nonstop from Miami to Guatemala City," says John Farrow, a sandy-haired Englishman who is United States traffic and sales manager for Aviateca. Pan Am's flight to the same point has stops at Havana and Meridia, Mexico.

While most Latin planes are older and slower than their competing United States counterparts, their safety records are as good as those of United States flights, the Latins stoutly insist.

They also offer, in some instances, passenger amenities comparable to their Yankee competition.

Aerovias Panama Airways, which charges only $55 for a one-way flight from Miami to Panama City, compared with $94 on a United States line, serves hot meals, has three stewardesses to look after the comfort of passengers and serves beverages including cocktails and hard liquor, free.

"We can serve free drinks because we buy our liquor at Panamanian instead of United States prices," explains APA's Mr. Poulos. A note for Scotch fanciers: He says a fifth of Ballentine's Scotch whiskey sells for $2.50 in Panama compared with $6.50 in the United States.

To meet the Latin competition the United States lines rely on faster schedules and better equipment and stress Yankee know-how. Panagra will get four of the first Douglas jets delivered to Pan Am to assure Panagra a "strong competitive position in its area." Panagra is owned by Pan Am and W. R. Grace & Co.

The Latin lines are also making progress toward modernization of equipment. Cubana de Aviacion already is flying Vickers Viscount turbo-props and is ordering Boeing 707 jets and Bristol Britannia turbo-props. Varig has 2 French Caravelle jets on order and is considering increasing the number to 5.

MORE MODERN PLANES

The Latin lines hope to be even more competitive as they get additional modern equipment. "We expect a lot of business out of the Midwest when we put Super Constellations on our flight to Chicago," says Real's Mr. Moura. Real will take delivery on four Super H Constellations early this year to replace DC-4's on the company's runs connecting Buenos Aires, Rio de Janeiro, Miami, and Chicago.

Ironically, the United States lines are responsible, in part at least, for the vitality of the Latin airlines. Pan American started 13 Latin lines to act as short-haul feeders for its international service and mapped out routes, trained pilots, ground personnel, and pioneered public acceptance. Now many of the lines, in which Pan Am still holds a minority interest, are competing internationally.

North Americans still supply many Latin lines with know-how. TAN, Aerolineas Peruanas and Compania Equatoriana de Aviacion, for example, use American pilots.

North Americans also bankroll some of the growing Latin lines. American Winston Guest, for example, financially backs Guest Aerovias Mexico, 52 percent, of which is owned by Mexican nationals, according to Mr. Morteiro, the line's general manager.

Just how fat the bankrolls of the Latin airlines are is hard to determine. Most of the lines are reluctant to talk about their financial health. Their status is further complicated by a frequent intermingling of private and government money in the enterprise.

TAN's general manager, Mr. Shelton, says the now-profitable airline hardly broke even from the time it was established in 1947 until its route was extended to Lima in 1954. "It was a struggle until then," Mr. Shelton says.

Compania Mexicana de Aviacion, whose stock is listed in Mexico City, is another profitable company. In 1956 it earned over $1 million, or 7.5 percent on gross receipts.

Self-Help Is No Magic Wand

EXTENSION OF REMARKS
OF
HON. DONALD E. TEWES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. TEWES. Mr. Speaker, the Agriculture Committee currently is preparing for hearings on a farm bill known as the self-help dairy proposal. It was developed by the leading farm organizations and authorities of the Nation. I introduced the bill, because I found it a realistic, practical approach to the complex problems with which the dairy industry is beset.

Because it is realistic, and because the problems it attacks are complex, there is no claim made that this legislation will solve overnight the economic tangle that has developed over two generations.

The self-help bill does not pretend to be a magic wand for dairy problems. It is a promising plan which recognizes the hard facts of dairy farming and marketing.

This warning would be superfluous except that in the past, broken faith in supposed panaceas has been an important factor in the failure of farm programs to command continuing support.

Because the self-help proposal holds the long-range solution to present difficulties, I think that now is the time to establish in the minds of the Representatives who may vote on it, and in the minds of the farmers who may be directly affected by it that self-help promises no "pie in the sky."

If this legislation is passed, there will be a period of adjustment. There will still be the risks and economic choices that make dairy farming attractive only to the tough minded and the able. Some dairy farmers are going to succeed under self-help, and some are going to lose ground. That has always been true of farming, and will cease only if farming becomes a public utility.

What self-help will do is to provide dairy farmers with bargaining power at least comparable to those with whom they must bargain in marketing their milk. It will allow a good farmer to make a living and to progress economically. And it will relieve the taxpayer of the cost of protecting the market from surplus.

It may be that farmers would prefer to be told that Congress can, with a roll-call vote, perform economic miracles, but I believe differently. Farmers are more sophisticated than some are willing to admit. They have been over the course of impossible promises and broken faith too many times not to know that their welfare lies with hard-fact planning, not magic wands.

Statement of the Honorable Lester Holtzman, of New York, Before the House Committee on Post Office and Civil Service

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. HOLTZMAN. Mr. Speaker, I would like to include in the CONGRESSIONAL RECORD the remarks I submitted recently to the House Committee on Post Office and Civil Service, in support of pay raises for our postal employees.

My statement follows:

Mr. Chairman, I would like to take this opportunity to express once again my keen interest in legislation now before your committee, which would provide a much-needed and much-deserved pay raise for our postal employees.

For the past several years the sentiment in Congress has been overwhelmingly in favor of such an increase, and last year the House of Representatives and the Senate saw fit to pass legislation which called for such adjustments. Unfortunately the President vetoed this legislation after the adjournment of Congress, and we did not have an opportunity at that time to reconsider the bill.

This year your committee is considering legislation early in the session, and I am very hopeful that we will be able to have a satisfactory bill enacted in the very near future, giving us ample time to effect repassage of the bill in the event of adverse Presidential action.

During the last few years the committee has listened to a steady stream of verified testimony which has shown the great need for pay raises. The cost of living has continued to spiral upward and our postal employees wage a continuous struggle to provide their families with the bare necessities of life. Many of them have had to seek additional employment to supplement their inadequate earnings from the Post Office Department, and in many households the wife has been forced to obtain work so that the family can maintain a decent standard of living.

Our postal workers are among the most faithful of Federal employees, working long hours at hard work, and many times under adverse conditions, to insure the prompt and uninterrupted flow of the mails. They are loyal and conscientious, but we must face the fact that even career employees are being compelled to leave Government service for more lucrative positions elsewhere.

The last salary increase was approximately 3 years ago, and it did not even come close to offsetting the high cost of living at that time. The upswing of living costs remains with us and the outlook for the future is not promising.

The Post Office itself has felt the results of the inadequate salaries in the high percentage of turnover of personnel. Years ago an individual sought employment with the Department, learned his job and became a valuable cog in the postal machinery, contributing immeasurably over a period of years to a more efficient operation of the postal service. Currently the Department is faced with the heavy cost of continuously training new employees, who in many instances find no incentive to remain in the service. This, of course, has a disastrous effect on the productivity and efficiency of the Department.

We must face the problem realistically, and bring about a fair and equitable adjustment of pay scales for these employees. As Members of Congress, we have a duty and responsibility to the men and women in Government service, and we cannot in conscience fail to provide them with adequate salaries. We must restore their morale and their self-respect, and I respectfully urge the committee to report out a just and satisfactory bill without delay.

Complacency, Confusion, and Coverup at the White House

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the New Republic magazine of January 6, 1958. The situation described in the article has deteriorated since the writing of the column:

BRINGERS OF BAD TYDINGS

The most disturbed group in the country today are the Wall Street internationalists.

They are the ones who sold us a well Eisenhower in 1952 and a sick Eisenhower in 1956. They pull the strings which control newspapers, banks, chambers of commerce. They are well-meaning men and enlightened according to their limitations. Every 4 years they become interested in politics but lose interest between times. Taft's isolationism frightened them and they swung to Eisenhower, as they had before to Dewey and Willkie.

Now, in horror, they see what they have done. The Nation is in danger, there is a cipher in the White House, and their conscience tells them they are responsible. I use the phrase "Wall Street internationalists," but that is not really accurate. Henry Luce does not operate in Wall Street. Charlie Wilson does not operate in Wall Street. I am speaking of the informed, multimillioned power elite all over the country that makes the Republican Party its chosen vehicle, knows the world is round, and thinks politics something it can dabble in.

That is really why the alarmist news of the so-called Gaither report is leaking out all over Washington. This is the report which Jim Hagerty declares does not say that the United States of America is weak in relation to Russia at this time. The Gaither report has not been published and almost certainly won't be. If published it would expose the inexcusable complacency of the administration. But who prepared the report? Why, good, sound millionaire Republicans for the most part. They are part and parcel of the Wall Street Internationalists who gave us Eisenhower. They made a serious study of Russia and America and were scared by what they discovered. They were even more scared when they gave the report to the National Security Council and heard Eisenhower's inadequate reaction. Now they want the report put out and the calculated leaks are coming from them.

Amiable White House Secretary Jim Hagerty has a penchant for night life on foreign assignments. At his best he is a superb public relations technician, but he was hardly himself in the ridiculous episode at Paris when he tangled with the New York Herald Tribune Humorist Art Buchwald. He interpreted as a deadly insult what anybody else could see was a mild spoof. American correspondents find it difficult to believe, in spite of Hagerty's denial, that Eisenhower did not himself prompt Hagerty to his otherwise inexplicable rage.

THE PRESIDENT LISTENS

One of the saddest sights Americans have ever seen was the well-loved Eisenhower sitting by last week in the post-NATO televised report to the Nation while Dulles meandered through 24 of the 30 minutes performance. You could not follow what was said because the situation spoke so much louder. Here was the President of the United States, looking bored and self-conscious, cast in a subordinate role to an underling. He listened; Dulles talked.

Eisenhower has had no press conference since October 30. The American Government is built on the Presidential principle: we put all our eggs in one basket. But in our present fix the President has offered no great program, no new ideas, no rallying point. He will be in office another 3 years.

Whence will leadership come? Congress? We should like to be optimistic for a change (honestly, friends, this gloom gets us down, too), but in all candor the prospect is none too good. The House is a great unwieldly folkmoot; the Senate is not equipped to carry on coordinated executive planning. In periods of congressional domination (like the present) there is normally an interval of partisanship and stagnation.

We ran across this quotation the other day: "The most dangerous thing about the Eisenhower influence, we believe, is the theory that because he is a general this much-divided man will not let our defense decay. * * *" Yes, it was in this column September 16. The first sputnik October 4.

The rumor that the new car models aren't going very well is now confirmed. Economists had looked to Detroit to pull us out of the present recession. But Detroit boosted the prices of new cars about $100 each. Walter Reuther suggested that, instead of raising, it lower car prices $100 and promised to take the price cut into consideration in wage negotiations. Detroit snooted Reuther. Now the recession deepens. We are in a production race with Russia, but our steel mills are operating at only about two-thirds capacity. (How preposterous can we get.) Year-end business seers predict recovery about "mid-1958" (the orthodox time-limit for this kind of prophecy). Well, we can offer a cheery note here. We honestly don't think the current downturn will last very long. As Harvard's Sumner Slichter says, there hasn't been a recession in history that could be halted so easily. Even a headless administration can't stand by and see a recession grow.

THREE-HEADED EAGLE

Actually the administration isn't headless. The American eagle now has three heads. There is Eisenhower, Sherman Adams, and Nixon. Eisenhower is head of state but no longer head of government. Adams wasn't elected but has the power. NIXON has only limited power but was elected.

Adams is not accountable to the voters, not accountable to Congress and his influence is unique in history. He is, alas, a limited man. He sneered at Adlai Stevenson when Dulles made a gesture of bipartisanship before NATO; he termed sputnik nothing more than a "basketball"; he fought to keep defense spending down in 1957 to allow a political tax cut this year.

There is a widespread belief that NIXON has more power than he has. But NIXON has few real executive responsibilities. Aside from attendance at weekly Cabinet and National Security Council meetings he sees the President only perhaps once a month; Adams is in and out of Eisenhower's office all day. NIXON's mental equipment is remarkable. Whether he has any convictions nobody knows.

T. R. B.

Humane Slaughtering of Livestock

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. POAGE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following letter from the American Jewish Congress:

AMERICAN JEWISH CONGRESS,
New York, N. Y., February 20, 1958.
Hon. W. R. POAGE,
House Office Building, Washington, D. C.

DEAR CONGRESSMAN POAGE: We are writing to you at this time to express our appreciation for your statements during the debate of H. R. 8308 on February 4, regarding the humaneness of the Jewish religious method of slaughtering animals for human consumption. At the same time, we wish to correct some inaccuracies during the debate and to clarify possible misunderstandings of our position on humane slaughtering legislative measures, particularly with regard to one part of the January 29, 1958 letter from Dr. Leo Pfeffer to you.

We were pleased to read in the letter of January 20, 1958 from Mr. Fred Myers, executive director of the Humane Society of the United States, to you, the statement that in the opinion of the Humane Society "based upon expert testimony already presented to Congress and upon personal observation, that the Jewish method of slaughter, when performed according to the laws of schechita by a trained and religiously supervised shochet, results in virtually immediate loss of consciousness by the animal and should be legally recognized as being humane." It was even more gratifying to note your comment in referring to shechita that "ritualistic slaughtering is, as I see it, when carried out in compliance with the Mosaic law, one of the most humane methods yet devised." While the humaneness of shechita has been repeatedly demonstrated through scientific studies conducted by eminent pathologists and other authorities in the fields of veterinary medicine, anatomy, and physiology, it is good to know that as a member of the United States Congress who has made a study of the subject, you have come to the same conclusion and were thoughtful enough to state your view on the floor of the House of Representatives.

In response to a question from Congressman JAMES ROOSEVELT, you said "as far as I know, there is no group except the Union of Orthodox Rabbis that has not agreed to these amendments. I may be wrong, but I know of no other group that is not in favor of these amendments." You will recall that the Rabbinical Council of America and the Union of Orthodox Jewish Congregations of America are opposed to such legislation. Needless to say, the position of these orthodox organizations is not due to a lack of concern about cruelty to animals. Rather, it stems from the apprehension based on the experience in other countries that humane slaughtering legislation no matter how worded may threaten shechita and may be a forerunner of a movement to ban shechita.

Referring to the undersigned organizations, Congressman MULTER said during the debate we "are in favor of and support this measure." This statement is inaccurate. As you correctly stated, we were opposed to H. R. 8308 in the form in which it was originally introduced. As stated in the letter from Dr. Leo Pfeffer to you dated January 29, 1958, in its present amended form we do not oppose the measure. However, while we do not oppose the measure as amended, we are not proponents of the bill. We are sure you understand and appreciate this distinction.

Inasmuch as H. R. 8308 is still to be considered in the Senate, may we clarify one part of Dr. Pfeffer's letter of January 29 which may be subject to misinterpretation. We have reference to the paragraph which reads:

"We understand further that while the bill, as amended, would empower the Department of Agriculture to restrict or prohibit shackling or hoisting of conscious animals in connection with slaughtering according to the ritual requirements of the Jewish faith, it does not restrict or prohibit, nor does it authorize the Department of Agriculture to restrict or prohibit the use of the Weinberg or revolving pen, as is used in Great Britain, and that such use of the Weinberg pen is a humane method of preparing the animals for slaughter."

We wish to underscore the correctness of your statement to the House of Representatives regarding our position to the effect that we want to prevent any unnecessary cruelty. This applies to the preparation of animals for slaughter as well as the act of

slaughter itself. We have no desire to protect methods of handling or preparation of animals which may be inhumane. At the same time, we see no need for restricting or banning present methods of handling which may not be inhumane.

To be more specific, while we hold no brief for and oppose such forms of shackling and hoisting which may be inhumane, it was never the intention of the undersigned organizations to imply that shackling and hoisting per se are inhumane and, therefore, subject to being prohibited in all their forms by the Department of Agriculture. We do not understand this to be the legislative intent of your bill. You will recall that Mr. Fred Myers, in his letter of January 20, advised you that in the amendments since written into H. R. 8308 "we have purposely avoided * * * a detailed description of humane methods of handling animals as they are brought into position for slaughter, in order to allow for future inventions in that field."

In any event, whether it may be existing methods of handling animals preparatory to slaughter; necessary modification of present methods; the revolving pen or methods as yet to be devised; our position precisely stated is that we are opposed to any methods which may be inhumane without necessarily ruling out existing methods which are or which could be modified so as to be humane.

We respectfully request that you insert this letter into the CONGRESSIONAL RECORD so that all who are interested may know exactly where we stand in the matter of humane slaughtering legislative proposals and how much we appreciate your efforts in behalf of religious liberty by your support of the Jewish religious method of slaughtering animals for food.

Once again, please accept our deep thanks for your cooperation and consideration.

Sincerely,

AMERICAN JEWISH CONGRESS,
By ISAAC TOUBIN, *Executive Director.*
RABBINICAL ASSEMBLY OF AMERICA,
By RABBI DAVID C. KOGEN,
Acting Executive Director.
CENTRAL CONFERENCE OF AMERICAN RABBIS,
By RABBI SIDNEY REGNER,
Executive Vice President.
UNION OF AMERICAN HEBREW CONGREGATIONS,
By RABBI JAY KAUFMAN, *Vice President.*
UNITED SYNAGOGUE OF AMERICA,
By RABBI BERNARD SEGAL,
Executive Director.

Who's Who Citation for Mount Pleasant, Iowa

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. SCHWENGEL. Mr. Speaker, in view of the fact that the city of Mount Pleasant, Iowa, has been singularly honored by a citation in the 60th anniversary edition of Who's Who in America, I am moved to call attention to this recognition and ask permission that the citation appear in the Appendix of the RECORD.

Mount Pleasant is the only community in the United States to be honored in this manner this year and is the second community in history to receive the citation.

Deviating from the publication's established practice of choosing 10 persons to whom citations are awarded, the editors have given one of the citations to the town of Mount Pleasant, Iowa, because of the citizens of Mount Pleasant, Iowa, in their efforts to improve and expand the facilities of Iowa Wesleyan College. Other awards or citations went to individuals in widely scattered places in the United States for various reasons.

The citation is carried under the heading, "Special Citations and Outstanding Memorial Gifts," with this explanation:

The board of editors has awarded special citations to the following donors of gifts to educational institutions. Some are selected because of the size of the gifts, and others because of their significance in respect to the particular purposes designated, or because they are outstanding as memorial gifts.

The citation is headed "The Town of Mount Pleasant, Iowa," and states:

Although communities are seldom cited in these pages, there are occasions when the efforts of townspeople as a whole are so outstanding that they demand special recognition. Such is the case with the citizens of Mount Pleasant, Iowa, in their efforts to improve and expand the facilities of Iowa Wesleyan College.

Two years ago the college began a quiet effort to interest the twonspeople in the capital improvement needs of Iowa Wesleyan. The first gift was a pledge by a businessman to pay $5,000 over a 5-year period. Today the college is able to announce that the original gift has been multiplied by more than 40 times for a total exceeding $200,000. This amount does not include an additional program of giving by local businessmen of $12,000 per year for operating expenses. Over the originally planned 5-year period the total will be in excess of $265,000.

A sum such as this is a great deal of money for a community of only 6,000 people. It amounts to $9 each year from every man, woman, and child. It illustrates, as did the Who's Who report on developments in North Carolina a couple of years ago, how much some communities value their independent educational institutions, and to what lengths they will go in personal sacrifice to preserve these cultural assets.

A Pretty Fine County

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. HORAN. Mr. Speaker, under permission to extend my own remarks in the Appendix of the RECORD, I am pleased to include a splendid editorial by Russ Hill, able editor and publisher of the Davenport Times, of Davenport, Lincoln County, Wash.

The editorial defends one of the finest counties in the United States:

Only a person blinded by his own ego could assume that life is dull for others. Only an academic prig could conclude that more than its fair share of drabness has been relegated to the smalltown society.

It is easy and logical to judge that the metropolitan city is simply the weak flesh and false paint of the American way of life, and that the backbone and heart is in the smaller community.

One might also decide that all cynics are domiciled in major cities and that all love and understanding is centered in rural areas. However, thoughtful people believe that truth, beauty, and goodness are not available only to special segments or individuals.

Those who refer to the small town as dull, might more aptly use the word "successful." It would be more fitting, at least in any of the 7 towns of under 1,500 population in Lincoln County, Wash., which is the second-largest wheat-producing county in the Nation and one of the richest per capita counties in our country.

It is true that we have no hungry people in our small towns in Lincoln County. We rarely hear of a repossession of a car or an electric appliance. Almost all of the 9,500 people, sharing in some way in the $30 million grain harvest of 1957, in Lincoln County have telephones, radios, comfortable homes, and autos. The Davenport Times tells every week of some family going to Hawaii or Europe or buying a new inboard boat or a cottage at the lake. These people play golf, fish, bowl, and dance. They belong to the granges, churches, lodges, and clubs to such an extent that discipline must be exercised to arrange an evening at home. Does this sound like a dull society?

It has been suggested that the society of the small town is introverted, and it is acceptable if it refers to the truth that people in this society mend their own fences first, and are slow to cast stones toward neighbors in the metropolitan areas. These same people oversubscribe causes such as the Red Cross, March of Dimes, and Boy Scouting and still build churches and pay taxes.

The smalltown society is complacent? Perhaps, if you mean having a sense of inward satisfaction. Most of the dissatisfied breeds of Socialist and Communists seems to grow in the metropolitan areas. It is difficult for them in the small town where people have such pride in their community and Nation that they will not be brought to a frenzy by malcontents. The people in the small town are not only interested in peace, but are apt even to practice brotherhood of man.

He who states that the society of the small town is monolithic in making decisions has a good point. The 1,500 people of Davenport, Wash., are as inspiring as the rock of ages when it comes to community progress. They have accepted the bills within the past very few years for a new $350,000 high school, a $300,000 grade school, a $200,000 gymnasium, a $50,000 street-paving program and erected by subscription a community hall in memory of war dead.

In the small town you find a society with great strength cultivated by a sense of tolerance and gratitude that represents a sentiment intelligence rather than frantic drive. And most important the people of the smalltown society have a great ability for forgiveness, even for those who sling at them an arrow tipped with the poison of parochialism.

Administration's Farm Program

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter received from Mr. M. K. Thornton, executive

director, Texas Agricultural Limestone Association, in which he has analyzed the farm message of the President presented to the Congress on January 16, 1958:

TEXAS AGRICULTURAL LIMESTONE ASSOCIATION,
Bryan, Tex., February 6, 1958.

Congressman OLIN E. TEAGUE, of Texas,
House of Representatives,
Washington, D. C.

DEAR SIR: I am presenting to you for your consideration, my ideas with regard to the farm bill as presented to you on January 16, 1958.

The last paragraph on page 1 points out a condition that exists, which is that over half of our would-be self-sustaining and self-respecting farmers depend on nonfarm activities to maintain themselves and that less than half of our farmers produce 90 percent of our food and fiber. This is true and means that the small farmer needs help badly if he is to remain as a self-sustaining entity. Apparently in the minds of some, this group should be sacrificed for the industrial type farmer. If such is done economic dislocation in the cities will likely result and at the same time an independent thinking segment of our society will be further depleted. Personally, I think that anything that will further serve to deplete our rural population is unwise.

On page 2, we find the statement that "prices received by farmers on the average are 3 percent above those of a year ago and that during the last 2 years, farm income has stabilized. * * *" Further down on the same page, the statement is made that "rising production costs continue to limit net farm income and so forth." There is certainly an inconsistence between these two statements. Actually as you know, farmers are beset on all sides by rising production costs and have to extend themselves in every possible way to maintain a reasonable net income.

We find the statement that "farm real estate prices are at an alltime high, reflecting the basic optimisms, and so forth." I cannot agree with this statement. In my opinion, it is the result of dull and spiritless pessimism on the part of the two and three hundred acre farmers who sell their land to escape the realities of hopeless drudgery without an adequate compensation for their labor.

The men who buy their places are men who are looking for an escape from income taxes, etc., and wish to put their capital where it will not evaporate. The small farmers are selling off their accumulations of a lifetime and moving to the city in the hope that they can enjoy the privileges and well-being of city conveniences. Too many times this dream turns out to be only a mirage. In other cases, due to drought and other adverse conditions the sale of all their accumulations is the final resource of a hopeless future. These people needed help. The remnant needs help.

At the top of page 3 we find the statement that large numbers of rural people have not benefited from price supports nor other changes in agriculture. This is part of the overall problem that they do not have the money to participate in the programs as now existing and have had to eke out a bare existence the best way they can.

There are those who hold that any program that will help these people restore fertility and productivity of the land is wasteful and self-defeating in the end. This I cannot subscribe to because the great revolution in agriculture stems from those soil-improving practices instituted by the Department in the thirties and repeated frequently enough in the same land to actually bring about desired changes. These desired changes have been accomplished slowly but surely and are continuing. These soil-improving practices which are spoken of in a derogatory way as the "cafeteria approach" are sound and need to be continued. It was the "cafeteria depletion process" that brought us to bankruptcy in our soil resources during the late twenties and early thirties. For generations farmers removed from the soil every year a small but definite amount of the soil capability and carried it to town with their hats in their hands and asked the people what they would give them for the product of their labor and their soil fertility. In so doing, they built a great Nation and a great State but these same resources that had been removed stepwise during this great building period need to be restored to the land if we are to remain strong and happy.

The stepwise approach has met with the needs of the land and fitted into the finances of many of our small farmers and ranchers. Surely the Nation as a whole should be willing to support such a program of restoration in light of history for its own benefit.

In this message, there are certain phases of agricultural programs that are supposed to be deleted and other phases reduced. That portion slated to be reduced or deleted under the agricultural conservation program contains that part which has meant much in the great agricultural revolution. The stepwise restoration of the soil is largely responsible for the agricultural revolution. Instead of reducing this portion, it seems to me, that in view of what our rural population has accepted, the appropriation should be increased and those portions that are to be deleted should be restored and funds increased.

We also find in this message the statement that the acreage reserve program should be deleted because farmers do not participate in it. At the time this message was being read to the Congress, the administrators of the State ASC were canceling out applications for participation in the acreage reserve program because funds were exhausted. It now appears likely that the conservation reserve will have to be limited in participation because of the interest of the farmers. The farmers that are signing up for these practices are those who need help the most. It also appears likely at the present time that those farmers participating in the ASC program may be liimted for lack of funds. All of this is in current contradiction to irresponsible statements made by certain members of the Department of Agriculture. Farmers want the help and need the help if they are to maintain their way of life.

In looking over this presentation, I feel that those who are responsible for the development of this program as presented to Congress have lost touch with men at the forks of the creek and do not realize that their needs are a vital part of our overall agricultural problems. The farmer's and rancher's needs in the restoration of the land and building for himself a good life should be considered.

To that end, it seems to me that the ASC program should be left as it is or even expanded in its scope of soil conservation and restoration in order that those who work the land will have an opportunity to participate in the good things of life.

Perhaps one way to improve the program would be to make the acreage reserve and the conservation reserve part of the ASC program and increase the funds available rather than reduce the funds and delete certain parts.

I hope in your deliberation, you will see fit to maintain the entire ASC and soil bank programs as they are or expand them for I am sure from my experience that the restoration of the land through the use of adequate mineral fertilizers and cover crops in a sound farming system will result in much happiness and greater well-being among the farmers of the State, particularly those in the older farming regions. This will redound to the best interest of the country.

Yours very truly,

M. K. THORNTON,
Executive Director.

More About Reuther, V—Walter Reuther's Political Ambitions

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. HOFFMAN. Mr. Speaker, it is a matter of common knowledge that Walter Reuther and his political pals have long politically controlled Michigan. Vicious, lawless violence has been their weapon, misuse of union funds their practice. Gov. "Soapy" Williams is a jumping jack manipulated by Reuther and Gus Scholle, State president of the CIO–AUW. Reuther's activities as a politician were clearly disclosed by Senator BARRY GOLDWATER—a columnist gives us a glance at a part of the situation. George Todt wrote, February 1, 1958, in the Valley Times of California:

WAY TO RESIST SOCIALIST TYRANNY

"Hail Columbia, happy land.
Hail, ye heroes, heavenborn band.
Who fought and bled in Freedom's cause."
—Joseph Hopkinson, Hail Columbia.

Ten years ago, Walter Reuther took off his union mask and allowed the politician to show through. Said Mr. Reuther: "political action * * * shall have first call upon my time and energy as president of the international union."

Not collective bargaining—but political action, instead, his first priority—for the socialistic boss of the AFL–CIO committee on political education (COPE). The latter being none other than the organization which cost President Eisenhower and the Republican Party control of Congress in the last election. And this despite a phenomenal 9 million plurality of votes cast for the President.

As Senator BARRY GOLDWATER of Arizona pointed out in his far-seeing address at the Republican dinner in Detroit on January 20, "Walter Reuther, by his own statement, sees himself primarily as a politician. The union appears to be merely a convenient stepping stone."

What the master of COPE has already done is to lay the foundations for his own Social Labor political party in the future. None who have examined his brainchild, COPE, can come away with less than a feeling of the immensity, the enormity, even the ingeniousness of the arrangement he has constructed for himself. It is a tremendous effort, being down-played for the moment, but ready to burst forth in behalf of Mr. Reuther's political ambitions at any time with a thunderous roar.

This dynamic political entity, Reuther's vehicle, is financially motivated with more money than may be found in the coffers of either major political party put together. Regardless of any artful dodges used, the money is to a remarkable degree that of enforced contributions from union men who dare not show themselves in disagreement with the leader. Many of them are Republicans. Their money is placed unethically

and immorally on candidates of the opposite political faith.

Now the long arm of COPE has reached out past Michigan, Mr. Reuther's home grounds, and taken over the State of Oregon in the last elections—and is presently reaching for the Golden State, California. Are we to be next on the Reuther timetable?

The question, which is paramount, is what can be done to prevent it? Jeffersonian Democrats, old line Republicans, and American patriots in general are as one in their concern at the socialistic threat emanating from COPE in their direction. Can they join together to stop this menace in its tracks?

It could be done if the various warring factions would bury their petty quarrels and bickering in behalf of an overriding issue—a great crusade right here at home. This can be tested in the gubernatorial campaign this fall in California. In Senator WILLIAM F. KNOWLAND, the GOP candidate, the people of California have a champion who is the antithesis of Walter Reuther. He has already struck both Reuther and COPE the deadliest kind of blow by advocating his Labor Bill of Rights to effect union democracy inside union ranks and the right to work—which is the best kind of job insurance for those three-quarters of the American work force not presently organized against their wills into unions.

Every Democrat, Republican and patriot who hates socialism and wants to resist it now can do so in California by the simple expedient of finding out who Reuther and his COPE political machine supports for governor—and then alining himself or herself with his opponent. Which, in this case, is Senator KNOWLAND.

In my time I have been a Jeffersonian Democrat, a traditional Republican and President and/or member of some old-line American patriotic societies. I know what ought to be said to any member of such groups who believes, as I do, that the Constitutional Republic of the United States must be preserved at any cost if human liberty is to survive in this country and throughout the world:

Forget your differences—band together—and organize yourselves immediately to withstand dictatorial and tyrannncal power from would-be tyrants in our midst. Don't worry so much about what is happening to others across the sea. Wake up and learn what is already happening to you right here at home. And don't put your head in the sand afterwards. It is the duty of every loyal Democrat, Republican and patriot to resist socialist tyranny, and those who advocate it, wherever they may be found. Our only motto should be: What is best for America? So what are we waiting for? Let's go. Are you with us? How about it?

Senator Yarborough Pleads for the Backbone of American Life

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. POAGE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following editorial from the Temple Daily Telegram:

SENATOR YARBOROUGH PLEADS FOR THE BACKBONE OF AMERICAN LIFE

It seems to us that everyone interested in what's happening to our Nation and our way of life should give thought to the plea of Texas Senator RALPH YARBOROUGH for the small farmer.

"We are trying to preserve a way of life that was here before the Revolution * * * and has been here up to this generation," he said, in outlining an emergency program to help these farmers.

Whether his program would work, we can only guess, though it apparently would. But its objective seems to us to be absolutely valid, and further to be of deep significance to the entire Nation.

The administration's farm policy as conceived by Secretary Benson has been and is to reduce the farm population along with planted acres. This idea has been sold to the administration by professional economists, who may be right in their economics.

They argue that we have too many farmers on too many small farms, and that only the larger land units can be farmed profitably today. Therefore, they say, let's act to get the small farmers off the land and into city jobs in factories, etc.

In money terms, that argument may make sense. In human terms, it does not. In fact, it seems to us to be almost criminal, in those human terms.

It amounts to forcing a new pattern of life on people who do not want it, who prefer to live on their own land as their fathers did—and who are vastly better Americans on that land than anywhere else.

This compulsory relocation idea inevitably contributes to higher relief rolls and unemployment payments in the cities, temporarily or permanently. It creates rootless and dissatisfied city dwellers, strangers to city ways, and thereby must surely increase both adult and juvenile delinquency. True accounting must add these hidden factors to the real cost of such a policy.

Obviously, in our civilization, if farmers were organized they would be in no danger of becoming human guinea pigs in such an experiment. But they aren't organized effectively. They are all but defenseless.

Our argument is not that farmers should be compelled to stay on the land. Some of them prefer to move to town. Our argument is that those who want to stay on the land should be able to do so if there is any practical or reasonable way to accomplish that. To us, the equation seems simple—one family living as it prefers to live is a national asset, but the same family living as it does not prefer to live is a national liability. And we have far too many of these liability families now.

We are not today trying to make it possible for small farmers to stay on the land. The administration admittedly has planned and worked to liquidate as many of them as possible. That's the point Senator YARBOROUGH is making—that we owe it to ourselves and our Nation to make this effort, before we wake up and find that we have plotted the uprooting of our way of life that has literally been the backbone of America.

We still need that backbone. Read any day's news, and see if you can say we don't.

A Bill To Aid the Deaf

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. MOORE. Mr. Speaker, I read with great interest the syndicated column (Eleanor Roosevelt's Day), of February 13, 1958, which was concerned with legislation to provide additional compensation for veterans having the service-incurred disability of deafness of both ears. Mrs. Roosevelt devoted her entire article to H. R. 4214 which was introduced on January 31, 1957, by the Honorable ROBERT H. MICHEL of the 18th District, Illinois. The bill is currently pending before the House Veterans' Affairs Committee and I therefore have submitted Mrs. Roosevelt's comments into the Appendix of the RECORD in order that more attention might be focused on those unfortunate veterans that seem to be somewhat forgotten.

A BILL TO AID THE DEAF

LOS ANGELES.—I seem to do nothing these days but write about people who are living on pensions, but today's case is not one of finanical disability.

The Peoria (Ill.) Chapter No. 1 of the Disabled American Veterans is supporting a bill, H. R. 4214. The member of the chapter who wrote to me about it is 100-percent disabled because of complete loss of hearing with absence of bone and air conduction. He told me:

"The purpose of this bill is not for additional compensation but that we veterans with this type of disability may have peace of mind in knowing we are protected by law."

He must be a young man because he is a World War II veteran, and evidently feels the loss of hearing very keenly.

He says:

"We are isolated from our loved ones, we are isolated from the social and entertainment world of sound. We cannot even go to the church of our choice and hear our minister speak the word of God. Our only means of communication is the writing pad and lipreading. I am sure that no person, with all of their God-given senses, would sell hearing for any amount of money."

I should think that men with this disability would be assured of complete compensation, but if this bill is needed to give them this assurance, I am sure that every voter in this country would want it to be passed. And I have no question but what the Members of Congress will feel the need of giving the veterans this reassurance. Of course, any disability must be proved to be service-connected, but in a case of this kind that would not be hard to prove.

Reciprocal Trade Agreements Act

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony of A. B. Sparboe for the Chamber of Commerce of the United States, before the House Ways and Means Committee, February 26, 1958:

RECIPROCAL TRADE AGREEMENTS ACT

My name is A. B. Sparboe, I am vice president of Pillsbury Mills, Inc., Minneapolis. I appear on behalf of the Chamber of Commerce of the United States to present its views on renewal of the Reciprocal Trade Agreements Act. I am a member of its foreign commerce committee.

The Chamber of Commerce of the United States is a national federation of over 3,300

UNIVERSITY OF MICHIGAN LIBRARIES

trade and professional associations and State and local chambers, with an underlying membership of 2,500,000 businessmen, and over 21,000 direct business members.

The chamber membership has supported the reciprocal trade agreements program for the past 24 years.

It is with sincere regard for the diverse and sometimes conflicting interests of our membership that we have sought a common denominator to serve as the basis of our recommendations.

This common denominator is the national interest.

The concept of the national interest in trade policy must start with the principle that the objective is to strengthen the national economy. Beyond that, the national interest must be concerned with the relation of trade to the defense and security of the United States, including its effect on foreign relations.

The legislation before you (H. R. 10368 and other identical bills) would renew the Reciprocal Trade Agreements Act with certain changes. The national chamber makes the following recommendations:

1. That the act be extended for 5 years. This is essential for consistent adherence to a policy of expanding world trade.

2. That the President be granted authority to lower tariffs on a gradual and selective basis in return for trade benefits from other countries.

The alternative methods of reduction set forth in the bills appear sound. Under the first method, the President would be authorized to reduce a rate of duty by 5 percent for 5 successive years. He would be authorized to reduce a duty by this same total amount over a shorter period, but no reduction in excess of 10 percent of the July 1, 1958, rate could become initially effective in any 1 year.

Under the second method, the President would be authorized to decrease the rate by not more than 3 percentage points ad valorem, but no reduction could be made initially effective in any 1 year which would exceed 1 percentage point.

Under the third method, the President would be authorized, as at present, to reduce an existing rate which is above 50 percent ad valorem down to 50 percent ad valorem. Here, too, the reductions would be carried out gradually, with not more than one-third of the total reduction to be made initially effective in any 1 year.

The progressive, but gradual, removal of barriers to trade should proceed in accord with the needs of businessmen conducting their trade in a free enterprise economy. Action under this authority would, of course, be subject to the peril-point procedures of the law and to the usual escape-clause safeguards.

3. That the proposal not be approved which would authorize the President to raise duties as much as 50 percent above the rates of duty in effect on July 1, 1934 (instead of 50 percent above the duties in effect January 1, 1945, as in present law).

The present Trade Agreements Act already provides considerable authority in this direction. The new proposal would use as the base rates, as of July 1, 1934, those actually enacted in 1930, the highest in our history. This would not seem to be realistic, necessary or desirable. In some cases, the proposed authority, if applied, could permit an increase of several hundred percent above the actual rates now in effect. This would be particularly true of commodities where the 1930–34 rates were on an ad valorem or percentage basis.

The very existence of such authority would increase the element of uncertainty in United States trade policy. To include in the act a provision essentially capable of vitiating the program's objective of fostering the healthy expansion of trade seems inconsistent.

4. That the proposal for technical change in peril point action, directed to achieving more prompt and effective consideration of serious injury cases, be approved.

The reciprocal trade agreements program is the means through which the United States is able to participate in cooperative measures to expand international trade by reduction of tariffs and other trade barriers on a mutually advantageous basis. International trade is a powerful weapon for peace. Moreover, it is essential to the continued expansion of the economy of the United States. It benefits the consumer, spurs long-term economic growth and conforms to the spirit of a free enerprise economy.

The reciprocal-trade-agreements program as a basic segment of United States foreign economic policy faces two new challenges, bringing new urgency for maintaining effective negotiating power and making the extension of this act even more imperative.

THE SOVIET ECONOMIC OFFENSIVE

While not as dramatic as the missile race, the Soviet economic challenge is no less real. We cannot readily doubt this fact when Nikita Khrushchev so bluntly said less than 3 months ago: "We declare war upon you * * * in the peaceful field of trade. We declare a war we will win over the United States. The threat to the United States is not the ICBM, but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system."

Expanding Soviet imperialism is taking the form of a centrally directed state-financed drive for economic penetration of the underdeveloped areas. We have seen it happening recently in Egypt and Syria in the Middle East and in Indonesia in the Far East. Unless checked, it would happen elsewhere in Asia, Africa, and Latin America.

Millions of people, the oil of the Middle East, and the vast resources of Africa are in danger of being subverted or lost to the West. Attractive trade facilities are being offered—including barter. Moscow is sending trade missions to any country which will receive them, especially the countries uncommitted in the East-West struggle. A rash of trade agreements between Communist nations and the free world were concluded in late 1957. Already this year, a Soviet trade representative offered Asian nations long-term trade agreements in all basic commodities.

The Soviet bloc sold $2.1 billion worth of merchandise last year to the free world—an increase of 70 percent in 4 years. Our Government officials have pointed out that there is no technical or economic reason why the Communist bloc cannot double or triple this volume within a very few years. In this way, Russia seeks to tie other areas to the Soviet orbit and to exploit the trade difficulties of the free world.

It must be remembered that many of the countries friendly to the United States must trade to live. If they cannot trade with us on mutually agreeable terms, they will surely trade with others.

The Reciprocal Trade Agreements Act, conceived as a means of easing the barriers to American exports and imports, has become a symbol of international trade cooperation.

THE EUROPEAN COMMON MARKET

On January 1, 1958, the European common market became a reality. United States exports to the 6 European common market countries are running at about $3 billion a year. Our private direct investment in these countries already totals over $1½ billion, with new direct investments (excluding reinvestment) taking place at an annual rate of about $250 million.

The threat of being shut out of traditional European markets by high tariffs is of acute concern to United States businessmen. The gradual elimination of trade barriers among the six common-market countries, coupled with the maintenance of a common tariff against the outside world, will place American exporters to the area at an increasing disadvantage vis-a-vis their competitors within these countries.

Many leading United States industries plan a partial shift from exporting to the area to investing within the area by setting up branches or subsidiaries in Europe or by licensing processes to existing European firms. In this way United States firms produce for the common market area and at the same time avoid the tariffs which may be imposed against our exports to the common market countries. American investment will be attracted also by the advantages of large-scale operation in a new market of 160 million consumers.

But a continuing flow of United States foreign investment abroad cannot take place indefinitely unless earnings from such investments can be withdrawn in dollars. The longer-run solution must lie in expanded trade. The United States must be willing to import on a sufficient scale to enable other countries to meet dividend, interest, and amortization requirements, as well as to pay for the goods they currently buy from the United States.

Both the initial and long-range loss to the United States economy can be offset only by effectively bargaining with the common market on a reciprocal basis. Representatives of the European common market have stated: "The European economic community stands ready to negotiate reductions in the common tariffs provided other countries meet us halfway."

Thus, it does not seem to be a time to remove or weaken the President's negotiating authority.

As the world's greatest trading nation, the United States has a tremendous stake in maintaining the most effective negotiating authority and bargaining possible. In 1957, for example, United States exports were valued at $19.5 billion, with imports amounting to $13.2 billion.

The United States consistently exports more than it imports. Generally speaking, foreign countries can pay for United States goods only to the extent that they can earn dollars by selling to the United States. In recent years, however, a large part of the dollar difference has been covered by various foreign-assistance and mutual-defense programs. A consistent and continuous large export surplus, financed out of the tax revenue, is neither economic nor in keeping with the position of the United States as a creditor nation.

THE ROLE OF EXPORTS

The Department of Commerce has reported that in 1956 exports constituted 5.7 percent of the gross national product. Exports comprise a much higher proportion of our production of movable goods—around 9 percent in 1956. It should be noted, of course, that much of the gross national product consists of services, construction, and retail distribution, which are not by nature exportable.

The percentage of our agricultural output exported is even higher than the comparable percentage of our nonfarm production, and hence substantially higher than the average for the economy as a whole. For agricultural producers the vital importance of export markets is beyond dispute. Even among those manufacturing industries with below-average export ratios, a great majority depend on foreign markets for an important share of their sales, profits, and jobs.

Primary manufacturing industries, such as iron and steel or nonferrous metals, have a total interest in export markets which is larger than their direct interest because a significant part of their production is proc-

essed by other industries and exported in some other form.

THE IMPORTANCE OF IMPORTS

It must be remembered that, in addition to increasing the dollar exchange available abroad for potential buyers of United States exports, our import purchases improve our own scale of living, increase the range of free choice available to American consumers, and reduce the prices at which the merchandise is available to consumers. Thus, the United States economy as a whole benefits from reductions in cost or improvements in design which actual imports have created or potential imports have stimulated. Such increases in efficiency reflect the power of competition to create better products at lower costs.

A primary national economic gain from foreign trade centers in the imports for which our exports are exchanged, as well as in the sale proceeds from the latter. This may readily be understood by an examination of the character of our imports. Despite the fact that this Nation is perhaps the most nearly self-sufficient of all, there are many items which must be imported.

In the aggregate, the value of United States imports in 1956 was equivalent to about 3 percent of the gross national product, or to a little over 6 percent of the estimated value (at early stages of distribution) of movable goods purchased in the United States. Directly or indirectly, imported goods are in daily use in virtually every American home, factory, and office, and the dependence of United States industry upon imports of many strategic materials is such that they are essential to keep factory wheels turning and assembly lines moving. Imports provide 10 percent of the raw materials that American industry needs to turn out everything from automobiles to space rockets. Without tin, nickel, manganese, chrome, and cobalt—most of which are imported—whole industries would be seriously affected.

THE PROBLEM OF COMPETITIVE IMPORTS

Criticism of the Reciprocal Trade Agreements Act has centered largely on the matter of serious injury to domestic industries by competitive imports. The extent to which American producers may be adversely affected by imports at a particular time cannot be precisely determined without a detailed analysis of the firms and products involved. While the producers who may be affected adversely by imports represent a relatively small segment of American production, they are, nonetheless, an important segment, and the incidence of injury cannot be disregarded. It is, therefore, vital that a means for affording reasonable relief for injury to such producers be continued in the law.

For this reason also the chamber has stressed the need for the gradual and selective adjustment of tariffs, with provision for modification or withdrawal of concessions, in order to deal with unforeseen developments seriously injurious to domestic producers.

We believe that proper safeguards exist in the present law and that tariff relief for industries during a period of adjustment is adequately provided. The proposal (sec. 4 of the bills) to speed up escape-clause action is a desirable one. In all cases determination of injury due to imports should be judged in the light of the national interest. Only in this way can the sound objectives of reciprocal trade be attained and all segments of our economy best be served."

CONCLUSION

The chamber strongly urges that the Reciprocal Trade Agreements Act be renewed in a form to assure the effective achievement of its objectives. Not to do so will be at our own peril.

Statement by Secretary of State Dulles on the Mutual Security Program

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. JUDD. Mr. Speaker, Mr. John Foster Dulles has appeared before the Foreign Affairs Committee on many occasions during the last 10 years. It was generally agreed by committee members that his statement before it today was perhaps the most forceful, clear, and convincing of all. Under leave to extend my remarks I include the statement:

STATEMENT BY THE HONORABLE JOHN FOSTER DULLES, SECRETARY OF STATE, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE IN SUPPORT OF THE MUTUAL SECURITY PROGRAM, WEDNESDAY, FEBRUARY 26, 1958

Mr. Chairman and members of the committee, the President has sent to the Congress a forceful message calling for the vigorous continuation of the mutual security program. In my estimation that course is vital to our country's safety.

I

The era of change

We live today in a historic era of change. It will spell the rise or fall of whole civilizations and of great nations. Some will meet the challenge; others may succumb.

The Congress and the executive branch, in whom our fellow citizens have reposed their trust, bear an enormous responsibility to understand clearly the nature of this challenge and to respond to it. The adequacy of our response will determine, for generations to come, whether our peoples will, in peace, enjoy the blessings of liberty or start upon the downward slope that leads to increasing encirclement and ultimate war or subjugation.

What are the great currents of change? There are two which transcend all others.

Communist imperialism

One is the revolutionary movement of international communism. Within 41 years a small group of violent men, starting in Russia, have seized control of all or major parts of 17 nations, with nearly 1 billion people.

The Communist bloc now boasts of enormous military power—ground forces of 400 divisions, vast air fleets, naval forces, including 500 submarines, and nuclear bombs and outer space missiles. They are developing a large economic potential. All of this is centrally controlled and used primarily to achieve its original goal of world conquest.

The drive for progress

The second great revolutionary element in the world today is the march toward independence of colonial peoples. Since World War II, 20 nations with a population of 700 million people have achieved their independence. And these people, as well as the peoples of other less developed nations, are determined that they must and will have economic progress.

Soviet economic penetration

The Communist imperialists are seeking to amalgamate the current of new nationalism into their own movement. This makes the total challenge more acute. Asia and Africa and other nonindustrialized countries are becoming major battlefields of the cold war.

Until a few years ago Communist imperialism sought to expand by a policy of threats, bluster or armed action. These crude and obvious methods ceased, however, to pay dividends.

Now the Soviet leaders follow a new technique. Where they formerly treated all free nations as enemies, they now profess the greatest friendship toward them—particularly toward those which seek economic development.

Having set out on this new course, they have followed it with energy—and capital and skilled manpower. They have made offers of economic help to nations in all parts of the globe. They and other bloc nations have already entered into agreements with 16 nonbloc nations for lines of credit or grants totaling nearly $1.6 billion in economic assistance and an additional $400 million for military assistance.

The Soviets are providing not only promises, but performance. They are actually providing capital assistance according to their pledges. They are providing rapidly increasing numbers of technicians. They are engaged in vigorous efforts to increase their trade with nations in all parts of the free world.

The Communist bloc's economic offensive is, of course, not designed genuinely to help newly developing countries to achieve sound economic growth within a framework of political independence. Just as the people now within the Sino-Soviet bloc are exploited, so the newly independent peoples would be exploited. But that goal is camouflaged behind propaganda which represents that only through association with the Communist bloc can the less developed peoples achieve the progress that they seek.

The present Communist political-economic offensive forms part of the Communist strategy of gradual encirclement and eventual strangulation of the more developed free nations, notably the United States.

This is the process which, if we fail to understand it or, understanding it, fail to respond effectively, will lead to the gradual diminution of the perimeter of freedom until it is pushed back to our own shores and we and perhaps a few remaining allies will be but a beleaguered island in a red sea.

Mr. Khrushchev has recently said:

"We declare war upon you—excuse me for using such an expression—in the peaceful field of trade. We declare a war we will win over the United States. The threat to the United States of America is not the ICBM, but in the field of peaceful production. We are relentless in this and it will prove the superiority of our system."

That is a warning to be heeded.

II

What should our course be?

I emphasize these powerful movements at large in the world because many are inclined to think in terms merely of increasing our own military power.

Such course would be suicidal.

As President Eisenhower said in his message on the mutual-security program, "we must not allow concentrations of our own military might to divert us from other essential objectives of our vital security policy."

The task before us is manifold. We must, of course, deter war—whether general nuclear war or limited war. But also we must prevent Communist absorption or envelopment of free nations by the more subtle means of economic penetration and political subversion.

Deterring war

Let us consider first the problem of deterring war. We have long since decided that we cannot do this alone. To attempt that would lead to intolerable taxes and in-

UNIVERSITY OF MICHIGAN LIBRARIES

supportable increases in the draft of our young men and women. Even then we would be weaker than we now are with collective effort. This collective way is the only sensible way. To that end there exist NATO, SEATO, ANZUS, the Baghdad Pact, and our bilateral arrangements with the Philippines, the Republic of Korea, the Republic of China, and Japan. The Organization of American States also has its common defense aspects.

These arrangements embody promises to come to each other's help. These promises are important. But also there is need of military strength-in-being. Our program of mutual security has that as one of its principal purposes.

In the 8 years of this mutual effort our allies have vastly increased the effectiveness and numbers of their forces. We have contributed weapons and material. Yet our help, though substantial in amount and critical in kind, has been but a fraction of the total effort. In this whole period we have contributed $20 billion in our military assistance program while nations associated with us in the collective defense effort have made defense expenditures totaling $122 billion.

There is another aspect of our mutual defense effort which is of transcendent importance. The most powerful deterrent to aggression is our strategic Air Force and our naval might. This great power is heavily dependent on dispersed bases around the world. These are supplied by many of our allies and friends as part of their contribution to mutual defense.

Local aggression

We cannot be sure that mobile strategic power will, alone, suffice to deter all aggression elsewhere. There is need also for local forces to resist local aggression and give mobile power the opportunity for deployment. As the President said in his message last week: "It is imperative that the free world maintain strong conventional forces capable of dealing with such aggressions wherever they may occur."

Our associates in mutual security are willing to provide the great bulk of the needed conventional forces if we will provide some of the necessary arms and, in certain countries, some of the economic strength needed to support their military establishments.

In the world as it is today, the peace of our country and the peace of every free world nation rests in the most liberal sense on the great forces of the United States combined with the great forces of the free world. Together they create an arch on which rests the safety of our homes and loved ones. The military assistance and defense support aspects of the mutual security program are the keystones in this arch of our security.

Development program

Let me turn now to our strategy to counter the Communist efforts to manipulate, for their purposes, the great political and economic evolution that is occurring.

I have heard it said that we must not enter into a competition with the Soviet bloc in this field. My reply is that we are not entering into a competition with them. They are entering into competition with us. They are attempting to take over and pervert for their own ends the normal processes whereby, historically, nations that are not yet developed borrow abroad to get their own capital development underway.

In this political-economic warfare, the Soviets are aided by the fact that within the free world the development of new nations has traditionally rested with private capital. In our own country's early history we borrowed great sums from foreign investors with which we built many of the railroads with which we opened up our country and many of the factories which were part of our industrial development.

Today our Government favors the greatest possible participation by United States private capital in the development of the less developed areas of the world. However, the political risks in many of these countries are greater than private persons will assume. Therefore, unless there is to be a breakdown in what have been the normal and historic means of developing less developed countries—a breakdown which would put great victories within the Communist grasp—governmental funds must play a part. In this connection I would like to quote from the warning joined in by members of your committee serving on our delegation to the United Nations General Assembly 2 years ago:

"We are in a contest in the field of economic development of underdeveloped countries which is bitterly competitive. Defeat in this contest could be as disastrous as defeat in an armaments race."

III

The program for mutual security in fiscal year 1959

If these are the challenges which confront us, what then must we do to surmount them and go forward?

An essential part of the answer is in the President's proposals now before you.

First, to maintain the peace, we must maintain the military strength of the free world as a deterrent to Communist armed aggression.

The President has asked $1.8 billion for military assistance, that is actual military goods. Of this approximately $510 million will go to our NATO allies, essentially for modernization and missiles. Some nearly $700 million will go to Korea, Pakistan, Taiwan, Iran, Vietnam, and other countries separated from the full power of the Soviet bloc only by a border gate or a narrow strait.

We believe that the ground forces maintained by certain of these countries can be reduced in number as more modern weapons enable firepower to go up. The sums requested include consideration of that factor.

The President also asked for $835 million for defense support. This is to go to countries in which our military assistance is helping to support substantial military forces so that these countries can and will maintain such forces and, in some cases, contribute additionally to the common defense.

Defense support is proposed for 12 nations. As in the past, the great bulk of it, 70 percent is intended for only four of these—Korea, Taiwan, Vietnam, and Turkey.

None of these 12 nations has the economic capacity to support forces of the size we believe important to our common defense without our help. These nations are collectively providing three million armed men in ground, air and naval units located at strategic points around the perimeter of the Communist bloc.

The second great purpose of our mutual-security program is to deal realistically with the second great challenge I have mentioned—the determination of the peoples of the newly developing nations to make economic progress. We have the instruments for this in our well-established technical cooperation program and our newly created development loan fund.

We believe we should make a moderate expansion of technical cooperation this year in a few countries where we now have programs and to undertake new programs in nations which have recently gained independence. The total needed for 1959 is $142 million.

There is one new aspect of our technical cooperation program to which I should like to refer specifically—the extension of the United Nations technical assistance program agreed to at the recent meeting of the General Assembly.

This important and difficult matter was handled by Dr. JUDD, of your committee. I hope that at a later time he will explain the serious problem which the United States faces.

The development loan fund is now the only element of the mutual security program which can ordinarily be used to promote assistance for development. It was recommended to the Congress last year, upon the basis of numerous studies prepared in the Congress, the executive branch, and the public, that a loan agency be established which would make it possible for the United States to help friendly nations develop their economies on a basis of self-help and mutual cooperation.

The committee of conference on the authorizing bill recommended that the fund now be established as a corporation. This is in accord with the views of the executive branch and we recommend to the Congress that this be done, in a form that will assure that lending by the fund will be fully coordinated with the foreign policy interest of the Department of State, the mutual security activities of ICA, and the lending of the International Bank and the Export-Import Bank.

Last year the Congress appropriated $300 million for the fund and authorized the appropriation of $625 million for the coming fiscal year. Since the appropriation of the funds for fiscal year 1959 is already authorized, your committee will not be called upon to act on an authorization this year. Nevertheless, I would like to make clear to you my belief that for all the reasons I have discussed earlier, it is immensely important that the full amount of these funds be made available as part of the capital of the development loan fund. They are as important for the future safety of our country as any dollars appropriated for weapons.

There are other needs—some close to our collective security effort—which cannot or should not be met out of military assistance, defense support or other categories. These will require special assistance. There are two main groupings in which these needs fall. The first is to help maintain stability both political and economic in certain nations where we do not support substantial military forces and which are not therefore eligible for assistance under defense support. Such nations include Ethiopia, Morocco and Libya, where we have military installations, and Jordan. Secondly, special assistance is also designed to support such activities as assistance to West Berlin, to continue the worldwide malaria eradication program, and for other important uses.

After the needs which can be programed in advance have been considered, there will still remain a need to be able to meet unforeseen emergencies. The President has asked a $200 million contingency fund for needs of this nature. It would be reckless, in the light of conditions existing in the world today and the virtual certainty of Communist cold-war initiatives that we cannot now forsee, to leave the President without an emergency fund of at least this size.

Other programs, for which the President requests in the aggregate $100.6 million, will be dealt with in detail in the coming days of your hearings.

IV

We can afford the security we need

I know that many Members of the Congress and their constituents are concerned by the cost of our mutual security program. Some are unable to understand why we should engage in economic assistance abroad when there is plenty to do here at home.

In this connection it should be borne in mind that the great bulk of our foreign-aid funds, over three-fourths, are spent in the United States in the first instance. The mutual security program is estimated to

account for the employment of some 600,000 American people. To cut these funds would be to cut employment here at home.

There are, however, even more important considerations. The program is for the mutual security of our own and other free nations.

I know that this program is often called foreign aid and that it is regarded by some as a giveaway.

There is no giveaway in this program, but there would have been and there would be a giveaway if we did not have it. We would have indeed given away a dozen or so nations with their hundreds of millions of people. We would indeed have given away the access which we and other nations have to essential resources. We would indeed have given away essential bases.

Worst of all, we would have given away America's great spiritual heritage.

This Nation was not founded for the purpose of gaining safety or to achieve material prosperity. This Nation was founded to demonstrate ideals which our founders believed would achieve worldwide acceptance. Those ideals were expressed in our Declaration of Independence which, as Lincoln said, meant "hope for the world for all future time."

Today this American idealism, once known the world over as the great American experiment, finds its dynamic expression in this mutual-security program.

I have heard it said that he who pleads for mutual security has no clients, no constituents. Nothing could be further from the truth. His constituents are the entire American people, for it is their interests that are involved and their ideals that are at stake.

The issue is a simple one. Are we so poor that we cannot afford to pay for peace and security and to continue to cultivate in the world those concepts of national independence and human liberty for which our Nation was founded? Everyone knows that, if we were to be attacked by force of arms, we would afford to fight back. Surely we can pay the infinitely lesser cost of waging peace.

Give 'Em Their Paychecks Intact

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. COLLIER. Mr. Speaker, I would like to insert an editorial which appeared in the February issue of Coal-Heat magazine, and which I feel points up clearly and concisely the need to eliminate the checkoff system which has led to the fiscal irresponsibility which exists throughout a great porton of our Nation today, not only on the part of many of our citizens but the Government as well:

To eliminate the checkoff is one way to reduce taxes and the price of literally everything we buy or use.

Only the checkoff—dues, fees, special assessments—automatically has made it possible for union bosses to play Napoleon, engage in power politics, and, on occasion, literally stangulate business or industry.

One's paycheck should be inviolate, virginal. And it should be illegal to withhold any part of the paycheck for any purpose whatsoever, including social security and taxes.

Since most employees are conscious only of take-home pay, many live in a dream-world—with the illusion that employers can pay the taxes, the fringe benefits, union dues, and assessments—that the Government can take care of everything, which is sheer fiscal irresponsibility. It's the hidden or concealed costs, taxes, inflation, that are playing havoc.

Let mama get the paycheck intact, and dues and special assesments to the unions won't continue to be automatic. Let mama pay the taxes, cash in hand, and the cry to cut taxes will exceed anything we've ever heard.

Except for the withholding tax, the Federal budget would never have gotten out of hand.

Eliminate the withholding tax, and let individuals pay their own taxes directly—and we will soon see fiscal responsibility just as we will among labor organizations when members pay their dues—directly.

Psychologically and economically the checkoff and the withholding tax are immoral and a violation of our constitutional rights.

MATS Gets Fatter

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks, I insert in the RECORD an excellent article from American Aviation magazine for February 24, 1958, concerning what they call the world's largest free line—meaning the Military Air Transport Service—which is known to a number of us as MATS.

I take this opportunity to remind our colleagues in the Pentagon that the Congress laid down a definite policy in its report on the Department of Defense appropriation for the fiscal year ending June 30, 1958, directing the Department of Defense to make greater use of commercial air carriers before authorizing transportation on Government-owned and Government-operated transportation, such as MATS.

This policy is laid out in detail in Senate Resolution No. 543, of the 85th Congress, 1st session, and was concurred in and emphasized in the report of the managers on the part of the House, including myself, in House Report No. 481 of July 23, 1957, on the defense appropriation for the current year.

I insert both those statements of congressional policy in the RECORD at this point prior to the magazine article so that all Members and readers of the RECORD may fully understand the position that the Congress has taken in this regard, and can judge for themselves whether or not the Defense Department has lived up to the congressional directives.

I think it is not revealing any committee secrets, Mr. Speaker, if I say that, in line particularly with Senate Report No. 543 and House Report No. 841, and the requirements in there for a report, that the officials of the Department of Defense can anticipate a number of searching questions concerning the progress, or lack of same, which has been made by them in implementing the congressional directives.

The article follows:

MATS GETS FATTER, BUT CONGRESS ONLY FRETS

(By Gerald A. Fitzgerald)

The world's largest free airline—Military Air Transport Service—began this year like any other year, with a congressional investigation. In all likelihood, there will be more hearings and investigations before 1958 ends, and MATS will continue to grow as it does every year, despite congressional injunctions to the contrary.

Congress, in this case the House Subcommittee on Military Operations, each year suggests that MATS get out of the airline business, to which the military in effect retorts: "Is that an order?" So far it hasn't been an order, with the result that this United States Government airline grows and grows and grows.

Representative CHET HOLIFIELD'S (Democrat, of California) subcommittee, now looking at MATS, seems more deeply interested in the MATS problem than have previous congressional investigators been. Nevertheless, chances are that even this group will have little effect on a military that is used to having its own way.

In any case, if you want one sure, quick way to raise the blood pressure of any airline management, scheduled or nonscheduled, just mention MATS. To airlines, it means the world's largest airline and their biggest single competitor for traffic.

Defense Department, parent of this Government airline, denies being in competition with anyone and gives the reason for MATS' tremendous capacity for cargo and passengers the effective, but not necessarily valid answer: "Required for wartime emergency."

If there were any assurance that this requirement was one that had a limit on it, the commercial operator might be able to take some consolation, but there is no indication of any such limit in military thinking.

MATS' fleet has been for some time considerably larger than those of all the domestic carriers put together and it continues to increase in size and capacity with each succeeding year. The President, Congress, and numerous congressional and Government committees have repeatedly told MATS to avoid competing with commercial interests wherever possible.

MATS, however, continues to register substantial traffic increases every year. How much increase occurs each year in so-called opportune airlift or the movement of hitchhikers is unknown, as this is not reported and is unscheduled. The fact that a young California reservist has set up an Air Force flight-information service and is making a good living by supplying MATS flight information to eligible hitchhikers suggests that travel this way may be more than just opportune.

Cryptic Department of Defense and Air Force answers to charges of competition, not to speak of the waste of tax money, do not satisfy everyone. Commercial carriers for a certainty are not satisfied with things as they are; nor is a congressional committee currently taking a look at the Department of Defense and MATS transportation pictures.

For more than a month now, since an industry outcry over the Air Force-proposed bailment plan erupted into a congressional hearing, Representative HOLIFIELD'S Subcommittee on Military Operations had been asking a lot of questions about Department of Defense and MATS transportation policies.

Department of Defense and its extensive panel of witnesses, led by Assistant Air Force Secretary Dudley C. Sharp, repeatedly have emphasized that MATS and other Air Force

UNIVERSITY OF MICHIGAN LIBRARIES

and military transport operators must maintain a fleet of the size they do, and exercise the fleet regularly in the interests of readiness and the national defense.

With this idea neither the carriers nor the subcommittee wish to quarrel, but what is the actual defense requirement? And, if the CRAF (Civil Reserve Air Fleet) is to be depended upon in time of emergency, as it has been so heavily in the past, should not it also be kept ready and aided as much as possible in its attempts to replace worn and outmoded equipment, and expand its capacity toward the time of an emergency? These, principally, are the issues before the subcommittee.

Carrier representatives made it clear in testimony before the subcommittee that the intention is not to deprive the Nation of any of its wartime emergency capability, but rather to further it. In almost every emergency airlift situation to date, commercial carriers have figured signficantly. During the Korean conflict, for example, commercial carriers provided 50 percent of the airlift, and with only 5 percent of the aircraft that were available to MATS.

The contributions of commercial carriers to national emergency needs are a matter of record and neither their willingness nor their ability are questioned. The trouble now is that the carriers have invested tremendous amounts of money in an attempt to modernize and expand their fleets to meet civil and possible military needs. Every bit of traffic is needed to afford the necessary expansion and modernization.

With some of the smaller independents, also members of CRAF, the question is not one of modernization and expansion, but one of survival. Many of the independent or supplemental carriers depend upon Department of Defense traffic for as much as 95 percent of their business. In the face of rising operating costs and a fall-off in their defense business, many may have to close their doors unless relief comes quickly.

That there is much more Department of Defense traffic available and eligible for commercial carriage cannot be denied. The practice of scheduling training flights to coincide with troop movements is well known. MATS claims to operate no domestic services or rather no scheduled domestic services.

Take note of two recent MATS accidents; one on January 7, when a MATS C–47 crash-landed near Bolling Air Force Base with 21 persons aboard; and another on February 1 near Long Beach, Calif., when a C–118 crashed and killed 35 soldiers. Almost all of the passengers involved in both crashes were traveling on Government business; the very people that Congress intended to be carried by Commercial carriers.

Many MATS flights, formerly scheduled domestic flights, were transformed into so-called hospital flights and the remainder are now classified as irregular or training flights. However, there is still much in MATS passenger and cargo operations that is anything but irregular.

Civilian Department of Defense employes have complained about being forced to travel on official business in outmoded and uncomfortable B–25 bombers on training flights. Airlines lose a lot of business each year to MATS and troop-carrier transports when whole planeloads are carried on morale flights. This probably is justified in many isolated areas where the United States has bases.

That's really not the problem, however. Commercial airlines, as has been demonstrated, can carry for almost any purpose at much less cost than any military operator.

The Flying Tiger Line recently concluded a 6-month passenger contract operation for MATS in the Pacific, using the latest type Super Constellation equipment. Its charge to the Government was $184 per passenger delivered from the United States to Japan. MATS cost for the same trip, furnished to the House Appropriations Committee during fiscal year 1958 defense budget hearings, was $212.

Similarly, in the Atlantic, Seaboard and Western Airlines, during a 6-month MATS passenger contract, provided service from the United States to Europe, also aboard Super Constellation equipment, at a cost of $105 per passenger. MATS' cost for the same trip, as furnished to committee, $137.

The differences in these costs, significant in themselves, become enormous when multiplied by the hundreds of thousands of passengers now transported by MATS. Savings that would be made possible through greatly increased use of commercial airlines would be substantial, and more funds would be available for military combat activities.

Some traffic would not be appropriately assigned to the commercial operator for security and similar reasons, but the vast majority of it he is able to carry and anxious to get.

The Hoover Commission went into this issue a few years ago and recommended substantial increases in the use of commercial carriers. To some extent these recommendations have been followed, but not to any really significant degree. Military response to these and other recommendations from Congress that are made annually at appropriation time has been little more than lip service.

The situation admittedly is a complex one and the transport industry has recognized this. It has also demonstrated its willingness to help in whatever way it can toward a solution. But in the end, it is not the transport industry that must propose a solution. These answers must come from Congress.

SENATE REPORT NO. 543, DEPARTMENT OF DEFENSE APPROPRIATION BILL, 1958

GENERAL STATEMENT

* * * * *

Use of commercial carriers

Last year in the conference committee on the Defense appropriations bill the Senate joined with the House in stating in a letter to the Secretary of Defense that the Government should, to the greatest extent practicable, adjust its use of air transportation so as to use existing unutilized capacity of United States air carriers. This statement was based upon our position that maximum utilization by the Department of Defense of United States civil air carriers is essential both in the promotion of our free enterprise economy and in the provision of the necessary ready reserve civil airlift for national defense; and that Government operations of its own air transport facilities should be limited to that essential to military security.

The committee reaffirms its position of last year that the Department of Defense should utilize the services of commercial transportation, in preference to Government-owned and Government-operated transportation, to the fullest extent possible when, upon using the same cost standards for both commercial and Government facilities, it is found to be more economical, and further, that in evaluating relative costs of transportation, the Department should recognize the specific monetary value of time saved as an important factor in the award of competitive bids in transportation.

It is the desire of the committee that all commercial carriers be given a fair and equal opportunity to offer their facilities on a bid basis to the Department of Defense, and be provided to the extent practical with equal access to information regarding commercial movements of cargo and personnel. The Department should make every effort to centralize the procurement of such transportation so as to consolidate movements in the interests of economy and to avoid the practice of arbitrarily dividing groups into such small units as to necessitate unwarranted additional expense.

The committee desires that at installations where private carriers are permitted to offer their services for sale to individual personnel, representatives of all commercial carriers should be afforded equal access without discrimination.

The committee notes with approval that the Air Force budget reflects increased use as compared with fiscal year 1957 of civil air carriers to augment the Military Air Transport Service in the movement of military personnel and dependents. This is offset in part, though, by the decreased use of civil air carriers in moving cargo for MATS. In summary we do not feel that sufficient effort has been made by the Department of Defense in the international and overseas field to "adjust its use of air transportation so as to use existing unutilized capacity of United States air carriers."

It is the wish of the committee, therefore, that within the 1958 appropriations for operations and maintenance and for military personnel the Defense Department reprogram expenditures for operating MATS and other Government-owned transport activities sufficiently to permit the funds so reprogramed to be applied toward procuring the services of United States civil air carriers to meet as nearly as possible 40 percent of the passenger requirements and 20 percent of the cargo requirements of the Military Air Transport Service.

The committee desires that a report be made by the first of January 1958 which would indicate the progress made by the Department of Defense in implementing this directive.

HOUSE REPORT NO. 841, CONFERENCE REPORT ON DEFENSE APPROPRIATIONS FOR FISCAL 1958, JULY 23, 1957

* * * * * *

Amendment No. 36: Deletes provision of the Senate providing for competitive bidding. This matter also is now under study by the legislative committees. The committee of conference strongly feels that competitive bidding should be required whenever practicable for more effective and economical procurement.

Amendment No. 37: Deletes provision of the Senate pertaining to the procurement of commercial transportation. The committee of conference emphasizes the importance of the Senate committee report on use of commercial carriers and calls on the Department of Defense to carry out the full intent. However, it is realized that the procurement of commercial transportation must be made in accordance with existing law.

The Double-Edged Sword

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 19, 1958

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the ruthless propaganda which the

Egyptian dictator, Abdul Nasser, is using to spread terror in the Near East. The following editorial from the magazine Prevent World War III, winter-spring 1958 issue, demonstrates Nasser's attempt to destroy the independence of all Near Eastern countries:

THE DOUBLE-EDGED SWORD

In the previous issue of Prevent World War III (No. 50) we analyzed the cunning maneuvers against the Arab kings conducted by the Egyptian dictator Abdul Nasser. We predicted that Nasser's failure to destroy the independence of Jordan's King Hussein last spring by peaceful means would drive him to more drastic action. The concluding part of the article went to the heart of Nasser's overall objectives:

"Will the kings be prepared for the coming counterattack? Nasser's next move may be camouflaged by the smokescreen of a new drive on Israel. The bright young man had been adept in employing the bogey of Israel as a means of whipping recalcitrants back in line. Will the kings dare to penetrate the anti-Israel fog which has already led them back to the brink of self-destruction?

"There is no doubt that the struggle between Nasser and the Arab kings will continue to the bitter end. Nasser will never give up his dream to rule the Arab world, and only the kings stand in his way. If the Egyptian dictator is to succeed, he must eliminate them."

Apparently Nasser now believes that his hour of retribution has struck. The hue and cry over the so-called Turkish menace, whipped up by Soviet propagandists, provide the right kind of atmosphere for Nasser's own moves. Throwing away all diplomatic niceties, Nasser has now gone over to the offensive. He has unleashed every propaganda weapon in his arsenal to spread terror, fear, and paralysis in the same way that Hitler's Wehrmacht employed the tactics of schrecklichkeit.

Last year the Nasserites pretended to be friends of the Jordanian king. They said he was fundamentally a good soul but that he was naive and misled by the agents of imperialism, i. e., United States of America. They even expressed confidence that the king was not beyond redemption provided he listened to the bright young man from Cairo. However, King Hussein acted in a way that was shocking. He dared to maintain his independence. This was something that galled Nasser. That is why the Nasserites today are literally crying for the blood of the king.

Through press and radio, Cairo has vilified the king, his family, and his government. On November 3, the Egyptian newspaper Ash-Shab cried out that a leading member of Hussein's government "met with Ben Gurion and Golda Meir and agreed that one state should be formed between them as one economic unit." This alleged deal was denounced as a "bloody crime." Then the paper made this ominous prediction: "When the people of Jordan and Palestine rise they will destroy the plot which was hatched in darkness and will destroy the plotters who plotted against their lives and existence and who sold out their cause in return for the dollars of imperialism."

Since it is evident that Moscow and Cairo coordinate their propaganda thrusts, it was not long before the Soviets chimed in. They came out with the tale that the United States insisted that certain Arab districts be given to Israel and King Hussein agreed. No matter how well Cairo and Moscow coordinate, they ought to remember the old Latin precept mendacum memorum esse oportet (a liar must have a good memory).

With the enormous propaganda resources at the disposal of the Moscow-Cairo axis, it did not take long before the whole Middle East was deluged by fantastic stories concerning King Hussein's treachery and crimes. Indeed, the insults heaped upon the Jordanian King "reached the point of almost unprintable opprobrium" (New York Times, November 18, 1957). All this frenzied propaganda from Moscow was unleashed because King Hussein allegedly sought peaceful negotiations with Israel. Those who have been attracted to Soviet peace propaganda should take notice of this episode.

The significance of the anti-Hussein campaign will be lost if it is merely regarded as a squabble between local contending forces in the Middle East. A study of Cairo propaganda shows very clearly that Nasser is aiming at a much larger target, that is, the United States of America. This is how it was summed up by one of Nasser's newspapers, Ash-Shab: "Jordan's return to a liberal policy and the downfall of King Hussein and his reactionary government will help to crush the American-Zionist plot of settling the Palestinian question and of eliminating the refugee problem. This will weaken the position of other reactionary governments in the Middle East, and so Arab nationalism will achieve further victories. But the American fortress will fall in battle. It will fall and be trampled upon by the feet of the advancing nationalist masses, by Arab nationalism which has been able to withstand storms, face developments, and deal imperialism severe blows. Other imperialist fortresses will topple before the advance of Arab nationalism, and America will live to see this."

It will also be noted that Ash-Shab speaks of weakening the position of other "reactionary governments in the Middle East." This is not spelled out, but already Cairo newspapers have been training their guns on the regime of King Saud. One Egyptian newspaper, Al Ahram, cast aspersions as to King Saud's motives in offering to mediate the Turkish-Syrian crisis. Indeed, it openly suggested that Saud was acting as a tool of the United States State Department.

The attacks upon King Saud's integrity and the massive assaults against King Hussein have created profound alarm in Arab circles. King Saud himself appealed to Nasser to stop these attacks. He wrote: "All causes of hatred among Arabs must be removed immediately. We regret the current campaign and promise to work to the utmost to eliminate it." King Faisal expressed similar sentiments and deplored "radio attacks conducted by an Arab state against another." The Baghdad radio complained that Nasser's ruthless methods were "against etiquette and proper political argument." The speaker of the Jordanian Parliament, Mustafa Khalifeh, also joined the appeal to halt the campaigns of hate "which are poisoning the Arab atmosphere."

In the Bible it is stated that he who lives by the sword shall perish by the sword. We would amend that truism by adding that they who cooperate in spreading the poison of hate may some day be forced to swallow it themselves. The kinds of Saudi Arabia and of Iraq should bear this in mind as they now appeal to Nasser to preserve the standards of etiquette in his relations with them. In principle, we share their concern and of all other Arabs who oppose the Goebbels-like attacks emanating from Cairo. However, the kings who are now the immediate targets cannot be absolved from sharing in the responsibility for the present wave of hate which seems to have drowned out reason.

It was only a short time ago that these very same kings were actively working with Nasser in drumming up fanatical hatred among the Arab peoples against Israel. A thousand times Israel was cursed by these Arab kings and their spokesmen. A thousand times the illiterate and uninformed Arab masses were called upon to dedicate their lives toward the destruction of the Israeli people. When the Arab kings joined with Nasser in whipping up emotions and fanaticism among the Arab peoples, they embarked on a dangerous cause.

Hate propaganda is a double-edged sword and, in the last analysis, will inevitably cut down its inspirers. It will do no good for the Arab kings as they are now doing, to beat their breasts before Nasser and promise their eternal enmity toward Israel. This is not the way out for them. Indeed, it is precisely the course which leads to a dead end and their own elimination.

As we stated in Nasser's Expendables, the Egyptian dictator's tactics toward Israel are guided by far-reaching objectives which include the destruction of all independent Arab States. After Nasser's fiasco in Jordan last year his prestige and influence began to wane. In common with all dictators Nasser could not tolerate such a state of affairs. One might say that it is a law of dictators that they can never rest on their laurels, but must ever press forward. It was the specter of isolation, of being discredited as a sawdust Caesar that compelled Nasser to resort to the terror which he has set loose. This is the reality of Nasser's present actions and no amount of appeasing by the Arab kings will do any good.

The Arab States which want to be independent of Nasser's imperialistic designs cannot have it both ways. They cannot offer to sacrifice the independence of Israel while they maintain their own sovereignty. They must understand that just as peace in the Middle East is indivisible, so is the independence of all the Middle Eastern states including Israel. Therefore, a sovereign independent Israel is the sine qua non for maintaining the independence of all Arab states. When the leaders of the Arab peoples finally recognize that hate propaganda must go and that their peoples must be told the truth about the West, then the survival and independence of all Arab countries will be assured and peace will reign in the Middle East.

An Outmoded System

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. MOORE. Mr. Speaker, in appropriation bills coming before Congress this year, we will be scrutinizing each item carefully to determine where cuts can be effectively made without injury to our national defense or to the economy of our country.

The following editorial from the Fairmont Times, Fairmont, W. Va., for February 22, 1958, entitled "An Outmoded System," certainly spells out one area where Congress can and should reduce the Federal budget. The abolishment of the antiquated system of postal savings should be a must on the list of congressional economies to be made this year. I urge my colleagues to support legislation introduced for this purpose as well as other economies recommended in the last Hoover Commission report.

The editorial follows:

AN OUTMODED SYSTEM

The Federal Government's Postal Savings System filled a genuine need when it was established nearly half a century ago. But the tremendous changes wrought during that half-century have so altered our national

UNIVERSITY OF MICHIGAN LIBRARIES

life that the use of post offices as banks is no longer necessary or sensible.

In 1910, transportation was slow and there were relatively few banks. This combination of factors put banking facilities out of the reach of many citizens, in rural areas especially. Also, banks were less dependable in those days; they were not as carefully regulated as they are in our time.

Under modern conditions, the Postal Savings System is costing the taxpayers money. There might be some excuse for that if large numbers of people were still dependent on postal savings facilities, but this is not the case. Therefore, the Postal Savings System should be discontinued.

This is not a new idea. Discontinuance has been recommended by various high Government officials, including not only the Postmaster General but also the Secretary of the Treasury and the Comptroller General. The Hoover Commission, as long ago as 1955, urged liquidation of the system as a needless burden on the taxpayers.

The facts weigh strongly on the side of a bill, now in the House, which would disdiscontinue the Postal Savings System. Though the amount of tax money saved would be relatively small, Congress would be wise to take this step in the direction of greater economy in Government.

Democrat Sins, GOP Slips

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. BASS of New Hampshire. Mr. Speaker, I request unanimous consent to have included in the Appendix of the RECORD, a recent column by George Dixon which appeared in the Washington Post entitled "Democrat Sins, GOP Slips." This puts a proper perspective on some of the criticism which the press directed at the Republican Party in recent months.

The editorial follows:

DEMOCRAT SINS, GOP SLIPS
(By George Dixon)

How it is being accomplished would baffle a student of the occult, but the sins of the Democrats are constantly being made to appear as the transgressions of the Republicans. Whenever the Democrats do anything wrong it doesn't seem to be long before the notion spreads that it was the fault of the GOP.

Let us start with the attempted natural gas gouge: The fight to slacken Federal controls so that an extra billion dollars can be jimmied out of the consumers has been led by the two Democratic leaders of Congress, Senate Majority Leader LYNDON B. JOHNSON, and Speaker SAM RAYBURN. But now the impression is widespread that House Republican Leader JOSEPH W. MARTIN Jr. was up to his disheveled hair in it.

Poor JOE, who wouldn't know the natural from the laughing-gas lobby, was finagled into attending a Texas fund-raising dinner in his honor. Unbeknownst to him it was being run by natural-gas people who tried to con people into buying $100 dinner tickets by picturing JOE as the man who would swing the congressional vote for the gas gougers.

JOE may be as innocent as a Massachusetts gas consumer, but it's going to be hard to smother the impression that the gas plot is Republican dominated because the man who sent out the come-on letters was H. J. (Jack) Porter, Republican national committeeman for Texas. Porter sent out 500 of these letters, and why he failed to foresee that at least 1 would almost certainly fall into tattling hands, should provide an interesting I. Q. study.

The morning the story of the GOP ineptitude broke, I ran into a prominent Democratic Senator. He was in convulsions. He finally made himself coherent enough to splutter: "Do you think Jack Porter is the smartest politician who ever came down the Texas pike?"

It reminded me, in reverse, of the old gag: "If you're so smart, why ain't you rich?" Many of these Texas Republicans are rich, but when it comes to political brains they act poverty stricken. In one stroke of brilliance they've made it appear as if the Republicans are the natural-gas bandits.

Almost simultaneous with this, the impression has spread that the so-called Federal Communications Commission whitewash has been GOP maneuvered. This was brought about by talk of White House and Sherman Adams pressures. It obfuscated the fact that the investigation of regulatory agencies, which blew up with the firing of its chief counsel and the quitting of its chairman, was Democrat dominated.

The Democrats have certainly succeeded in spreading the notion that the Republicans are to blame for the missile and rocket lag. This probably should be rated as the No. 1 irony. The Democrats were in control at the close of World War II when Wernher von Braun was working on the V–2 rocket. It was not until the Republicans took over that Von Braun was given the go-ahead to expand his V–2 into the Jupiter.

The GOP is being depicted as the party of the piledup deficit, high taxes, and farm surpluses. They are just reluctant legatees. The Republicans also seem unable to counter the illusion that they are the bloated rich and the Democrats the exploited poor.

The picture now is so topsy-turvy that I hear everybody at Republican national headquarters has been ordered to quit carrying matches in case of a natural-gas leak.

Chicago's Sewage Disposal System Cited Among Seven Engineering Wonders of America

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. O'HARA of Illinois. Mr. Speaker, it will be of interest to the membership of the House, which thrice has passed by overwhelming majorities the Lake Michigan water diversion bill fathered by the Honorable THOMAS J. O'BRIEN and supported by the Illinois members of both parties, to learn that the American Society of Civil Engineers has presented to the Metropolitan Sanitary District of Greater Chicago a bronze plaque in recognition of its sewage disposal system being classified by the society as 1 of the 7 engineering wonders of America.

This is conclusive answer to those who, entirely uninformed on the subject, have sought to confuse the understanding of the need and the purpose of Congressman O'BRIEN's water diversion bill by suggesting that Chicago wants to dump her sewage in Lake Michigan. The fact is, of course, that for Chicago's sewage disposal the sanitary district has constructed and is operating the largest disposal plant in history or in existence now. Its recognition by the society of the most learned and experienced engineers of the United States as one of the seven engineering wonders of our country is of such interest that I am extending my remarks to include the order of business at the awarding ceremonies on February 22, 1958, during the national convention of the American Society of Civil Engineers and the addresses of Louis R. Howson, president of the society, and Anthony A. Olis, president of the board of sanitary trustees.

ORDER OF BUSINESS

The order of business of the seventh wonder plaque presentation ceremony on February 22, 1958, at the board room, Administration Building, Metropolitan Sanitary District of Greater Chicago, follows:

1. Chairman Dr. John A. Logan, professor of civil engineering, Northwestern University and president of the Illinois section of American Society of Civil Engineers, introduces the guests:

Dr. Harold Gotas, dean of engineering, Northwestern University.

Mr. Robert Crown, president of the Empire State Building Corp. As proprietor of another of the America's seven wonders, he is no doubt with us today to get a preview of a similar ceremony which will be held in his wonderful building in the near future.

Mr. Earl Harrington, president Western Society of Engineers.

Mr. Arthur Rubloff, chairman of the board, Arthur Rubloff & Co., and father of the famed Fort Dearborn project.

Mr. E. G. Norell, president, Chicago section, American Society of Electrical Engineers.

Mr. M. V. Maxwell, vice president, Chicago section, American Society of Mechanical Engineers.

Mr. William A. Dundas, general superintendent of the Metropolitan Sanitary District of Greater Chicago, who did much of the creative engineering which went into the building of this great system.

Mr. Horace P. Ramey, chief engineer of the Metropolitan Sanitary District of Greater Chicago, whose half century of devoted work has contributed to the stature of the sanitary district.

Mr. William H. Wisely, executive secretary American Society of Civil Engineers.

Mr. Wm. F. Patterson, vice president, the Metropolitan Sanitary District of Greater Chicago.

Mr. Casimir Griglik, trustee, the Metropolitan Sanitary District of Greater Chicago.

Mr. J. B. Martin, trustee, the Metropolitan Sanitary District of Greater Chicago.

Mr. John A. Cullerton, trustee, the Metropolitan Sanitary District of Greater Chicago.

Mr. John G. Henneberger, trustee, the Metropolitan Sanitary District of Greater Chicago.

Mr. Frank W. Chesrow, trustee, the Metropolitan Sanitary District of Greater Chicago.

Mr. Francis T. Delaney, trustee, the Metropolitan Sanitary District of Greater Chicago.

Mr. Wm. S. Nordburg, trustee, the Metropolitan Sanitary District of Greater Chicago.

2. Chairman introduces Mr. Louis R. Howson, President of the American Society of Civil Engineers.

3. President Howson makes presentation talk.

4. Chairman introduces Anthony A. Olis, president of the board of trustees of the sanitary district. Mr. Olis was elected a trustee of the sanitary district in 1946 and reelected in 1952. The board elected him president in 1950 and under his leadership the sanitary district has expanded its scope and functions to meet the challenge of metropolitan growth. Mr. Olis is a graduate of the University of Chicago Law School and holds a doctor of law degree.

5. President Olis makes acceptance talk.

6. Chairman thanks guests and closes meeting.

PRESIDENT HOWSON'S ADDRESS

The address of Louis R. Howson, president of the American Society of Civil Engineers, at the seven wonders plaque ceremony follows:

About 2 years ago the American Society of Civil Engineers, the oldest engineering society in the United States, established a committee to study civil-engineering structures in the United States, evaluate the importance of their contributions toward better living, and select the seven which might be classified as the seven civil-engineering wonders of the United States.

In order to have the selection made from as comprehensive a source as possible, the society asked each of its 74 sections to give consideration to the civil-engineering construction of the area each served and make nominations to this committee of civil-engineering structures believed worthy of consideration in their area. Several hundred suggestions were received, accompanied in most cases by a description of the project and the particular conditions leading to their nomination for consideration. This list was narrowed down through various steps, and finally there emerged what the committee appraised as the top seven civil-engineering wonders of the United States.

The civil branch of the engineering profession has been frequently designated as the public-welfare and public-service branch of the profession. It has been instrumental in the development of modern living, such as our railroads, waterways, highways; our urban development, their water supply, sewerage, and other essential facilities; the ability to establish property boundaries and reestablish them as needed. Accordingly, in the consideration of this large number of civil-engineering projects there was uppermost in the minds of the committee this question of service of the particular facility in modern living.

The seven civil engineering wonders include the Grand Coulee Dam, the Empire State Building, the San Francisco-Oakland Bay Bridge, the Colorado River Aqueduct, the Panama Canal, the Hoover Dam, and the southwest sewage treatment plant of the Metropolitan Sanitary District of Greater Chicago, the selection of which is being commemorated here today by the dedication of a bronze plaque.

The southwest sewage disposal plant of the Metropolitan Sanitary District of Greater Chicago is the largest in the world. It was not selected, however, for that reason. It was selected because in its construction and operation it, and the sewage disposal system of which it is a major part, embrace all phases in the development of the art of waste treatment and is an example of the highest combination of modern practices in waste disposal.

Originally, Chicago sewage discharged into the Chicago River and then into Lake Michigan, from which the water supply was taken. As the population increased, so did the typhoid mortality and it became so serious that in 1889 the Legislature of the State of Illinois created the Sanitary District of Chicago. That body promptly undertook, through engineering investigations, the solution of the problem. The first step included the diversion of all sewage from the lake to a newly constructed canal, approximately 30 miles in length, through which water was drawn from Lake Michigan and discharged to the Des Plaines River, the Illinois River, and thence to the Mississippi River, taking with it all of Chicago's sewage flow. At the time that diversion was made there was no other method of sewage disposal in this country for quantities of anything like the magnitude of Chicago waste.

As years passed studies were continued, methods of sewage disposal were developed, and beginning about 1920 the Sanitary District of Chicago began to construct sewage disposal works. Also, as time passed the refinements of sewage treatment processes increased, culminating in the construction of the southwest district plant with a capacity of approximately 1,000 million gallons per day (4 million tons per day). This plant is capable of treating this vast volume of waste so that it is returned to the Illinois waterways without detriment to downstream neighboring States.

This work, involving the expenditure of hundreds of millions of dollars, has been designed for the district by civil engineers working in cooperation with chemists and bacteriologists over a period of several decades.

Before the sanitary district was created, the typhoid death rate in Chicago reached a peak of 173.8 per 100,000 people. The Siamese twins of sanitary engineering, water supply and sewage disposal, have reduced this figure until today the figure is less than 1 per 100,000 consistently. Over the United States similar projects have been effective in saving approximately 100,000 lives per year; without them, many would have died from water-borne diseases, primarily typhoid.

This selection of the southwest sewage treatment plant as one of the seven civil engineering wonders of the United States and the presentation of this plaque are concrete indications of the workings of the civil engineering profession for the benefit of mankind.

Modern urban development could not exist without the primary civil engineering works of distribution, water supply and waste disposal.

PRESIDENT OLIS' RESPONSE

The following is the address of Anthony A. Olis, president of the board, the Metropolitan Sanitary District of Greater Chicago:

Thank you, Mr. Howson.

This wonderful plaque is a milestone in the history of the Metropolitan Sanitary District of Greater Chicago.

I accept it on behalf of the board of trustees, the staff, and the residents of the sanitary district, those who have gone before us and those who will follow us, as well as the 5 million of us there are today.

For the sanitary district, unique in conception and a pioneer in function from its very beginning, has been a creation of the people it serves.

The idea of the sanitary district was born in a citizens' committee in 1885 following a disastrous flood which led to pollution of Lake Michigan and an epidemic of water-borne diseases.

They planned the sanitary district as a metropolitan government cutting across municipal lines to perform a specific task vital to all of the people within a natural geographic area. So far as we can learn, this was the first step taken in this country in this direction—and only in recent years has the metropolitan concept of service government taken root in the other large cities.

Simply put, the sanitary district was officially created by the legislature in 1889 to prevent the pollution of Lake Michigan, the source of drinking water. It was given the power to tax and to issue bonds and it was made directly responsive to the voters through its nine trustees elected at large.

This whole plan was submitted to the voters in a referendum on November 5, 1889, and they approved it by a vote of 70,958 to 242. In my opinion, that percentage has held through the years—and therein lies the strength of the sanitary district and the reason its achievements could rate this signal honor from the American Society of Civil Engineers.

The few who carp and whine and drag their feet have been swept along in the swelling tide of those who are building Greater Chicago into the first city of the planet Earth.

By the turn of the century the sanitary district had reversed the flow of the Chicago River and made it flow away from the lake with its polluted load. They had built interceptors to pick up the wastes along the lakefront.

Next came the Cal-Sag and the North Shore Channels and an ever-widening network of intercepting sewers. At the start the sanitary district served 185 square miles. Today it serves 900 square miles in Cook County—Chicago and 115 suburbs.

The sanitary district pioneered in the construction of sewage treatment and disposal plants, and in our own time we have seen this system come to a stage of completion where we could say: "All of the wastes originating within our borders is being given complete treatment."

It would be pleasant—or would it?—if we could rest on the district's laurels now. But a great and challenging task still confronts us.

This metropolitan area is low and level. Its streams are few and small and easily polluted. Floods are an expensive nuisance. Our waterways—71 miles of navigable canals within the sanitary district—will be called upon to play an ever-increasingly important role as the St. Lawrence seaway brings seagoing traffic to our shores. Our industry and our population grow day by day, increasing the sewage load.

How are we meeting these problems?

We have a plan for flood control, and we will push until the job is done if the public and the legislature continue to support us.

Our network of interceptors—already 250 miles in length—is growing by the day, keeping abreast of the residential development of the metropolitan area.

Our treatment plants are being modernized and enlarged. An experimental research program is underway searching for more efficient, more economical methods of treatment and disposal.

The Cal-Sag is being widened as a Federal project to increase its barge and ship capacity. Incidentally, it will increase its capacity for carrying floodwaters and bring some measure of relief to the south side.

We are dredging the north shore channel and that will ease flood pressure on the north side.

When the main channel of the sanitary and ship canal is widened from the Cal-Sag junction to Lockport—the final phase of the Government's Cal-Sag project—the safety margin against floods will be substantially increased.

Everyone of these measures will help us prevent the pollution of the streams in Cook County. Each is a step forward in the task of preparing this area to house 8 million residents by 1980.

I am certain I speak for every resident of this area, Mr. Howson, when I say the sanitary district is grateful for the honor your society has given us.

In a large sense, this award was earned by the men who went before us. Our right to share in it will be determined by how well

UNIVERSITY OF MICHIGAN LIBRARIES

we meet the responsibilities and problems which face us.

I am sure this plaque, prominently displayed in our administration building, will be a source of inspiration to all of us as well as to the men to whom we hand the reins in the years to come.

Thank you.

East Berlin—The Lost City

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. HILLINGS. Mr. Speaker, an extremely perceptive insight into East Berlin has been given us by Mrs. Jerene Appleby Harnish, publisher of the Ontario-Upland, Calif., Daily Report.

Mrs. Harnish is an astute reporter and she recently wrote an excellent series on her trip behind the Iron Curtain, one of which dealt with the "dying city of East Berlin."

Mrs. Harnish's article clearly develops that East Berlin is an example of what Communist oppression can do to a city and its people. I suggest that all members of Congress read the following article to remind us of what communism can do to obliterate the future:

(By Jerene Appleby Harnish)

The Iron Curtain clanged down on us as we entered cars, driven by Communist chauffeurs, to be taken on our conducted tour of the East Sector of Berlin. We knew that we were under guard and we also had an uneasy feeling that we were being watched by other state officials. Our guides made it clear to us that we were to be allowed to stop at approved spots to take pictures. Sentry boxes, men in uniform, and bridges were forbidden subjects as were all areas which might have military significance. Thus began our visit to Communist East Berlin, a city dying under the oppressive hand of the Kremlin.

The only area which our Communist guides were anxious to show us was the famous street called Stalin Alle but referred to by West Berliners as Stalin alley. The buildings, stretching for blocks along this one street, merely serve to emphasize the superficial attempts on the part of the Communist regime to rehabilitate the East Sector of the bombed-out German capital. In the pictures accompanying this article it can be seen that the apartment buildings, only 10 years old, were hastily constructed to make a show rather than provide desperately needed housing for East Berliners. In fact these apartment houses have not been thrown open to the homeless workers but are largely occupied by party bureaucrats. Small state-owned stores occupy the first floor of these apartments, a pitifully inadequate shopping area for the population of the East Sector.

The style of architecture used by the Russians in building Stalin Alle has long been out of date in the Western World. It is similar to the ugly and pompous type of architecture used in some American cities in the 1920's. The facades of the buildings are covered with dirty buff tiles already falling off in many places. Some of the apartments boast small balconies, common to European architecture, but many of these have become completely unusable because of broken railings and missing floors. The whole effect of Stalin Alle is one of shoddy grandeur, an affront to German standards of workmanship.

In an effort to make these structures impressive they have been built eight stories or more in height. Their depth, on the other hand, averages about 40 feet giving the whole avenue the look of a movie set—all front and no back. Through the archways of the new buildings and down the intersecting streets the rubble of bomb-destroyed buildings is clearly visible. Little attempt has been made to clear away the ruins of World War II, either in the immediate vicinity of Stalin Alle or in other portions of the city. The new buildings themselves show no evidence of proper upkeep and repair.

As we drove around East Berlin we were struck by the lack of activity in the streets. Few automobiles are to be seen, practically none of which are privately owned. Army trucks made the only real traffic noise we heard. There were a few listless shoppers going silently about their errands. We decided that the only commodity we envied the East Berliners was the unlimited parking space available.

The day after our conducted tour of East Berlin we again crossed the line between the free world and the Communist slave world to go to the East German airfield at Marienfelde. Only on a Russian-controlled airline could we reach Warsaw, our next stop. We were forced to wait a while at the Lufthansa Station on Stalin Alle before going to the airfield. The waiting room was typical of all those we visited later at the various airfields behind the Iron Curtain. There are always huge maps on the walls and usually globes conveniently placed so that travelers may see at a glance the land masses under Communist domination. The map on the wall of the East Berlin waiting room is a beautiful job of inlaid wood and is ornamental in the extreme.

While we were waiting to be taken to Marienfelde by bus we were given permission to walk up and down the nearby arcades in front of the small shops. The window displays were revealing in that they showed the extremely limited choice of articles for sale. Several of us entered a shop selling Russian-made nylon stockings. We asked to see some wool socks but they were not available. Since there were no other customers in the store the girl clerks seemed very friendly and smiled as they accepted gifts of American cigarettes. After we left, one girl came running after us proudly to present us with a small illustrated booklet picturing the shop's wares.

A few children warmly dressed in cheap woolen garments were playing around the square. They followed us around looking curiously at our clothes and especially at our shoes. Good leather shoes are always a source of interest to people behind the Iron Curtain because they are almost unobtainable there. Several little boys posed for pictures as they chewed happily at the gum we gave them.

As we waited to go to the airfield we felt the heavy hand of Communist authority on our shoulders. The new order from the Kremlin demanded that all visitors crossing East German territory obtain visas from the nonexistent East German Government. This ruling had been issued the very week we arrived in West Berlin in order to pressure Americans into recognizing puppet East Germany as an autonomous nation. Several of the group had announced that they would turn back to West Berlin rather than seek such visas against the United States State Department's orders. It was decided to go on to the airport without such visas and see if we could not proceed with police stamps only. A United Press representative advised us to try this method—and it worked.

When our flight number was called over the loud speaker we went onto the airfield to find a two-motored, Russian-built plane waiting for us. It is called the Illy 14 and is an almost exact copy of the good old American workhorse of the air, the DC-3. Like the DC-3, this Russian plane is safe, slow, but not too comfortable. It must fly at lower altitudes because the cabin is not pressurized. Also the heating system is dependent on the motors so that the cabin is bone cold until the plane is in the air. The meals served on these Russian planes are simple to the point of being elementary—bread, sweet butter, cheese, and ham with a cup of tea or coffee and a wizened apple. As we were to learn during the next few weeks, air travel is not luxurious behind the Iron Curtain.

The Russian pilots are obviously well trained for their jobs. Their take-offs and their landings are extremely good. And the story that there is no flying over satellite and Russian territory in the daytime by American tourists is simply not true. The hostesses called attention to points of interest as we flew over them. In all cases the stewardesses on these planes were pretty Communist girls who spoke good English. There was no hesitancy on their part to answer questions. In fact they were quite chatty.

We were now on our way to Warsaw, the capital city of satellite Poland. We were no longer free agents to travel as we wished. We were wholly in the hands of Communist couriers and subject to their orders.

Let's Cure the Scientist Shortage Now

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert an article written by me and published in the March 1958 issue of the magazine Mechanix Illustrated, which has just come off the press.

The article deals with the proposal contained in my bill, H. R. 9610, to establish a United States Science Academy, how this institution would be set up and how it could contribute to our national security. I am glad to bring it to the attention of all my colleagues.

It reads as follows:

LET'S CURE THE SCIENTIST SHORTAGE NOW

(By VICTOR L. ANFUSO, Member of Congress, Eighth Congressional District, New York)

A military man of increasing importance in this age of ICBM's and sputniks is the soldier-scientist. The manpower shortage in this field is acute and growing steadily worse—and yet the problem is being handled in the conventional business-as-usual manner.

There is currently little encouragement for the young scientist to join the armed services. In fact, any young men who want to be soldier-scientists under present conditions are being unrealistic. They stand a fine chance of being utilized as motor mechanics or telephone operators.

Recently a young draftee known to the academic and scientific worlds as a mathematical genius was discovered in the Army, assigned as a clerk-typist at Fort Lee, Va.

Pvt. Ernest Shult was only one victim of the Armed Forces' so-called "Classification System," and his case might be considered humorous if it were not so tragic. Today we cannot afford to waste a single scientist in a position that does not take full advantage of his talent and knowledge.

Repeatedly, we now hear these warnings: "Don't get hysterical. We do not have to copy Russia's totalitarian methods of regimenting science." I agree. But let's not lose sight of the fact that the Russians don't have to worry about placing enough scientists with their armed forces. The Kremlin presses a button and gets all the scientific manpower it needs, where it needs it.

I believe our free system can be just as effective if we establish a United States Science Academy. I have drafted a bill for a law creating the United States Science Academy, and by now the bill should be under active consideration in Congress. Talks I have had with some of my colleagues and various science leaders regarding the Science Academy have been encouraging. As a matter of fact, after contacting the White House I have reason to expect approval of the bill from the President, and bi-partisan support for it in Congress.

If passed unchanged, my bill will contain the following provisions:

1. The establishment of a permanent United States Science Academy under the Department of Defense.

2. The purpose of the Academy will be to train selected citizens, to be known as cadets, for service as officer-scientists with any of the Armed Forces.

3. Cadets will be between 17 and 25 years old and will receive a minimum of 4 years training.

4. Upon graduation, all cadets will be required to serve a minimum of 3 years in the Armed Forces of the United States.

5. Admission to the Academy will be by competitive examinations supervised by the National Science Foundation.

6. Candidates shall also be named by foreign nations who are allies of the United States, provided such candidates can pass a strict security check.

7. Physical standards will be minimized; by deemphasizing brawn we may get more brain into the Armed Forces. We should not forget that one of this country's most brilliant scientists, the great Steinmetz, was a badly deformed cripple.

8. The atmosphere at the Science Academy will be studious but not overmilitarized. The cadet's standing as a scientist will be the only consideration—not his military knowledge. We already have three service Academies.

In all other respects, for purposes of administration, the science cadet will receive a completely free education, pay, housing, medical care, and supervision, under the same rules now governing other service Academies.

Since this is an entirely new venture, there is no way of estimating now the cost of establishing the Science Academy, which I hope will be equipped with the finest facilities that money can buy. No doubt, it will run into many millions of dollars, to be financed out of the Defense Department's budget. It may mean a tax increase somewhere along the line. But how else can we meet such a challenge as was reported recently from Russia—that the Communists are going to establish an entire "scientific town" with a population of 20,000, 10 major research institutes, a large new university, and housing accommodations for the best scientific brains to be gathered from all parts of Russia?

Perhaps you may have noticed that nowhere in my bill is the sex of acceptable cadets mentioned. That was deliberate. I believe the academy should be coeducational. I realize this may arouse some opposition to the bill; I hope not, for we have neglected too long the vast, untapped potential of scientific contributions from American women.

It has been estimated that at some Russian atomic projects, as many as half the scientists are women. In this country we have a handful of women scientists in good jobs. Our Science Academy might very well attract such brilliant cadets as Joyce Myron, the 18-year-old student from the Drexel Institute of Technology, who dazzled millions of Americans when she displayed a staggering knowledge of atomic energy on TV's $64,000 Question.

What will the United States Science Academy accomplish that other private technical schools and universities cannot?

In the first place, it will assure our Armed Forces of a definite, reliable, and steady number of highly trained scientist-officers. We must remember that graduates of private schools are under no compulsion whatsoever to join the Armed Forces. Just the opposite is usually true. We have to snare many of them through the draft, if and when we can. We even have difficulties obtaining them as civilians attached to the Armed Forces because we cannot pay the high salaries of private industry.

On the other hand, the incentive for becoming a science cadet is quite strong. The cadet will not only get a free education, but he will get paid for it. He will be free to devote all his time and energies to his first love, science, and not to waiting on tables or jerking sodas in order to pay his tuition, room, and board.

Although it has been estimated that some 40 percent of our top high-school graduates never go on to college because they cannot afford it, money will not stand in the way of recruiting a science cadet for Uncle Sam.

One reason America is graduating only half the number of science students as Russia, say the experts, is the fact that scientists in America lack public respect and prestige. Says Dr. Edward Teller, noted "father" of the hydrogen bomb: "In Russia, a boy thinks about a career as a scientist, the way a young girl in our society thinks about becoming a movie star."

The United States Science Academy should prove a glittering attraction for young Americans, and should do much toward restoring the tarnished prestige of scientists in this country. The Science cadet will enjoy the prestige and dignity that comes with graduation from West Point or Annapolis.

I first began to give serious thought to the problem of training scientists for our Armed Forces back in 1955 and 1956 when, as a member of the NATO Parliamentary Conference, I attended secret briefings by Generals Gruenther and Norstad. I came away from these meetings considerably disturbed by the news that Russia was drawing ahead of us in the science race.

I thought about the nation getting such great military leadership from West Point and Annapolis—then why not the same for the world of science from a United States Science Academy? When our own complacency was shattered by the sputniks, I decided the time had come to act.

I am confident that adding a Science Academy as this Nation's fourth defense bastion will add greatly to our national soundness and strength.

Whether you agree or disagree with the idea of a Science Academy, it is at least worthy of public discussion and debate in Congress, and I am sure your Representative would be pleased to have your views and suggestions—and so would I.

Independent Commissions—Their Function in Our Form of Government

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. EVINS. Mr. Speaker, in connection with the hearings on the regulatory agencies by the Special Subcommittee on Legislative Oversight, we must not lose sight of the fundamental and basic situation of which the unpleasant revelations of the committee are merely symptoms. That basic situation is simply that some of our independent agencies have fallen under the influence and domination of the executive branch of our Government in contravention of the original intent of Congress in establishing them and the constitutional reservation of the right to regulate commerce by the Congress. Once any agency becomes subject to pressures from others, its capacity for making judicial decisions in the public interest is impaired. Under such circumstances, it is not surprising that the situation now being exposed by the House special committee should exist.

Pertinent to this subject, Mr. Speaker, the Honorable Robert T. Bartley, Commissioner, Federal Communications Commission, in a scholarly address before the Political Study Club of Washington, D. C. pointed out the basic and constitutional issues involved in the present controversy. Because of the pertinence of Mr. Bartley's address, I request unanimous consent to have it reproduced in the appendix of the RECORD. I commend this reading of Commissioner Bartley's address to my colleagues and others.

The address follows:

INDEPENDENT COMMISSIONS—THEIR FUNCTION IN OUR FORM OF GOVERNMENT

(An address by the Honorable Robert T. Bartley, before the Political Study Club of Washington, D. C., April 20, 1957)

The subject of my talk, Independent Commissions, Their Function in Our Form of Government, is one of extreme complexity, largely because our commercial economy is extremely complex.

The independent commissions about which I wish to speak are those which are engaged in the regulation of commerce. There are some 38 commissioners in the regulatory independent commissions who try to see to it that the public interest is paramount in the activities of the industries regulated. The Interstate Commerce Commission lays claim to being the first alphabetical agency. The ICC was created 70 years ago in 1887. The stewardship of the ICC as an independent Commission was such that the pattern was followed by Congress in establishing the Federal Trade, Federal Power, Federal Communications, Securities and Exchange, and the Civil Aeronautics Board.

As I read and study history, I become more and more impressed with the amazing wisdom of the founders of our Constitution. The only satisfactory explanation I have been able to discover for their amazing wisdom is that they were more experienced in

UNIVERSITY OF MICHIGAN LIBRARIES

the abuses of governmental power. They lived in times of monarchy, feudalism, military dictatorships, colonialism, revolution, and, yes, even anarchy. And sometimes I wonder if they didn't have more time to think about important things that really matter, instead of being busy managing time-saving devices. If you will pardon a personal reference which I think may illustrate what I mean, I believe that I was better prepared for classes when I rode horseback to school than I am today for office work after bucking automobile traffic. I had a nice smart horse that didn't talk back, but a car has got no sense. The point is that I got where I was going and I had had some time to think.

I believe that our Founding Fathers were more aware of the dangers of centralization of power because they saw more of abuses at close range and with more thinking time at their disposal they were able to create our Constitution which provides for all the powers necessary to govern and yet leaves that power in the hands of the governed. Our Government has been termed one of checks and balances. Its powers are, of course, entrusted to the three branches of Government: executive, legislative, and judicial.

Our Founding Fathers, however, did not believe it wise to entrust the regulation of commerce to the executive branch of Government, but lodged such authority as close as it possibly could, as a practical matter, to the people.

The critical section of our Constitution on this subject reads as follows: "The Congress shall have power to regulate commerce with foreign nations and among the several States, and with the Indian tribes."

So, Congress has the sole power to regulate commerce, that is, to prescribe the rules by which commerce is to be governed. Chief Justice Marshall said, "The wisdom and the discretion of Congress, their identity with the people, and the influence which their constituents possess at elections, are * * * the sole restraints on which they have relied, to secure them from its abuse."

The Congress has not only the right to regulate commerce, but it is its duty to see to it that intercourse among the States and the transmission of intelligence are not obstructed or unnecessarily encumbered.

Commerce generally is subject to the antitrust laws but many businesses take on the character of natural monopolies because competition would be wasteful. For example, some cities for a while had two telephone systems. If you desired to talk with anyone in your town who had a telephone, it was necessary to have two instruments and pay for service to two companies. It is deemed by Congress essential that these natural monopolies be regulated as to rates and service.

How then is Congress to cope with so complex a problem as the regulation of rates and services of utilities. Recourse to the courts for damages resulting from monopolistic abuses took years and years for settlement and by the time a decision was final, the economic situation had changed. Members of Congress could not give the time necessary to effectively regulate these interstate corporations whose activities or products were vested with a public interest—these public utilities.

It became evident that it was necessary that Congress delegate some of its powers to regulate commerce to some continuing body in order that such regulation might be effective.

It could have adopted specific and detailed legislation and called upon the Executive to administer the law. But, with the rapid change and development in our economic structure, it was apparent that greater flexibility in legislating rules would be necessary to keep up with progress. And, aware of our Founding Fathers' fear of too much executive power, very few of the powers of regulation over commerce have been entrusted to the executive departments—notably, the antitrust laws. And, even here, the Congress has seen fit to have in addition an independent agency, the Federal Trade Commission.

Furthermore, the Congress was aware of the sensitive nature of the economic beings it sought to regulate and of the damage which could be done by arbitrary or capricious actions by such agency it empowered to regulate commerce. It was also aware of the political influence it could exercise over the people generally.

So, Congress conceived a number of independent agencies. They were to be independent of the executive. They were to have legislative authority in the sense that they could implement the law passed by Congress by the adoption of rules to carry out the intent of the law. And they were to adjudicate cases involving complaints by users against the regulated industry, or decide between contenders for a certificate of convenience and necessity or select among applicants for licenses to engage in the service affected with the public interest. The Congress provided that the courts could reverse any action of one of those agencies which was arbitrary or capricious.

And, finally, and of immense importance was the concept that these independent agencies should be bipartisan. Congress wanted the benefits of our two-party system. It had rejected the idea of delegating these powers to the executive or an executive department or to a single administrator. These commissions were to be composed of an uneven number (like the Supreme Court—and for the same reason—to avoid tie votes). No more than a majority of one to be from the same political party. The concept is that the Commissions should have the benefit of conflicting viewpoints in order that their decisions and actions reflect not partisan political convenience, of whatever party happens to be in power, but that their decisions should be based on the merits as reflected in a record developed through bipartisan participation—just as laws are enacted by Congress. Members of these commissions are appointed by the President with the advice and consent of the Senate for fixed terms.

The six Commisisons which I named earlier are in daily contact with every corporation of any size in the United States. These Commissions regulate the interstate rates and services for such mammoths of industry as the railroads, bus and truck land transportation, aviation, and power and gas. And practically every other corporation of any size comes within the purview of the laws administered by the Federal Trade Commission and the Securities and Exchange Commission.

With respect to the FCC, our rate and service jurisdiction encompasses the world's largest corporation, the American Telephone & Telegraph Co., and its interstate subsidiaries, the Western Union's domestic landline system, and the several international communications carriers.

As a Government official, I simply can't resist giving some statistics. Radio's increasing impact on the daily lives of the American people is borne out by the 1,600,000 authorizations which the FCC has issued in that field—a growth of over 200,000 from last year. Many people do not realize that for each radio and television station which broadcasts programs to the public—some 4,500 broadcast stations thus far—there are 85 times as many radio stations of other kinds, such as those engaged in marine services, aviation, land transportation, police, fire and forestry protection, industrial operations, and common carrier communication services. In these nonbroadcast services, there are more than 1,200,000 transmitters in use. Operators who man the Nation's radio transmitters hold more than 1 million permits of different grades. In addition, there are about 150,000 amateur operator permits.

For the regulation of these industries in the communications field, we have approximately 1,100 employees. One-third of these employees are stationed at monitoring stations throughout the country for the purpose of seeing that users of radio operate in such a manner that they do not interfere with other stations. That leaves around 700 people outside the Commissioner's offices, to handle the application processing, to carry on hearings and investigations, and advise with the Commission with respect to short-term and long-term policy matters.

So far as the Commission's budget for its activities is concerned, I have in the past referred to it as the plugged nickel, which means simply this. The budget for FCC's operations amounts to less than 5 cents per annum per person in the United States. With that plugged nickel, the Commission is supposed to "regulate interstate and foreign commerce in communications by wire and radio, so as to make available so far as possible to all the people of the United States a rapid, efficient nationwide and worldwide communication service with adequate facilities at reasonable charges for the purpose of national defense, and for the purpose of promoting safety of life and property through the use of wire and radio communication." That's lawyer language for saying the public is entitled to fast, cheap communications service.

Notwithstanding the tremendous job which regulatory agencies have to do, they are today quite unpopular. I now understand what Senator McFarland told me the day I was confirmed as a Commissioner when he said "Bob, you are more popular today than you will ever be again."

It is only natural that the regulator would be unpopular with the regulated—if the regulator is doing an effective job. We Americans just naturally react unfavorably to being told "No", even when we understand that must be the answer for the good of all.

One complaint against us, though, is legitimate and gives us great concern. That complaint relates to the delays encountered by the parties in securing decisions.

Remember, one of the reasons for the creation of commissions was to avoid the long delays experienced in court. Now for a long time, these agencies were able to operate in such a way that interested parties received answers expeditiously and the public was, I believe, better served. Remember, too, that even then actions of the Commissions which were arbitrary were reversible in court. But that was not enough for those who lost cases or who, for one reason or another, wanted an impending unfavorable decision delayed. So, gradually over the years, we have seen a whittling away of the powers of these Commissions in providing expeditious service to the public.

Now, one of the reasons for these delays lies in the fact that the personnel force provided for these agencies has remained about the same as before the war; whereas, some of the industries regulated have doubled and trebled in size. Indeed, in the case of television, a completely new complex industry has been born, an industry in which the public has invested some $18 billion in 40 million television sets. To help us execute our duties with respect to the 4,500 Standard, FM and TV stations, our Broadcast Bureau operates on a budget of approximately $1 million with only 160 people. This simply is not an adequate force to handle the innumerable problems in this field with expedition.

I digress for a moment to point out that I am giving you my personal views—not necessarily those of my sponsor. I'm reminded of the book entitled "An Unbiased and Unprejudiced History of the War Between the States—From the Standpoint of a Southerner."

My views here are the result of my own experiences over the last 20 years—during which time I worked in and with independent commissions; on the Hill, where I had an intimate insight into the objectives and intent of congressional committees who passed the laws forming these agencies; as an officer of a licensee of the FCC who could feel directly the impact of administrative regulation; and now—on the other side of the fence—as a member of one of these independent commissions.

Another contributing factor for delay is the recent increase in the laws providing for more "due process."

Let us see how this has come about.

Back in 1938, after Congress had set up a whole administrative pattern of independent regulatory commissions, attempts were made to break down this pattern. James Landis wrote a book entitled "The Administrative Process," in which he pointed out:

"Only a year ago (meaning 1937) a distinguished group of scholars, reporting to the President of the United States—in language hardly indicative of academic restraint—described the independent administrative agencies of the Federal Government as constituting a headless fourth branch of the Government, a haphazard deposit of irresponsible agencies and uncoordinated powers, whose institution did violence of the basic theory of the American Constitution that there should be 3 major branches of the Government and only 3."

Although this frontal attack on independent commissions was defeated, a pincers movement succeeded some years later and resulted in the enactment of the Administrative Procedure Act. I believe Congress was seeking to remedy abuses which had arisen in the functioning of certain agencies within the executive departments which led primarily to this statute—not from abuses in the six agencies I am discussing.

But, even when early bills preceding the Administrative Procedure Act were being considered, there were warnings raised against attempting to remedy abuses by general legislation affecting all administrative agencies. And these cautions were spoken not by partisans of the agencies themselves, but by eminent judges experienced in judicial review of administrative matters, and by members of the bar practicing before administrative agencies. For example, the Association of the Bar of the City of New York, whose committee on administrative law was then headed by John Foster Dulles, put itself on record as disapproving the bills. Its report pointed out that administrative law is an intricate field encompassing numerous agencies dealing with a variety of diverse subject matters; and that no one procedure is adequate or appropriate for the handling of all these different fields.

In summation—what does all this add up to?

We have seen that Congress set a statutory course for independent commissions to follow. It established what it presumed would be a fair and qualified group of people to administer an act on a bipartisan basis. For a long time, and without interference from the executive department, it provided these commissions with adequate funds and personnel to operate effectively. It prevented the courts from interfering with the decisions of the commissions on matters of judgment by limiting the power of review to those cases in which the commission had acted in an arbitrary or capricious manner.

But, what has happened in recent years? The basic intent of Congress in creating independent commissions is slowly but surely being defeated, in my opinion, by the following factors:

First. The executive department has been extending its influence upon independent commissions in a crippling manner through restricting their budget and personnel justifications before Congress—and has been encroaching upon the important functions of certain administrative agencies. In addition, the independent regulatory agencies are required to secure prior approval from the executive department before they submit to the Congress their views concerning legislation affecting their respective agencies and the laws entrusted to them by Congress. Moreover, in certain important situations, the independent agencies must secure the prior approval of the principal legal officers of the executive department in order to petition the United States Supreme Court to review court decisions made against such independent agencies.

Second. The judiciary, through restrictive and hampering interpretations of the law and requisite procedures, has hamstrung the expeditious handling of cases and has apparently indicated in certain decisions an intent to exercise its judgment in place of the commission's. In this connection, it is interesting to note that the Supreme Court has had occasion in a recent case to remind the lower court that the Communications Act must be read as a whole and with appreciation of the responsibilities of the administrative body charged with its fair and efficient operation. The Court also pointed out that the growing complexity of our economy induced Congress to place regulation of businesses like communication in specialized agencies with broad powers; and that courts should be slow to interfere with the agency's conclusions when they are reconcilable with the statutory directions.

Third. And, finally, Congress itself has made it difficult for the independent commissions to function effectively. Through certain basic procedural restrictions (such as the APA) and crippling amendments to the basic statutes (1952 amendments), Congress has followed a trend of removing from members of commissions their latitude of action and exercise of discretion and judgment—which tools, I believe, are essential to a fair and expeditious handling of the complex matters with which we have to deal.

Through these three means—the intervention of the executive, the courts, and through legislative acts themselves, it has become more and more difficult for these arms of Congress to carry out efficiently, effectively, and expeditiously the very policies which Congress itself delegated to them.

The public has a direct and vital interest in the effective functioning of the FCC. All of our actions have a direct impact on the public—from the institution of service by a new local radio or television station—right through the efficient operation of your police and fire departments, public utilities, and industrial companies through the use of radio—all the way to the rates you pay for interstate and foreign telephone and telegraph service.

It is rare, however, with the exception of public utility rate cases, that the public participates directly, or voices its opinions before the Commission. Therefore, as I see it, the Commission must itself represent the public interest in its deliberations. It must, in fact, be an affirmative defender of the public's right to the best possible communication service, in carrying out the mandate of Congress in this branch of commerce.

Currently, more and more Members of Congress are becoming concerned with the declining prestige of the independent commissions and with their declining efficiency. If you read the CONGRESSIONAL RECORD, you will become aware of this. If you depend upon the newspapers and radio, however, you will likely find little on the subject—perhaps because it is so complex—and perhaps because they do not think their readers or listeners will be interested. On the other hand, how can the public generally be interested or concerned about something they don't read or hear about. Maybe it's a vicious circle.

It is interesting to note that a recent report by a House Small Business Subcommittee made five recommendations after studying the activities of independent commissions. They take a column in the CONGRESSIONAL RECORD of March 20, 1957, since they are written in legal language, but basically this is what they say:

1. Authority to name the chairman of these commissions should be placed in the commissions themselves instead of with the executive. For years, the ICC and Federal Trade Commission rotated the chairmanship among their members and this arrangement worked very well;

2. That these agencies should not have to clear their requests for appropriations with the Bureau of the Budget;

3. That they should not have to clear their requests for information from the industries they regulate with the Bureau of the Budget;

4. That they should not have to clear their legislative proposals with the Bureau of the Budget; and

5. They should be allowed to seek Supreme Court review of lower court decisions without having to go through the Solicitor General.

Subsequent to this report, Congress appropriated $250,000 to its House Committee on Interstate and Foreign Commerce to make a study of the manner in which these agencies operate. We should be hearing much more about this study in the next couple of years.

Now, if you were going home by horse and buggy and had plenty of time to think through what I have said here, I believe you would conclude, as I have, that:

First. The Founding Fathers were wise to place the authority to regulate commerce close to the people—in the Congress.

Second. The Congress was wise when it refused to delegate its authority to the executive branch or to an administrator but instead established independent bipartisan commissions.

Third. That needless procedural steps in issuing decisions should be avoided—and where they exist eliminated.

Fourth. That the commissions should be adequately manned to cope with their innumerable complex problems.

Address by Mr. Robert F. Six Before the National Transportation Outlook and Planning Conference, Washington, D. C.

EXTENSION OF REMARKS

OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 26, 1958

Mr. ROGERS. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD an outstanding talk made yesterday by Mr. Robert F. Six, president of the Continental Air Lines, with headquarters in Denver, Colo., before the National Transportation Outlook and Planning Conference of the United States Chamber of Commerce in Washington, D. C.

Mr. Six has had more than 25 years experience in air transportation. He points out many problems in air transportation that must be solved.

The address is as follows:

Gentlemen, I am grateful for the opportunity to participate in this panel discussion on the economic outlook and planning for the transportation industry.

My remarks, on behalf of the air transport industry, will be in key with the comment made by Senator GEORGE SMATHERS at the close of the railroad's testimony before his most important Subcommittee on Surface Transportation.

He said, "Our country, its economy, its population, are all moving forward. Changes

UNIVERSITY OF MICHIGAN LIBRARIES

are inevitable and are, in fact, occurring at an astonishing pace. Transportation, one of the primary factors of our growth and our change, is itself undergoing great change.

"It is important that all of us in and out of transportation must raise our sights and develop a new attitude, a spirit of objectivity and selflessness, if we are to stop the destruction of a vital part of the transportation system and the downward trend of the Nation's economy."

These remarks, intended essentially to sum up the deteriorating railroad situation, are equally applicable to all elements of our transportation complex and particularly to our own industry.

The Government, through its regulatory agencies, is explicitly charged with the fostering and encouragement of the civil-aviation industry.

In measuring the degree to which this encouragement has been carried out, or will be carried out in the future, I like to think in terms of three pertinent yardsticks. They are:

1. Will Government action improve service to the public?

2. Will this action strengthen our international position, particularly with respect to Russia? and

3. Will the Government's action serve to let our free-enterprise system act as a stimulus to the economy?

Using those yardsticks, let's see what's been done.

The airlines, acting in the best spirit of free enterprise, have committed themselves to the investment of more than $2 billion for new jet-powered aircraft. This is an investment that will not only allow the United States airlines to maintain their supremacy, it is an investment that will spread out through the whole economy, creating new jobs, making new skills, and priming the sluggish pump of the current American economy in the healthiest way—through private funds.

First and foremost, then, is the financial health of the industry. That health is tied in directly to fares that we are permitted to charge the traveling public.

Continental, along with 11 other trunk airlines, has asked the Civil Aeronautics Board for fare increases averaging 15 percent. Two weeks ago, the CAB granted an interim 4 percent increase along with a dollar-per-ticket charge.

Many observers felt that this increase would solve our financial problems. Unfortunately, it will not; and let me cite a few figures to illustrate the point. The industry grossed an estimated $1,500 million in 1957. Net profit after taxes and interest was about $25 million. If the 4-percent increase had become effective February 1, the estimated gross for the industry in 1958 would be $1,700 million, of which $45 million would be the net. This means that the combined profit for 1957 and 1958 will be about $65 million, or not much more than $57 million registered in the single year of 1956.

It can be expressed in still another way. The profit margin in 1957 was only 1.57 percent. The increase would bring it up to 2.61 in 1958, which is a long way down from the 4.6 percent of 1956, or the 7 percent of 1952. Again, it should be noted that the estimated gross revenues in 1958 will be more than double those of 1952, but the profit margin will be a good deal less than half.

Besides painting a dreary financial picture, those figures tell a lot more. At a time when the earnings, and cash reserves, of the airlines should be at historic highs to permit the transition into the jet age, we find that they are at historic lows.

Fiscal health, at this time, is vital to our financing of the jets. Where is the money going to come from? We've arranged for some loans and a little equity financing. There is also the cash throwoff from depreciation. We'll be able to pick up some additional funds as we phase out our present equipment. That will still leave us short about $600 million. The remainder will have to come from the earnings that we retain and the additional financing that we can accomplish.

We know that the investing public evaluates corporate securities on the basis of earning power—past, present and potential. In the final analysis, the owner of securities recognizes that an adequate flow of cash earnings to pay interest and to meet sinking fund requirements is his best protection. Absence of strong earnings will tend to destroy investor confidence in a company.

Because of the poor earnings position of the carriers today, it is becoming increasingly and painfully obvious, that there is a flight of capital from the airlines. The common stock of the 12 trunklines are now selling at about 64 percent of their book value while even in the dark days of the industry—1947—they were selling at 155 percent of their book value. From a comfortable high in 1946 of 324 percent over book value, the selling point has dropped and dropped during the last decade.

It's also possible for an airline to raise money by borrowing it from banks or other lending institutions. I say "possible" but at this point our weak earnings make it improbable that we can raise any substantial amount of capital that way. A measure of credit strength is the debt-equity ratio which is simply the relationship between the borrowed money and the owner's money in the business. There should be as much equity money as borrowed money in any company. The electric-utility industry, for example, has a ratio of 1 to 1. Bankers have made it clear to us that they will not be willing to provide debt money to airlines on any more liberal basis.

Using a little simple arithmetic, we soon find that were the entire $1,500,000,000 of outside financing required by the airlines through 1960 to be in the form of debt, a debt-equity ratio of 3 to 1 would result. The investment community has told us that they will not allow the airlines a ratio even close to that figure.

Essentially, then, Government confidence and understanding, through the grant of higher fares, will stimulate our aim to provide better service to the public, improve our international posture, and encourage the free-enterprise aspects of the economy.

But there is another, and more compelling reason, why the airlines must be financially fortified as they take the important step into the jet age. The reason lies on the other side of the Iron Curtain where a going jet air system is now operating, not only within Russia, but from Russia to other countries.

Just recently Russia's Aeroflot began their first service to the West at Copenhagen. They have concluded an agreement with England for reciprocal service and it is becoming evident that the Soviets are showing increasing interest in air service to the United States.

While we fly jets experimentally, they fly them commercially. They have flown their current commercial jet, the TU–104, to our shores three times. The last occasion was early this month when the jetliner landed at Baltimore carrying the new Russian ambassador. Observers predict that by the end of this year, the Soviets will be operating more than 100 new turboprop and pure jet aircraft.

The addition of the jets to the civil air fleet of the United States provides not only a great benefit to the passengers, it promises even greater benefit to the national defense effort. As an example, our military today has not one jet transport on order, but is depending on the airlines to provide the necessary jet air transport airlift.

As part of their planning against a national emergency, the scheduled airlines have earmarked the very best of their present equipment to the Civil Reserve Air Fleet. These planes are available on 48 hours' notice for any global assignment in support of combat forces.

Measured in terms of today and tomorrow, the ton mile lift of the CRAF fleet will be four times greater. In 1957, the capacity of the CRAF fleet was more than two billion miles while in 1961, when the jets on order have been received, the capacity will be more than 8 billion ton miles annually.

We are prepared to move ahead and provide the many benefits that characterize the jet era. We merely need a regulatory climate that will encourage our ambition.

Let us move that yardstick around and apply it to another situation confronting the industry: the user charge. Some critics would have the public believe that we pay no user charge for the airways system and that the air is just one great area of free rides for all. This just is not the case.

Last year, for example, the airlines paid about $25 million, for their share of the Federal airways. They paid this fee through the 2-cents-per-gallon tax that is levied on aviation fuel. I think you will agree that an industry that pays more in user charges than it is able to retain in profits is more than paying its way.

Not content with this contribution, the Government now seeks to increase this tax to the point where it will become practically confiscatory. The proposal now is to increase this tax immediately to 3½ cents per gallon and then increase it by annual increments of three-fourths of a cent per gallon until it reaches the level of 6½ cents. This would mean that by 1962 the airlines would be contributing $167 million a year for the maintenance of the airways.

This figure is so in excess of the most optimistic prediction of the industry's earnings as to be out of sight.

Here again, let the Government assume the responsibility that it has. Let it add up the cost of this new system, both to maintain and operate it. Let it then recognize that the Federal airways are an element of our defense program where a first priority is properly given to military aircraft. Priority rights should carry a premium price tag. Let it then determine on a fair basis how much of the system is used by the airlines; how much by the private flier; how much by the business flier; and, most important of all—what portion of the system's cost should be borne by the military with its thousands of airplanes using this system.

With so much at stake, with so much to look forward to, it is perhaps significant that this year marks the 20th anniversary of the Civil Aeronautics Act. The act sets forth not only the rules by which we live, but through its philosophy, sets the spirit which motivates our most ambitious plans. The philosophy is simply this: The Government, recognizing that a sound air transportation system is vital to the economy and national defense of our Nation, will seek always, and all ways, to foster, encourage, and promote the United States civil aviation industry.

With a mandate like this one to show them the way, we are confident that the Government, and its regulatory agencies, will seek and find a sound and consistent policy that will allow us to improve our service to the public, that will strengthen our international position in the face of Russia's challenge, and that will encourage our free-enterprise system to stimulate the American economy.

In closing, I should like to say that our industry is very encouraged by the Board's recent move in granting the interim fare increase of 4 percent plus $1 a ticket. We sincerely hope that with the wealth of evidence presented in the general passenger fare case, that the Board will in the very near future resolve this case and provide the carriers with an increased fare level adequate to permit earnings that will allow them to compete effectively in the forthcoming jet age.

1829-1880

Appendix

Youth Activities Conference of Wisconsin Department of Veterans of Foreign Wars

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 27, 1958

Mr. WILEY. Mr. President, I was pleased to read in the February, 1958, issue of the Wisconsin Veteran, the official publication of the Department of Wisconsin Veterans of Foreign Wars of the United States of America, a description of another of the constructive contributions made by that fine organization in my State, and in the other States of the Union.

I refer, in this instance, to the fourth annual Department Youth Activities Conference, which was held last month as a part of the midwinter conference of the VFW.

The conference heard frank and constructive presentations from leading experts as regards what has been done, is being done, and should be done so as to reduce the problem of juvenile delinquency.

What I like about the conference is its affirmative approach; its recognition of the need for a positive, not a negative, viewpoint toward our youngsters.

The VFW is to be congratulated for its fine work along these lines; paralleling the contributions made by that other great spokesman for the veterans of America—the American Legion.

I ask unanimous consent the front-page article from the Wisconsin Veteran be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"KEEPING YOUNG FOLKS BUSY" IS THEME—YOUTH CONFERENCE HELD AT MIDWINTER MEETING

BARABOO.—A unique feature of the 1958 midwinter conference was the fourth annual department youth activities conference held on Saturday, January 25. The purpose of the conference was to make an evaluation of the VFW youth programs now carried by many posts and auxiliaries in the State.

Also, the purpose was to urge posts and auxiliaries to expand their programs and also to encourage others to undertake youth activities work.

GEORGE JOHNSON IN CHARGE

Making the arrangements for the conference was George Johnson, Milwaukee, department youth activities chairman. He presided during the session and introduced the various speakers on the program.

Approximately 150 persons attended the discussion period, which was opened by greetings from Duane Peck, Baraboo mayor.

COUNTY JUDGE SPEAKS

The first speaker was Sauk County Judge Robert Golmar, whose father was one of the founders of the famed "Golmar Brothers Circus."

Judge Golmar declared that there was too much emphasis on juvenile delinquency and not enough emphasis on the 95 percent who do not get into trouble.

He told his audience that he was amazed that more youth do not get into trouble, because it is so easy today.

He further stated that in 1957, 93 children were brought into his court—which also has juvenile jurisdiction. He declared that on the basis of his observation there were a number of reasons for youthful delinquency. First and paramount he asserted that if a youngster feels insecure or that he is not wanted, he is apt to get into trouble.

A case in point was that of a child who when an infant was tied to his chair for hours and now, at 15, had been in 16 foster homes, and his basic trouble was that he was angry at his father and mother for abandoning him.

WHAT YOUNGSTERS NEED

Judge Golmar then propounded a query: "What do youngsters need?"

He said that playgrounds are not necessarily good for delinquents, because many of them are retarded, consider themselves outcasts, so in order to show off they get into trouble. He advocated a number of means of alleviating this situation. First, he recommended the increase in number of foster homes. He said that it is very easy to have babies adopted, but no one seems to desire to cope with growing boys. Foster homes, he said, could save many.

Secondly, a traveling psychiatrist in the State could confer with juvenile authorities and assist in rehabilitating many.

Thirdly, he urged the revival of CCC camps.

Fourth, he said that though he might be in the minority he was of the opinion that universal education was the bunk. He asserted that many youngsters can't learn, and should be working.

Finally, he declared that more understanding is needed in this very important area.

In closing, Judge Golmar said that "it isn't a question of children. It is a matter of family." In each instance of a juvenile delinquent, he said, he found that the parents were emotionally disturbed.

MRS. ALLNESS WELL RECEIVED

Mrs. Ada Allness, Viroqua, who is a member of the Governor's Committee on Children and Youth, delivered an interesting talk that was extremely well received by the audience. She complimented the Veterans of Foreign Wars for their tremendous contributions in community service.

"Knowing what my own home town VFW post is doing in community service, I know it is magnified on a statewide and national level," she said.

QUALIFICATIONS GIVEN

In explaining her qualifications to speak on youth problems, she said that she had been a teen-ager, that she lives with three teen-age daughters, and that now, at middle age, she was at a point where she could evaluate in a detached manner the problems of teen-agers.

TEEN-AGERS HAVE PROBLEMS

"Teen-agers," she said, "have many trials and tribulations. Such as what to wear, when to drive, dating, and studying. One reason that we oldsters are critical of young people is that we are envious of the life they lead. And many of the chief critics have forgotten their past."

She took a La Crosse newspaper and pointed to the many news items pointing out the derelictions of the youth. And then she also mentioned that a closer scrutiny would also reveal many fine achievements by the youth of the city, also.

ENVY OF OLDSTERS

"Altogether too often our own discontent and envy causes us to criticize," she said, "for our attitudes quite frequently are based on our own backgrounds."

DUTY TO YOUTH

"Our duty to youth," she said, "is to show the teen-ager that his period of life is the beginning of life—a preparation—and to warn him not to try too many things in a few years. Because there is a long life ahead.

"For after all," she said, "teen-agers have time on their hands, and their problem is to know how to use it. And young people who know how to make use of their leisure time do not have problems."

GROW UP TOO FAST

"Because of our movies, TV, and other mediums of communication, in the modern world a child grows up too fast," Mrs. Allness went on. "It is through groups such as the VFW, the church, the school, that youth can learn in many ways how to take care of his leisure time."

YOUTH'S NEEDS

She concluded by making the following suggestions: First, it is necessary that youth put their leisure time to good use. Second, there is need for responsible adults to give love, affection, and recognition. She was of the opinion because of their military careers VFW members can be of great influence.

Third, an opportunity to participate in group life should be afforded. Fourth, she declared that there is too much of a distinction between youth and grownups—instead of a constant working together. This latter method is being tried, she said, in many communities.

Finally, Mrs. Allness said that opportunities for employment for young people must constantly be evaluated in order to instill confidence in them.

She concluded with this famous saying: "All that is necessary for evil to prevail is for good men to do nothing."

FELDMANN SPEAKS

Senior Vice Commander in Chief Louis Feldmann, who has had experience as a law enforcement officer, said that there was nothing wrong with children. He said that children have always been of some trouble to their parents—and likewise, parents to children. The problem, he felt, is mainly one of interpretation of customs; that adults do not keep up with the times. Thirty years ago, he said, a child spent much more time at home. But as we all know, there has been considerable change because of the tremendous change in the means of communication.

He pointed out the various programs of the national VFW organization—such as

UNIVERSITY OF MICHIGAN LIBRARIES

sponsorship of marble tourneys, teener baseball, Boy Scouts, and bowling—and urged active post participation. And he said that if we take care of youth, youth will take care of tomorrow.

He agreed with Mrs. Allness that the basic problem emanates in the home.

OTHER SPEAKERS

Other speakers included Elmer Kruger, Eau Claire, who spoke on the VFW department junior rifle program; Elaine Johnson, DeSoto, department auxiliary president, who reviewed some of the activities of the auxiliaries in the field of youth activities, emphasizing the baby sitting schools sponsored by the Viroqua and Middleton auxiliaries; Vernon Olson, department commander, who spoke briefly about VFW community service; Keith F. Genrich of Portage, who explained the teener baseball program; and youth activities Director George Johnson.

PLAQUES AWARDED

Department President Mrs. Johnson and senior Vice Commander in Chief Feldmann awarded plaques to two Baraboo high school students, in recognition of exceptional scholastic records and outstanding service to their community. The recipients were Miss Karen Nelson and William Luethy.

In accepting his award, William declared that Baraboo is fortunate in having a VFW post in the community helping youngsters.

A citation was also presented to junior Vice Commander Orville Scheuerell for his community service attainments as state chairman in 1956 and 1957.

Ten Years—The Czechoslovak Question in the United Nations

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, February 27, 1958

Mr. KENNEDY. Mr. President, this week marks an unhappy anniversary, for it was on February 25, 1948, that the Communist coup d'etat took place in Prague, marking once again the temporary passing of free Czechoslovakia.

It was during 1948 also that Democratic Czechoslovakia lost its two greatest modern citizens, Eduard Benes and Jan Masaryk.

These thoughts are tempered by the reflection that this year also marks the 40th anniversary of the founding of the Czechoslovak Republic under the inspired leadership of Thomas Masaryk. Unfortunately, we are still witnessing the legacies of the action in 1948, but we are equally certain that the principles and aspirations of 1918 are the enduring ones.

The suffering of the Czechoslovakian people under foreign despotism are all the more grievous when we recall that Czechoslovakia represents one of the oldest European states. It is a country which was long hospitable to a diversity of peoples and ideas, and its cultural roots can be traced more than a thousand years.

To all men of freedom Prague represents a haven and beacon of freedom, and to all men of learning Charles University in Prague, founded in 1348, is one of the great intellectual lodestars of western culture.

Czechoslovakia has never had an easy independence, but it has never lost its identity and sense of freedom.

Mr. President, I hope this week will be one of memory for Czechoslovakia's past greatness and determination for its future redemption.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum prepared by the Czechoslovak National Council of America.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

TEN YEARS—THE CZECHOSLOVAK QUESTION IN THE UNITED NATIONS

On February 25, 1948, the Communist coup d'etat in Czechoslovakia was accomplished and became successful because it was directed and secured for the Czechoslovak Communists with the aid of the Soviet Army stationed in nearby East Germany and Austria, Deputy State Secretary Valerian Zorin was sent to Prague to observe the fulfillment of Soviet plans.

The permanent representative of Czechoslovakia to the United Nations, Dr. Jan Papánek, wrote a note of protest against Soviet interference in Czechoslovakian state affairs.

On March 10, 1948, report of the mysterious death of Jan Masaryk was received. Ambassador Hernan Santa Cruz helped introduce the Czechoslovak case into the Security Council in the name of the Chilean Government.

On March 17, 1948, the Security Council met. The Soviet delegate, now Foreign Minister of the U. S. S. R., Mr. A. Gromyko stated that the complaint was an invention without foundation and a gross insult. He attacked the Chilean Ambassador, "amoral American newspapers," and Dr. Papánek. But the Security Council voted 9 to 2 to request Dr. Papánek to present his views before the Council. He presented in detail developments in Czechoslovakia and produced additional evidence about the threat of Soviet Army intervention and acknowledgment by Prague Communists of this support.

British delegate, Sir Alexander Cadogan in his statement among other matters declared his conviction that Jan Masaryk made his last desperate sacrifice; he gave his life to prove to all the world that this change had been forced upon his nation. The French delegate, Alexander Parodi said that President Benes is deprived of his freedom of expression, probably guarded and a prisoner of the regime which has taken control of his country.

The United States delegate, Ambassador Warren Austin said that Czechoslovakia was a nation which understood democracy. All the world knows that. Too much has happened which is not in character with the Czechoslovak people and tradition. Too much has happened which bears a striking similarity to what happened in other countries, for the Security Council to be satisfied with perfunctory or categorical denials, or with further red herrings.

Ambassador Santa Cruz closed his forceful address by requesting that a committee be created to investigate what happened in Czechoslovakia.

The Security Council debated the Czechoslovak case during the months of April and May 1948. From that time on it has not taken any action on the Czechoslovak question and it remains an unresolved item on its agenda.

With a view to the furture, the record of the debate on this question in the Security Council will prevent the falsification of history. The Czechoslovak people need never fear the revelation of the truth in this matter. They should on the contrary demand that it be engraved in history, whose memory is more durable than metal.

There is another fact, however, which is pertinent to this. The Communist putsch in Czechoslovakia was prepared and carried out so ingeniously that the stifled outcry of the nation, whose throat had been seized by international communism was not heard abroad. The victims of Communist terror in jails, in concentration and slave camps doomed to slow death, could not cry out.

The Soviet Union did not remove the Czechoslovak question from the agenda of the Security Council with its veto. Unresolved, it remained there and can be taken up again when a suitable opportunity presents itself; when new circumstances or a change in the international situation make it possible.

All who believe in the eventual liberation of Czechoslovakia by new forces of a morally reborn nation, also believe that the debate on the Czechoslovak question in the forum of the United Nations was not the epilog of a suffered defeat, but rather the foreword of a better and brighter future.

Voice in the Wilderness

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 27, 1958

Mr. YARBOROUGH. Mr. President, it is now clear to one and all that the plight of the family-size cotton farmer in Texas and across the Nation has been worsened by the soil-bank plan. Just how much the soil bank and some other Federal programs have done to kill the family farmer is graphically shown in a recent editorial in one of Texas' outstanding weekly newspapers, the LaGrange Journal. While we do not agree with all of the reasoning, this editorial accurately states the end result.

For those who have not had the opportunity of becoming acquainted with Texas, the city of LaGrange is located in central Texas in the heart of the original Texas cotton belt. It is primarily an area of small property owners—family farmers who have lived generation to generation on their land, and they want to continue living on their farms. But thousands and thousands of them are having to move to town, and leave the land.

The editor of the LaGrange Journal, L. A. Duewall, is a man close to the cotton farmer. He understands and states their problem very well in an editorial in the Thursday, January 23, 1958, edition. His editorial is entitled "Voice in the Wilderness."

Mr. President, I ask unanimous consent that the text of aforementioned editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VOICE IN THE WILDERNESS

Hear, oh Washington, the cries of a small town newspaperman in central Texas. Hear the earnest plea of a representative voice of the small cotton farmer.

Why have you continued to let go unheeded the needs of the cotton industry? Why have you continued to surpress the basic unit of American life, the small, family-size farmer? Why have you deserted us?

Your soil bank takes over a half billion dollars a year to operate. It offers Federal pay to the farmers to take cotton and other major surplus crops out of production.

Whom has it helped? Has it helped the family farmer with 5, 6, or 7 acres of allotment? Has it helped the Mississippi State Penitentiary which was paid $71,000 for idling 1,000 acres of cotton? Has it aided the Garvey farms in Colby, Kans., which received $278,187 in soil-bank payments? Has it helped the tremendous problem of overproduction?

Has not the soil bank amounted to little more than a bonus payment to the larger growers at the taxpayers' expense?

Your acreage controls program has failed. What equity is there in acreage controls?

Is there any equity when a man like Monroe Wood, whose farm is located south of Odessa, Tex., grows 191 bales of cotton on a 31-acre block of land, an average of 6 bales to the acre? Compare his acreage allotment with that of a Fayette County producer who does well to grow one-half bale per acre. Where is the equality in that type of system? Where is the justice?

How has the total farm program fared during controls by the Federalists out of Washington? Production has increased, costs of the farm program are the highest on record, while farm income has fallen steadily.

Farm income dropped from $16 billion in 1951 to $11.6 billion in 1957. This drop occurred during a generally increasing income and profits for everybody else. This means that the farmers' costs were higher for the things he had to buy.

Today farmers are leaving the farms in record numbers; the farm debt is the highest it has been in the history of this Nation.

On the cotton front, cotton is in major trouble because of the laws that have encouraged farmers to prosper by not planting, a socialistic concept if we ever saw one. Farmers cannot prosper by not planting. The only way for cotton farmers to prosper is to be allowed the freedom they need to plant, and through ever expanding markets for farm products.

What has happened to the cotton industry during the controls by the Federalists from Washington? United States cotton farmers have been cut back in acreage from 24 million in 1947–49 to 16 million acres in 1955–57. Manfacturers of synthetic fiber production in the United States is up the equivalent to about 11 million bales. Foreign cotton farmers have expanded the planting of cotton and prospered. Foreign cotton production since 1947 is up over 13 million bales.

Who killed cotton as king? The question was answered in a recent editorial in the Houston Chronicle, which said, "The cotton industry is dying in the Southeastern States where once it was king. Thirty years ago, and more, Uncle Sam started to solve the farm problem. Consider the results.

"In 1930, Alabama, Georgia, North and South Carolina planted about 10,500,000 acres of cotton, and produced 4,850,000 bales, or 36 percent of the Nation's total. This year 77 percent of the cotton acreage of these States has been taken out of production. They will grow about 1,500,000 bales (one-third of that grown in 1930), and only 13 percent of the national total.

"Less cotton, fewer jobs. Some 4 million people formerly employed growing cotton have migrated to the congested cities of the North. This year, 30 percent of the already limited acreage went into the soil bank, the latest gadget to solve the farm problem. That means still less cotton in this section next year and still fewer jobs.

"Thirty years of restricted acreage, price supports, and 'umbrellas' over foreign producers have done what could have been predicted."

But that isn't all the story. The real victims of the entire program of controls, subsidy, etc., are the family farmers. They, in effect, have been stripped of their right to work and to make a living, in direct violation of the Constitution.

Not only are the family farmers the victims, but as William Jennings Bryan warned, the cities stand or fall with the vanishing family farmer. The strength of the American people, or any people for that matter, comes from the soil. Towns today are becoming ghost towns; small farms are becoming ranches; and Government is subsidizing large farms.

We fear our way of life is going, and if allowed to continue we fear may cause the people to be open prey to any "ism" which might offer hope.

The situation is more serious than meets the eye.

Let not this be the voice of one crying in the wilderness. Hear, oh Washington, hear.

Funeral Meditation for Joseph Harmon Reass

EXTENSION OF REMARKS
OF
HON. CHAPMAN REVERCOMB
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES

Thursday, February 27, 1958

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a funeral meditation by the Reverend John F. Streng, who is the pastor of St. James Evangelical Lutheran Church, of Wheeling, W. Va. The funeral meditation was delivered at the burial services for Joseph Harmon Reass.

Joseph Harmon Reass was a distinguished citizen of my State. He was one of the organizers of the American Legion. He was outstanding in his leadership of the American Legion, and was long active in post No. 1 in Wheeling.

There being no objection, the meditation was ordered to be printed in the RECORD, as follows:

FUNERAL MEDITATION

Text, St. Luke 24: 8: "And they remembered His words."

Members of the mourning family, members of the military, and friends, in the Providence of God we are met in this hour to bid farewell to a noble American citizen of sterling Christian character. Joseph Harmon Reass was a faithful member of St. James parish for over half a decade rearing his family in the fear and admonition of the Lord. Joseph Harmon Reass had another claim to fame. He endeared himself indelibly and immortally to millions of blue-blooded American citizens young and old as father and cofounder of the now world-renowned military organization known as the American Legion. Every hamlet, village, city, and metropolis, in our land has felt the tremendous positive impact of this benevolent institution. It has stood guard over the highest standard of patriotism and citizenship through unselfish service to God and country.

Wherever the American flag flies, wherever an ex-service man deserves encouragement, wherever the Constitution of the United States is endangered or in need of constructive interpretation, there comrades gather and unitedly pledge themselves to fulfill a sacred obligation toward God and Government.

When by the grace of God, this young soldier returned to his beloved land, there rose within his heart a burning desire. His love for his country and church moved him to concentrate on finding a way to cement the friendship and fellowship of stout-hearted men, who through united peaceful efforts in American citizenship might help to avoid another world conflict, and conflagration. Thus in 1919 an overseas victory base became the mecca for determined doughboys, who caucused in solemn and serious deliberations that the agonies of war, the memories of misery, and the valor of unselfish comrades living and dead, and the deep convictions of the futility of armed conflict might be indelibly engraven in the minds of generations to come.

Our brother comrade was one of the leaders in that noble enterprise which has so immeasurably determined the destiny of our Nation, under God. Today its international influence has become a bulwark beyond every battlefield in which sleeps the flower of American youth.

Let we forget, these brave men wove into the fabric of American integrity the ingredients of lasting peace and prosperity, based upon loyalty and personal devotion. Let we forget, these brave warriors of yesteryear, willing to sacrifice their last ounce of devotion to save their country from slavery, deserve what little honor we can bestow. God in His mercy will remember them as good and faithful servants.

Centuries ago an inspired penman under the influence of the holy spirit surveyed the miracle of the resurrection of our Lord. He recalled how his Master's intrepid disciples remembered His words of prophetic intent and impact. The authority and authenticity of those prophesies became the basis of their own convictions upon which they established what later became known as the Christian church. Their challenging simple statement was also the creed of the deceased. Of him it can be likewise said: "He remembered His words." And in sacred remembrance of the dying words of many comrades, our now departed brother, returning from the holocaust of hell, together with like-minded veterans, remember that America can remain strong only when her frontiers remain fortified with charity toward all and malice toward none; when family and friends are safe from any foe only because they are united in worship, work, and watchful vigilance.

He remembered too the word of the Lord that "righteousness exalteth a nation"; and: "blessed are the peacemakers, for they shall obtain peace." He saw in the Christian home a fortress that need not capitulate to any enemy without. He saw in the union of thousands of comrades known and unknown a common cause which no sinister philosophy of inferiority or divided national interests could infiltrate.

And now he has been summoned to final rendezvous and reveille in the bivouac of the dead. He has joined that vast throng of emancipated heroes whose roll of honor can be estimated only in terms of eternity. He rests from his labors and his works do follow him. America has lost another illustrious citizen whose foresight and fortitude has strengthened the ramparts we watch. The Lord has taken His servant home as one who came out of great tribulation to wash his robe white in the blood of the lamb. Final taps are sounded for him here; but never

UNIVERSITY OF MICHIGAN LIBRARIES

ending shall be the trumpet sound amid the welcome victory chorus of the redeemed.

May His memory inspire country and church, family and fatherland to remember his words and deeds in the light of life, liberty and the pursuit of happiness. Amen.

Foreign Aid—How We Look

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, February 27, 1958

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "How We Look," which was published in the Washington Post of yesterday. The editorial is most thoughtful and timely, and I believe it will be of value to all readers of the RECORD to have the editorial published in it.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of February 26, 1958]

HOW WE LOOK

The searching questions about the United States contained in the letter from a young Vietnamese girl which we published on the front page yesterday have caused considerable consternation in Washington. Some persons assume that the letter was a Communist plant. We are convinced from what we know of the background of the letter that it was not; that the questions are sincere and that they deserve thoughtful answers. Obviously the young lady has absorbed Communist propaganda. But the views which she expresses really pose a challenge for this country to do a better job of making itself understood in Asia.

It is quite natural in a country such as Vietnam, which was long under colonial rule, that people should be suspicious of large groups of Americans who descend upon them. These suspicions are fed by the occasional Americans who are overbearing, who are impatient with the locals and seldom see them except to dispense advice, who live in sumptuous houses and whose chauffeurs imperiously honk for the peasants to scatter. There are relatively few such persons in comparison with the numbers of Americans sympathetically doing their best to help, but they hurt. The effect of such arrogance is compounded by reports of American racial discrimination which are widely discussed among the darker skinned peoples of Asia—although the American information services tried hard to show that the events at Little Rock came about because it was the policy of the United States Government to eliminate discrimination.

Special difficulties arise in Vietnam because of the character of the divided country and its government. Independent Vietnam was born in the war with the Communist Viet Minh. The United States quietly urged France to grant full independence, but to some persons the United States seemed to be alined with the country they regarded as their oppressor. The Geneva armistice left Vietnam split into two parts, and when American advisers replaced French colonial administrators their motives were suspect.

The government of President Ngo Dinh Diem has proved a good bet for American help in establishing stability. Mr. Ngo is an authentic nationalist, and his objectives are praiseworthy. But he has little understanding of the function or importance of a democratic opposition, and there has been an autocratic cast to his regime. The reasons why he resists nationwide elections for reunification have never been fully explained. Part of the task in Vietnam is for President Ngo to take the people more fully into his confidence.

American aid to Vietnam last year amounted to nearly $300 million. Much of this went directly or indirectly into support of the 10-division army maintained against the Communist threat. But there is an impressive showing for economic help—resettlement of nearly a million refugees, a flourishing agriculture, small industries starting up.

It is difficult at best to explain that the primary interest of the United States in extending aid is to assist other countries to maintain their freedom. The quest for markets is easily disposed of; American exports to Vietnam last year amounted to only $75 million out of a worldwide American total of $19.5 billion. But to many Asians the United States unquestionably does seem more interested in signing up anti-Communist allies in the cold war than in helping people for their own sake.

Obviously there is no simpler answer to the young Vietnamese girl, but part of it lies in official American attitudes. Communism, and even the brutal events in Hungary, are something remote from the experience of many Asians. But what the United States has done to help neutral India without strings—and the eloquent thanks of the Finance Minister for pioneering the concept of aid by richer countries to those less fortunately placed—does have meaning in Asian terms.

What the episode really illustrates is that, whatever may be the shortcomings of the American information program, the information people can't do the whole job by themselves. The need is for official actions and statements to reflect an understanding of Asian desires, for recognition by Americans at home that their own conduct is on trial. The need is for American representatives abroad who are trained in local languages, who are willing to live on a modest scale and who can win the trust of the people.

It is particularly fitting that the Vietnamese letter should have arrived at a time when discussion of foreign aid is so current in Washington. Far from regarding this single instance impatiently as a rebuke or a demonstration of ingratitude, administrators and legislators ought to look upon it as a stimulus. We hope that the young lady will receive many answers—and that the appropriate answers will be translated into official policy.

St. Joseph's College Ranks Among Top Five in Nation in Number of Degrees in Physics

EXTENSION OF REMARKS
OF
HON. KATHRYN E. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mrs. GRANAHAN. Mr. Speaker, it was with a great sense of pride that I read recently in the publication of St. Joseph's College, The Hawk, an article reporting that this outstanding Philadelphia institution, located in my congressional district, is among the top five institutions of higher education in the Nation in the granting of degrees to physics majors.

This is a really remarkable record, I believe. St. Joseph's ranked after the University of California, Massachusetts Institute of Technology, Harvard, and the University of California at Los Angeles.

I congratulate the Very Reverend J. Joseph Bluett, S. J., the president of this outstanding institution, for its outstanding physics department. Also, Mr. Speaker, in view of the tremendous interest being displayed by our Government and by the Congress, as well as by our citizens generally, in the problem of educating more scientists, this is an achievement, which I believe merits the attention of the Congress.

Consequently, I submit for inclusion in the Appendix of the RECORD the article referred to in the Hawk of St. Joseph's College, as follows:

COLLEGE RANKS FIFTH IN PHYSICS MAJORS

The American Institute of Physics recently announced St. Joseph's College ranked fifth in the Nation as regards the number of degrees granted to physics majors in 1956. This information resulted from a national survey recently conducted by the institute.

Only 18 of the colleges canvassed granted more than 20 degrees in physics to June graduates. St. Joseph's granted 32. The first four schools were The University of California, MIT, Harvard, University of California at Los Angeles.

St. Joseph's has placed every one of its students seeking employment after graduation in industry since the inception of the cooperative program in 1951. The rest of the students have gone on to graduate work in physics, mathematics and engineering.

The physics department is now educating 263 undergraduates at St. Joseph's. Included in this number are 54 sophomore premeds, 100 freshman physics majors and 66 physics majors from the upper classes.

Rev. John O'Connor, S. J. has announced that the physics department has received an anonymous donation of $12,000. Part of this sum will be used to set up a medal for the highest average in physics in sophomore year.

Death of Bob Reeves, Sr., Fighter for Good Government

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 27, 1958

Mr. YARBOROUGH. Mr. President, while the 85th Congress was in adjournment between its sessions, Texas lost one of her most active workers and fighters for good government. Bob Reeves, Sr., died at Franklin, county seat of Robertson County, Tex., on November 30, 1957.

Utterly courageous, he served for 16 years as sheriff of Robertson County, thwarting one bank robbery in progress with a gun duel, with a bandit.

Bob Reeves managed campaign after campaign for me in Robertson County in our 5-year fight to take the leadership of the Democratic Party out of the hands of its enemies who were seeking its defeat

and destruction. Bob Reeves quietly organized and in the last two campaigns he obtained majorities for us of more than 2 to 1 over the opposition in Robertson County.

His wise, quiet counsel will be missed in our strategy meetings. His leadership will be missed by all the people of Robertson County and the middle Brazos River Valley area. There is none there now to fill his shoes. An oak has fallen in the forest.

Mr. President, the Franklin Texan of December 5, 1957, printed a brief sketch of Bob Reeves, Sr.'s life, with the names of the surviving members of the family. I ask unanimous consent that this account be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BOB REEVES, SR., DIES OF HEART ATTACK SATURDAY

Funeral services were held Monday afternoon at 2 o'clock for Bob Reeves, Sr., 62, former sheriff of Robertson County and mayor of Franklin. He died of a heart attack at his home in Franklin at 11 o'clock Saturday night.

Services were held at his residence with Brother O. C. Hartsell of Springhill, La., officiating, assisted by Brother Weldon Hamill of Mexia, Rev. Verlon Feller, and Brother Lee Faulkner. Songs were rendered by a group under the direction of Henry Ellison of Rockdale.

Interment was in the Franklin Cemetery with Riddle Funeral Home in charge. Active pallbearers were Carl O'Rear, G. W. Holland, Lad Nickelson, Rannell Nickelson, Carl Duffey, J. Lynn Mauk, W. O. (Bud) Baxter and Bill Hamilton. Honorary pallbearers were D. J. Easterly, H. P. Culpepper, Goree King, Clarence Hale, Bill Palmos, W. S. Barron, Robert Lloyd Jackson, Bassett Davis, Damon Newsome, A. G. Scott and Doctors R. W. Huling, Mitchell Brown, Howard Smith, J. G. Sanders and J. B. Barnett.

Mr. Reeves was born on January 26, 1895, near Bald Prairie. He died on November 30, 1957. He was a lifelong resident of Robertson County.

For 14 years, from 1936 to 1950, he served as sheriff of Robertson County. He also served as a deputy sheriff under Sheriff W. A. Nickelson. He was a former mayor of Franklin and at the time of his death was a member of the city council.

Early in life he was in the general mercantile business at Bidge. He also owned extensive ranching interests there. In recent years he was in the insurance business and also owned the Pioneer Motel and Cafe.

Mr. Reeves received nationwide attention for one of his law enforcement encounters. He shot and killed a bank robber during a bank holdup in Bremond on December 23, 1947. Mr. Reeves was deadly accurate with any firearm.

Mr. Reeves was affiliated with the Baptist Church. He was very active in civic affairs, serving as chairman of county bond and Red Cross drives. He was also active in the affairs of the Democratic Party.

Survivors are his widow, Mrs. Oda Boring Reeves, of Franklin; two children, Mrs. Robert E. Ford of Los Angeles, California and Bob Reeves, Jr., of Midland; 5 grandsons, Bobby and Kevin Ford and David, Stacey and Kippy Reeves; and 1 sister, Mrs. Ila Boring of Houston.

The Need for Arctic Research

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, February 27, 1958

Mr. WILEY. Mr. President, every Senator no doubt has seen maps and projections portraying the military significance of the Arctic area.

In the event of war—which we hope, of course, will never come—the region over the North Pole might become virtually an aerial highway of bombers and missiles flying in both directions.

Under these circumstances, we can hardly afford to ignore any opportunities to strengthen our security network, so far as early warning systems, guided missile installations, and the like, are concerned.

I was pleased to read, therefore, in the New York Herald Tribune of February 14, 1958, an important article entitled "Lack of North Pole Data Called Peril to Security," written by Ansel E. Talbert, the miltary and aviation editor of that distinguished newspaper.

It told of a new report by an Arctic Research Advisory Committee, which stated grimly that the United States would practically invite a scientific Pearl Harbor if it failed to appreciate the full importance of the Arctic area.

The report confirmed the warnings, which have been presented for a number of years, by one of America's great polar aerial pioneers, the famous Col. Bernt Balchen.

Unfortunately, Colonel Balchen's warnings, like the warnings of other prophets of aviation, have not been sufficiently heeded.

So, too, the longtime stress by the late Rear Adm. Richard E. Byrd, concerning the significance of the Antarctic, has likewise not been sufficiently heeded.

Under these circumstances, I appeal once again for action on the Senate and House sides on the Wiley-Richard E. Byrd Commission bill, so as to establish a continuing organization which would protect America's national security in both the Arctic and the Antarctic.

I earnestly hope that both polar regions may be used for man's progress. I hope that out of them will come a tremendous wealth of scientific data which would be usable by all nations.

But I cannot close my eyes to the primary needs of my own country—the need basically for national survival.

I ask unanimous consent that the article from the Herald Tribune be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LACK OF NORTH POLE DATA CALLED PERIL TO SECURITY

(By Ansel E. Talbert)

The United States and Canadian Governments have just been warned by their joint Arctic Research Advisory Committee that scientific information available on the strategic north polar basin is so seriously inadequate as to endanger North American security.

Unless the two nations meet the situation, according to the Committee, we will invite a scientific Pearl Harbor.

The committee, composed of 20 outstanding scientists and military men of the 2 nations specializing in Arctic research and tactics, says that operation of atomic-powered submarines and atomic icebreakers at the top of the world soon will be no novelty. In a report that pulls no punches, the committee members state that expanded Arctic research is essential in the face of large-scale, intensive, and competent Arctic research and development being pursued by the Soviets without fanfare. It almost certainly will have reverberations in Congress and the Canadian Parliament.

NEED FOR MISSILE SITES

After recalling that America's atomic-powered submarine *Nautilus* recently traveled under the Arctic icepack to within a few miles of the North Pole—and was prevented from continuing only by a minor communications antenna failure—the report notes that defenses must be planned now against Soviet submarines which could make similar trips.

The committee members believe there should be an immediate study of the feasibility of establishing intermediate-range-ballistics-missiles bases, not only on land in the high north of North America, but also on the Arctic Ocean icepack. They also recommend establishment of a policymaking Office of Assistant for Arctic Research in the United States Defense Department and a completely integrated program of American and Canadian Arctic research pushed with all possible speed. Their report further says:

"The concept that the Arctic is a barrier to an aggressor is no longer tenable—the Arctic is a highway to those who have the wit to use it. We cannot depend on superiority over the adversary in numbers, in physiological or mental toughness, or in heavy industry. The free world's only certain sword and shield is superiority in basic knowledge and spirit * * *.

"The Arctic's true military potential can only be transformed to the dynamic by means of studies specifically oriented to the problem."

In addition to representatives of the United States Air Force, Army and Navy, and Defense Department, the committee membership includes others representing American and Canadian scientific institutions, the Canadian Joint Staff and the Arctic Institute of North America, which has offices in both Nations.

The joint committee originally was organized at the request of Rear Adm. R. B. Bennett, Chief of Naval Research of the United States Navy. Many of its warnings and findings confirm those made in Washington during the past several years by Col. Bernt Balchen, famed Arctic and Antarctic pilot and explorer, before his retirement from the Air Force.

BALCHEN URGES ACTION

Colonel Balchen told this correspondent about the report: "Its recommendations are splendid, but they should have been carried out years ago * * * let us hope they now are adopted without further delay."

Colonel Balchen and the members of the Arctic Research Advisory Committee feel that a joint American-Canadian push northward involving specialized Arctic units equipped with missiles and other nuclear weapons would threaten the Soviets with a relatively invulnerable offensive force remote

UNIVERSITY OF MICHIGAN LIBRARIES

from our own heartland and relatively close to their own offensive Arctic deployment.

In emphasizing the Soviet Union's historic interest and preeminence in the Arctic regions, the committee report pointed out that Soviet bases already are deployed along thousands of miles of the coastline of Siberia and that scores of Soviet scientific parties were working on the ice pack itself on both sides of the Pole.

The report asserts that Soviet submarines, not necessarily atomic-powered at present, but with under-ice capabilities in all likelihood explore the North and east coasts of Greenland and (Soviet) reconnaissance planes already probe the high latitudes of the Western Hemisphere. Before writing it, the committee made a tour of present Arctic bases in Canada, Alaska and Greenland.

National Guard Cuts Opposed

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 27, 1958

Mr. TALMADGE. Mr. President, 79 members of the Headquarters Company of the 48th Armored Division of the Georgia National Guard, stationed at Macon, Ga., have wired me expressing their wholehearted opposition to proposed cuts in the strength of the National Guard. I ask unanimous consent that their telegram be printed in the Appendix of the RECORD.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

MACON, GA., *February 25, 1958.*

Hon. HERMAN E. TALMADGE,
United States Senate,
Washington, D. C.:

We wholeheartedly oppose suggested reductions in the National Guard and urgently solicit your help in our fight to maintain a strong National Guard ready to deter any aggressive force.

Headquarters Company, 48th Armored Division: Louis White, Samuel Dennard, Bryan Howard, Alfred Underwood, Hubert Williams, George Willis, Frank Groce, Evan Lewis, Walter McGraw, John Donald, Harrold Dupree, Bobby Pritchett, Charles Renfoe, David Adams, Elmer Griffin, James Hutto, Louis Ray, Ronald Sharpe, Herbert Simpson, James Smith, James Wade, William Darley, Clark Sauls, James Spear, Edwin Anderson, Hansel Averett, Cordia Barbee, James Donald, Richard Haralson, Thomas Haynes, Hodge Malone, George Meadows, Warren Meadows, Phillip Usen, William Pender, Bobby Sands, Kary Wey, Jackie Amerson, Walter Amerson, Leonard Avera, Charles Buffington, Melvin Foskey, Raymond Huff, Robert Jones, Joseph Kelley, Will Melvin, Bobby Mines, William Mines, Charles McCuen, Bobby Nelson, Elbert Parker, Tommy Rhoden, James Richardson, David Sanders, James Shepard, Francis Swann, James Thompson, Bobby West, Oscar Woodward, Robert Ard, Roland Cromer, Alton Everidge, Larry Howell, Jerry Joyner, Billy Jones, Alton Kimsey, Charles Pritchett, Talmadge Ryals, Chauncey Smith, John Smith, Roger Taylor, Therom Watson, Riley Windham, Vernon Bray, Clifford Hooten, James Hubbard, Charles Jiles, Richard Little, Jimmy Hutton.

Indian Treaty Payments Should Not Be Taxed

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 27, 1958

Mr. NEUBERGER. Mr. President, the Federal Government is starting to reimburse members of the Pacific Northwest Indian tribes for abandoning the historic fishing rights at Celilo Falls on the Columbia River so that the great multiple-purpose dam at The Dalles site may become a reality. Eventually, tribal members will receive about $25 million for the rights they established through treaty agreement with the United States Government.

It now appears that the Bureau of Internal Revenue seeks to levy a capital gains tax on individual tribal members for income they receive from reimbursement. I do not believe there are grounds in justice and equity for such a levy. The Indians reserved these fishing grounds to themselves through a treaty with our Government. The Indians did not initiate the action through which the fishing rights were eventually canceled by the Federal Government. They are realizing the $25 million reimbursement on a more or less involuntary basis. The fishing grounds were needed for the dam reservoir area. Moreover, how is the capital gain to be evaluated? Who is to say that the fishing rights had a value of less than $25 million when originally acquired through treaty? I do not think the tribal members should be subjected to this levy, despite the absence of any specific legislative tax exemption for the Celilo fishing rights.

An excellent article on this subject recently appeared in the Oregonian for February 24, 1958, written by that newspaper's Washington correspondent, Mr. A. Robert Smith. So that the Senate may have the benefit of additional information on this matter, I ask consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TAX MEN SEEK SHARE OF INDIAN INDEMNITIES
(By A. Robert Smith)

WASHINGTON.—Uncle Sam's tax collectors are trying to get a share in those payments which the Government is now making to four Northwest Indian tribes who suffered by the flooding of the Celilo Falls fishing grounds. The Bureau of Internal Revenue's Seattle office has ruled that the individual members of the Umatilla, Yakima, Warm Springs and Nez Perce tribes, who collectively will be in line for about $25 million, will have to pay a capital gains tax.

The Bureau of Indian Affairs, from its Portland area office on up to the Indian Commissioner, are opposing the tax collectors on this one and siding with Indians. The Commissioner of Internal Revenue ultimately will have to decide the issue, but if the decision goes against the Indians, they are expected to go all the way to the Supreme Court if necessary in fighting the decision.

The Umatilla tribe is the first to have received any of its share—which totals $4,616,971—in the form of a check for $1,500,000 the end of January. The balance is to be issued later. The Yakimas are due about $15 million, the Warm Springs about $4 million, and the Nez Perce tribe about $3 million.

All had treaty rights in the fishing sanctuary at Celilo Falls on the Columbia River, which was inundated by the reservoir behind the Dalles Dam, now nearing completion.

Internal Revenue has had mixed success in trying to tax Government payments or the profits from property of Indians. In some historic cases, the courts have backed up the Indians, which is what the Northwest tribes are now relying upon.

The tax collectors argue that all citizens are subject to the income tax. Attorneys for the Indians contend that when the Federal income tax was adopted in 1913, Indians weren't yet citizens. They were granted citizenship in 1924.

The income tax now applies to all Indians who are out on their own, without dispute. The quarrel concerns those still in trust status who may receive certain unusually large benefits that would put them into a taxable bracket.

This is one problem, at least, that is settled respecting the Klamath Indians and their valuable property. Assuming some plan is allowed to take effect within a few years by which the tribal members are separated from Federal trusteeship and allowed to cash in their share of tribal assets if they wish, they will each be in line for a sizable payment.

Based on the Interior Department's appraisal of tribal assets, they will be eligible for nearly $60,000 each.

The Klamath Termination Act declares that "no property distributed under the provisions of this act shall at the time of distribution be subject to Federal or State income tax. Following any distribution of property made under the provisions of this act, such property and any income derived therefrom by the individual, corporation, or other legal entity shall be subject to the same taxes, Federal and State, as in the case of non-Indians."

This language should certainly protect the Klamaths from the treatment the tax collectors are giving the Umatilla, Yakima, Warms Springs, and Nez Perce Indians. Since these latter tribes have no such iron-clad legal protection, it would appear only fair that the Eisenhower administration unite behind the principle of protection which the Indian Bureau is advocating.

After all, was there a tax collector stationed at Celilo Falls to assess the Indians for the number of salmon they caught

George Washington, 1732–99

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a sonnet in memory of George Washington, by Dr. Glen Levin Swiggett.

GEORGE WASHINGTON, 1732–99

(By Glen Levin Swiggett)

Why do we not hold always in our thought
This man who is the symbol of a free
America and of that liberty
Which freedom-loving Pilgrim Fathers sought,
And for which, men of peace, they bravely fought?
Why not hold to the principles that he
Steadfastly held, and let the whole world see
We try to live by rules that he has taught?

The memory of this man we must not let
Fade from our lives as we now enter on
Adventures perilous to his concept
Of a free nation, nor must we forget
That by example, not by gifts, are won
Such nations' friendship as we should accept.

Appeal of American Citizenship to Foreigners

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES

Thursday, February 27, 1958

Mr. CHURCH. Mr. President, inscribed on the Statue of Liberty are these words which give voice to the American dream:

Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shore.
Send these, the homeless, tempest-tost to me.
I lift my lamp beside the golden door.

The dream still lives, Mr. President. I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to me by one who passed this statue a little more than 5 years ago, with his grandparents and orphaned younger brother, on the way to the lakes and pines of Bonner County, Idaho, and I ask that my reply be printed immediately following the letter.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

SANDPOINT, IDAHO, *February 18, 1958.*

Hon. FRANK CHURCH,
Senate Office Building,
Washington, D. C.

DEAR MR. SENATOR: Today I have been to Coeur d' Alene where, in the Federal Building, I was fortunate enough to pass the naturalization examinations so that I may be sworn in in April as a citizen of this city, county, and State, and of the United States. Now the way is open for me to explore those benefits of democracy of which I have heard and dreamed for years.

Though I have not yet been sworn in by the Federal judge, I am so pleased at today's success that I want to write to someone about it before I sleep tonight. And I think it fitting that I write and thank you and your Members of Congress who by your laws have made possible this wonderful miracle of saving us former central Europeans from the ghastly living death of the Communist machinery. Your liberal laws dealing with us who were once displaced persons have given us a new lease on life and a determination to be of devoted service to this new land of our adoption.

When I celebrated my 18th birthday last October, like other youth I quickly registered with the draft board. But the 18th birthday also meant that I could make formal application to begin the processes of becoming a naturalized citizen. So in short while my maternal grandparents (who brought me to America) and I had made out our preliminary papers, fingerprints, etc. We had been residents here for 5 years last April; so that requirement was taken care of. My younger brother and I had easily learned English in the schools, but the language and knowledge of civics did not come so easily to my grandparents, both of whom are past 50 years of age. You can imagine how happy I was that they as well as myself were able to pass today's examinations so that we all three can be made citizens together next month.

And now that I am almost a citizen I am wondering whether the privilege of attending the United States service academies is available as readily to naturalized citizens as to native born citizens. I know it may be nearly a year early for me to ask that question, but I must plan ahead. I am very interested in what I have heard and read and studied about the Naval Academy at Annapolis. I have been told that to get information and permission to attend I must address either a Senator or Representative from Idaho to Washington, D. C. As you are the youngest of our congressional people from Idaho, it occurs to me that you may be interested in the problems of youth and their education and would be willing to inform me as to the channels for getting more information about how to apply for a Naval Academy appointment for entrance in the summer of 1959 class.

I am past 18 years old and am in fine physical health. I am in my junior year at Sandpoint Senior High School and have been on the school honor roll every semester of my junior and senior high school thus far.

I am president of the junior class and am vice president of our Sandpoint Chapter of the Future Teachers of America.

I have been active in all branches of athletics up to this year. This year I have had to work in the bus station and newsstand 4 hours each afternoon and evening and all day on Sundays. That cuts out the athletics but still permits me to get to club and association meetings and our math seminar and such things.

For practice I have taken one administering of the college board exams and hope to take the merit scholarship exam that is to be given later this spring.

That gives an outline of some of the things I have been doing these past 5 years and 10 months since we came past the Statue of Liberty and took the train out here to Bonner County. I shall be glad to furnish any other details that may be of interest to you in case you could and would consider me as a possible candidate for nomination on your quota next year.

After my freshman year of high school, I attended on scholarship the honor students summer camp on the campus of Montana State University at Missoula. That helped me in gaining greater ease with my reading and speaking of English. If I earn enough this year, I hope to spend some time next summer taking some more additional academic work of similar sort.

I think my major interest in college will be electronics and engineering. My school grades have been straight A's for the high-school record up to the past semester when I slipped back to a couple of B's to mar my record. If I can get those grades up and pass the competitive exams with good scores, I shall hope to get scholarship aid for college attendance. If I can present physical and mental qualifications good enough to win appointment to and attendance at one of the Service Academies, then I can really get a good education and put my accomplishments to real service in the United States to which I already owe a great debt.

I shall be glad for any advice or assistance you may be able to give me in line with the rambling inquiry I have been making.

I shall also be glad to furnish names of any references that you may require before considering my requests further.

Thank you for your kindness.

Sincerely yours,

JACK BACKES,
(Formerly: Jack Zellenkowitsch; now: Jack Backes.)

P. S.—Since being saved from the concentration camp by my maternal grandmother, I had taken my mother's maiden name; but now as part of Naturalization I have had my surname changed to Backes, the last name of our father who died in the Tito concentration camp 11 years ago this month.

FEBRUARY 26, 1958.

Mr. JACK BACKES,
Sandpoint, Idaho.

DEAR JACK BACKES: First, I want to tell you how moved I was to read your letter. Yours has been an experience which leads you to value our democracy and its traditions to a high degree, and you are to be commended on the tremendous progress you have made since you came to the United States.

I am eager to assist you in your desire to attend one of the service academies. Because I feel that any worthy young man in Idaho, who can qualify, should have an opportunity to be considered for appointment to one of the service academies, last year I established this program. I have the Civil Service Commission give competitive examinations at several convenient locations in our State to assist me in making my nominations to the Army, Navy, Air Force, Coast Guard, and Merchant Marine Academies. Another such examination will be given in July of this year. If you will fill out the enclosed personnel form and return it to me, I will see that you are notified well in advance of the time and place where you can take the exam. Also enclosed is a sample questionnaire which will indicate the scope of the exam. Under separate cover I am sending you catalogs from each of the service academies in order that you can study their requirements and programs.

Congratulations, too, to you, your brother, and your grandparents upon becoming citizens. I welcome you and I am certain that our country, our State, and the city of Sandpoint will benefit from having residents who understand from firsthand knowledge the terrors of communism, and who, as a result, place an especially great premium on freedom.

Sincerely,

FRANK CHURCH,
United States Senator.

Congress and Foreign-Aid Funds

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Thursday, February 27, 1958

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington Evening Star of February 21, 1958, written by Constantine Brown entitled, "Congress and Foreign-Aid Funds—Appropriations for

UNIVERSITY OF MICHIGAN LIBRARIES

Yugoslavia, Poland, and India Expected To Stir Fight." I think this article deserves congressional attention.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESS AND FOREIGN-AID FUNDS—APPROPRIATIONS FOR YUGOSLAVIA, POLAND, AND INDIA EXPECTED TO STIR FIGHT

(By Constantine Brown)

There was an inevitable revulsion among rank-and-file Senators and Representatives when they read President Eisenhower's message asking for another $4 billion for foreign economic and military aid.

With the cost of living creeping upward, high taxes, and an uncertain economic situation at home, it is only natural that the legislators—and particularly the Republicans, who face an uphill struggle next November—should wonder how the American people will feel if they are burdened with another $4 billion in expenditures abroad.

It was recognized, however, that there is some merit in the Chief Executive's claim that much of this outlay is intended to strengthen our own national defense. This theme song has been repeated since 1950. In those 8 years we have contributed $38 billion for that purpose. Yet only a few months ago we heard loud laments from our defense experts that America and her allies are weaker than the U. S. S. R. and her satellites. Moreover, our allies in Western Europe, while accepting the American taxpayers' dollars, play the international game to suit their own interests and are revising downward their defense potential.

Senate and House leaders of both parties feel, however, that after some pruning of the administration's estimates they will be able to obtain approval of a satisfactory foreign-assistance program on a selective basis. This means that Congress itself, will single out the recipients and how much each of them will receive.

The administration is asking, for instance, $1.8 billion in direct military assistance for its allies. This means actual weapons. This amount will be seriously debated. It is natural that our active allies (Turkey, Vietnam, Nationalist China, and South Korea) should receive sufficient arms to permit them to resist any kind of aggression by either the U. S. S. R. or Communist China. They do not have the means to produce weapons—except Turkey, which can manufacture small arms but not heavy equipment or planes. Neutralism is unknown either to the government or people of these nations, although they are directly under the guns of the enemy. The administration is endeavoring to whittle down the ground forces over the protests of their respective governments. On the other hand, our Western European allies who have an industrial potential as good as ours are in a position to provide their own armament. Instead, these allies, such as Britain, are cutting down the conventional forces and expect us to provide them with guided missiles. The best they are willing to do for the common cause is to provide the necessary sites for our prospective IRBM's.

Germany could produce as good if not better nonconventional weapons than ours at cheaper cost. But the Bonn Republic's admission to the NATO was accepted by France and the other European members of the coalition with the provision that she will not be allowed to manufacture such weapons. She is, in fact, a second-class member of the coalition because of the fears of the West Europeans that she might become once more a military power.

Under present world conditions, it is felt in Congress, all free nations which are aware of the Communist threat and wish to resist it should do their utmost to face the situation and not leave it to George (in this case Uncle Sam) to do the job. Judging by the present mood of Congress the chances are that there will be some substantial trimming of the $1.8 billion asked by the executive.

There will be little room to slice the indirect military support of 12 associated nations. Seventy-five percent of the proposed $835 million is earmarked for South Korea, Nationalist China, Vietnam, Turkey, and Thailand. The majority of the legislators favor continued support to these countries. Neither is there much likelihood that the amount of $212 million for assistance to Morocco, Libya, and other recently born countries to help sustain their stability will be cut to any substantial degree. We have important air bases in Morocco and Libya.

The economic development assistance amounting to $626 million and the President's contingency fund of $200 million are expected to be among the most controversial items of the 1959 foreign-aid program. It is believed by the suspicious-minded legislators that the administration intends to use these sums totaling $826 million of the taxpayers' money to provide countries such as India, Yugoslavia and Poland with the assistance which Congress would otherwise deny them.

Heated debates are inevitable on the floor of the Senate and House after the respective Appropriations Committees bring out the bill.

Soil-Bank Program

SPEECH
OF
HON. MARTIN DIES
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10881) making supplemental appropriations for the fiscal year ending June 30, 1958, and for other purposes.

Mr. DIES. Mr. Chairman, I move to strike out the requisite number of words.

Mr. Chairman, when this matter was before the House last year the majority of us voted against the soil-bank program because this was generally conceded to be an unsound, unworkable, and harmful program. There was very little said in its behalf, but there was a great deal of information given to the House in reference to the many abuses of the program. It appeared to be the general consensus of opinion that a great deal of money had been wasted and that the farmers had received no real benefit from it. There was a well-grounded fear that its passage would alienate the sympathy of the nonfarm population to the extent that in time all farm programs would be scrapped.

When the bill went to the Senate the soil-bank program was restored in conference. Now we are told that the $500 million allocated to the program is insufficient to take care of the applicants because the Agriculture Department miscalculated with respect to the number of applicants and have refused to reallocate the $500 million among all qualified applicants. Because of this refusal on the part of the Agriculture Department, we are told that we must appropriate an additional $250 million for a program which is generally regarded as unsound. It is conceded that the Agriculture Department can now reallocate the funds so as to give all the applicants their fair share. But since the Department refuses to do this, we are told that we must increase the original appropriation.

Mr. Chairman, if this argument is valid, the Congress is at the mercy of the various agencies of the Government. All that any agency need do is to ignore the amount authorized by Congress and come back for a supplemental authorization. To me this appears to be extremely dangerous. More and more Congress is becoming a rubberstamp. During the 20 years I have served in this body, Congress has lost much of its prestige and power. The blame can be placed at our own door. The Department of Agriculture knew that Congress had limited the funds authorized to $500 million. There was no excuse for the Department of Agriculture to administer the act in such a way as to exceed this limitation. The farmers knew that there was only $500 million available for this program; no one was deceived. The only fair way for the Department to proceed at this time is to reallocate the funds but to stay within the amount which Congress authorized. We can compel them to do so by a simple resolution.

If this were a sound and constructive program, we might be justified in increasing the authorization, but no one thinks that it is sound. No one can defend it. If it is right to spend our children's earnings to pay people not to work land, then it is equally right to spend their money to pay people not to work in factories, in offices, or anywhere else. If this program is justified as a means of reducing farm surplus, why would not the same kind of program be justified in reducing labor surplus? We now have some four or five million surplus laborers. Would anyone suggest that we have the right to eliminate this surplus by paying 5 million laborers in America not to work? The principle is the same. It is frequently said that we have too many lawyers. Would it be right to pay the surplus lawyers not to work?

The ultimate effect of this kind of legislation is to destroy any hope we have of establishing a sound and workable farm program. The farmers need all the friends they can get because they are in a minority. You cannot win friends for the farmers by taxing people to pay farmers not to work land. Heretofore, the payments made to our farmers were based upon sound conservation principles. If the farmer received money from the Treasury, he was required to do something to build up his land for the benefit of future generations. You must remember that future generations must pay the bill because we are now operating on deficits as well as taxes. Have we any right to bequeath the burden of debt to future generations unless we give them some benefit in return? There is nothing more important to them than the conservation of our soil. It is not right to take money from one citizen who is compelled to work to earn the money in

order to give that money to another citizen for not farming land.

I know that there have been more abuses in connection with this soil-bank program than in connection with any agricultural program that I have seen in the past 30 years. It is a fact that can be verified in every community that there are people who use this program to buy land. Think of how unfair and utterly ridiculous it is to tax the American people for a program that enables some people to buy land without doing any work. As far as I am concerned, I am tired of being taxed for such purposes when I know that the farmer is not being benefited by it. I voted against it last year. The Senate put it on. Now I am told that regardless of my vote last year and the fact that based upon honest convictions I could not support it, I ought to vote for it this year because employees in the Department of Agriculture refused to follow the law. Of course, if they can do this in connection with this authorization, they can do it in every other instance. Congress distinctly said, "We are going to authorize $500 million for this program, and that is all." The Department knew that. It was plain understandable language. If any department of government can bring about an increase in appropriations by disregarding the law or through mistakes, then we are at the mercy of the departments.

It certainly seems to me that since the Congress limited the amount to $500 million, the Department ought to be compelled now to allocate that money among all the qualified applicants. They can do it. Of course, it may make some people angry, but my observation is that most of the farmers think we are crazy because we passed the measure in the first instance. The average farmer knows that it is not right. You and I know that it is not right. It is not right and never will be right to tax people who have to work for a living in order to give it to somebody for doing nothing, absolutely nothing. If you can do it for the farmers, you can do it for the independent merchant; you can do it for everyone else in our economy. We have come to the time that our Government has forgotten the vast unorganized segment of our population in America, the millions of people that are not organized and do not have a lobby, and are not able to exert influence. They are the ones who are paying the bill.

Since I have been in Congress, I have supported sound and honest farm programs and I shall continue to do so, but I will not suport a program which says to a man, "All you need do is let your land lie idle." The farmer has an honest case for parity because he is compelled to buy in a closed market and sell in an open market. Many of the products that he buys are produced by industries which are protected from foreign competition by the tariff. Furthermore, many industries are able to stabilize their prices which the farmer cannot do.

I do not believe that the farmers favor this program. Naturally, every farmer is going to try to get his share of it, but that does not mean that he favors it. I think that what he wants is equality of opportunity with all other producers. He wants his fair share of the national income He cannot survive if he is compelled to sell his products at low prices and pay high prices for the things which he must have.

This soil-bank program is not any answer to the farm problem. It is purely political. But we do not have the money to indulge in politics.

A Pitch for Trinity

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, February 27, 1958

Mr. UTT. Mr. Speaker, under leave to extend my remarks I would like to insert the following article entitled "A Pitch for Trinity," which appeared in the February issue of Western Water News, San Francisco, Calif.:

A PITCH FOR TRINITY—FARM BUREAU GIVES WATER USERS' POINT OF VIEW

In a statement presented to the Subcommittee of the House Committee on Interior Affairs during the hearings on the Trinity River Power development program, the American Farm Bureau brought clearly into focus the warter users' interest in the program. The statement was presented by A. L. Andersen of Colorado and Louis A. Rozzoni, president of the California Farm Bureau Federation—both members of the Board of the American Farm Bureau Federation.

Public Law 386 of the 84th Congress authorized construction of the Trinity division of the CVP as a Federal project. However, it contained a proviso authorizing and directing the Secretary of the Interior to make engineering studies and conduct negotiations with any non-Federal agency with respect to proposals to purchase the falling water. The Secretary conducted the studies and negotiations as directed and reported to the Congress under date of February 12, 1957. The Secretary recommended joint development of the waterpower resources of the Trinity division by the United States and the Pacific Gas & Electric Co.

SUPPORT JOINT DEVELOPMENT

Andersen told the committee that the factual data had been analyzed by the Farm Bureau technicians and that the fundamental data on which the proposed legislation is based had been accepted by the various agencies interested in the development program.

The Farm Bureau statement emphasized the importance of the original intent of the Congress in connection with water and power development. The committee was told that "the Congress in passing this act laid great stress on the statutory role of electric power for assisting irrigation and other objectives of the project. To definitely fix the place of electric power in this project Congress, after stating the primary purpose of the project, went on to say that electric power revenues were to be used 'as a means of financially aiding and assisting such undertakings.'"

HIGH VALUE ON FALLING WATER

On the value of falling water the statement was made that "in the proposed agreement for joint development the Pacific Gas and Electric Co. proposes to pay the United States an average payment of $4,600,000 annually for use of the falling water. This annual payment to the United States would be equal to more than $5 per acre-foot for the water used in power generation—water which is not consumed in the process of producing electric energy, but which is fully available downstream for sale in the various units of the Central Valley project for irrigation purposes. For example, Central Valley project water is sold in the San Joaquin Valley for $3.50 per acre-foot.

"According to the report of the Secretary of the Interior dated February 12, 1957, this schedule would contribute to the CVP during the 50-year contract period $165 million more than the Government would receive from Federal development of the Trinity Division. It is clear that the interest of water users is to obtain from Trinity the maximum contribution to Central Valley project that the marketability of the power will warrant, and that this objective will be furthered by private development. It is, of course, recognized that any estimate of this nature may necessarily be modified by other developments such as construction of the San Luis unit of the Central Valley project."

IMPACT ON CVP

Andersen called attention to the report of the Secretary of the Interior which advised the Congress that "under the present Central Valley rate structure the Trinity Power facilities, if built by the United States, would require substantial assistance from other project revenues in order to meet repayment requirements." He asked the question "Why should the users of water and power on the various units of the Central Valley project be required to pay or help pay for the Federal Trinity power plants? We believe this would defeat the purposes as declared by Congress in enacting the Central Valley Project Act of 1937."

BIG TAX PAYMENTS

Under the proposal of the power company, tax payments will approximate $83 million to the Federal Government and $62,600,000 to State and local government.

Noting this situation Andersen said: "Considering tax payments to Federal, State, and local governments and the increased revenues to the Central Valley project from the sale of falling water, joint development of the Trinity division would provide additional total revenues of $310 million above all-Federal development during the 50-year contract period.

"We recognize that under certain assumptions, the preference customers, most of whom are located in one city, would be required to pay more for electric power than under all-Federal construction. This additional benefit to a small group of preference customers must be compared to the total benefits to be derived from joint development. We believe that the benefits from joint development to farmers as water users in California and as taxpayers throughout the Nation far outweigh the subsidy that would be enjoyed chiefly by the residents of one city in California."

Concluding that taxpayers cannot be expected to supply all of the billions which will be required for the contemplated program of water and power development in California, Andersen stated that "public and private interests must work together to provide the funds for these needed developments. Revenues from the lease of the power privilege to agencies which can sell electric power at full market value under State regulations will help make possible this gigantic and desperately needed water conservation development. We believe that the Trinity water power development should be authorized to operate under this type of financing.

GREATER BENEFITS

"As the Secretary of the Interior said in his report to Congress in February 1957, 'joint

UNIVERSITY OF MICHIGAN LIBRARIES

development would provide substantially more funds for potential irrigation and multipurpose development in the Central Valley project area. This means that the power resources of the Trinity River division under joint development would provide the greater benefit to the project area and to the Nation as a whole.'

"It seems to us that the Secretary's statement is in complete harmony with the situation and that it is clearly in line with policies of the American Farm Bureau Federation."

The Importance of Extending the Full Appropriation for the Library Services Act, Public Law 597

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. BYRD. Mr. Speaker, under leave to extend my remarks, I wish to include a statement which I have submitted to the House Appropriations Committee's subcommittee studying the budget of the Department of Health, Education and Welfare. My statement is in support of the full appropriation for the Library Services Act, Public Law 597.

The statement follows:

THE IMPORTANCE OF EXTENDING THE FULL APPROPRIATION FOR THE LIBRARY SERVICES ACT, PUBLIC LAW 597

Mr. Chairman and members of the committee, I greatly appreciate this opportunity to speak in behalf of the proposed legislation to extend the full appropriation of Public Law 597, the Library Services Act. Federal aid to the States for public libraries in the rural areas of our Nation has always been of great interest and concern to me. I was happy to have been one of those Members who sponsored this type of legislation in the United States Congress. The passage of the Library Services Act in June 1956 represents somewhat of a triumph in many respects. I would not be human if I were not to admit that the passage of Public Law 597 gave me deep personal satisfaction, for it embodied a great deal of my own proposal for Federal aid to extend library services to rural areas. Other than this, however, and of far greater importance is the fact that the library services bill represents a concern on the part of the Federal Government for those 27 million children and adults in America without library services of any kind, and for the additional 53 million Americans with only inadequate libraries.

However, the passage of Public Law 597 was but the first step in getting a program of Federal aid to libraries underway. The funds authorized by the act are $7.5 million a year for the 5 years, beginning July 1, 1956. For the first fiscal year Congress appropriated $2,050,000. This amount provided for a basic grant of $40,000 to each of the States, Alaska, Hawaii and Puerto Rico, and $10,000 to the Virgin Islands. For the second fiscal year beginning July 1, 1957, Congress appropriated $5 million. The time has now come when we must seek appropriations for the third fiscal year, to carry on the programs that have been established. When we review the tremendous progress that has been made in the first 2 years, the importance of granting the full amount of $7.5 million authorized by the Library Services Act becomes obvious.

According to the Library Services Branch of the Office of Education, participation of the States in the program exceeds all expectations. During the first fiscal year of the program, 36 State plans for the further extension of public library services to rural areas were approved. These 36 States were able to match, and in some cases to overmatch the Federal funds provided. According to Public Law 597, the Federal grant must be matched according to a formula based on the State's per capita income. Additional funds are allotted based on the rural population of the State as compared to the rural population of the United States. The law also specifies rural areas as being those of less than 10,000 people, but large centers may be included in plans to extend public library services to rural areas.

The whole approach of the legislation of the Library Services Act was to stimulate State and local governments to develop their own library programs. During the first fiscal year the Federal Government paid grants to the States totaling $1,440,000. To match this amount State and local governments together were required to contribute $1,282,861. Actually, the 36 participating States managed to put as much as $4,224,120 into the effort, and so outdistanced requirements by nearly $3 million. We could not ask for more evidence of the willingness of the State and local governments to bring library services to the rural areas of our country. It is also proof of the careful preparation and planning which has been carried out by the State library agencies well in advance of the passage of the Library Services Act.

How was the money spent in the first year of this Federal aid program? If you will bear with me, I would like to give you a breakdown of the total budget of the 36 States' plans. The total budget of the 36 States amounted to $5,664,120. Of this $2,300,475 was spent for personnel, $2,083,622 for books and other library materials, $601,938 for library equipment and $678,085 for operating expenses. Included were approximately 80 new professional positions and 30 new bookmobiles.

Now that the second year of the Library Services Act is under way, the Federal program of aid to the States for rural libraries is being conducted in 45 States and the 4 territories of Guam, the Virgin Islands, Alaska, and Hawaii. The Office of Education expects to receive plans from Puerto Rico within a few weeks. The 3 States who have not as yet submitted plans are Delaware, Indiana, and Wyoming, and there is a possibility that the State plans for Delaware are to be received before the end of the second fiscal year. Under the appropriation of $5 million granted in the second fiscal year, it has been calculated that the matching funds from State and local sources amounted to $4,569,000. From all accounts, it would seem that the achievements of the second year of the program will be as impressive as the first.

The Library Services Act now approaches the middle year of its 5-year program. I do not wish to burden you with further financial evidence to emphasize the full importance of granting this program the full authorization of $7.5 million to carry on its highly dedicated mission. Rather I would like to emphasize that there is a great deal at stake here, the importance of the public library as a means of educating the American people.

Within recent weeks we have heard and read innumerable laments concerning the deterioration of American education. Figures have been published comparing our graduates in scientific and technical fields with those of other countries, particularly Soviet Russia. We have been reminded of the lack of intellectual pursuits on the part of the American people, and of our poor disregard for the scholar and his work.

I will not deny that all of these weaknesses exist and have existed for some time. The time has come, however, when we can no longer afford to ignore these weaknesses of ours. To do so is to invite disaster for ourselves and our children who are to come after us.

I am convinced that Americans everywhere are willing and ready to go forward to achieve those things that will strengthen America's intellectual forces. The response which they have already made to the Library Services Act is the best evidence of this fact. At a time like this we cannot deprive the American public of one of the greatest means to improve and educate itself. The 27 million Americans without library services of any kind is certainly one of the most compelling reasons to continue the program of the act. And the additional 53 million Americans with only inadequate library resources is another equally compelling reason. I would like to think, however, that the most compelling reason for giving the Library Services Act an opportunity to operate under a budget of $7.5 million dollars is the future of America itself.

Again, I wish to thank the members of the committee for making it possible for me to present my plea for a full appropriation for Federal aid to the rural areas of our great Nation.

Lithuanian Independence

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, I join many of my colleagues in a salute to the freedom-loving people of Lithuania in their celebration of the 40th anniversary of Lithuanian Independence Day. It is a shameful thing that these people find their homeland once again under the domination of a foreign nation.

Forty years ago this month the people of this Baltic nation threw off the chains of oppression and knew freedom. It was a day to be remembered and celebrated within the nation and by its citizens and former citizens around the world. It culminated a centuries-old struggle for freedom and liberty.

In those dark days of 1939, when so much of the world lost freedom, Russia moved into Lithuania, and independence was gone. Still today the Soviet armed might controls the nation. But the freedom once known by the people of this nation remains as a memory and as a dream for the future. Despite murders, intimidation, deportations, and all manner of pressures by the Red leaders, the people of Lithuania are still Lithuanians, not Russian puppets or Communists.

The people of this once-independent nation still strain for freedom, and we of the free world can take courage from the valor of the Lithuanian people. The Lithuanians in America are not numerous, but they are known in this country. Their deep religious feeling and their reverence of freedom and independence make them welcome.

I wish to join the rest of the free world in saluting the oppressed people of Lithuania and in marking the 40th anniversary of Lithuanian Independence Day. May fredom once more be possible for these courageous people.

The Soil Bank

SPEECH
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 10881) making supplemental appropriations for the fiscal year ending June 30, 1958, and for other purposes.

Mr. McGOVERN. Mr. Chairman, I would like to join the gentleman from Mississippi [Mr. WHITTEN] in supporting the proposed supplemental appropriation of $250 million for the acreage reserve portion of the 1958 soil bank. I will also support the amendment to be offered by the gentleman from Wisconsin [Mr. REUSS] limiting the amount any one producer may receive under the acreage reserve to $3,000.

From the very outset, I have stated publicly that the soil bank is no solution to the farm problem and I say that again today. But poor as the program is, we must provide enough funds to cover the farmers who have come to sign up for it in good faith. Regardless of our personal views on the soundness of the soil bank, we cannot hold out the hope of contracts to the farmers and then tell them at the last minute that the funds are exhausted.

The Department of Agriculture had announced that farmers would have until March 7 to sign up for the acreage reserve feature of the plan. Suddenly, with lines of farm applicants waiting to sign their contracts, the Department announced that the program would have to be placed on a first come, first served basis. The Department has inadvisedly seen fit to place such a loan interpretation on the $3,000 limit to any one producer which the Congress passed last summer, that they have used available funds much faster than would otherwise have been the case.

To date the soil bank acreage reserve has not materially reduced farm surpluses, it has not cut farm program costs, and worst of all it has failed to restore adequate income to American farmers. The program has been of little or no benefit to most of the family-size farmers of the Nation.

There is no doubt in my mind that the same amount of money which we have poured into the soil bank could have produced much better results if it had been invested in a farm price support program geared to the family-size farm.

I believe that the farmer wants to farm; he does not want to depend for his annual income on some scheme which pays him a small sum for letting his land go unworked. Naturally farmers will in many instances sign up for the acreage reserve payments when they are confronted with the kind of depressed farm prices that have been established by Secretary Benson.

Much can be said in support of the conservation reserve section of the soil bank, but the acreage reserve is nothing more than a stopgap which should be replaced as soon as possible by a genuine price protection program for farm commodities.

For the present, we have no other reasonable alternative than to vote the necessary appropriations to meet our moral obligations to the farmers who have planned for acreage reserve sign-ups in 1958.

Democracy in Argentina

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, February 27, 1958

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Democracy at Work," published in the New York Times of February 26, 1958. The editorial comments upon an exchange of correspondence between Representative CHARLES O. PORTER, of Oregon, and Assistant Secretary of State William B. Macomber, Jr.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEMOCRACY AT WORK

The election in Argentina, the revolution in Venezuela that followed other revolutions against dictatorships in Colombia and Argentina, the popular pressure that forced the Peruvian dictator to hold fair elections, the Cuban struggle—these and other events of recent years are signposts in the long, hard, uphill journey toward democracy in Latin America.

Last week a manifesto was issued here through a stanch democrat, Prof. German Arciniegas of Columbia University, a former Minister of Education and Ambassador of his native Colombia. It was signed by a long list of distinguished statesmen, scholars, political leaders and editors in many of the Latin-American countries and was circulated throughout the hemisphere in the free press. It is a firm and dignified statement of the democratic principles that should guide Latin American nations and an expression of faith in the fitness and readiness of the Latin countries for democracy.

By coincidence, an official statement from the United States was published about the same time and largely overlooked in the rush of big news. This was in the form of an exchange of letters between Representative CHARLES O. PORTER, of Oregon, and Assistant Secretary of State, William B. Macomber, Jr.

Mr. PORTER wrote to President Eisenhower on February 13 suggesting a statement congratulating the Venezuelan people on the overthrow of the Pérez Jiménez regime. Mr. Macomber replied on behalf of the President and ended his letter with a significant sentence that is worth attention and constant repetition.

"While we are not in a position to intervene in the internal developments of the countries of Latin America," he wrote, "we are in a position to feel—and we do feel—satisfaction and pleasure when the people of any country determinedly choose the road to democracy and freedom."

This exchange of letters was published in the CONGRESSIONAL RECORD of February 18. It should give some comfort to those who think that the United States has given too little support to the struggle for democracy in Latin America and has shown too much friendliness toward dictators.

Wings Over the Capitol

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. HALE. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the May 1937 issue of the Journal of the American Institute of Architects:

WINGS OVER THE CAPITOL

(By Leicester B. Holland, chairman, Committee on Preservation of Historic Buildings)

Controversy is always unpleasant. I think particularly so to architects, but sometimes it is necessary, even for architects, to stand squarely on one side or the other of important questions. And because the institute has conferred on me the honor of the chairmanship of the Committee on Preservation of Historic Buildings, I feel it my duty to speak, when the preservation of the most historic building in the country is threatened, as I think it the duty of the institute itself to weigh carefully, and give its official opinion clearly, concerning architectural matters of importance to all citizens of the United States.

THE EVER-EMULOUS ARCHITECT

It is a curious fact that every architect who has worked upon the United States Capitol, though constrained to accord his work with that of his predecessor, has felt that he could better it. But fortunately those employed were great enough to respect what had been done, and develop their own designs in harmony therewith.

The immediate concern, when L'Enfant had laid out the city of Washington, was to erect two buildings: one a palace, in the European sense, to house the President; the other the legislative halls to house the Government. Two competitions, perhaps the first architectural competitions in the country, were announced and held. For the President's house, the design of James Hoban immediately won; but for the much more complicated structure, the Capitol, no satisfactory plans were submitted. Providentially a late design was offered by Dr. William Thornton, an extrordinarily versatile man, a doctor, an amateur artist, and later the first United States Commissioner of Patents. His scheme for the Capitol was at once greeted with the highest praise. It was simple, noble, admirable, all the encomiums of the 18th century vocabulary were showered upon it by Washington and Jefferson. But as he was not a builder the work was carried out by a succession of recalcitrant supervisors, until finally Hoban took over the construction of the Capitol as well as the White House

UNIVERSITY OF MICHIGAN LIBRARIES

and there was peace. By 1800, when the Government was due to move to Washington, the northern section of the building, designed to house the Senate, was complete.

THE GRANDEUR THAT WAS THORNTON AND THE GLORY THAT WAS LATROBE

Then all efforts were turned to the southern section—now Statuary Hall—which was to accommodate the House of Representatives. To eliminate the complications of dual control, Latrobe was called in, in 1803, to design and to build, but in accordance with Thornton's original scheme. Latrobe was the apostle of the Greek revival. Naturally he found fault with Thornton's modified Roman inspiration, just as he complained that Thomas Jefferson, with whom he was in constant consultation about the Capitol, would not forget the Roman orders and realize that only in the Greek was true beauty to be found. But naturally also, he matched the exterior of Thornton's wing exactly. And then, in 1814, while the construction of the great rotunda between these two completed sections was still little more than foundations, the British sailed up the Potomac and did their best to burn it all. The interior was gutted but the outer walls stood solidly. Only the cornice and balustrade at the roof line were wrecked and where the flames licked through the windows the exterior was scorched and smoked. The exterior was quickly restored just as it had been, and tradition says that like the White House, which was also burned, it was then repainted to hide discloration. But inside all was to rebuild, and all the interior architecture became modified Greek in style.

THE NEW ENGLAND CROWN

In 1817 Latrobe stepped aside, and Bulfinch the master architect of Boston, the first American-born professional, was called in. He executed the central eastern portico as Latrobe had planned it, with stylistic mannerisms of his own; he completed the rotunda and crowned it with a wooden dome much less classical than Latrobe had intended, and he built the western extension in the center wholly according to his own design. The curious spacing of the columns there recalls most strikingly his portico on the Boston State House. Finally in 1830 the Capitol was completed, and Bulfinch went back to Boston. His characteristic touch is neither so Greek as Latrobe's nor as Roman as Thornton's, a little more naive than either but harmonizing beautifully with both.

A PRESIDENT TO THE RESCUE

For 20 years while the country grew, the building stood unchanged, admired by all. At last both legislative bodies had increased to such extent that enlargement became obligatory. Mills, then Architect of the Capitol, suggested a large addition to the east, forming a Greek cross, but President Fillmore, anxious to preserve the building which had become a venerated symbol, would have none of this. So Mills resigned and Walter took his place. He too suggested a great eastern extension, which Fillmore promptly condemned, but also submitted an alternate plan in accordance with the requirements. "It was desirable," said the President, "not to impair the harmony and beauty of the present building, which as a specimen of architecture is so universally admired. Keeping these objects in view, I concluded to make the additions by wings detached from the present building, yet connected with it by corridors. This mode of enlargement will leave the present Capitol uninjured."

The composition, now practically three separate buildings, extended twice as far from north to south as it had done before, and Bulfinch's little dome was quite inadequate as a central motive. So Walter included a large new dome as part of his original composition. And he designed it most masterfully, not as a separate thing resting upon the roof of a building less than half its height, but taking as its base the central colonnaded portico of Latrobe and Bulfinch and building up from that in diminishing rings to the great hemisphere. So that the whole grows in one majestic pyramid, straight from the ground to the crest of the goddess of freedom. In this respect, there is no large dome like it in the world. I do not think there is any more beautiful.

THE MONUMENTAL SNIVY [1]

But the problem of constructing such a dome was difficult, for the walls on which it must rest were built for a much smaller mass, and without tearing out the whole interior and building new and heavy foundations in the unstable hillside, a masonry structure was impossible. Walter here showed ingenuity to match his artistry. He adopted the only possible material, iron. He placed the upper drum and the dome itself directly above Bulfinch's circular wall; the lower ring of columns was carried on iron brackets cantilevering out from it; and around the base he set an octagonal wall or podium of iron, entirely free from the inner construction, to act as a transitional member between the circle above and the rectangular portico below. This iron skirting is purely stage scenery, it carries nothing and rests as chance will have it, just on whatever walls it happens to cross. It is entirely meant for visual effect, and in this it is entirely successful, also it is perfectly secure. But it happens that the front portico below is very deep, about 32½ feet in fact, so that while the face of the skirting is well back of the face of the front line of columns and the pediment, it is actually 12 feet 10 inches in front of the back wall underneath. This discrepancy shows clearly in a section of the building, but actually in elevation it is very hard to see. Only from points far around to the side and close to the face of the building is it apparent. I doubt if anyone has ever noticed it unless it was called to his attention. Yet this is the much discussed "overhang of the dome", which has served as the ostensible reason for later proposed alterations to the facade.

Walter's wing buildings are of marble, unlike the central part of the building and the dome, which are uniformly painted. Turned at right angles to the longitudinal axis of the central part, they create a broad and shallow court in front, and at the rear project a little less than Bulfinch's central mass. In general effect they are quite classic. Walter had been to Europe and doubtless was much influenced by the classic revival in Germany, for his flutted columns and low pediments have the somewhat dry correctness of scholarly classicism, which Bulfinch's more Jeffersonian portico lacks. But again the new work, though slightly different, harmonizes excellently with the old.

THE PERFECT BLEND

In 1865 the Capitol was completed just as it stands today. And as it stands it shows two miracles. The first is esthetic; it is almost unbelievable that a succession of building operations, by such various hands, could have resulted in anything but a hodgepodge, quaintly picturesque at best. Instead the outcome is by common accord one of the most beautiful buildings in the world, dignified, simple, well proportioned, harmonious in its varied detail, unique in composition. It is certainly finer than any of its architects could have planned, if he had been left wholly to himself.

THE HISTORICAL MIRACLE

The second miracle is the picture of its history which it presents. For by extraordinary luck and thanks to the watchful eyes of successive Presidents, nothing of its various building periods as shown on the exterior has been lost, save Bulfinch's wooden dome. It stands today as it stood at the end of the Civil War. If in the mind's eye one blocks out the wings and the dome, it is to be seen as it was completed by Bulfinch in 1830. If then the hand be held to hide the central portion, it stands as Latrobe left it in 1817, the two low domes bespeaking his interiors. Remove these last and we see it as the British found it when they burned it in 1814. Remove the left hand part in turn and it appears as was in 1800 when Washington became the Capital City of the United States. And this is not just the appearance of successive stages that we see, it is the actual substance of the masonry. Closer inspection reveals in many details the various masters' hands; Thornton's pilasters have entasis, those of Bulfinch have simply sloping sides, while those of Walter are vertical in the classic manner. The capitals show where one man's work stopped and another man's commenced. It is the visual history of American architecture for any who can read it, and it is the only building in this country that tells its story as the cathedrals and palaces of Europe do.

From the esthetic and from the historical point of view it seems incredible that any architect should wish to change it. And yet almost every architect that has been connected with the Capitol has wanted to try his hand at it.

GILDING REFINED GOLD

Walter, himself, was the first. When he had finished his work he was not satisfied. What architect is satisfied with his finished work? His thoughts returned to his first design, he wanted a great central mass projecting eastward. Doubtless the older work seemed to him less stately than his own, in detail and material. He drew up a plan to do it all over in marble and bring the center out as far or farther than the wings. Later he drew another scheme practically filling up all the court. These are what are spoken of as the architect's original designs for completion of the building. Fortunately there has never been any serious thought of executing any of them, even the present plans ignore them, except as argument for changes of a different sort.

EXTRAMURAL REPERCUSSIONS

Since Walter, the titular Architects of the Capitol have not been designers; they have rather been engineers, admirable constructors supervising the execution of other men's plans. Thus, when the next expansion became necessary, through the shocking congestion of the Library, it was not the Architect of the Capitol who provided the design but the firm of Smithmeyer & Peltz. And this time the addition was not made to the Capitol itself, but the Library was moved bodily outside and given a building all its own. And in accordance with earlier history, when the new Library was finished the architects felt that the Capitol was out of harmony with it and drew plans for doing it over to conform with their own creation. The new design had eight little cupolaed towers, like minarets around the central dome, producing somewhat the effect of a modified classic mosque. But, fortunately, the design was never executed.

ECHOES OF THE COLUMBIAN EXPOSITION

Then a little later, to provide more room for the overcrowded quarters of the legislative bodies, the House and Senate Office Buildings were erected, again expanding the Capitol outside itself, and again not from designs of the Architect of the Capitol, but this time from those of Carrère and Hastings. And when their work was done, did Carrère and Hastings draw plans for the alteration of the Capitol? Of course, they

[1] This word is not to be found in any dictionary.

did, though the initiative came from a congressional committee, Carrère and Hastings being called in to devise ways of correcting the overhang of the dome and to replace the painted sandstone with marble. The architects categorically condemned Walter's proposed eastward extension and presented two new schemes, A and B. By the first, the whole eastern wall of the old building was to be brought forward 12 feet 10 inches, just enough to catch the overhang of the dome. It was all to be done in marble with Walter's rhythm substituted for Thornton's in the decoration of the walls, Walter's fluted columns substituted for Bulfinch's plain ones, and the width of the central motive increased by two columns so that it should be larger than the entrances to Walter's wings, with the pitch of the pediment changed from Bulfinch's style to Walter's. Scheme B was like A in elevation, only the facade was brought forward 32 feet 6 inches, so as to provide office room within and a corridor connecting Walter's wings on the second and third floors. But Carrère and Hastings very strongly advised against adoption of this second scheme, as they said it would fill up the shallow court, one of the most attractive features of the present composition. And in fact they seemed to have such appreciation of the building as it stood that they questioned whether it would not be wisest simply to reface the existing walls in marble in their old position. Again, fortunately, neither design was executed.

The last extension has been to remove the Supreme Court from its old quarters to a vast new building facing the Capitol. The architect, Cass Gilbert, died before he had time to realize how little in accord the design of the old structure was with his new marble temple. And so we have no recommendation from him that the work of Thornton, Latrobe, and Bulfinch should be given the Gilbertian touch.

SECOND GROWTH

Since then, the extensions themselves have been extended, the House Office Building in a new structure by the Allied Architects of Washington, the Senate Office Building in additions by Wyeth and Sullivan and the Library in an annex by Pierson and Wilson. As traditionally proper, the Architect of the Capitol has now been assisted in drawing plans for the current projected reformation of the old building. Again, as Carrère and Hastings discarded Walter's suggestion, so now Carrère and Hastings' vehement warnings against filling the court are disregarded, and it is proposed to bring the facade forward as much as 40 feet.

Such is the history of the building. It has been eloquently epitomized by Charles Moore in his introduction to Glenn Brown's History of the Capitol:

"Historically, the Capitol at Washington is the most important structure in the United States. Other buildings, such as the Old South Church in Boston and Independence Hall in Philadelphia, are connected with important episodes in the history of the country. The Capitol is unique in that it both typifies the beginning and also marks the growth of the Nation. Like the great Gothic cathedrals of Europe, its surprising merit is not its completeness but its aspirations."

And I may add that it is notable also in that as it has grown, the new work has never entailed the destruction of the old, except for Bulfinch's little dome, and that recently all its growth has been in widening rings outside itself. From the historical point of view it is amazing that any architect should wish to start the destruction now.

THE DEATH SENTENCE

The present bill before Congress makes destruction mandatory. It does not create a committee of Congress to study and report, but a committee which, with the aid of the Architect of the Capitol and such architectural advisers as it may choose, shall proceed to the extension of the eastern front "in substantial accordance with either scheme A or scheme B" of Carrère and Hastings' studies, and the substitution of marble for the original sandstone. Regardless of whether aesthetic or utilitarian gains are to be had from the proposed changes, it is certain that all the exterior stone work of Thornton, Latrobe and Bulfinch is irrevocably doomed to destruction once the bill becomes law. That is inescapable. The form may be retained, on the west at least, but new stone of a different character will be substituted for the original work throughout.

AND ALL FOR WHAT?

What are the gains that could warrant such a sacrifice? Those claimed are three: 1. Provision of a visible support for the scarcely visible projection of the skirting of the dome; 2. Substitution of marble for painted sandstone, as a more durable material and to make the central portion match the wings; and 3. Provision of extra committee rooms within the building and, if the extension be brought far enough eastward, a gallery on the third floor connecting the new House and Senate wings.

In all the hearings, the proponents of the change have emphasized the fact that increased internal space is not a primary incentive, but a secondary desideratum. It is, however, the factor which to many architects might seem decisive. But before undertaking such a change most architects would wish to know how much space was needed and where it would be most useful. So far as we know, no thorough study of these matters has been made, and none is contemplated under the terms of the bill, which calls for extension only according to a predetermined plan. If added space is vital, it is not at all impossible that it could be found by internal reorganization without any extension, or by removing some of the subsidiary activities outside the building, as has been done when space was needed heretofore. Or if room cannot be found within the present walls, it might be possible to extend Walter's wings to the east or to make additions to the north and south of his work in such manner as to be practically invisible from the front. The alteration would then be to the newest and least interesting, rather than to the oldest part of the building. If the corridor in the upper story, seemingly of use chiefly to members of the press gallery, were necessary, it might be added with less disfigurement on the west side than on the east. But no such alternatives, or say others, can be considered by the terms of the bill.

MAJOR OPERATIONS FOR MINOR ILLS

Again if the overhang of the dome is intolerable to those who know about it, it could be cared for by simply bringing forward the face of the wall beneath, under the portion, reducing the depth of the latter to 20 feet; or the whole portico, or simply the central part of it could be brought forward 12 feet, using the same material and leaving Thornton's and Letrobe's work untouched. But no such alternatives can be considered by the terms of the bill. Aesthetically such moderate changes, though hardly warranted, would undoubtedly be preferable to moving the whole facade eastward, for as Carrère and Hastings emphasized, moving the facade lessens the depth of the shallow court, and moving it 40 feet, as is contemplated, would almost wholly destroy the court. Even an appreciable eastward movement of the portico alone, would somewhat diminish the present unity of the central mass rising from ground to dome.

THE DREAM OF MARBLE HALLS

The substitution of marble obviously admits of no alternative except to preserve the old painted sandstone. This change is the one, perhaps the only one, which might have general popular appeal, for there is no denying that marble is the more expensive material. But aesthetically, as well as historically, there would be a loss rather than a gain. For Thornton's detail is much more interesting than Walter's, yet it is sandstone detail and could hardly be copied in marble without losing its effect, as one can hardly copy pine furniture in rosewood without absurdity. If marble is to be used, marble detail should be adopted, as Carrère and Hastings planned, thus making Walter's wings in all respects the oldest instead of the newest parts of the Capitol.

The change of material would entail an even more serious esthetic consequence. The dome is of iron, painted; it will always be so. At present the substructure from which it grows is also painted, and there is unity of color and texture throughout the central mass, the wings being frankly appended units. If the central portion be made of the same material as the wings the effect will be quite different. There will be then an extraordinarily long, low marble building, 10 times as wide as it is high, on top of which the dome, of another color and texture and twice as high as the walls below, will rest. The unfortunate appearance of the result need hardly be stressed.

My capacity in the institute is primarily concerned with history. Yet, as an architect, I realize that historical values must be sacrificed sometimes to esthetics and esthetics to utility. But these necessities must be very compelling to warrant such sacrifice in the case of so rare a monument as the Capitol. At present, no major utilitarian necessities are advanced, and esthetically, the changes seem bound to produce a loss rather than a gain. To sacrifice the present very beautiful composition which embodies the history of American architecture, simply to make it more academically correct, or just for a love of marble, seems to me, frankly, a piece of parvenue vandalism. If this be architecture, then architecture in America is not the goddess I have thought her, but a hussy who would swap her honor for a new spring hat.

Poll of the Fourth District of California

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MAILLIARD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. MAILLIARD. Mr. Speaker, again the citizens of the Fourth District of California have shown a commendable interest in the affairs of their Government by responding in gratifying numbers to my most recent questionnaire. One out of every sixth registered voter was asked to participate and, as of this date, over 18 percent have replied, many including carefully considered analyses of the more vital issues.

I am greatly encouraged by the substantive thought given to some of the most important current problems. The following tabulation may be of interest to my colleagues:

UNIVERSITY OF MICHIGAN LIBRARIES

	Percent—		
	Yes	No	No opinion
1. Do you favor replacing the Joint Chiefs of Staff with a single military chief who would give orders to all the services?	54	41	5
2. Should we finance an all-out crash program, regardless of cost, to attain supremacy in missiles, rockets, and satellites?	45	51	4
3. President Eisenhower's new budget calls for $3.94 billion for the mutual security program to help our allies. Should we spend the money for—			
a. Military assistance to our allies?	45	42	13
b. Help in promoting the economic development and political stability of less advanced nations to counter Russia's economic cold war?	78	16	6
4. Do you favor—			
a. The elimination of all price supports for agriculture (cotton, wheat, corn, rice, peanuts, and tobacco)?	63	30	7
b. Payments to farmers who take land out of production (practicing conservation) for a certain period of years?	32	61	7
5. Do you favor Federal grants, matched by State funds, to improve mathematics and science courses by providing for better equipment and higher pay in some cases?	72	25	3
6. Do you believe that each State, as best it can and will, should solve a classroom shortage without the financial aid of the Federal Government?	56	41	3
7. Do you favor Federal legislation guaranteeing democratic elections in union affairs and also requiring annual reports on the handling of union health, welfare, or pension funds?	93	5	2
8. Do you believe your Representative in Congress should accept postponement of projects in his district, no matter how worthwhile, in order to reduce the budget or increase funds for defense?	45	48	7

Better Educational Opportunities

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. CUNNINGHAM of Nebraska. Mr. Speaker, I am today introducing legislation which will, in my opinion, do more toward assuring American youth constantly better educational opportunities than any program of Federal scholarships, any Federal program of classroom construction or any other Federal program.

My bill allows school teachers and school administrators to deduct for income tax purposes professional and extraordinary living expenses incurred while furthering their educational training. It would allow any teacher or administrator a maximum $600 deduction from gross income prior to determining taxable income.

Teachers and administrators could deduct expenses of tuition, fees, books, and transportation from home of record to the institution, as well as expenses for meals and lodging.

Such legislation would encourage teachers to continue their professional education, and I would suppose it would be an encouragement to young people entering the field, since it is a universal truth that promotion and allied salary increases in the teaching field go most usually to those who are seeking to improve themselves through further professional training.

Through encouraging teachers to improve themselves and through encouraging students to enter the teaching field by making it easier for them to advance their status and salary level, I feel this bill will do much to improve the already high caliber of teaching in our schools.

Through an improved caliber of teaching, our so-called math and science lag will soon dissolve. The shortage of teachers should certainly be attacked by making teaching more attractive financially. And finally, there is no new agency, bureau or even office needed in this legislation. No new employees need to be hired and there is no appropriation needed to carry it out.

Interparliamentary Union Holds Its 46th Conference in London, 1957

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. REED. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

INTERPARLIAMENTARY UNION HOLDS ITS 46TH CONFERENCE IN LONDON, 1957

The 46th conference of the Interparliamentary Union was held in London September 12–19, 1957. Only 4 years before, the United States Congress had been host to the Union at the Capitol in Washington. Meantime, annual conferences had been held in Vienna in 1954, Helsinki in 1955, and Bangkok in 1956.

Although the union is almost 70 years old, this was only the 46th meeting, since it did not always meet annually and did not meet during the periods of 2 World Wars. Yet the idea of the union, participation of parliaments in the foreign affairs of their countries, the establishment of the principle of arbitration of disputes, and the struggle to bring about peace through mutual understanding had never been abandoned and the verging on London by 49 civilized nations, intent upon peace, was a strong indication of the continued force of a great idea. The United States was a charter member of the union in 1889.

The United States delegation, which had left Washington a few days previous, consisted of Hon. HENRY O. TALLE, of Iowa, chairman, who went to fill the place of Hon. DANIEL A. REED, president of the group; Senator GORDON ALLOTT of Colorado, Senator RALPH E. FLANDERS of Vermont, Senator J. ALLEN FREAR of Delaware, Senator J. WILLIAM FULBRIGHT of Arkansas, Senator THOMAS C. HENNINGS, JR., of Missouri, Senator ESTES KEFAUVER of Tennessee, Senator A. J. MIKE MONRONEY of Oklahoma, Senator STROM THURMOND of South Carolina, and Senator ALEXANDER WILEY of Wisconsin, a vice president of the group. The House delegation consisted of Congressman HALE BOGGS of Louisiana, Congressman HAROLD D. COOLEY of North Carolina, also vice president of the group and member of the council, Congressman CHARLES B. HOEVEN of Iowa, Congressman KENNETH B. KEATING of New York, Congressman JOHN MCMILLAN of South Carolina, Congressman GORDON L. MCDONOUGH of California, Congressman W. ROBERT POAGE of Texas, Congressman JOHN M. ROBSION, JR., of Kentucky, Congressman ANTONI N. SADLAK of Connecticut, and Congresswoman KATHARINE ST. GEORGE of New York. Mr. William T. Reed, assistant secretary for the minority of the Senate acted as secretary of the delegation while Dr. Franklin Dunham accompanied the group as permanent executive secretary and liaison to the Interparliamentary Union and United States Embassy. Mr. Pat Holt of the Senate Foreign Relations Committee and Dr. Charles J. Zinn of the House Judiciary Committee acted as observers during the conference.

At the opening of the conference 49 nations made up the membership of the union. These nations are, Albania, America (United States), Argentina, Australia, Austria, Belgium, Brazil, Bulgaria, Burma, Ceylon, Czechoslovakia, Denmark, Finland, France, Germany, Great Britain, Greece, Haiti, Hungary, Iceland, India, Indonesia, Iran, Iraq, Ireland, Israel, Italy, Japan, Laos, Lebanon, Liberia, Luxembourg, Monaco, Netherlands, Norway, Pakistan, Peru, Philippines, Poland, Rumania, Spain, Sudan, Sweden, Switzerland, Thailand, Turkey, U. S. S. R., and Yugoslavia. At the first meeting of the council held early in the week, applications were received from Egypt (to return to the conference), Algeria, South Vietnam, and Ghana. All but Ghana qualified technically and were elected. Absentees were Turkey, Peru, and Haiti, so the nations in actual attendance remained at 49, though there are now 52 members in the union, the largest number of representative parliaments in its history.

Meetings of both the conference's executive committee and the council were held during and, in th case of the executive committee, after the conference, as well. Invitation from Brazil to meet in Rio de Janeiro, the fourth week of July 1958 was formally accepted and the council meeting for 1958 was subsequently set for Geneva, approximately March 1. Since the conference will be so early in the summer, this is of course the first time the conference will have met on the South American continent and a great number of Latin-American nations are to be expected.

Members of the United States delegation were in many advance conferences during the early part of the week serving on committees and attending council meetings until the inaugural of the conference which was held with all the panoply of ritual and color in Westminster Hall, ancient seat of the British Parliament with Queen Elizabeth II, presiding. In a short and beautifully-given speech, the Queen reminded the delegates from all the world that it had been 67 years since the first meeting in London (the second meeting of the union actually to be held) and that those same high hopes for peace through parliamentary action were the potential truth of peace of these meetings. The Prime Minister, Mr. MacMillan, responded to her greetings, as did the Minister for Foreign Affairs, Mr. Selwyn Lloyd and Lord Stanagate, retiring president of the council.

The Queen's speech follows:

"It gives me great pleasure to be able to attend the opening of the 46th conference of

the Interparliamentary Union and I extend a warm welcome to the representatives of national parliaments from all over the world.

"This great Hall of Westminster is the birthplace of British parliamentary institutions. The first Parliament was summoned here 700 years ago and many great events in the history of parliament and nation have taken place within these walls. This hall bears witness to the durability of the system and it is therefore a most suitable choice for this meeting of the Interparliamentary Union.

"I am proud to say that political life in all the nations of the Commonwealth, of which I am the head, is based on parliamentary government. We regard it as both the proof and the guardian of our democracy. It may not please all the people all the time, but it is essential if the individual is to remain free and all are to be equal before the law.

"The Parliament at Westminster has seen many changes and survived many crises. It has adapted itself to the conditions of each succeeding age without loss of vitality or strength. This has happened because there have always been men who have realized that it is the principle of parliamentary government that is important and principles are only kept alive by people who believe in them passionately.

"Other nations have developed political assemblies in different ways with a great diversity of form and function, but the fact that so many are represented in this union is a solid expression of faith in Parliament as the first and principal instrument of democracy.

"Sixty-seven years ago, at your first meeting in London, a resolution of the union recorded your belief that closer relations between the members of the various parliaments would make for peace. Subsequent events have not been very encouraging but everyone here today knows the potential truth of these words. The union brings you together, not as representatives of governments but as representatives of parliament. You are all men and women in public life with obligations and duties to those whose interests you represent in the counsels of your own countries. Whatever differences may exist between the nations you, at this meeting, have much in common.

"If this union can help you understand each other's problems and points of view, if it can help you to advance those forms of government and standards of international dealing which we know to be right, then we may yet win that concord among the nations which has been sought for so long and which we need so urgently today.

"I wish your discussions every success at this 46th conference of the Interparliamentary Union."

The Prime Minister said, in part:

"It falls to me—and this is a very great privilege—to offer to Your Majesty in the name of this distinguished and representative gathering our sincere thanks for so graciously consenting to open our conference. We all realize the heavy burdens which lie upon Your Majesty, and the many claims upon your time and strength. We are therefore doubly grateful for the honor which you have done us.

"Here, as Her Majesty has reminded us, we are assembled in an ancient building hallowed as the very birthplace of our parliamentary institutions. These have been developing with many changes during many centuries of history and the particular form which our parliamentary democracy now takes is the result of a very prolonged development. I think it would be quite wrong to overlook the fact that parliamentary institutions allow of different kinds of relationships between the executive authority, be it crown, or president, or cabinet, and the deliberative and legislative assembly. The precise balance of rights and powers between the two are always changing. In some countries these are governed by written constitutions, in others they respond to different conditions at different times, but there is one essential if parliamentary government is to have a real meaning. Parliamentary representatives must represent their electorate. They must not be the creations of some outside body. They must be individuals and not ciphers. Free men are not nominees. They must have the right of free speech and free criticism. Whatever their powers be at any given time in the development of a country, parliament and executive must be separate and living institutions with their own sense of responsibility and their own rights and duties.

The Secretary of State for Foreign Affairs, said in part:

"There is another way in which we can effectively help to improve the situation. It is on the topic of disarmament that I particularly wish to speak to you today. The Interparliamentary Union devoted an important part of its time at its last session in Bangkok to the study of this problem. There is plenty of controversy about it. But as your guest I do not want to go too far into the controversial aspects with you this afternoon. I want rather to indicate the way to common ground.

"I wish to emphasize three points. First, the need for progress; second, the opportunity which the world has of making progres at this time and, third, the lines upon which progress can be made.

"First, with regard to the need to make progress. A race in armaments is wasteful and dangerous. It is wasteful because it draws off resources in men, in money and materials. It absorbs scientific inventiveness and technical knowledge. All those, if they were devoted to peaceful purposes, could greatly enrich the world and add to the sum of human happiness. A race in armaments is dangerous because it increases tensions and adds to the risk of war. At the present time the hydrogen bomb is the greatest deterrent to war.

"Our security in this country to a large extent is based upon that deterrent. But we should much prefer a comprehensive disarmament agreement, properly controlled, covering all the fields of armaments, of a nature that would make a major war impossible. What we wish to do at the present time is to make a beginning on the way towards that comprehensive agreement.

"Second, the opportunity to make progress. The disarmament subcommittee has been meeting in London for the past 5½ months. It has now adjourned and reported to the disarmament commission of the United Nations. It has not been able to record agreement between its 5 members, although 4 of them have put forward joint proposals. I believe that many people are disappointed that this period of intensive work should end without agreement.

"It has been a great disappointment to the government and people of the United Kingdom. There is a temptation to look at the results of the talks in a mood of cynicism or even despair. The very fact that there was a certain optimism about these disarmament talks 2 or 3 months ago has tempted some to give way to disillusionment or impatience.

"I, however, do not look at the matter in this way at all. There has been a period of useful discussion. Much attention has been given publicly and privately to the problems involved. We face a new session of the United Nations. I believe that psychologically it is the time for us to make progress: the cost of arms, the nature of modern arms, the strains and stresses in the world—all these combine to reinforce the challenge. It is not as though progress in disarmament would simply affect the budgets and economic situations of the countries. It would also of itself contribute to the relaxation of tension necessary to further progress.

"How then could progress be made? I would venture to set out four essential considerations governing our approach.

"First of all, it would be a mistake to wait until there is sufficient agreement to enable a comprehensive disarmament plan covering all stages to be evolved and agreed upon. Such a comprehensive plan is still our objective—one which will include the prohibition and elimination of all nuclear weapons and the reduction of conventional armed forces and armaments under strict control to levels needed for internal security and nothing else.

"But in the world of today it would be foolish to believe that any such plan is practical politics. We will not abandon it as an ideal but it will not happen soon. We should therefore now aim at a partial or first-stage plan, one upon which there is a chance of agreement being reached.

"My second point is that if a start is to be made toward partial disarmament, it is not wise to impose political conditions for the first step. Before the process of disarmaments gets to an advanced stage, I am certain there will have to be political settlements of certain outstanding problems. I think we would be unwise to specify what these problems might be, because that might simply be to erect barriers to further progress. But for a first stage or partial plan I think we should have in mind such measures as are likely to be acceptable without any political preconditions.

"Thirdly, agreement to be sound must involve disarmament both in the nuclear and in the conventional field. Whatever debates there may be, whatever the clever dialectics on either side, you will not get one group to accept a measure of nuclear disarmament unless the other group also accepts conventional disarmament. You will not get one group to accept conventional disarmament unless the other accepts nuclear disarmament. We have to be realistic in these matters. It isn't a question of propaganda positions, who wins the war of words, it is a question of realities and there will not be an agreement unless those two march pari-passu. There are two reasons for this. Some countries have a striking superiority in conventional weapons. They are in a geographical position to move conventional armies and armaments without great problems of transportation. For them conventional attacks are much easier to prepare and to launch and, indeed, to maintain. There are other countries with scattered responsibilities, with long lines of communication which have to be over the sea in large measure, countries which are therefore in quite a different position. That is the first reason for conventional and nuclear disarmament proceeding together.

"The second reason for our saying that nuclear and conventional disarmament must go together is that we hate war, by whatever weapons it may be waged. We believe that a world war fought with so-called conventional weapons similar to those of the last war but improved upon, will be just as terrible for the world as a war fought with nuclear weapons. It may take longer for society to destroy itself, but it will happen just the same.

"The fourth point is that if such a partial agreement is to contribute to a sense of greater security in the world and not the opposite, it must consist of measures capable of being controlled and must provide for the degree of control considered necessary. It is no use entering into agreements which are simply declarations of intention. In the realm of disarmament, it is my firm belief that treaties, however solemnly enacted which do not provide for controls, will do nothing to increase international confidence."

UNIVERSITY OF MICHIGAN LIBRARIES

The business of the conference actually started at 2:30 p. m. in the afternoon when sessions began in the admirable circular auditorium in Church House, close by St. Margaret's Church and the abbey. After the election of Sir Malcolm Stoddart-Scott, chairman of the British group as president of the conference and the Honorable HENRY O. TALLE as a vice president, a letter of greeting was read from the Honorable DANIEL A. REED, president of the United States group who could not be present with the delegation. Ringing applause greeted the close of the letter and, subsequently, a radiogram of greetings was sent by the entire conference to Mr. REED, beloved member of the union, on the occasion of his 81st birthday?

The general debate opened on the report of the secretary general which had been circulated in advance to all delegates. Speakers for the United States delegation were the Honorable HENRY O. TALLE, of Iowa, chairman of the delegation, and the Honorable J. WILLIAM FULBRIGHT, Senator from Arkansas. The general debate continued until Saturday morning when the three questions on the agenda were brought up for discussion. The first question was the refugee resolution. This question had received long and exhausting debate both in committee and at the council meeting in Nice, 1957. Both Congressman KEATING and Senator HENNINGS spoke on this question. Congressman KEATING had attended the special meeting in Nice, called to discuss this question before the council met and had already inserted in the resolution points consistent with the United States views on this alarming problem—a source of primary concern in the Near East, as well as in many other locations. By amendment, it was possible to submit and pass the resolution with the principle of voluntary action demanded that no refugee should be pressured to return to either his own or any country without his complete consent. This was upheld by Senator HENNINGS, as well, and was so passed.

The question on Monday, September 16, was the influence and control by parliaments over governments. Senator FLANDERS and Mrs. ST. GEORGE spoke to this resolution and supported a Philippine amendment which brought it within the scope and philosophy of both our governments as well as those of the direct parliamentary form. It was so passed.

The third general question was the stabilization of prices of primary products. Congressman TALLE and Senator KEFAUVER spoke to this resolution and both advocated a stricter and more accurate means of information on primary products and fair dealing in adjustments of world commodities as the affected the economic life of all nations, large and small. A resolution embodying these ideas and calling for a world conference on prices was passed.

Letter of President DANIEL A. REED, of the United States group, addressed to the 46th conference of the Interparliamentary Union:

"MY DEAR LORD STANSGATE: I am happy to be able to extend to you and through you, to all the assembled delegates of the respective countries represented in London, my most sincere greetings.

"One of the bitter disappointments of my life is to miss the opportunity of attending the sessions of the 46th interparliamentary conference at London this year. It is wonderful to have the 'mother of parliaments' as our host at this time.

"My admiration for the far-flung Commonwealth and its mother country has grown through all the years from my youth to the fourscore I can count today. Although I am prevented by circumstance and on the advice of my physicians to attend this meeting, I know the London conference will be another historic event in man's constant search for a just and durable peace. To these ends and purposes, I fervently join with you in spirit today.

"Peace is not a passing elusive state of inactivity. It is a dynamic, attainable objective, so well defined by St. Augustine centuries ago in his words: 'It is the tranquility of order.' Tranquillitas was the Latin word the eminent church doctor used and it means even more than the English word which has grown from it. It is not simply a sense of well-being. It is actually the sense of being—being just to your neighbor.

"In all my visits to London and to your other cities of traditional industry and importance, the lovely lake country, the bonnie hills of Scotland, and your nearby neighbor, the ever-green emerald isle, I always have been impressed by the sheer beauty of what might have been, except for the gulf stream, an icy stretch of land in a subarctic sea. Instead, it has been blessed by nature to be the home of a great people, whose energy and integrity has influenced every part of the civilized world.

"It has brought law and order into man's undertakings—it has laid the foundations for democracy and self-government and wholesome respect for authority, without which men cannot peaceably live with one another. It has not always accomplished its eternal aims but it has heroically striven, I believe, to bring them about.

"In the late unpleasantness (which, incidentally, is as late as the 18th century) our own revolution was led by sturdy sons of Britain—Washington, Franklin, Hamilton, Jefferson, and the Adamses, who clung to the principles of law and order, aided and abetted by many English statesmen back home who fought in your very parliament for the cause which their kinsmen in the United States were upholding.

"By language, law, custom, and kinship, we are very close to you. By great waves of immigration from all of Europe, the Scandinavian countries, the Near East, the Middle East, Africa, and the Far East, in fact, from all the world, we are kin to every segment of the human race.

"In the deepest travail of the second World War (may there never, never be one called the third) your distinguished leader Sir Winston Churchill, one of the most valiant men the world has ever produced could cry out, with Arthur Hugh Clough in his fateful prophecy written in the early part of the 19th century: 'Say not the struggle naught availeth, The labor and the wounds are vain, The enemy faints not, nor faileth and as things have been, they remain.'

"Again:

" 'And not by eastern windows only,
When daylight comes, comes in the light,
In front, the sun climbs slow, how slowly,
But Westward, look, the land is bright.'

"Not by eastern windows only, so well represented now in the Interparliamentary Union and in its Bangkok meeting but by westward look to North and South America, the Conference plans to meet in Rio de Janeiro next year, so demonstrating its new universality and its worldwide constructive effort for peace and understanding among all peoples.

"I cannot close without recalling those words of Alice Duer Miller, beloved American poetess whose wonderful poem, The White Cliffs of Dover, written in 1941 just 1 year before her death, ended with these 2 lines:

" 'And in a world in which there is no England,
I do not care to live.'

"We thank the Creator of this universe that He chose to make England live, and live on, to be the host as you are, in 1957, to the half-hundred nations now assembled in the very cradle of parliamentary practice and procedure, this glorious monument to self-government, Westminster Hall. There have been 8,000 peace treaties written in the last 3,500 years and each one of them contained a clause that 'the peace shall be permanent.' The average life of each treaty was 2 years. That does not mean anything unless we think that it is quite unimportant in the course of human events. We are working along idealistic lines of bringing about peace, and it means a long, hard battle but it must be won if civilized humanity is to survive.

"This is the idealistic principle in which every mother on earth is interested—it is peace; and if we are to have peace, it is going to be through the parliaments of the free nations of the earth, not through the executives of the nations. It is the men who are close to the heartbeats of the mothers who are sent to the parliamentary bodies of the respective free nations that are eventually going to bring about peace. I believe this may be the very step to the solution of the problem which the world has long awaited.

"I wish I could be with you to take part in the work toward that 'tranquillity of order' St. Augustine so well defined.

"Let us remember peace is not a static condition—it is a dynamic force and the Interparliamentary Union can, I believe, by its exercise of reason, prudence, and justice, help mightily to bring it about.

"Sincerely yours,

"DANIEL A. REED,

"President of the United States Group of the Interparliamentary Union."

Speech of the Honorable HENRY O. TALLE at opening of 46th conference of the Interparliamentary Union:

"Mr. President, fellow delegates, ladies and gentlemen: This morning the Interparliamentary Union witnessed with the profoundest emotions of respect the impact of loyalty and devotion between a people and their Queen when Her Majesty, Queen Elizabeth II, opened the first session of this conference. It was an event we shall never forget, an event which, as a ceremony and a spectacle of graciousness, could not be excelled.

"The Interparliamentary Union convokes its 46th conference in the year 1957 in an atmosphere of tradition and history congenial to our aims, because England has been the workshop of freedom for the western world.

"It is a profound and basic truth that the philosophy of the dignity of the individual has its roots in the Old and the New Testaments and in all the great religions. But it was Anglo-Saxon will-to-freedom which gave it meaning in the everyday life of man, and here in London and in these immediate environs we have the very anvil, so to speak, on which the modern creators of freedom hammered out the faith and the law basic to the freedom we cherish. Here we walk within the very walls within which were evolved what became in its time the greatest of parliaments.

"We are most happy to be convened in the great and beautiful metropolis of the United Kingdom, where every ancient castle, tower, temple, and monument speaks of the rich history and culture of a magnificent nation and of the men and women who made it great, from Chaucer and Shakespeare to Churchill—Blackstone, Milton, Locke, Newton, Pitt, Nelson, Tennyson, Byron, Victoria, Disraeli, and Gladstone—and the many other bright stars in the British galaxy who have for centuries illuminated the long and tortuous road to humanity's fulfillment.

"We are thrilled to meet in this historic hall of the ancient palace of Westminster, which is so rich in historical association, and where the representative English Parliament was born.

"What is it that we ask shall be done at this conference? We ask only that man set-

tle his relations with man on a plane of peace. We ask only that man substitute arbitration for war. We ask only that peace itself be made a philosophy of life and not an instrument of diplomacy to be shuffled like a playing card in a highly dangerous game. We seek, as this agenda so eloquently proves, to direct the attention of nations to the care of those who, even as I speak, are the victims of war and near-war.

"Gathered here are the delegates of 49 nations of this universe. I wonder if you will agree with me that it is doubtful if the representatives of so many people ever before met under a spiritual canopy of amity and mutual goodwill like that which prevails at this conference. None of us seeks as against the other to impose a standard of conduct or a philosophy of government or law that may be either unsuitable or premature or unacceptable.

"What we all seek is to consult together in the manner of parliaments and to put into as concrete form as may be, the world's infinite yearning for peace and mutual happiness. It happens that I, an American delegate, speak from a racially Scandinavian background. It is my pride in the valor of the Norsemen and their lordly individualism and independence that persuades me to say that the very idea inherent in the word, 'parliament' forbids that any one man, or any one nation, shall prevail over or dominate the others.

"The political faith of the American people expresses itself in the fact, as nearly as it can be made operative, that the United States is a nation of 172 million people governed by themselves. The Government, as in this assembly before me, takes the form of decision by representation. In the United States it is representation of the people both by districts—upwards of 400,000 people to a district—and geographically, by States. The individuals and the parties in power, far from remaining static, or themselves determining their successors, are in a constant state of rotation. They change subject to the will of the people in whom rests the power—absolutely—of decision by ballot, free and secret.

"You will forgive me for making these elementary comments about my Government. I shall be intensely interested in hearing you discuss yours. This is one of the facets of our consulting together. For it is this interchange of views that we all hope may bring about the mutual understanding conducive to the peace we are here to help assure to a tension-ridden mankind.

"We in the United States who believe in the philosophy of the West, imbedded as it is in 2,000 years of development, have gone to extraordinary means since 1945 to help the world toward its appreciation and perhaps its adoption. It has basically influenced our policy, our finances, our budget, our economy. Since we in this assembly are representative of every area of the world, what we aim to do is not to proselytize one another, but rather to accept each other's differences without hostility. But we do this without blurring our vision, much less blinding it, to our central purpose: world peace.

"American freedom has not only its roots but its very soul in British tradition. We are profoundly thankful for the observation of that great English statesman, Mr. Gladstone, and we shall never cease to quote his famous conclusion: 'As the British Constitution is the most subtle organism which has proceeded from the womb and long gestation of progressive history, so the American Constitution is, so far as I can see, the most wonderful work ever struck off at a given time by the brain and purpose of man.'

"American freedom made itself workable through this constitution.

"Therefore, when I speak of the congenial atmosphere in which we meet, it is this mutual interweaving of history that I have in mind. For let us not suppress the pride we of the West must feel in the spectacularly apparent fact that, as the United States borrowed from England in struggling for America's sublime credo, equal justice under law, so Asia and Africa and the Middle East and the Far East are even in this hour, groping for their freedom inspired by that same philosophy. Just as the United States from the beginning and today is erecting her inherently American edifice of free government from the collected wisdom of the past—Hebrew, Greek, Roman, European—from Christ and Moses, Solon and Aristotle, from Montesquieu and John Locke, so the newly awakened areas of the earth are at this moment responding to this same eternal cry of man for his right to be free.

"All the world, its peace, its stability, its future, is face to face now with man's soaring demand—where liberty is still denied him—for his right to establish in his own way the justice that he cherishes. He is clamoring for his right to insure domestic tranquillity, his right to promote the general welfare, his right to secure the blessings of liberty to himself, and his posterity.

"Those who can read the writing on the wall know how inevitable are the forces of history. Those who can read the writing on the wall know that no instinct in man, once aroused, is more difficult to suppress than the instinct for liberty. We here, if we are to remain true to the founding principles of this institution, the Interparliamentary Union, have it as our bounden duty to satisfy to the fullest this elemental quest of man for the right to be himself.

"Mr. President, I wish at this time to congratulate the secretary general on his proficient work in preparing the preliminary documents, the agenda, the draft resolutions and various reports—all of which will greatly facilitate the proceedings of our conference.

"I look forward to the debates of our meeting on the very important topics listed in the agenda. I trust that our discussions will contribute to enlightening ourselves as well as international public opinion in this increasingly interdependent world. We cannot solve the problems of our times unless we first understand them. And understanding comes most surely through full and free discussion.

"Finally, we all know that the task of building a peaceful world is a slow and painful process at best. We must build stone upon stone. In this atomic age there is no acceptable alternative to constantly striving for our great objective—the creation of a peaceful world with justice and freedom for all mankind."

Speech of the Honorable J. WILLIAM FULBRIGHT at opening of 46th Interparliamentary Union Conference:

"Mr. President, I am honored to be permitted to address this great assemblage of parliamentarians. The secretary general has produced a complete and, on the whole, an objective and dispassionate report which reflects some of the troubles besetting the human race as we move through these middle years of the 20th century.

"Troubles of course are not new to the human race, but we should recognize that these troubles are very largely of our own making.

"We are capable, in the sense that we have the technical and scientific knowledge, of feeding, clothing, and housing the 2½ billion of us. We have the means, in short, to achieve freedom from want. This is one of the four freedoms to which one of the great Presidents of my country referred in one of his finest speeches. I am sure you remember the other freedoms which President Roosevelt listed on that memorable occasion—freedom to worship, freedom of speech, and freedom from fear.

"It is a sad commentary that we have not been able so to organize our affairs as to achieve these freedoms. This is not the forum in which to make propaganda as to who is, or is not, responsible. We here cannot settle any of the great issues which divide the world. We have no authority to do so, if we could. The place in which to resolve these issues is the United Nations, now meeting in New York.

"The United Nations cannot function properly if we have no confidence or trust in each other's word, in each other's intentions.

"Confidence can develop only from a course of conduct over the years. It does not arise from propaganda hocus-pocus.

"What we can do in this gathering is to get to know each other better. We can develop confidence in each other, assuming, of course, that we are not wholly depraved. All of us are human beings before we are Americans, or Britishers, or Russians, or Indians. A biologist would have difficulty in distinguishing one from another.

"If one assumes, as I do assume that human beings are rational creatures, that they do not wish to commit suicide—then how can we go about preventing self-destruction by nuclear weapons?

"To me the first and obvious step is to get to know, to understand each other—not through propaganda which is unreliable, but through personal conversation and observation.

"The differences between men as men are slight. The differences between their institutions and their prejudices are great, but these institutions and these prejudices have been changed in the past and can be changed in the future in response to the needs and desires of men—the desire to live, for example.

"When we meet in London, we are inevitably, I think, given renewed hope. These historic surroundings, which saw the birth of free political institutions, remind us that we do make progress and that such institutions can change, they can adapt, and that they do endure, sometimes in spite of very great difficulties.

"Indeed, the mere fact that we are gathered here is itself a tribute to the strength and vitality of such institutions. We are representatives of legislative bodies that range from the oldest to some of the newest. It is significant that even in countries where parliaments have no real power, the dictators still feel called upon to give lipservice to the forms of democratic self-government. The idea of democratic government is one of the most powerful that has possessed the human mind. I recall a remark of Voltaire, who said, 'There is one thing more powerful than all the armies in the world, and that is an idea whose time has come.'

"If we cannot today say that the time has come all over the world for the idea of democratic government, through freely elected legislative bodies, at least we can say that the idea is making encouraging progress.

"Our primary task in this conference is to get to know each other, and our great task back in our respective countries as members of legislative bodies is to encourage our peoples to get to know each other. This is not something which can be achieved in a day, or a year, or even perhaps in a generation. But over the long term, I believe the best means of reducing world tensions and of achieving world peace is an international program for the exchange of persons among nations.

"I am not afraid to let an opponent expound his views. I have enough faith in the truth and soundness of our own cause to be confident that it will prevail in a fair and free exchange.

"The United States has done considerable in the field of exchange of persons, both from the point of view of enabling citizens of other countries to come to our country and of

UNIVERSITY OF MICHIGAN LIBRARIES

enabling Americans to go abroad—to live, to study, to understand other cultures, and to take that understanding home with them. I am proud to have played a small part in sponsoring some of these United States programs.

"I think that my own country should do more along this line, and I hope that it will. I hope that each of you will join in urging such programs upon your own governments when you return to your home.

"Exchange-of-persons programs are not expensive, and they seem especially cheap when contrasted with the cost of modern armaments. Yet I think it is only through the kind of understanding which exchange programs bring about that we will ever be able to reduce the cost of armaments.

"I expect the newspapers and the radio in most of your countries have carried reports of debates and differences in the United States over American foreign policy. Those differences exist, of course—not only in the United States but also in other countries where people are free to express differences. Such differences—strongly held and vigorously expressed—are the nourishment, the very essence of parliamentary institutions.

"But let me say this, so far as the United States is concerned: The things that unite us, as Americans, are greater and stronger than the things that divide us. I suspect this is true, also, of the other representatives who are here from democratic countries.

"The justification of a conference such as this one, it seems to me, is that it makes us more keenly aware of this simple fact.

"If we have brains enough to discover the secrets of nature itself, surely we must also have brains enough not to blow each other up. Otherwise, the story of the human race will indeed be a sad and pitiful one; and it will perhaps be a kindness that there will be no one left to write the story, much less to read it."

Speech of the Honorable KENNETH KEATING on the refugee problem, Interparliamentary Union Conference, London.

"It is particularly fitting that we meet today in London to discuss the universal problem of refugees. First, because historic London, steeped in traditions of the common law, of liberty, and of freedom, seems a proper place to turn our thoughts to many who are denied those privileges, or who may be forced to forego them if we stand by passively. Secondly, who can forget that we meet in the same city where momentous disarmament talks have so recently been held—discussions which, by their very awesome nature—tend to overshadow the seemingly less significant problems of exiles and refugees who seek a shelter today?

"But our lofty concern with justice and our natural preoccupation with prospects for world peace must never cause us to overlook the very real human suffering of the thousands of homeless and depressed emigres who today wander aimlessly the map of the world. They are, after all, victims of wars we so desperately seek to prevent in the future.

"Never before in the history of civilized man has the problem of the refugee been more acute than it has been within the last 2 decades. Never before have so many been uprooted from so many lands in so many unhappy ways.

"While it is true that miraculous strides have been taken to find shelters for the homeless and to provide havens for the oppressed in the years since the end of World War II, much still needs to be done. All of us here today, through our legislative bodies, are uniquely fitted to stimulate and participate in this humanitarian crusade.

"Certainly the draft resolution on refugee problems, if judiciously interpreted and put into action by men of good will, could achieve much good. For example, all can agree that much benefit can accrue from honestly promoting the education of young refugees, as well as efforts to aid in the resettlement, housing and employment of emigres. These are all objectives vigorously pursued and carried out by my government.

"My attention is drawn particularly to the admonition in the resolution that refugees should enjoy the same conditions as nationals of the receiving country with regard to their right of association.

"To Americans, this is axiomatic. Ours is, after all, a land of refugees, founded by men and women who had fled from persecution. In the United States the refugee—like the immigrant—has always been accorded equality in all his dealings. He is given every conceivable opportunity to make his own way and has traditionally been accorded the same safeguards and protections afforded every American citizen.

"Today, as throughout our history, many of the leading citizens of the United States are foreign born or the children of foreign born parents.

"For example, the present Congress of the United States contains Members born in England, India, Poland, Italy, Bulgaria, Canada, and Russia, to say nothing of countless others whose parents were born across the seas.

"The rich and varied mixture of backgrounds, bloods, and cultures which goes to make up America today has contributed uniquely to the building of our Nation. We are proud of our tradition of according haven and extending the hand of welcome to the world's homeless and oppressed, just as we are proud of the record these people have achieved in our midst.

"Much as I concur in the general objectives of this resolution, there are several aspects of it which are susceptible of misinterpretation, and are consequently disturbing. I refer particularly to the sections which deal with the vital question of the repatriation of refugees.

"Now, all men of good will most certainly agree that all refugees who so desire should be allowed to return to their native lands. That is but their birthright as human beings and freemen.

"But, in our zeal to insure that the return of refugees to their lands is not interfered with, we must take care not to lend assistance to or approve of the efforts of those who would force repatriation on unwilling emigres. It is fundamental to any sound and fair refugee policy that repatriation be completely voluntary.

"Certainly, this union should not condone the tactics of any member who resorts to threats, intimidation, and moral blackmail to force repatriation. But we know that some nations have been guilty of these practices, and if we do not amend the resolution before us we may be guilty of giving them a chance to continue such infamous actions with impunity.

"It is a wel-known fact that nefarious groups have been working for years to force the return of unwilling Russian nationals all over the world. Their tactics run the gamut from threats to loved ones still living behind the Iron Curtain, to threatened—and perhaps perpetrated—kidnapings.

"A most blatant campaign has been carried on by Hungary's Kadar regime to coerce refugees settled in Austria. There have been cases in my own country, where official representatives of Communist countries have attempted—and sometimes succeeded—in intimidating Russian nationals who were living peacefully. Potential areas, inhabited by Russians nationals, include West Germany, Austria, Argentina, Belgium, Brazil, and Great Britain. Are we to stand by without protest while repatriation teams, under the guise of informational and humanitarian works, employ their tactics of threats, intimidation, and disruption?

"At the same time, it should be noted that certain nations of the free world, notably Austria and the German Federal Republic, have been the target of repeated charges of obstructing the repatriation of emigres. The facts simply do not bear out these accusations. It is clear that Soviet refugees are entirely free to return if they desire, but these nations have wisely and courageously refused to compel any emigre to return against his will and have attempted to resist the intensive campaign put on by Communist groups.

"The resolution under consideration today offers us an opportunity to strike a ringing blow for the principle of voluntary repatriation. Certainly, we must not here today take any action which could in any way be interpreted as a stamp of approval of the activties of these groups which are exerting undue and unjustified pressure on refugees to return behind the Iron Curtain.

"For that reason, we should amend section 8 to make it unmistakably clear that this great body is opposed to any coercive activities by any nation either to force or to prevent repatriation.

"The wording of section 8, and other sections, of this resolution, as they now stand, invites the continued use of the force and fear which have been practiced all too often in the past. With these thoughts in mind, an amendment to section 8 has been tabled to insert a new subparagraph (d), to read as follows:

" 'Prohibits pressures upon or intimidation of, refugees by the receiving country or by their country of origin with respect to repatriation. No language in any of the preceding subparagraphs of section 8 shall be deemed to express any contrary intent.'

"If we are to work and hope for a world peace based on justice and freedom, we cannot allow the present tactics of these repatriation teams to continue without rebuke. It is unthinkable that this organization could go on record with a resolution which in any way might be construed as approving or condoning these strong-arm tactics.

"I therefore ask wide support for the amendment I have outlined. It has the unanimous support of the American delegation, which is dedicated to the ideal of freedom of movement of peoples everywhere.

"The Declaration of Independence of the United States contains these immortal words:

" 'We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness.'

"To an American, these are not merely high-sounding, empty phrases. They are living, breathing principles which the United States practices today in all phases of its activities. I trust their application to the principles here enumerated are both obvious and acceptable to all men of good will assembled heretoday. If so, we must amend the resolution before us.

"In so doing, we can print in bold, black letters our dedication to the principle of free and unfettered movement without the use of pressure or intimidation to force or prevent such movement. In accepting this amendment we can forge more strongly than ever the bonds of friendship, respect for individual rights, and devotion to justice which hold such hope for the peace of the world."

The speech of the Honorable THOMAS C. HENNINGS, Jr., at the 46th conference, Interparliamentary Union:

"The problems presented today for the world community of nations by the existence of refugees are of such gigantic magnitude that it is occasionally felt that it is impossible to do anything about them. The causes themselves—natural disasters, such as fire, flood, famine, and pestilence; and man's inhumanity to man: war and perse-

cution because of race, religion, or political belief—defy complete analysis and ready solution and consequently demand unceasing direct attention themselves. But as long as such causes exist, we will have refugees.

"We must, therefore, strive to find solutions to the refugee problem just as we direct our energies to raising standards of living, improving health and sanitation, wiping out illiteracy, obtaining fair wages and hours and working conditions, and achieving mutual understanding and respect of all peoples.

"The strong spirit of human solidarity not only makes all men brothers but makes life itself worth living. We national legislators, who enact our countries' laws, have grave and challenging responsibilities. It is appropriate that our international association devote some of its time to discussing these important issues. It is fitting that the League of Nations, the United Nations Organization, and the Interparliamentary Union have expended considerable thought and effort on behalf of refugees in this century. We must continue our efforts but we must remain on guard at all times to avoid simply approving resolutions with pious phrases, merely expressive of good intentions. Superior goals are expressed in article 13 of the Universal Declaration of Human Rights, which says:

" 'I. Everyone has the right to freedom of movement and residence within the borders of each State.

" 'II Everyone has the right to leave any country, including his own, and return to his country.'

"Yet we know that most nations of today are far from actually granting those objectives—to their own people or aliens.

"To take worthwhile steps in the right direction, we parliamentarians should examine the conditions which prevail in our own countries and see what national law changes we can bring about. At the same time, we should not lessen our support for such international activities as those which are conducted by the Intergovernmental Committee for European Migration and the office of the United Nations High Commissioner for Refugees.

"In regard to national programs, I want to call attention to a recent action by the Congress of the United States. The American Congress, in enacting several immigration law amendments in the past month, recognized a national responsibility concerning refugees and provided for the issuance of nearly 19,000 immigrant visas in addition to regular quota allowances. German expellees to the number of 2,500 and 1,600 Dutch ethnics, are the only groups with earmarked totals; this represents an advance in approach to immigration and a discarding of rigid national origin or regional concepts; thus, properly qualified refugees and escapees from tyranny any place in the world become eligible to enter the United States for permanent residence, and eventual United States citizenship if they so desire.

"Admittedly these numbers for refugees are not large, even when combined with the provision, unlimited in number, for the admission of alien orphans in the next 2 years. But it is not in numbers where I find the major significance of America's most recent immigration law. I believe great importance should be attached to the fact that this act represent another step by the United States away from the total exclusion policy which was not altered substantially until World War II. America can no longer be criticized for operating an Oriental exclusion law and the new provisions for refugees, and family reunifications, make it clear that area of origin is no longer the ironbound test for admission to our shores for residence.

"But as interested as I am in this legislation, which I have supported wholeheartedly, I feel somewhat as did the critics in the old Roman Senate, who used to ask:

" 'How long, oh, Cato, must we continue to pass only piecemeal legislation?'

"Therefore, I support the amendment of the United States delegation, which provides protection for individual rights and voluntary repatriation."

Speech of the Honorable KATHARINE ST. GEORGE on control of governments by parliaments, at the 46th conference, Interparliamentary Union:

"First let me add my praises to those that have already been given to the British members for their generous hospitality, their unending kindness, and the superb and competent arrangements they have made for the comfort and pleasure of all the delegates.

"Certainly nothing could be more fitting than that the 46th Interparliamentary Conference should be held here in London, in the shadow of the mother of parliaments. For we must all acknowledge that it is from the genius of the British people that the idea and ideals of parliamentary government sprang, in the first instance and, therefore, inasmuch as all of us here present belong to parliamentary systems of one sort or another, we are all somewhat beholden to England and to her Parliament.

"Our discussion centers today on the influence and control by parliaments. We, of the Interparliamentary Union, do well, at this time in the world's history, to pause and take stock of parliamentary governments of the world and our own in particular. While it may not be a popular premise, I submit to you that the parliamentary system has suffered grievously as a result of two world wars and that it no longer has the vigor, strength, and dignity that it possessed in the second half of the 19th and first quarter of the 20th centuries. There are many parliaments in the present age that are nothing but rubberstamps, representing only one party and, therefore, only the opinion of the government in power. The words of a French lady, going to the guillotine, are quite applicable: 'Ah, liberty, what crimes have been committed in thy name.'

"Why has this situation come about? It seems obvious that wars, on the modern scale, deal deadly wounds to parliamentary governments. If a government is to wage such wars successfully, everyone down to the very schoolchildren must be regimented. Free enterprise ceases to exist, conscription becomes universal, and obviously representative government in parliament and congressional assemblies plays a very secondary if not supplementary part in government.

"Above all, criticism and debate are not tolerated during a state of war and both criticism and debate are the very lifeblood of representative government.

"This Union has always been dedicated to peace, and it does well to pursue that course, because we may well be entering the twilight of parliaments, and unless we have peace we may also see the end of the system altogether.

"As we go back from this conference, let us highly resolve to cultivate peace and understanding among ourselves and all the peoples of the world. Let us also do everything in our power to raise the prestige and power of our elected representatives.

"In my country the Founding Fathers envisaged and planned a government of three coequal branches: legislative, judicial, and executive. This was an ideal arrangement, but only constant vigilance can make it work. In our country, just as in yours, liberty has to be fought for all the time. Liberty and self-government can be killed by indolence and lack of interest on the part of the citizen almost as easily as by war.

"Sir Winston Churchill in his message to us says: 'Parliamentary institutions have confronted, and have triumphantly overcome, the heaviest assault ever made upon them.' I would that I could share this optimism, but I cannot. We may well have survived the assault but we are sorely wounded and it will take our best efforts to bring free representative government back in its full glory.

"About 200 years ago, Edmund Burke stood on the floor of the House of Commons and championed vigorously the cause of the 13 colonies in North America who were in rebellion against England. Can you imagine such a thing happening in the world today? Of course you cannot. We have seen men and women driven from public life for far less. Such conduct today would be regarded as treason and would be dealt with accordingly. Yet history does not record that Burke was made to suffer unduly for his opinions, so clearly expressed. Many doubtless disliked them, most persons probably disapproved of them, but he was permitted to pursue his course in peace.

"Yes, as we stand here and look at the past in parliamentary history, let us try to keep this system strong and undefiled. Let us not be complacent and spend our time in silly congratulations and foolish optimism. Let us not be lulled into the belief that because there are more parliaments there is more freedom, this is not necessarily so.

"Benjamin Franklin is reported to have said to an old lady in Philadelphia who asked him what form of government the new Nation was to have: 'A republic, if you can keep it.'

"We as we go back to our respective homelands can paraphrase these words 'A free parliamentary government if we can keep it.'

"We will only keep it by cultivating peace and understanding among ourselves—by educating ourselves and our peoples in the difficult practice of free government, by remembering the words of Voltaire 'I disapprove of everything you say, but will fight to the death for your right to say it.' Above all, realizing that we personally have been greatly honored to be chosen as representatives of sovereign peoples and that as individuals we must work and strive to represent them always with dignity, integrity and true patriotism, so that these free people under God shall not perish from the earth."

Speech of Honorable RALPH E. FLANDERS at the 46th conference, Interparliamentary Union:

"Mr. President and members of the Interparliamentary Union:

"The subject of this session is the influence of and control by parliament over the government. This subject is particularly appropriate for a meeting in this capital, whose parliament is properly called the 'mother of parliaments.' The primary instrument of government under the British constitution is the parliament itself. That constitution is an organic development, evolved by growth and changes over centuries of history. In the pagentry and setting of our opening session those centuries were displayed before our eyes. Let us hope that the British people will always preserve these values of history, made visible.

"Her royal highness, Queen Elizabeth II, who so graciously opened our sessions, reigns but does not rule. The centuries of evolution have placed upon parliament the sole responsibility of ruling. Yet the reigning of Elizabeth is both a vital and a preserving force in the British commonwealth of nations even though it is not directly concerned with governing. Its scope lies with the intangibles, which must be strong and healthy if the tangibles are to be effective.

"All the governmental power of Great Britain has come to be concentrated in the House of Parliament, in the ministries selected from them and in the administrative and judicial branches which they control. The people control parliament in contested elections. Through their elected servants the people control every element of their government.

UNIVERSITY OF MICHIGAN LIBRARIES

"The draft resolution now before us sets forth the British parliamentary practice as the norm to which all governments of all nations should seek to conform. As Members of the House and Senate of the American Congress we would, first, subscribe wholeheartedly to the purpose of bringing governments under the control of peoples; but we must call attention to the fact that the parliamentary system is not he only means by which that can be accomplished. In our country the functions of government are divided between a Chief Executive, a legislative body, and a Supreme Court. The President and the two Houses of Congress are elected by popular vote. The Judges of the Court are appointed by the President with the advice and consent of the Senate as evidenced by a vote of confirmation.

"Here we have three distinct branches of Government—legislative, executive, and judicial. They are distinct but must work together. They do work together under a system of checks and balances as it has come to be called. These checks and balances are always at work as was plainly evident in the recent history of race relations in our country. The Supreme Court, by new interpretation of our Constitution, decreed that further progress must be made toward unsegregated schooling. A governor seems about to challenge that decision, by force if necessary, the President confers with the governor to see whether forward steps may be taken. Without exacerbation of public sentiment.

"Meanwhile, the President's Department of Justice sends to the Congress a law for its consideration which deals with the whole field of race relations. The Congress, after lengthy debate, decides that the measure is too broad and will lead to Federal inquisition and supervision over too great an area of the citizens' activities. The administration bill is therefore drastically amended by the Congress, it is passed as amended and sent to the President. He signs the bill and it becomes law.

"Such is our system of checks and balances, always fluid but continuously effective. This system is defined in our Constitution, drafted by the Founding Fathers in the years following our successful revolution. Sir Henry Maine praised this as the greatest application in history of the elementary principles of government to practical administration. It provides for amendments, which are made from time to time, but its structure sprang in full bloom from the fertile minds and devoted hearts of an assembly of American patriots and statesmen assembled in a constitutional convention. It has taken its place alongside the evolving British Constitution as an example to the world of political institutions which embody and preserve the will of the people as applied to the policies and acts of government.

"For these reasons, Mr. President, the American delegation cannot be satisfied with the narrow view of parliamentary powers as described in the resolution. It is necessary so to reward it as to compass a wider range of means for attaining the desired ends."

Speech of the Honorable HENRY O. TALLE at the 46th conference, Interparliamentary Union:

"Mr. President, fellow delegates:

"I now have the honor, or perhaps I should say the task, of addressing myself to one of the most important, most persistent, and most difficult of current international subjects: commodity prices and what to do about them.

"Innumerable debates on this question have been held in recent years. It is too much to expect that we in this room will reach unanimous accord on every aspect of the subject. Yet I believe that we can all benefit from the discussion. And I further believe that careful consideration of one another's views may possibly show that there is not so much disagreement as some may have thought.

"For example, I do not think there is any substantial disagreement as to certain basic facts:

"It is a fact that many foodstuffs and industrial raw materials are subject to sharp and sudden fluctuations in price and demand.

"It is a fact that these fluctuations are a matter of concern to all countries, both as exporters and importers.

"It is a fact that such fluctuations bring especially serious problems to a country which is so heavily dependent upon the production and exportation of 1 or 2 primary commodities—such as rubber, sugar, coffee, tea, cocoa, tin, copper, jute, cotton, rice, and coconut products—that such exportation is a mainstay of that country's domestic economic activity, of its tax revenues, and of its foreign exchange earning power.

"I am tremendously impressed with the seriousness of these facts, especially for countries that are less developed industrially and heavily dependent upon a small number of primary products for their livelihood. I think that all of us share this awareness and this concern.

"Thus there is no disagreement over the magnitude or the seriousness of the problem. The point at issue is whether it is desirable for governments to try to limit these fluctuations through agreements regulating trade.

"My own opinion is that, in general, it is not.

"Without in any way minimizing the problems of market instability, I believe that there are few situations in which strict regulaton is in the long-run interest of either the exporting countries or the importing countries.

"In the first place, it is my deep conviction that economic progress is best served by allowing maximum freedom to private enterprise, and by a minimum of government interference in world commodity trade.

"In the second place, I believe that many of the proposals that are made for broadly regulating commodity prices are impractical, and could not be made to work for a variety of complicated reasons—technical, economic, and otherwise—having nothing to do with ideology. I certainly do not blame people from casting in all directions for solutions to these very real and grim problems, but I do not think it is feasible to solve them through excessive regulation.

"Third, the problem of instability in a given commodity is not necessarily solved by establishing a commodity agreement. Close examination of a particular commodity situation often proves that a strong and stable market is in prospect without any special action by governments; or that measures other than a commodity agreement will suffice; or that a commodity agreement is not technically feasible; or that it is not negotiable because of an essential conflict of interests between importing and exporting countries; or the examination may show that a commodity agreement would not be in the real interest of the exporting countries.

"Commodity agreements, even though they may be necessary in some cases, have definite limitations. It is a mistake to expect miracles from them. I may point out that the existence of a sugar agreement, in which the United States participates, was no guaranty against a sudden increase in the world price of sugar and an equally sudden drop. The contribution which a commodity agreement can make to stability in prices, tax revenues, and foreign-exchange earnings is often greatly overrated.

"My fourth and final point is that there are certain dangers in commodity agreements which ought not to be overlooked. One danger that I have in mind is that if prices are stabilized at too high a level, this will only encourage shifts to substitutes and synthetics, or to cheaper sources. And the exporting countries may wake up to find that they have achieved their price objective at the cost of declining markets.

"I am giving some of the reasons why I believe that it is not wise for the nations to go all-out for commodity agreements or other machinery for strict regulation of trade. But I do not mean to suggest that our minds should be closed to exceptional measures in exceptional cases.

"In my view, the wisest approach to the problems of instability in world commodity trade is a case-by-case approach. The existing machinery for consultation and action in the commodity field seems entirely adequate. I am in favor of studying each problem on its merits and taking any necessary action, if action is warranted. I am not in favor of deciding in advance that all commodity problems should be attacked in a certain way.

"We all know that in the long view, the problems of instability become less and less serious as nations make progress toward the diversification of their economies. I do not say that this is the only thing that can be done, but I say it is the most effective thing that can be done toward a real solution. We of the United States share with the peoples of the nonindustrial countries a desire that they grow economically and become more diversified in their output. I believe that I can say without giving the appearance of boasting—since it is only a fact known to you all—that never before in history has a nation taken so substantial an interest in the economic progress of other sovereign nations, as has the United States during the last 10 years.

"Let us continue to attack our long-term and short-term problems together in good will and consideration for one another's needs and convictions."

Speech of the Honorable ESTES KEFAUVER at the 46th conference of the Interparliamentary Union:

"Mr. President, I think we are all in accord as to the spirit and objectives of the draft resolution which has been presented in regard to the stabilization of the prices of basic commodities.

"I must say, however, that the problem is a good deal more complicated than the draft resolution implies. The report of the rapporteur recognizes the complexity of the matter. It also recognizes the failure, or at best the only partial success, of previous efforts to stabilize world commodity prices through international agreements. The rationale of the resolution, however, is that the reasons for these failures lie in the fact that the efforts were not sufficiently comprehensive. The resolution therefore suggests that broader efforts be made.

"It seems to me that it could equally well be argued that the reasons for the lack of success of international commodity agreements lie in the method of approach—that is, in the agreements themselves. It would then follow that we would have no more success in the future with broad agreements than we have had in the past with narrow ones.

"Let me make just a few comments about the general problem.

"It is unquestionably true that sharp fluctuations in world prices of basic commodities work a hardship on all concerned, and that this hardship is particularly acute in the case of precipitous declines in the prices of commodities on which underdeveloped countries rely for a substantial proportion of their foreign exchange.

"It is, however, easy to exaggerate the effects of these fluctuations. Despite cyclical variations, there has been a long-term secular trend upward in practically all prices. This is to the benefit of underdeveloped producing countries, and as a representative of an in-

porting country, I am not complaining about it. I am merely pointing it out, because I think it is frequently overlooked.

"Let me cite just one example of a basic commodity which is not the subject of an international price stabilization agreement, yet which has been of enormous benefit to several underdeveloped countries. I refer to oil and to Venezuela and Iraq, both of which have profited greatly from oil and both of which are using their oil income to good advantage. All of us can think of other examples as well.

"However, I do not want to minimize the problem, because it is a very real one. I do venture to suggest that there is no panacea to be found, either in an international agreement on the stabilization of prices or in other means. This does not mean that the problem is hopeless. Rather, it means that we should not concentrate our attack on the problem in a single approach. We must approach it on many fronts.

"One of these is the development of world trade, commerce, and prosperity generally. The more prosperous the world is as a whole, the greater will be the demand for basic commodities and the greater will be their stability based on long-term market growth. This calls, I think, for mutual reductions in barriers of all kinds to world trade. I support such reductions in my Congress, and I hope you will support them in your Parliaments.

"Another avenue of approach to this problem is through the stimulation of private foreign investment. I have not always been uncritical of private business, but I do think that it has learned a good many things in its foreign operations and that, today, it goes into a country, not to exploit, but to develop. I have already cited the examples of Venezuela and Iraq. To those, I could add, so far as American business is concerned, most of South America, Brazil, Peru, Colombia, and Mexico, in particular, have benefited greatly from the investment of private American capital. There is no reason whatever why other countries could not similarly benefit if the local investment climate is made attractive. This involves many things, but two of the most important are political stability and sound economic policies.

"These twin approaches—through the development of world trade and of private investment—seem to me to offer a sounder long-range solution to basic commodity prices than a general international stabilization agreement. If such an agreement puts the price too high, it not only discourages consumption but also encourages the development of synthetic substitutes. This latter process is already well advanced in the case of rubber, for example. On the other hand, if an agreement puts the price too low, it means that the producing countries are not receiving full value and it will probably also discourage private development of the resources in question.

"I hold with Adam Smith that the best regulator of prices is the mechanism of the free market. This means, of course, that we must all take steps to see that the market is really free and that it is not manipulated by private or public monopolists for their own ends.

"In conclusion I would like to mention one device which I think is deserving of more attention than it has so far received—either in my own country or elsewhere. This is what is popularly known as the world food bank. This is my personal view and not necessarily the view of the United States delegation. It would involve the application, on a worldwide basis, of the ever-normal granary idea. Each country would put certain stocks into the bank in times of surplus, and each country would be entitled to draw certain stocks out in time of shortage. It would, in some respects, be analogous to the International Monetary Fund except that it would use food instead of money as its stock in trade.

"The United States Senate has called for a more detailed study of this problem. If the pending resolution is adopted by this Interparliamentary Conference, and if the international meeting which the resolution calls for comes about, I hope that this aspect of the matter will not be overlooked."

The efficient cooperation of our London Embassy staff in all projects, the regular early morning caucus meetings of the group at the Embassy, the assignment of staff and office space for the United States secretarial staff, the standby cooperation of the United States Navy, who were responsible for physical arrangements and for important briefings both at the opening and during the Conference, were unexcelled. The delegates returned home with the feeling of a job well done, looking forward to Rio de Janeiro July 24-31, 1958.

The resolutions enacted by the 46th conference of the Interparliamentary Union follow:

I. THE REFUGEE PROBLEM

Considering that the resolution adopted by the Istanbul Interparliamentary Conference (August–September 1951) on the Juridical Aspects of the Refugee Problem contains the following statement:

"Recalling that under the Universal Declaration of Human Rights everyone has the right to security of person; to recognition everywhere as a person before the law; to seek and to enjoy in other countries asylum from persecution; to equal protection against any discrimination; no one shall be subjected to arbitrary exile; everyone has the right to return to his country; everyone has the right to a nationality; no one shall be arbitrarily deprived of his nationality; no one shall be arbitrarily deprived of his property; and everyone is entitled to a social and international order in which the rights and freedoms set forth can be fully realized."

Considering that, from the point of view of protection of refugees, the convention of July 28, 1951, relating to the status of refugees, constitutes the most important initiative taken by the United Nations Organization and that, during examination of this convention, the Geneva Conference adopted:

1. The protocol relating to the status of stateless persons.

2. Several recommendations concerning (a) recognition of travel documents necessary to facilitate the movement of refugees and, in particular, their resettlement; (b) maintenance of the unity of the refugee's family and protection of refugees who are minors, in particular unaccompanied children and girls, with special reference to guardianship and adoption; (c) support of properly qualified organizations dealing with refugees;

The 46th Interparliamentary Conference—

I. Considers that the refugee problem should be examined on the basis of the following principles: (1) It is the duty of the States and of their respective peoples to be guided by a strong spirit of human solidarity in order to afford refugees asylum and work; (2) states should grant refugees the same treatment as that accorded to other foreign nationals; (3) refugees should, insofar as possible, be enabled to find an occupation corresponding to their stated experience. Young refugees wishing to specialize should be afforded every opportunity to do so in general schools or technical institutions, after having completed their normal course of primary studies; (4) governments and their respective peoples should facilitate the housing and resettlement of refugees; (5) with regard to the right of association, refugees should enjoy the same conditions as the nationals of a country; (6) regulations in regard to unemployment benefits, insurance, and social security should be applicable to foreigners in general; (7) article 13 of the Universal Declaration of Human Rights is recalled: "i. Everyone has the right to freedom of movement and residence within the borders of each state"; "ii. Everyone has the right to leave any country, including his own, and to return to his country."

II. Asks that in all cases in which refugees are desirous of returning home, no obstacle shall be placed in the way of their repatriation by the receiving country nor by their country of origin and that every facility shall be given them to that effect; and invites the governments of all countries in which there are refugees, as well as all official or private international organizations concerned with the problem of refugees, to acquaint the latter with the laws and regulations applied in the different countries, with a view to facilitating their voluntary repatriation; condemns the use of refugees as an instrument of political struggle;

III. Recommends that the governments of all countries in which there are refugees take immediate steps to insure their speedy employment, while awaiting their voluntary repatriation, as well as all possible measures for the prompt repatriation of children and adolescents separated from their parents;

IV. Prohibits pressures upon, or intimidation of, refugees by the receiving country or by their country of origin with respect to repatriation. No language in any of the preceding paragraphs shall be deemed to express any contrary intent;

V. Recommends that the United Nations give to the Arab refugees the consideration which the justice of their case calls for and find a final solution to their problem by enforcing the resolutions already taken by that organization, and until such a solution is implemented to give adequate financial assistance;

VI. Requests the office of the United Nations High Commissioner for Refugees to continue the study of the following questions: (i) Equivalence of degrees for refugees; (ii) exemption for political refugees, their wives, children and parents from the tax on registration certificates and renewal thereof, and on identity cards; (iii) financial assistance to countries which, as a result of special circumstances, receive a large number of refugees, particularly with a view to facilitating the construction of houses, this being an indispensable factor in the adaptation of refugees to the receiving country, a similar contribution also being made to encourage the acceptance of nonproductive persons whenever agreement has been reached on the immigration of a specific number of workers; (iv) further, to facilitate the voluntary repatriation of refugees by practical means.

VII. The conference invites nonmember states to become parties to the Geneva Convention of July 28, 1951, with the least possible delay, and to grant refugees the facilities laid down in this convention.

II. THE INFLUENCE OF AND CONTROL BY PARLIAMENT OVER THE GOVERNMENT

Considering that one of the fundamental aims of the Interparliamentary Union is the fostering of democratic parliamentary institutions and their development in the light of our experience.

Considering that it is inherent in the democratic system of government that the legislature should constantly and continuously control the conduct of government and that this requires the meeting of parliament at reasonably regular intervals with full facilities for information, particularly through questions, inquiries, interpellations, discussions and the adoption of resolutions.

Considering that, although the financial procedure and the procedure over the discussion of foreign affairs differ in various coun-

UNIVERSITY OF MICHIGAN LIBRARIES

tries, it is essential for parliament to intervene unreservedly in and express itself vigorously on all domestic and foreign matters.

The 46th Interparliamentary Conference recommends that, within the framework of the different political and constitutional systems that exist, a serious effort should be made to consecrate the supremacy of parliament by making it the real elected instrument of the democratic will of the people.

III. THE STABILIZATION OF PRICES OF PRIMARY PRODUCTS

Considering that excessive fluctuation in the prices of primary products makes it difficult to frame and apply acceptable programs for economic development and leads to situations which are difficult both for producers, who, in view of this uncertainty, are never assured of equitable remuneration for their efforts, and for importers, who need a regular supply of products at reasonable prices.

Considering that these disadvantages are particularly felt in underdeveloped countries, which find the main source of their revenue in the production of raw materials and are more affected by fluctuations in prices than industrialized countries, which are normally better organized for the protection of their economic interests.

Considering that fluctuations in commodity prices in international markets upset the balance of payments position of the underdeveloped countries and therefore their prospects of economic development.

Recognizing that measures taken in the field of price support by nations responsible for the economy of underdeveloped territories have achieved only limited success and need to be supplemented by, and coordinated with, action on the international level to put an end at least to short-term fluctuations of prices arising mainly from temporary causes,

Recognizing the disadvantages of harmful operation by organizations acting under monopoly conditions and constantly paying to producers prices which are unduly at variance with those prevailing in international markets,

Appreciating that it is desirable to strive for terms which, while being fair to consumers, should not be to the detriment of producers, and to that end that organizations of producers, consumers, and traders should be associated in the discussions,

The 46th Interparliamentary Conference recommends:

That the formulation of international commodity agreements between the appropriate producer and consumer countries on the lines of those already in operation should be encouraged;

That the Havana Charter rules which are at present administered by the Interim Coordinating Committee for International Commodity Arrangements should be reviewed and put on a permanent basis;

That an international conference should be convened in order to carry this recommendation into effect.

Foreign Aid: A Study in Dollars, Delusions, and Deception

EXTENSION OF REMARKS

OF

HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 27, 1958

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks, I request permission to have the following article printed in the CONGRESSIONAL RECORD.

Mr. Bernard Van Renssalaer, who has written a recent article which appeared in the Reader's Digest on the foreign aid program, made a very enlightening talk on the way some of the foreign aid moneys are being spent. Mr. Van Renssalaer points up the need for a critical reevaluation of this entire program.

The article follows:

This is a tale of misspent dollars. It is also a story of delusions and deception. This tale will not have a happy ending. In fact, it has no ending at all. It will continue, page after page, chapter after chapter, volume after volume, without purpose and without end, until aroused citizens put a check on what is becoming a humiliating and futile episode in the annals of our history.

I refer to the program upon which our Federal Government embarked 12 long years ago. Perhaps a better way of saying it, is billions and billions of dollars ago. It started, innocently enough and with the noblest intentions, as the Marshall plan. It has mushroomed in a little more than a decade to the second most expensive project in the overwhelming array of Government undertakings.

Under this program we are contributing to the economies of more than 60 countries in every part of the world at a total cost of $4 billion annually and the process of expansion goes on and on.

Foreign aid is a tale of dollars. Sixty billion dollars, to be exact. That is the 12-year cost to the American people. How much is it, in terms we can comprehend? It figures out to $350 for every man, woman, and child in our Nation; more than $1,000 for the average American family—more, I might add, than most families have in their savings accounts today. Sixty billion dollars—more than the total assessed valuation of the 17 largest cities in America.

Foreign aid is a tale of delusions. We have been deluded—there is no other word for it—into a mass belief that every dollar spent for foreign aid shoves our trusted allies, our not-so-trusted friends of the moment, and the outright fence sitters further and further away from the yawning precipice of communism. We've been told, retold, and told again—directly and by calculated implication—that the yardstick of the free world's collective security can be measured by the sum total of American dollars paid out in foreign aid.

The sad fact is, my friends, that we've been sold a bill of goods. We bought it—but we are not through paying for it. And if the present plans of our foreign aid bureaucrats materialize through the generosity of Congress, we can look forward to continuing payments for at least another generation.

Foreign aid is also a tale of deception. A tough word, to be sure—but it fits. How many times have you picked up your newspaper to read a dynamic pulse-stirring statement by a high-ranking Government official extolling the virtues of a mammoth program of foreign assistance? To justify the outlay of your dollars, he tells you: "Look what we've accomplished. A new factory in Iran, food for the starving Koreans, guns and tanks and planes for our good friends, the Turks. And just in the nick of time, too, to slam the door on the lurking menace of the Kremlin."

Is that what we've done? Have our dollars really and truly saved the world, or a good part of it, from communism? Believe me, if I was convinced, or even half-convinced, I'd never utter a word of protest. But as a free American, I reserve the right to examine the facts and reach my own decisions. When the facts plainly and indisputably contradict the propaganda, then I believe it's time to step in and set the record straight.

The record of 12 years shows this: America is now committed to a foreign-aid program indefinitely. The program is costing far more than it should because of the way money has been mismanaged and squandered. Dollars alone do not rescue countries from communism. It takes more than multipurpose dams, factories, and cash to save the souls of men. Properly conceived and managed, American assistance to the needy nations of the world could yield great benefits. But as conducted today it cannot fail to drain off tremendous amounts of our financial and material resources out of all proportion to the accruing advantage to ourselves and to the people we are trying to help. Moreover, it is not winning friends. The main beneficiary will be the entrenched and growing bureaucracy that is in the process of making a permanent career out of distributing American taxpayers' money to the four corners of the earth.

As long as this program stumbles and staggers without clear-cut policy direction, without realistic planning and competent management, without rigid discipline and control—so long as these conditions prevail, foreign aid shall remain the greatest international giveaway in the history of mankind.

Now let's examine the details of foreign aid, the various shapes it takes on the planning boards of the State Department, the Defense Department, and the International Cooperation Administration and as it grows to maturity in the sixty-odd nations currently involved.

First is military assistance. This refers to actual military hardware and training of foreign troops. For this purpose some $1.5 billion will probably be appropriated in the fiscal 1958 budget.

Next is a program bearing the dubious title of defense support. In a cold, bright light, this shows up as economic assistance, but we are told it is all part of our military aid because it is designed to bolster—probably some $700 million worth in fiscal 1958—the economies of countries receiving military assistance. This, however, fails to conceal the fact that defense support, as such, is nonmilitary in character.

Nevertheless, as our foreign-aid bureaucracy set out to justify its share of the proposed record-high budget for the next fiscal year, the American taxpayer was assured that at least 75 percent of the $4 billion to $4.5 billion sought for foreign aid was going into military assistance. This, of course, has popular appeal. We will support a military program because it contributes to our defense whereas we resent a huge volume of economic giveaways.

This percentage figure, however, does not quite square with the facts. Actually the aggregate of all nonmilitary aid consumes more than half of our foreign-aid expenditures, and if you add the value of surplus farm products we distribute abroad but which do not figure in the mutual security budget, the sum of nonmilitary assistance mounts up to more than 60 percent of our total foreign-assistance bill.

America also extends to its friends abroad a program of technical assistance, whereby we attempt to impart some of the know-hows and skills of superindustrialized society to the underdeveloped areas of the world. This highly commendable objective will probably command a budget of $160 million for the next fiscal year. Unfortunately this part of the program has run into great trouble by trying to do a little of something everywhere in all fields of human activity. There are now between 1,500 to 2,000 projects in more than 60 countries.

It has been impossible to obtain enough trained manpower to operate them and this sprawling, uncoordinated program is beyond the capacity of Washington to manage effectively.

Adding up the other components of this complex program we find something like this available for fiscal year 1958: $500 million for an economic development lending fund; $500 million in reappropriation of the funds remaining from last year's foreign aid budget; $300 million for the President's special or emergency fund; some $95 million of administrative and miscellaneous costs; and $750 million surplus agricultural commodities.

It all rounds out to a tidy $4.5 billion. Your share: some $80 to $85 for every family in the land.

Now this amount, while vast, would not in itself account for fears that there is a swollen budget, hidden waste, extravagance, duplication, and inefficiency. It is only when we relate the anticipated expenditures to past outlays and the record of accomplishments that the warning signal goes up.

We are informed—at least, it's printed there for all of us to read—in thousands of pages of testimony given in congressional hearings and in reports of congressional investigations and in other official records, that great waste and extravagance does in fact exist. We are told, for example, that—

1. We helped finance sugar plants in Iran where not enough sugar was grown to keep them operating.

2. We helped erect cotton plants in Korea—where there is no native cotton.

3. We helped put up flour mills in Korea and Formosa—where there is little or no wheat.

4. In Iran we paid out some $500,000 for American-made automatic looms to install in a textile plant which had never been properly engineered. The looms required high-grade cotton—of which there was very little—and skilled operators and maintenance men—of whom there were none in the native population. Then we failed to install the power to make the plant operate.

5. We put up a tremendous cowbarn in Lebanon—as a cost of $128,000—to display to Lebanese farmers with an average income of $100 or less a year, all the shiny, modern equipment they should purchase in order to really become prosperous.

6. In India, 2 weeks before unobligated appropriations were to expire at the end of a fiscal year, we decided to donate $1,539,000 worth of prefabricated steel for 52 grain silos and warehouses. Two years later the steel was lying around unused. Yet the International Cooperation Administration obligated $4 million more for additional steel warehouses.

7. We put up $450,000 for a tire plant in Korea, and then learned that it was extremely difficult to develop a market for this product.

8. We paid out $14.5 million to build 5 airports in Afghanistan and install electronic equipment in another airport which Russia is building—in a country with few roads and totally inadequate mass transportation facilities.

9. For 2 years 50 cents of every dollar we poured into Yugoslavia for economic aid leaked out for the payment of principal and interest on Yugoslavia's debts to other countries.

10. We spent several hundred million dollars in the purchase of British military aircraft that it was known would be obsolescent when delivered. Meanwhile our assistance enabled the British to release funds from their budget to subsidize the development and production of commercial jet transport airplanes in competition with American aircraft manufacturers and engine builders.

11. In one case a large military aid contract for ammunition to be produced in Europe was taken from the low bidder in one country and placed in another country without due regard for price in order to influence an election.

12. In South Vietnam and South Korea, we converted imported commodities and American dollars into local currencies at unrealistic and disadvantageous rates of exchange. The result: It required many millions of dollars more than was necessary to carry out our objective.

13. We obligated $19 million for the construction of a fertilizer plant in Korea without any engineering survey, specifications, or determination on such essential matters as types of fertilizer, plant location, and types of raw materials.

14. During the last few weeks of fiscal year 1956, in an effort to use up all allocated funds, we gave Iran $34 million in commodity procurement grants although we knew or should have known that Iran's capacity to receive and absorb these commodities did not exceed $1 million per month.

15. In South Vietnam, South Korea, and Iran, when we could not find enough projects upon which we could get rid of our aid funds, we handed the local officials, from time to time, United States Treasury checks running into many millions of dollars as a form of budget support. No one really knows how these funds were used and where they were spent.

16. In Iran we imported machinery and equipment of all sorts valued at $25 million. Three years later the International Cooperation Administration was still trying to find out where it had all gone, where it then was, and who had it.

17. In the suburbs of Manila, we built row after row of individual bathrooms on small lots—on the theory that people would buy the lots and build neat, little homes around the bathrooms. Unfortunately, the Filipinos didn't like the idea and so the rows of bathrooms just sat there. I might add that this landmark in our efforts to raise the living standards of backward people came to be known as Flushing Heights.

These documented incidents, unfortunately, are not isolated instances of errors in judgment, admittedly a very commonplace human failing. If we could forget that the record presents countless similar cases, then we might find it possible to adopt a tolerant attitude with the confidence that our foreign aid bureaucracy would learn by experience.

It hasn't developed that way. The same errors of judgment show up year after year. The list I recited to you covered very recent cases as well as cases dating back a number of years.

The record, while very bleak indeed, does contain bright spots. Our $60 billion investment is not a total loss. In spite of empire building, inefficiency and needless expense in many areas, the Marshall plan helped to restore Western Europe at a critical time. The anti-malarial compaigns in several countries have proved to be lifesavers. Certain technical cooperation projects in the fields of agriculture, health and education have more than justified themselves. Without substantial aid certain countries of Asia might have collapsed, but here again there was much waste and the recipients were often uncooperative.

Let me emphasize a point I made earlier. All of us can believe very strongly in the principles of American aid to needy countries. We have the immediate and important objective of gaining and holding trustworthy friends in the family of free nations. Viewed from long range, an effective foreign-aid program can do much to help our less fortunate neighbors help themselves. It is a lofty goal, and one to which we can all subscribe.

No; we cannot find fault with the principles. But we can—and must—take steps to correct the way our foreign-aid bureaucracy has chosen to carry out this mission. We can—and must—restore this program to manageable size, reflecting our own ability to pay for it and the ability of recipient nations to absorb and properly utilize what we are providing.

Are we on the path to better management? At this moment, there are few, if any, encouraging signs. In the face of overwhelming evidence of waste and extravagance, we are advised pointblank by our foreign-aid officials that, notwithstanding dollars down the drain, their management can be defended, because we are saving the world from slavery. We are not extended even the lamest excuses for our squandered dollars. Instead, every mistake is defended, and we are advised that the program's motives are the highest. That, we are told, is the only really important thing to consider.

So far removed from the somber conference rooms in Washington, you may very well find it hard to believe that such an attitude exists. Let me quote to you from a letter I received from one of the highest officials in the State Department, after I had called his attention to the record of staggering waste and just plain mismanagement attached to our program in Iran. He replied, and I quote:

"The story of our aid program to Iran is, in fact, a classic case in which the operation was successful, and the patient survived."

Had I lacked respect for this gentleman and his high office, and had I not been convinced that he, too, had been sold a bill of goods by the freewheeling planners and empire builders serving under him, I might have asked: "How about the patient in the room next door, the American taxpayer? Will he survive, too?"

At every level in the foreign-aid hierarchy, this bewildering attitude is pronounced. Consider for a moment the investigation conducted by the House Committee on Government Operations to pin down the blame for the unwholesome condition of our program in Iran. Let me quote from the committee's final report—mind you, this is the report filed by 29 Members of the House of Representatives and based upon 8 months of investigation and over 1,200 pages of testimony.

The committee recommended "that the Department of State and the International Cooperation Administration identify the individuals responsible for the waste and lax administration described in this report, and take prompt action to insure that they shall no longer occupy positions of trust and authority in the expenditure of United States aid funds."

That, my friends, is plain talk. And what happened? At this very moment the official who directed our aid mission in Iran is now chief of our mission in Korea where we are spending more than $300 million annually in economic aid. His former deputy was selected to succeed him in Iran. Others associated with the Iranian program are holding responsible foreign-aid positions in various parts of the world. In other words, all have received an outright vote of confidence for having squandered tens of millions of American dollars in useless and impractical projects.

Now where do we go from here? First, I believe that if more and more citizens come face to face with the painful realities in this gigantic international WPA, it will become more and more difficult to peddle a shoddy bill of goods. That's our first job—bringing this tale of dollars, delusions, and deception into every corner of the land, for citizens everywhere to consider in their own homes and communities, and reach their own decisions.

I have every confidence in the common sense and good judgment of the American people. Given the facts, Americans make up their minds in a hurry, and then stand

UNIVERSITY OF MICHIGAN LIBRARIES

up for what they believe. It won't happen overnight, of course. We cannot scour out the follies and blunders and outright nonsense of the past 12 years without hard work, active interest, and unselfish devotion to the task at hand.

Equally important is setting our sight on a well-defined objective. Like it or not, our Nation has shouldered the burden of world leadership. Like it or not, we are committed indefinitely to a program of foreign aid. Now as practical people who want the job done as efficiently as possible and at the lowest possible cost, let's decide how we will go about it.

Let me offer, for your earnest consideration, a few ideas of the subject.

First, when we concede that foreign aid is something we must learn to live with indefinitely, let's also accept the fact that it must be rigidly controlled and kept within the bounds of our ability to administer it properly.

Competent administration is a primary goal. There's a place for idealists and visionaries and saviors of the world—but not in foreign aid. We must have experienced bankers, experts who can hold their own in the game of international finance, engineers and other technical authorities who can measure the value of our projects in terms of performance and proven results, not politics and soul-saving. Above all, we must have tough-minded administrators with the experience necessary to manage the greatest merchant banking and technical operation that the world has ever known. They must be wise enough to carry out our legitimate objectives and at the same time sufficiently hard bitten to insist that Uncle Sam gets a fair shake and a measure of cooperation from the recipients of our aid.

Further, we must create a rigid policy framework and stay within it. That means we must assess our foreign-aid plans from our own point of view as well as the other fellow's. It means facing up to the fact that some things, at least, simply cannot be justified in terms of a foreign nation's needs if they are clearly beyond its capacity to absorb and use the aid. The development of backward countries is a slow and painful process. Our assistance in this undertaking is not a project to be turned over to theoretical planners and promoters.

Next, I believe we should draw a clear, sharp line between military and nonmilitary assistance. The American taxpayer is entitled to know where one ends and the other begins. The practice of disguising purely economic projects as so-called military support, simply to appeal emotionally to the American public, is deception at its very worst.

Further, let's step back for a moment and take a good, hard look at foreign aid and all the responsibilities it carries. Let's size up our obligations to the rest of the world, and then take a new and tighter grip on a long-ignored concept: that foreign assistance must serve to strengthen and defend the giver as well as the receiver, and when giving becomes unproductive and wasteful, the waste must be ruthlessly eliminated or the giver will ultimately be badly hurt.

Our foreign-aid bureaucrats tend to lose sight of this fact and it is time that they face up to the realities.

One more point: Foreign aid, as it is conducted today or as we would like to see it conducted, can never become a substitute for diplomacy and a realistic foreign policy. In a world of proud and sovereign nations, we cannot purchase friendship or respect. Only a genuine interest in the welfare of others, as reflected in practical efforts to help others help themselves, will earn us any measure of international affection and trust. We must avoid creating any suspicion that we are employing foreign aid not as a means of helping other people but as a form of bribery, tribute or blackmail.

The underdeveloped countries of the world cannot be saved by the indiscriminate use of dollars. The only thing that can save them is an understanding of the spiritual values that have made America great and a desire to put them into practice. We cannot plan and regulate their lives. We can show them the way but they must do the rest. This is our real mission. To accomplish this we must revise both our thinking and our planning.

Finally, we must insist upon a straightforward and businesslike program of competence, control, and commonsense. Competence means that we must give the capable people within the International Cooperation Administration an opportunity to function under experienced leadership instead of bureaucratic promoters. Controls are needed to bring a measure of discipline and order to the administration of foreign aid. Commonsense is indispensable in deciding what should be undertaken and how it should be done. Until these three elements are introduced into the program, foreign aid will continue to deteriorate with the gravest consequences for the United States and the beneficiaries of our assistance. Only a vocal and vigorous public opinion can bring about these reforms.

The answer is up to you and every other American. Thank you.

A Blueprint for Action

EXTENSION OF REMARKS

OF

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 27, 1958

Mr. O'NEILL. Mr. Speaker, on October 29, 1957, the Democratic leader of the Massachusetts State Senate, the Honorable John E. Powers, of South Boston, addressed the Boston College seminar on fiscal, economic, and political problems of Boston and the metropolitan community. This was the opening address of the fourth year of the Boston College seminars.

The title of his discussion was "A Blueprint for Action." Senator Powers is considered to be one of the most able men who have ever been in public life in Massachusetts in the past decade—an able leader, a forceful orator, and an alert and progressive legislator. He has served in the Massachusetts Legislature as assistant minority leader, as majority leader, and as minority leader. He knows the problems of Massachusetts, and the problems of his native city of Boston. His sterling remarks have been accepted quite generally as a step forward toward improving relations between businessmen and legislators. He was introduced by Horace Schermerhorn, who is president of the National Shawmut Bank of Boston and served as chairman of the seminar with the following remarks:

Our speaker rounded out with the prorogation of the 1957 session of the legislature a total of 19 consecutive years in that body. He served in the Massachusetts House from his election in 1939 until 1946 and he has served in the Massachusetts Senate from 1947 until the present. On the floor of the Senate, he is officially recognized as the senator from the Fourth Suffolk District. We know him as the senator from South Boston.

His capacity for leadership was recognized after a single term in the House when he was chosen assistant floor leader. In the Senate he has been elected floor leader of the Democratic party by the members of his party through 8 years of sessions.

The senator from South Boston was called upon by former Governor Dever to act as his Suffolk County campaign manager 3 times, and his party made him chairman of the Democratic platform committee twice, in 1954 and 1956.

Just a few weeks ago, a Republican president of the senate—for the first time—appointed a Democratic member of the senate to the position of chairman of a special recess committee. The special recess committee was created to study the whole problem of railroad transportation. I think we can appreciate how critical is the work of this committee, and I think we can appreciate the honor and responsibility imposed on that Democratic senator, our next speaker, Senator John E. Powers, of South Boston.

The following is the address of Senator Powers:

Mr. Moderator, Reverend Father, gentlemen, I am pleased to share this platform with Mr. Hennessey today and to express my gratitude to the officials of the Boston College seminar for the courtesy of their invitation.

Our topic today is general in nature and its affords your speakers vast latitude as we attempt to formulate in accordance with the dictates of the topic, a blueprint for action.

That there may be total understanding of our purposes here today, it seems expedient that we lend our attention to the provocative challenge which lurks in the title of our discussion. A blueprint, in the strict application of the term, suggests the orderly formation of plans to be executed, usually by someone else, at some time in the future.

Action, however, possesses a far different connotation, for implicit in it is the clarion call for the urgent and immediate expenditure of energy to provide a solution for those problems which are made evident by the cold and uncompromising facts contained in the blueprint.

Thus, today, to fulfill the challenge of our topic requires substantially more than a recitation of all the ills and infirmities of the aged city of Boston.

Rather, we must address ourselves to the task of attempting to outline a course of action which possesses two cardinal attributes: (1) That such means or plans as are suggested here be capable of serving as the foundation for continued progress; (2) that such means or plans as are suggested here be capable of virtual immediate execution.

The magnitude of such a project is immense, so immense that certain preliminary statements are demanded of one who would profess to volunteer such suggestions.

The problems which beset Boston are extremely grave—and in some respects appear to defy or resist all efforts to correct them. Yet, to approach the task of solution with an attitude of futility is to foredoom the effort which has been undertaken. In a similar view, to consider such progress as has been made an optimistic signal to abate or abandon the intensity of the efforts directed toward the resuscitation of the city, is to consign Boston to the status of a municipality with no future other than its past.

Those elements which have contributed to the decline of the capital city are too well recognized to require extensive elaboration. The debilitating effects of a shrinking tax base and a soaring tax rate have been made

the subject of many academic discussions. The paralysis visited upon a city by a highway system, inadequate to absorb and service the demands of its traffic, are visible daily, and the economic holocaust which is created thereby is impossible to appraise.

The blight of decadent property which serves as a cancer, jeopardizing the value of contiguous areas, presents a severe test of a community's willingness to sacrifice in the present to insure its existence in the tomorrow to come.

These conditions, which, while they are not singular to Boston, are present here in such proportion as to negate any premature optimism which might be engendered by the prudential development, or other such evidence that the drowsy giant which is Boston is emerging from its century-long slumber.

Progress, however, has been made—and in sufficient proportions, to allow this small relief—the pace of our retrogression has been diminished and perhaps has been halted. This has been achieved not as a result of the decision of any 1 man or 1 concern, but because many men and many organizations have arrived at the inevitable conclusion that decay, devastation, and impending doom impels a cooperative effort—governed by the need to cease a Pollyanna-like quest for Utopia, and to commence the rebuilding of a city in conformity with the realities which confront it.

It is to this realism we aspire to contribute today.

Our problem is Boston—and the most vexing section of the city, and that afflicted most, is the downtown area.

To arrive at the core of the problem, let us utilize courageous realism, without which we cannot validly suggest a solution. The origin of all of Boston's problems is its size. It is a small city, shackled and confined. It is an enigma among the municipalities of this Nation and the world, for it encompasses but 47 square miles of land area. To those who seek to aid its growth is presented the complexity that Boston has but three boundaries, for its eastern border is the ocean.

There can be no doubt that those who see the inevitability of a regional government which will comprise the contiguous cities and towns on the remaining three borders are gifted with prophetic vision. But you will recall that realism was to be the common denominator of this discussion. Thus, while the integration of these communities with the capital city has a proper inclusion in a blueprint of the future—it is idle and fruitless to depend upon it in a blueprint for action.

The simple truth which marks this as necessary for discussion is the recognition that the residents of our adjacent communities are opposed to the concept of the metropolitanization of the area—and will resist every effort which might undermine the existence of their autonomous governmental structures.

This is the reality—and to discuss it in such terms is not to inhibit any efforts which are currently being made to overcome their opposition and resistence—but rather to bring to prominence some few suggestions which properly may be incorporated in a blueprint for action.

We are aware that the presence of a common water supply, the dependence upon the same public transportation—the established practice of mutual aid when fire threatens—all provide the basis upon which greater regional cooperation can be erected. Our ability to participate in a common sewerage system and jointly in supporting recreation areas again demonstrates the economically dictated inevitability of an expanded regional program.

However, let us consider, fleetingly, the factor which urges the citizens of these communities to resist extensive cooperation with the city of Boston. Momentarily, we shall ignore the circumstance which finds Boston bearing a disproportionate share of the cost of these mutually supported services. Instead, let us concentrate on their fear. Boston's steadily increasing debt, and soaring tax rate, cause these communities to fear that the metropolitanization of the area is merely a device to spread the onerous tax burden of the city to the citizens of the surrounding area. With this fear ever present in their minds—coupled with the reluctance to have their local form of government altered, any attempt to propound a metropolitan approach to some of Greater Boston's regional problems is destined for a frigid reception.

Unhappily, this is no surprise to any student of legislative activity. Year after year, the calendar of the general court contains many proposals which, if enacted into law, would, through statutory mandate, enforce cooperation in solving the regional problems. Yet, year after year, such bills are defeated, for they bear the appellation of a Boston bill. Now, why and how are they defeated? In recent years they have known their demise in the senate—and they have been defeated because the city of Boston does not possess total representation in the upper branch of our general court.

Ward 20, which is the West Roxbury section of Boston, houses 5½ percent of our total population.

Ward 22, which is the Brighton section of Boston, houses 4½ percent of our total population.

West Roxbury is linked in a senatorial district with the town of Brookline, and is represented by a senator from Brookline.

Brighton is included in a senatorial district with the city of Newton, and is represented by a senator from that city.

Consider the significance of this in relation with any legislative proposal of a regional nature, which would bring benefit or relief to the city of Boston. Invariably, the votes of these two senators reflect the thinking and the desires—and the fears—of the residents of Newton and Brookline, rather than the interest of the city of Boston.

Allow me to make reference to a recent example. The Highland Branch extension of the MTA was eclaimed and endorsed as an advantage to the city of Boston by virtually every organization and individual conversant with the nature of Boston's transportation problem. Yet, its most vigorous and articulate opposition emanated from the Senators who, although they represent 10 percent of the total population of Boston, also represent the town of Brookline and the city of Newton.

The bill which allowed this extension of MTA service was passed and signed into law despite the opposition led by these two senators. Parenthetically, permit me to add here that its legislative success is attributable in no small measure to the untiring efforts of one of your previous seminar speakers, the former trustee of the MTA, Robert Ryan.

It is not the intention of these remarks to serve as a criticism of the two gentlemen who represent these senatorial districts. In so conducting themselves, they are doing as they should—for they are giving expression to, and acting in harmony with, the desires of the majority of the people they represent.

It does, however, have this intention—at this seminar which aspires to contribute to a blueprint whereby the problems of Boston may know a solution—when next the topic of the redistricting of the senatorial district lines is considered—and such a discussion will occur in the foreseeable future—it is imperative for all who seek to aid Boston in the solution of its problems to unite to cure a condition which finds 10 percent, or 75,000 citizens, of the city deprived of a voice and a vote in a chamber of 40 members, on every matter in which the welfare of Boston is in conflict, however remote or problematical, with the wishes, the desires, and the fears of the residents of surrounding communities.

To do this—to insure that the welfare of the citizens of Boston, and the well-being of the city itself—is fostered by the greatest available legislative strength is going to create a problem among many well-intentioned men and organizations who desire earnestly to aid Boston. However, their conflict will arise from the political fact that such a redistricting might well affect the political domination of the senate which has existed since the two-party system came into being in Massachusetts.

This conflict, which I predict with certainty will occur, leads logically to an important factor in this blueprint for action which today we are attempting to draft. Business and the legislature must cooperate immed tely, for the needs of the capital city are so grave, so acute, as to demand of all of us that our partisanship and our prejudices be set aside, for the cost of retaining them could be the demise of a city.

Before we can cooperate we must eradicate many widespread deep-rooted misconceptions which currently exist.

Despite the solidarity of opinion which prevails in some very respected, if remote, quarters, your legislature is not populated by men and women dedicated to the harassment of business in Massachusetts. This concept is as erroneous, I hope, as the belief possessed by some that in a choice between material profits and human values, the business community will invariably select the former.

If there is to be the cooperation which we today seek to establish, it must first be realized that the doctrine of laissez faire has been entombed for many years. To the members of the Massachusetts Legislature it often appears that its requiem is still being sung by the local business interests in the forlorn hope that by repetition it may be revived.

Gentlemen, now as never before, business and government are linked—for the climate in which business is transacted is manufactured by the legislature. It is understandable that this change has not engendered the enthusiasm of everyone. But for Boston business to attempt to ignore or rail against it in the hope that it will go away is to further jeopardize our position as a city, to the detriment of all.

As I attempt to delineate the viewpoint of a legislator in this blueprint for action—it is imperative that these attitudes of the past be appraised in order that they may be avoided in the future.

We, today, state without equivocation that if Boston and its business community are going to prosper, then the business community and the legislators must work for this common purpose. The cooperation of which we speak is not an abstraction—rather it envisions the mutual development of plans—and the wholehearted support of business and industry as we, the legislators, attempt to effect them.

This means that our relationship must advance from its present status, which finds us, the members of the legislature, the recipients of mimeographic commands from business, usually with our names misspelled, emanating from people who have kept themselves as remote from us as men from another planet.

It means, also, that each individual must accept this premise as a necessary corollary to the achievement of this cooperation, which has for its end the solution of the problems of Boston. It will be woefully insufficient and inadequate if business believes that all that is necessary is to appoint another committee within the framework of an existing organization and authorize it to meet with the members of the legislature.

UNIVERSITY OF MICHIGAN LIBRARIES

A legislator, gentlemen, be he a representative or a senator, a Democrat or a Republican, is first a politician. As such, unless he is most unique, he has had the experience of knocking on doors to enlist support of his candidacy and of his legislative proposals. In the process, it is inevitable that he finds some doors locked and bolted against his appeal. It is a pathetic commentary that the business leaders of the community, whose economic life could be destroyed by one line in a bill, are among those who consistently resist the opportunity to meet with the men who serve in government.

It would be no exaggeration to state that no 10 percent of the leaders of industry in this Commonwealth knew the names of their Senators and Representatives. Were a poll to be taken today, in this audience which is comprised of men conscious of the power of the legislature to either improve or destroy the economic climate of Massachusetts, not 50 percent could name the Senator and representatives from the districts which house your businesses.

If for one instant you feel this is an exaggeration, turn now and ask your neighbor if he can do it—and if he fails, then in charity, and in truth, acknowledge your own inability.

We are here to formulate a blueprint for action, which will bring benefit to Boston and assist the capital city in this her hour of need. Untold benefits can be accomplished through the legislature in the next session which commences in January. Legislation will be filed to ease the inequitable burden Boston bears in the cost of State government. Efforts will be made again to introduce morality and common sense into the apportionment MTA costs by revising the iniquitous formula which impoverishes Boston by a passenger count which ignores the geographical origin of the rider.

These are not new legislative proposals. They have been defeated in the past, and they met their defeat because the voices and the efforts of the Boston legislators did not have the support of the individual business man who earns his living in Boston but resides beyond the limits of the city. What is the proposal for action? Let every businessman who is affected by the tax rate of the city of Boston inform the elected officials of his home community of his interest in the success of these bills, and his reward will be a substantial decrease in the levies imposed upon Boston, with a resultant stabilization and ultimate reduction in the tax rate of the city.

This can be accomplished only by the action of the individual. Your various trade organizations and your chamber of commerce have able, efficient men representing them at the statehouse—but until each businessman in Boston makes its tax rate his personal concern, our blueprint will never leave the draftsman's board.

Thus far, my remarks have been critical of the business community's approach to legislative problems.

In so doing, I do not contend that the Members of your legislature possess infallibility. We, too, make errors. We, too, have our prejudices and perhaps are often guided by them. But we consider and act upon more than 5,000 individual bills every year, which encompass every phase of human endeavor—up to and including the dreams and the ideals of our citizens. If we err—our error is inadvertent—not deliberate. We, like you, make mistakes in our business, are uninformed or misinformed as to the total effects of every one of these 5,000 bills which are before us for decision.

Hence, since many of these matters can and do affect you and the business climate, prudence dictates that a special effort be made to communicate your ideas to the man who, in the final analysis, might well control your economic destiny.

I regret the necessity of devoting so much of my allotted time to a discussion of this topic. However, from personal experience I know that if you will make a gesture toward the removal of the barriers which presently separate us, your legislators will make cooperation an immediate reality. From this cooperation, legislative action, which will bring vast benefit to Boston, can be enacted within a period of months—and our blueprint can begin to take form.

Only one facet of this need for cooperation and the means of accomplishing it remains to be discussed. When you meet your legislators, and, parenthetically, it will come to the statehouse I will be happy to perform the introductions—leave in your offices the local interpretation of the concept that what is good for General Motors is good for the Nation.

You see, gentlemen, we are elected by popular vote to enact laws which promote the greater good for the greater number. In truth, there have been occasions when the wishes and the desires of the industrial community were, in the opinion of some of us, in conflict with the best interests of the greater number of our citizens.

While I do not wish to forestall or inhibit any questions which may be asked in the period which is to follow these remarks, let me anticipate one which most certainly would—and perhaps still will be asked.

I was, and am, opposed to the imposition of a sales tax in Massachusetts. This proposal had—and apparently still possesses—the support of the business interests. This is understandable, because their property is of such a value that it carries a high assessment. Consequently, assuming, without agreeing, that the revenue from a sales tax would reduce the tax rate, the owners of highly assessed property would receive a tax benefit. Accordingly, their support of it is understandable, and their motives are personal and economic. It is my duty to act on legislation in conformity with my opinion of how the greater number will be affected. It is apparent that if a property tax reduction was to be accomplished by revenue derived from a sales tax, then the purpose of the sales tax was not to eliminate the tax burden, but it was a device whereby it would be shifted. Accordingly, I opposed it because it was in conflict with the best interests of the greater number of our citizens.

I did not—I do not—because I cannot subscribe to a theory which seeks to have the residents of a community, after paying their own share of the tax burden, subsidize the business interests of the community in order that their costs of operation might be reduced.

Further discussion of the sales tax at this time will serve no useful purpose, for its enactment is more remote than a central government for Boston and its surrounding communities.

We are concerned with a blueprint for action—we are attempting to formulate endeavors which can be translated from the planning board into realities—thereby providing some immediate relief to the perplexing and myriad problems which beset Boston.

Earlier we said Boston is a small city—confined and shackled by a geographical limitation over which it has no control. Additionally, it has experienced a migration of industry in recent years. It stands now on the threshold of decision—and its future relies upon the vision and the courage of those who occupy positions of leadership.

As it is true that the success of the relationship between the legislature and the business community depends upon individuals acting with mutual respect and confidence—so, also, the vision and courage demanded for the task of effecting a renaissance in Boston requires the untiring constant efforts of the individual as well as the labors of the community's business organizations. Boston's salvation, in other words, requires much more of the businessman than his dues in the chamber of commerce.

The blueprint which is ultimately to serve Boston, its citizens, its business and industrial community, must be drafted in conformity with the economic role the city is to play in our future and with recognition of the city's most severe shortage. There is, as you know, an economic base study currently in progress. Its decisions and conclusions will be of vast and lasting benefit to the entire area. However, the events of the recent past give vivid indication of the role the downtown area will play in our future. It is apparent that this region will become a headquarters center, rather than the site of the total business operation. The construction of arteries and belt highways will dictate the removal of the manufacturing and warehousing aspects of a business to more convenient localities providing immediate access to the highway system.

Accordingly, our planning now—our redevelopment of areas should be in conformity with this apparent use. As Boston is a city with but three boundaries, and unable to expand on its other borders, we must, it seems evident, encourage our expansion to occur in the only direction in which it can be utilitarian for occupants, and of greatest lasting value to the city. Our most serious liability as a city is our lack of area. Therefore, the form of our expansion must be vertical. In this manner, more area will continue to become available for investment and the tax base of the city will be expanded. Permit me to digress here for an instant with a suggestion relative to this vertical expansion. Our tax base in the capital city is inhibited by many circumstances. One of the contributing causes, in recent years, has been the expansion and the extensive building programs of our educational institutions and our religious denominations. I strongly urge that a meeting be requested by the proper authorities with our leaders in the religious and educational life of our community. By the enlistment of their aid, the pattern for the new architectural development of Boston can take immediate form and serve as an example for others who will locate and build in our city. Simultaneously, by expanding vertically, the amount of area, already in critical short supply, can be budgeted to uses which are productive of tax revenue.

Many of the problems which confront Boston need not depend upon the State government for their solution, nor rely upon the investment of private capital to commence the revitalization of the city. I am aware that at the present time the municipal government, with the cooperation of the Federal Government, is participating in programs which have as their objective the modernization of the capital city.

However, acknowledging that the basis for most of our problems is our lack of growth and investment possibilities, I strongly recommend that an extensive survey be made within the framework of our municipal government of all the departments holding property within the downtown area. Such a survey should, of course, include a review of all foreclosed property through tax title takings, which numerically are usually clustered surrounding those areas already marked for renewal. These properties should be reserved by the city from sale and any contemplation of an integration of departmental activities which will occasion the abandonment of an existing facility, should, when public service will allow, be decided in consideration of the future use of the land by private investors.

To those who are currently harboring the thought that such talk of vertical expansion and private investment in commercial real

estate in Boston represents the attainment of a new peak in optimism, permit me to refer to the statement of Mr. Roger C. Wilkins, vice president of the Travelers Insurance Co. Mr. Wilkins was asked why Travelers settled in downtown Boston rather than a suburban location, and his response was—and I quote him—"There has been a strong trend toward recentralization in the last 10 years." Many—myself included—are in agreement with this analysis—and the decision of Travelers to invest $7 million and erect a 16-story building, is a cogent rebutfal to those who dispute his assertion.

Boston must now aggressively act to make of itself a desirable locale for this migration back to the city.

The funding bill, which was passed by the legislature in its closing sessions of this year, whereby Boston is authorized to borrow $45 million, was an emergency measure to avert disaster. However, it insures—unfortunately—a high tax level for some years to come—and a high tax rate discourages construction. As a temporary expedient, in order that Boston may compete for investment, I earnestly urge the consideration and the support of the business community, of a bill which I filed a year ago. This proposal is currently the subject of a study by the joint committee on ways and means, and will be considered and acted upon in the coming session. Under its terms, and these would apply to every city and town in the Commonwealth, not to Boston alone, the assessment placed upon new construction could not exceed, for a period of 10 years, 25 percent of the cost of construction. Since it is well recognized that property is not assessed at current values anywhere in the Commonwealth, this ceiling on valuation would not occasion a current hardship upon the existing taxpayer, and by serving as an incentive to build, it would broaden the tax base and redound to his ultimate benefit. This proposal would, of course, necessitate a constitutional amendment.

Any discussion of new construction, and suggestions as to the direction of its expansion, leads inevitably to the consideration of zoning, and particularly to its application in the downtown area.

Under the authority of chapter 665 of the acts of 1956, the administration is empowered, with the approval of the city council, to create a zoning commission. This commission will then propose new zoning requirements for the city of Boston. I recommend that all—each individual—every organization—sincerely interested in the city and its future—pay careful heed to these recommendations—for unless they permit the greatest utility of the meager land we possess in the city, Boston's future could suffer a severe reversal before it had an opportunity to commence. However, it has become apparent that any recodification of existing zoning laws, having as its purpose the adaptation of a city to modern demands, requires that the zoning ordinances require of a developer or investor some facilities for the parking of the vehicles of the occupants of the building. Thus, again, I urge that influence of the business community be directed to the task of insuring that any revision of the zoning requirements of the city be in conformity with the needs which are so abundantly apparent.

The concept of new construction, of urban renewal and of area revitalization, is exhilerating in the vistas to which these projects give rise. However, of equal importance is the protection of existing areas of value from the pernicious extension of an area of blight. Such a problem is evident on Tremont Street, from Park Street to Boylston Street. We cannot allow this area to deteriorate. Already it shows evidence that the atmosphere of Scollay Square is progressing uptown. Indeed, one more joke shop on Tremont Street and the entire city will look like the victim of some horrible hoax. To halt this deterioration, I recommend to the trustees of the white fund, which holds title to the E. T. Slattery Building, that they survey the possibility of renovating the building for office use. Such an endeavor is within the scope of the allowable activities and would, I submit, be a profitable venture. It would further introduce into the area a new employee corps of shoppers, benefiting the retail stores in the area which have suffered from the retail trend to the suburbs. The influence of the business community should simultaneously be directed to the immediate execution of the plans for beautifying the Boston Common side of this same area.

Reference to the Boston Common, of course, causes us to consider the effect and the benefit the proposed garage will bring to the area. In a similar manner, it encourages suggestions born of the fear that an already traffic-harassed city will be further paralyzed during the period of construction. To provide the opportunity for a study of the problem which might arise, and allow the formation of plans in advance of the time of crisis, I recommend that the area of the Common, on the corner of Boylston and Charles Streets, which is in summer months used as a ball field, be utilized during this Christmas festival and shopping season for the parking of cars, together with authority for angle parking on Charles Street between Boylston and Beacon Streets. Such a use will not interfere with any functions, for the area is never used for recreational purposes in the winter months. Such a use, however, would provide an opportunity to view and study the effects on the flow of traffic, and would be of material convenience to shoppers, with a resultant beneficial effect on the volume of business done by our retail stores during the Christmas season.

Before we end the discussion of the garage under the Common, may I urge upon you this suggestion: it is agreed that the tax base of the city of Boston must be expanded. Our desperate need is for more land in areas destined to attract construction. In accordance with the challenege contained in the title "Blueprint for Action" I ask this seminar to consider the inclusion in the contract under which the Common garage is to be constructed, either by private capital or by an authority, that all fill removed from under the Common be dumped in the Fort Point Channel. This will provide a start for the development of a new land area, contiguous with the New York Streets development, and will transform a liability into a tax producing asset. In addition, approximately one-half million dollars annually could be saved by the elimination of the need for bridge maintenance, and within the borders of the newly expanded downtown area a region can be developed which would merit the title "Miracle Mile."

It has, I am certain, become apparent that in my remarks today I have avoided a discussion of two salient topics, which must be included in any blueprint for action. In the introduction which brought me to your attention, the chairman made mention of my recent appointment as chairman of the special commission on railroads. Having accepted the responsibility of this chairmanship of this investigation, it is my opinion that any remarks I might make at this time relative to this subject matter could affect the harmony and the effectiveness of our commission. Accordingly, I ask your sympathetic understanding of my position.

The other topic concerns the administration of the affairs of the City of Boston. My desire to cooperate with the business community as a legislator, in providing a solution to the ills of Boston, is as sincere as the magnitude and the scope of the challenge which confronts us. Accordingly, I have purposely refrained from any discussion of this topic, lest the laudable intent and spirit of this seminar be scarred by an interpretation which could divert us from our purposes, which transcend personal ambition.

Gentlemen, I am grateful for the opportunity to share with you today this climate of recognition that, as it relates to the survival of our city, no man is an island. In our city ,for men who look to the future in common purpose, there exists no barrier which cannot be melted away by the fire of enthusiasm—no prejudices which familiarity cannot destroy—and having banished these destructive elements from our locality, no material problem will withstand the strength of our united efforts.

The American Merchant Marine in War—Contribution of United States Lines in World War II

EXTENSION OF REMARKS

OF

HON. HERBERT C. BONNER

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 27, 1958

Mr. BONNER. Mr. Speaker, on February 13, 1958, I inserted in the RECORD an article showing the importance of our American-flag merchant marine to the security of our country in time of need. This article, entitled "American President Lines' Role in World War II," graphically told of the reliance we must place on our privately owned merchant fleet in times of world conflict. I hope many Members had an opportunity to read it and found it interesting.

Today, I wish to insert another story. This time telling of the contribution made by another of our great American steamship companies in wartime. This is the story of the United States Lines Co. as written by Maj. Gen. John M. Franklin, its president. I hope and believe that this will be equally interesting as the American President Lines story:

THE AMERICAN MERCHANT MARINE IN WAR—CONTRIBUTION OF UNITED STATES LINES IN WORLD WAR II

(By Maj. Gen. John M. Franklin, president, United States Lines Co.)

The record of the United States Lines contribution to our country's World War II effort began long before war was declared between the United States and the Axis nations. In fact, it goes back more than half a century in building a worldwide organization of trained personnel both ashore and afloat. It goes back to 1927–32 when the company had the courage to plan and invest millions of dollars in five new large passenger vessels built in American shipyards—the *California, Virginia, Pennsylvania, Manhattan,* and *Washington.* It goes back to the Merchant Marine Act of 1936, when the United States Lines became the first company to sign an agreement with the Government for the construction of the largest and finest passenger liner to be built in an American shipyard under that statute. This was the 34,000 gross ton liner *America,* which was accorded the distinction of hull No. 1 under the act. The record must also take into consideration the 58 passenger and cargo ships owned or operated by the company before the war and the 16 additional ships on order and build-

UNIVERSITY OF MICHIGAN LIBRARIES

ing in American yards. All, afloat, on the stocks or on the order books were taken over by the Government when the war came.

Threaded throughout the dynamic history of the company is a story of exceptional seamanship in peace and war; of heroic deeds in the face of raging seas and enemy action and of sturdy ships carrying the cargoes that were the lifeblood of the Nation in the dire emergency of World War II and the lesser but serious conflagration in Korea.

To recount the numerous outstanding events that stud the company's history would be impossible in such a brief summary as this. To do so properly would require volumes. Later in this report a few of the more remarkable exploits will be mentioned in detail.

In reviewing briefly the record of the United States Lines immediately before, during and after the war, these are the highlights:

WORLDWIDE ORGANIZATION

In the calm between the two World Wars the United States Lines built up a smoothly functioning organization that kept its ships serving with clocklike regularity the essential American trade routes to Ireland, the United Kingdom, continental Europe, the Far East, and Australia.

Its vessels were manned by a veritable wealth of trained and experienced officers and seamen, who had been tested in the winter Atlantic and the worst that the Pacific could offer in the way of typhoons and gales. Ashore, both in these United States and in far-flung offices around the world, on the docks and in the terminals were experienced men who knew how to move cargo and passengers with unmatched dispatch.

All this vast know-how was at the fingertips of the State Department when the dread pall of war began to spread across the world with Hitler's invasion of Poland in 1939. And, when 2 years later, this country was inevitably drawn into the conflict to preserve freedom and the democratic way of life this well-knit, experienced team of ship operators was in being to move today, not tomorrow, the troops and cargo necessary to victory. United States Lines personnel helped expedite the loading of men and war materials in ports from Maine to the Gulf of Mexico. It was company men in uniform or out, who helped to discharge the ships when they reached the war theaters and sailing the ships across the troubled seas were masters, other officers, and seamen who had been selected by the line over the years for their efficiency and devotion to their maritime calling.

EVACUATION OF AMERICANS FROM WAR COUNTRIES

In the short respite between the invasion of Poland and Pearl Harbor, United States Lines' ships such as the *Manhattan, Washington, President Roosevelt,* and smaller vessels evacuated more than 23,000 stranded American citizens from a war-torn Europe and from an Orient dominated by a belligerent Japan.

These American-built ships, privately owned and operated, were the salvation of these thousands of our citizens. The foreign-owned passenger liners, which normally operated in the North Atlantic trade, and on which many of these people had booked passage, had been withdrawn by their governments without warning to the passengers.

The sudden dearth of shipping put a tremendous strain on the shipping resources of the United States Lines and other American-flag companies. First the war came just when all ships, American and foreign, were booked to capacity for the normal westbound rush season. Second, more and more transatlantic tonnage was withdrawn from passenger service as country after country became involved in the war. Third, the war brought confusion to the normally efficient European terminals of the United States Lines as panicky nationals pleaded for space that was already doubly filled. And, finally, our our neutrality laws prevented the company's vessels from using these terminals and new ports of embarkation had to be found.

Here, training, experience, and the will to do a job in the American way came to the fore. Other ports of embarkation were found. Company stewards conjured up cots and mattresses seemingly from thin air. Promenade decks, swimming pools, lounge and recreational areas became dormitories. Officers gave up their quarters to mothers and small children. Meals were served in continuing shifts. And irate and nervous passengers were soothed into cheerful acceptance of the overcrowded and difficult conditions.

But, clearing a European port did not mean the end of tension for the masters and crews of the United States Lines' ships. There was still the submarine-infested Atlantic to cross, the risk of being mistaken as a ship of a warring nation.

RESCUES

Not far from the minds of the seamen and the passengers was the awful picture of the British liner *Athenia,* which was sunk by a German submarine on September 3, 1939, the day Britain declared war on Germany.

A United States Lines' freighter, the *City of Flint,* rescued 223 passengers from the stricken ship.

This was but the first of a long series of daring rescues carried out by the crews of company ships, who manned lifeboats in mountainous seas to bring exhausted foreign seamen to safety and the chance to fight again in a cause that soon was to be the cause of our Nation.

In September 1939, alone, ships of the United States Lines' fleet saved the lives of 130 seamen, whose ships had been torpedoed by Nazi U-boats. Sharing the honors for the rescues were the *President Harding,* which rescued the entire 36-man crew of the British freighter *Heronspool* off Ireland; the *American Farmer,* which saved 29 from the British freighter *Kafiristan* off the Scilly Islands; the *American Shipper,* which saved 32 from the British cargo ship *Blairlogie,* and the *Washington,* which saved 33 from the British-flag *Olivegrove.*

DRAMATIC INCIDENT

Perhaps the mot dramatic incident during the repatriation of Americans from war-scarred Europe involved the liner *Washington,* then commanded by Capt. Harry Manning. The *Washington* sailed from Lisbon on June 10 with 1,000 Americans. Early the next day while heading for Galway, Ireland, to pick up another 800 stranded Americans, the *Washington* was ordered to stop by a German submarine.

Captain Manning stayed on his course until the U-boat flashed by blinker signal the dread threat "torpedo ship."

"I will not attempt to describe my own reactions or those of the officers and crew," Captain Manning later told a nationwide audience over the facilities of the National Broadcasting Co.

"Picture, if you will, a great ocean liner a couple of hundred of miles at sea, with 1,500 or more souls aboard, most of them asleep—men, women, children, and babies.

"We watched for the next message and finally it came. It gave us 10 minutes to abandon ship. I immediately sounded the general alarm, closed all watertight doors, and ordered all passengers into the lifeboats.

"The efficiency of the crew was most gratifying and the calmness of the passengers was astonishing," the captain went on. "There was not a single incident of hysteria or confusion. Anyone aboard who witnessed how this American crew went about its work in this emergency must have felt proud to be an American.

"Every man went to his station. Women and children were assisted into the boats first. It gave one a splendid feeling of satisfaction to see with his own eyes that the old tradition of 'women and children first' was not dead."

Captain Manning told of keeping the blinker repeating the words: "American, *Washington;* American, *Washington.*"

The ship master said he believed the U-boat commander could not understand English well and apparently thought the *Washington* was an enemy ship. His only hope, he said, was to keep exchanging messages until visibility became clear enough for the large American flags on the liner's sides to be seen.

But the U-boat answer kept repeating "Ten minutes to abandon ship."

"While all this was going on, preparations to abandon ship continued," Captain Manning related. "We were about to secure the fire and engine rooms to prevent a fire which would naturally follow had the ship been torpedoed."

"Finally the message we were waiting for came, it said, 'Thought you were another ship. Please go on. Go on.' "

Captain Manning brought the *Washington* into New York safely with more than 2,000 passengers and crewmen.

"The one thought that will linger longest with me regarding this incident," the captain told the radio audience, "is the calm, intelligent fashion in which the American officers, the American crew and the American passengers met this emergency. Need I add, I am proud to be an American."

Repatriation of the last American citizen from Europe was completed on July 18, 1940, when the United States Lines *Manhattan* arrived in New York jammed far beyond capacity. The company ships had returned 21,000 persons to their homes.

The company also was active in the repatriation of Americans from the Far East returning to this country a total of 2,000 men, women, and children. The liner *Washington* carried the last shipload. She arrived in San Francisco in December 1940, with 1,342 passengers including 509 children. This was the largest number of Americans evacuated from the Orient on a single American-flag ship.

LINERS BECOME TROOPSHIPS

Because the United States Lines and its predecessor company had the courage to plan, invest millions of dollars, and build 6 large passenger vessels in American shipyards beginning in 1927, this Nation had a ready fleet of vessels to call on for troopship duty.

After quick conversion, these 6 vessels—fast enough to outrun a submarine and thus able to travel without convoy—carried more than 2,200,000 military personnel to and from every theater of war. They traveled more than 2,250,000 miles.

The ships were the *America* (*West Point*), *Manhattan* (*Wakefield*), *Washington* (*Mount Vernon*) and the *Brazil, Uruguay,* and *Argentina,* which were originally the *California, Virginia,* and *Pennsylvania,* and built by the United States Lines predecessor company for intercoastal service.

All six ships had outstanding records, but for the purposes of this summary we will review briefly only the activities of the largest United States Lines' ship—the *America.* This vessel was named the *West Point* when she donned her battle gray.

SS. "AMERICA" LARGEST AMERICAN TROOPSHIP

The 34,000-ton *America* served on every sea. Off Singapore, she was fired upon by Japanese shore batteries but was untouched. Off Rio de Janeiro, she eluded German torpedoes with her 24-knot speed. In Milne Bay, New Guinea, she fought off Japanese

airplanes. In the Red Sea, and again at Suez, she was attacked by Nazi torpedo planes, but her high maneuverability took her easily out of the way.

The *America's* wartime assignments sound like a geography lesson—Noumea, Bombay, Marseilles, Capetown, Guadalcanal, etc. During her enlistment she moved 400,000 troops a half million miles—roughly the equivalent of 14 times around the world.

Never once did her propulsion machinery break down.

Her contribution to the war effort can never be statistically evaluated, but we do think one little point in this connection might be mentioned here.

If her troop-lift had to be paid for, as was the case in the movement on foreign ships of many of our soldiers overseas, it would have cast the Government over $30 million, or twice the original cost of building the ship.

WSA REQUISITIONED ALL AMERICAN SHIPS

When the War Shipping Administration requisitioned all privately owned American flag ships they took possession of 55 vessels owned or operated at the time by the United States Lines. They also took over 16 new ships that the company had ordered and which were completed, nearing completion, or on the ways. Aside from the troop-carrying potential, this fleet in being at a time of acute emergency had a war-cargo lift of well over a half million tons. The fact that the WSA requisitioned these ships did not mean that they operated them. On the contrary, the United States Lines and other experienced American shipping companies were assigned these vessels on an agency basis to handle every phase of the terminal and voyage operations. During the war the United States Lines was assigned 332 ships for which they were responsible, including the furnishing of competent officers and crew members. In addition, the United States Lines, because of its experienced terminal and operating personnel ashore at its various ports from Maine to Florida and on the Gulf, acted as berth agents for 2,027 ship departures or arrivals.

Lacking in glamour, perhaps, but a substantial contributor to the Nation's war effort was the United States Lines freighter fleet. These ships traveled millions of miles and delivered the vital cargoes on schedule.

ONE OUTSTANDING CARGO SHIP

An outstanding example of a prosaic cargo carrier was the passenger-cargo ship *American Banker*. This 7,400-gross-ton ship made 38 crossings of the Atlantic in 2½ years up to late 1943. At least once she made the perilous run to Murmansk in the Russian Arctic, and on another trip she discharged supplies at Oran for the north African campaign. In this period she carried more than 100,000 tons of cargo overseas and returned with some 25,000 tons of highly strategic materials for the war effort in this country.

The *American Banker*, then in command of Capt. John F. Spears, had many encounters with enemy submarines but managed to elude the torpedoes every time.

UNITED STATES LINES PERSONNEL IN WORLD WAR II

The lines' contribution to the war in the matter of personnel must also be considered in terms of the years that went into the training and development of the highest type of experienced men, afloat and ashore—men familiar with the complex business of operating ships to every port in the world. The loading and unloading of ships, the efficient operations of docks and terminals, men fitted for duty wherever their country needed them, whether on combat or merchant ships.

Of the United States Lines personnel in the Armed Forces, 115 served as officers in the Navy and 27 in the Army, many of them in key positions. • • • Others used their knowledge of ocean transportation as officers at Army bases in various parts of the world and as Navy port directors both here and at advance bases. Most of our ships' officers who were called to active duty from the Naval Reserve served at sea, one of them, Capt. Schuyler Cummings, as commodore of convoys in the Atlantic area. Our records are bright with the stories of their achievements. It is significant that in the merchant service alone 449 of our ships' officers and men lost their lives through enemy action. Almost 100 officers and men were in enemy prison camps. It is safe to say that wherever Americans fought, ships and men of the United States Lines took part.

And the company's fleet did not escape unscathed from the ceaseless forays of the enemy. From May 1940 through July 1944, a total of 38 ships were sunk.

PERSONNEL HELPED TRAIN OTHERS

A little known but important contribution to the war effort was the United States Lines cooperation with the Maritime Commission's training program during the war. Rear Adm. Albert B. Randall, United States Navy, reserve, commodore of the United States Lines fleet before the war served as commandant of the United States Maritime Service in charge of training. Rear Adm. Giles C. Stedman, United States Navy, reserve, formerly commander of the *Washington* and the *American*, served as superintendent of the United States Merchant Marine Academy at Kings Point, Long Island, which turned out hundreds of ships officers during the war.

Comdr. Edward Closton, who served on the *Leviathan*, was commandant of cadets at the New York State Maritime Academy at Fort Schuyler. Commodore Harry Manning, who was capitain of the SS. *United States* when she established new speed records for the Atlantic on her maiden voyage in 1952, was the head of the maritime training school at Hoffman Island during the war. Capt. Alfred M. Moore, of the United States Lines, was commander of the training ship *American Pilot*. In all a score or more United States Lines' officers were engaged in training the much needed personnel to man our rapidly growing wartime merchant fleet.

SPEED UP OF CARGO LOADING

With speed in loading such an important factor in war operations, a plan for stepping up cargo loading was devised by the late Peter Fay, manager in charge of the United States Lines pier operations in New York. The idea of working out the deck loading plan of a ship well in advance by means of an exact scale model of the ship and scale models of the various items carried on deck as war cargo, was conceived. Members of the Chelsea pier staff in New York built a 9-foot scale model of a Liberty ship and scale models of tanks, bombers, fighters, scout planes, tugboats, landing barges, boxed airplane engines, locomotives, jeeps, automobiles. Before a ship arrived at a United States Lines pier for loading, the entire plan was worked out by placing models of the cargo the ship was to carry on the deck of the model in the most efficient way. The actual loading was then accomplished much faster and more efficiently. This system was so successful that other steamship lines with special loading problems sent representatives to the company's piers to use the models.

STEVEDORING SCHOOL

Another unique contribution of the United States Lines to the war effort was the stevedoring school set up in the passenger waiting room on Pier 59, North River, in association with the firm that had been handling stevedoring for the company for over half a century. At this school, Navy officers were trained in up-to-the-minute methods of handling and stowing cargo. The school was operated for the Navy's benefit to overcome the critical lack of officers experienced in this important field and capable of taking over the work at the Navy's advance bases. More than a thousand students—officers from the Davance Base training section of the Port Director, New York, and from the Navy Sea Bees Special Units received instruction.

The school was a fully equipped laboratory in which every operation of cargo handling could be performed in miniature on a 27-foot scale model of a Liberty ship that was complete in every detail of deck machinery.

Every piece of machinery could be rigged and operated with the precision of its counterpart on a fully sized vessel. The starboard side of the model was cut away so the students could see what happened to cargo after it was stowed in a hold. To complete the miniature set, the model ship was placed alongside a scale model of a pier complete with lower deck, loft, overhead span, catwalk, chutes, elevators and rigging. Small scale barges and lighters brought miniature cargo alongside and tractors moved cargo around the pier in realistic fashion. The model ship, 27 feet long and 43 inches in beam, was especially built for the school and was the only one of its kind in existence.

The school stressed rigging, and along the walls of the schoolroom were working models of cargo booms on which different methods of rigging were demonstrated and practiced. Because the students were likely to be called on to carry out, loading and discharging operations under fire, in harbors lacking proper facilities, and on beaches they were taught to rig emergency booms to take the place of damaged equipment and to substitute tractors for hoisting power when the ship had no steam up.

United States Lines' cargo experts and stevedoring associates formed the faculty of this unique school. In addition to the classroom work the students went out on the piers and participated in the actual work of loading war cargo for the fighting fronts.

POSTWAR ACTIVITIES

After the war the company proceeded to rehabilitate its fleet by purchasing the steamship *America* and many cargo ships from the Government under the Ship Sales Act of 1946. It was faced with the problem of reestablishing satisfactory passenger and cargo services on the many trade routes it had built up before the war. During the war Gen. John M. Franklin, president of the company, had observed how heavily our country depended upon the two *Queens* of the British merchant marine, to carry troops to the different theaters of war. With the war's end he decided to recommend to his board of directors that the United States Lines Co. propose to the Government construction of the finest and fastest passenger liner ever built in an American shipyard, it would be specifically designed for quick conversion into a fast troopship in case of another emergency. This ship was built and named the *United States*. On her maiden voyage in July of 1952, she established new speed records on the North Atlantic and brought prestige to our merchant marine and country. As a troop ship the steamship *United States* could carry approximately 14,000 troops to practically any port in the world and steam 10,000 miles without stopping for fuel, provisions or fresh water and she would speed to her destination at well over 30 knots.

At the present time the United States Lines owns and operates a fleet of 55 modern fast passenger and cargo ships, comprised of 44 C–2 vessels, 9 new mariner type vessels, and 2 large passenger ships, the steamships *United States* and *America*, all with steam up, in service and available for immediate use by the Government in case of another national emergency.

UNIVERSITY OF MICHIGAN LIBRARIES

If necessary this fleet is capable of carrying on a single sailing from a given part, 23,000 troops and well over 600,000 tons of necessary military cargo to any port in the world.

Truman Doom and Gloom Fail To Impress

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. CRAMER. Mr. Speaker, I would call to the attention of the Members and the public the editorial reaction of two of the fine daily papers of the First District of Florida, the Tampa Morning Tribune, Tampa, and the St. Petersburg Independent, St. Petersburg, that dispels, in my opinion, the effectiveness of former President Truman as a salesman of doom and gloom. At the Democratic $100-a-plate fund-raising dinner in Washington the former President tried to add to the fires of those who would talk our country into depression for political gain. I firmly believe that those who take callous advantage of any such temporary situation are not only men of little faith but are rendering a disservice to the people of this great land. I am happy to see my opinion reflected in the two following editorials:

[From the Tampa (Fla.) Morning Tribune of February 25, 1958]

PAINTING THE CLOUDS

Harry Truman's attack and President Eisenhower's reply suggest that the 1958 political campaign will resolve itself largely into a contest to see whether the Democrats can blacken the economic clouds faster than the Republicans can paint them with sunshine.

In his speech to $100-a-plate diners in Washington, Mr. Truman made a characteristic assault upon the partisan enemy. The country, he said, is in terrible condition and it's all the fault of the Republican administration. Republican control means panic and disaster. Remember the economic collapses of 1873, 1893, and 1929? Better vote Democratic before this great Republic is irreparably damaged by the party of special privilege, etc.

President Eisenhower, who has a distaste for dealing in personalities, made an impromptu speech to the National Food Conference yesterday which was clearly intended as an answer to Mr. Truman. America is strong and healthy, he said, and has nothing to fear from temporary ups and downs—provided its people have the good sense not to listen to men of little faith and little spirit.

Harry Truman may not be gloating over the current rise in unemployment, as Republican Congressman SIMPSON of Pennsylvania charged. But, certainly, Mr. Truman and his fellow partisans will scare up all the votes they can be invoking the hobgoblins of the Hoover depression. The breadbasket issue is the most powerful in politics.

Similarly, Mr. Eisenhower and the Republicans can be expected to minimize unfavorable trends and speak optimistically of the new green pastures of prosperity which lie just over the hill.

These conflicting interpretations will leave many citizens wondering: What's the truth, anyway?

It helps to place things in perspective by comparing the present with the past.

Best estimates put the number of unemployed now at about 4½ million, or approximately 6 percent of the total labor force. (Some economists say that, except in wartime, there is a normal unemployment rate of about 4 percent, because of seasonal layoffs and individual job switching.)

Now a figure of 4½ million jobless sounds pretty bad—until you check the record books. At the bottom of the depression of the 1930's, this country had 13 million out of work, or 25 percent of the total labor force. Even as late as 1940, after strenuous pump priming by the Roosevelt administration, there were still 8 million job hunters. It took World War II to bring full employment.

The gloom hunters point to curtailed operations in such industries as steel and automobile manufacturing. True, these reductions are severe. Yet top economists estimate that the drop in the Nation's overall production, as compared with last year, is running only 2 to 2½ percent—hardly an alarming change.

Nonpartisan opinion holds that this country, after a period of roaring economic expansion, is undergoing a contraction much like the mild recessions of 1948–49 and 1953–54. Who is frightened by the memories of those years? The same opinion foresees an end to the readjustment in 1958 and the beginning of a new boom.

By all the evidence, Harry Truman is painting the clouds much too dark. True, President Eisenhower may spread the sunshine a little too broadly at times. But when he tells us that America is strong and healthy and has nothing to fear unless it follows men of little faith, history gives his words the stamp of truth.

[From the St. Petersburg (Fla.) Independent of February 25, 1958]

TRUMAN POLITICAL GADFLY

Although they may be able to withstand the slings and arrows of other critics without too much trouble, a give-'em-hell speech by former President Harry S. Truman never fails to get under the skin of the Republicans.

Thus the reaction to the former President's fund-raising pep talk in Washington over the weekend was both quick and violent. The stung Republicans are still tearing their hair.

Yet there was little in Mr. Truman's speech that he hasn't said on previous occasions. He charged the Republicans with producing a recession at home and a crisis of confidence abroad.

His speech was filled with jarring sarcasm on every front. Said he:

"And in spite of the Republican recession, the Republicans manage to keep prices going upward. This is quite a feat, to have price inflation and recession at the same time. We had a hard time getting a satellite off the ground, but it was no trick at all for them to shoot the cost of living into outer space."

On the foreign scene, Mr. Truman declared:

"One of the worst results of this period of economic misrule is its effects on the international situation. The present administration has acted like an overbearing banker with a glass eye, not like a loyal and faithful friend of the other nations, and the crisis of confidence in our leadership has sapped the strength and determination of the great alliance."

Mr. Truman, of course, conveniently overlooks the economic setback which occurred during his administration as he does the failures of his administration in the field of foreign affairs. At the same time he is not always careful with the truth.

But he does have the capacity not only of hitting the Republicans where they hurt, but of rallying the spirits of the Democrats.

It is a matter of conjecture of how many Americans, outside the bigwigs of both parties, are deeply affected or persuaded by his public utterances. We suspect that most stopped taking him too seriously long ago.

Nevertheless in the role of political gadfly he does seem to perform a good purpose. He serves as a rallying point to the Democrats who seem to have a built-in proclivity for riding off in all directions. And at the same time he regularly manages to arouse the Republicans from the bog of smug complacency in which they seem to spend a good deal of their time.

A Bill To Protect the Small Investor

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. MULTER. Mr. Speaker, I have today introduced a bill designed to bring within the operation of the Securities Act of 1933 the sale of securities offered for sale and sold only in one State. The bill would thus prohibit deceptive practices which are currently victimizing small investors.

Of all the laws passed under the aegis of the New Deal, few if any have been as wholeheartedly accepted as the Securities Act of 1933 and the Securities Exchange Act of 1934, which established the Securities and Exchange Commission and today protect millions of American investors from fraud and deception in the sale of securities. The major stock exchanges themselves now welcome the standards for prospectuses and security offerings which the SEC, under these laws, requires. Confidence in the integrity of the security markets, so badly shaken in the debacle of 1929, and with reason, has been reestablished.

Nonetheless, we must face the fact that there are certain areas in which the small investors face a real peril, areas over which the SEC presently has no jurisdiction. One of the most insidious of these, and the one which my bill is intended to attack, concerns securities which are offered only within a single State, and which are often limited for original sale to the residents of that State. Heretofore these have been exempt from SEC regulation.

It is precisely here, free from the watchful eyes of the SEC, that unscrupulous promoters have victimized unwary small investors. Let me give you but one example of many that have come to my attention. In New York City, within recent months there has appeared a rash of advertisements offering returns of 7 percent, 10 percent, 12 percent, or more on various real-estate securities, with the offerings limited to State residents only. Such advertising, as the Better Business Bureau of New York City has

been at pains to point out, is frequently misleading and deceptive. Offering circulars are so artfully contrived as to confuse even a studious and informed person, much less an uninitiated and uninformed real-estate investor.

Unfortunately, under the laws of New York State, such offerings do not need to stand the advance scrutiny of analysts, accountants, engineers, and attorneys of the Securities and Exchange Commission. All that is required is the filing of a simple registration statement with the attorney general of the State of New York; and he has no effective regulatory power over these offerings.

New York State is by no means unique in this situation. In fact, many other States are much more lax in their supervision over the issuance of securities that are advertised and sold only within the State.

The bill which I am introducing seeks to put an end to these unscrupulous promotion schemes. Heretofore, under paragraph 11 of section 3 (a) of the Securities Act of 1933, security issues restricted to residents of one State have been exempt from Federal regulation. By striking out this paragraph, as my bill proposes, this exemption would be terminated. It would thereby be unlawful to use the facilities of interstate commerce unless a registration statement for the security was in effect.

Investors throughout the Nation would be assured that the fact that a security is not offered for sale throughout the country is no barrier to its meeting the requirements of the SEC for disclosure of all relevant information. There would remain, of course, certain kinds of securities, such as Government securities, building and loan securities, and those security issues aggregating $300,000 or less which would continue to be exempt from SEC regulation. Small investors would receive a substantial benefit from this bill. They would be less subject to scheming promoters issuing misleading, confusing, and deceptive prospectuses. This is a protection which our people deserve and need.

Farmers' Grain Cooperative

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Thursday, February 27, 1958

Mr. WATKINS. Mr. President, farmer cooperatives, which number over 7,000, move into our distribution system about 25 percent of all farm products which are marketed in the United States. Cooperatives are important handlers of many of our grains, such as wheat and corn, among other commodities.

With respect to the marketing of grain, cooperatives provide farmers with a longer marketing season, which permits them to take advantage of price fluctuations over a longer period of time than otherwise would be the case. In the fall, 1957, issue of the Grain Quarterly appears an article by Mr. Harold W. Poort entitled "Farmers' Grain Cooperative."

Because this very short article tells the success story of how one grain cooperative has served agriculture so well, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FARMERS GRAIN COOPERATIVE
(Harold W. Poort)

A new attendance record was set when patron-members of Farmers Grain Cooperative held their annual stockholders' meeting at Ogden, Utah, on November 1.

Patrons of the Utah co-op heard General Manager Harold W. Poort report that during the past year Farmers Grain handled 5,698,000 bushels of grain. Approximately 80 percent of this total was wheat. Savings for the year totalled $241,000.

Now a healthy, going, fast-growing operation, this regional grain marketing cooperative is now entirely out of debt to banks on its facilities of 3 million bushels at Ogden. Farmers Grain has written off losses undergone in previous years in connection with a feed plan and a dehydration operation that did not pan out as originally expected. These trials have now been charged off as experience.

Under the aggressive leadership of General Manager Poort and President W. W. Leek, Farmers Grain has been built up to a strong, working capital position. The regional's working capital has been increased from $218,000 on May 31, 1953, to a present total of $741,000. Thus, the co-op has now reached that enviable position where it is not currently required to borrow operating capital. Its savings for the past year's operation worked out to about 4.5 cents per bushel, and it has taken up with cash its revolving fund certificates of 1943.

Earnings from storage and handling were down somewhat from last year, but gross margins on merchandising operations increased substantially.

The board of directors, which is headed by Mr. Leek who was reelected to that position, consists of 1 member from each of the local associations which are 100 percent shippers to the regional.

Crop volume in the area served by Farmers Grain was down during the past year because of adverse weather and the soil bank. Wheat in the area, at this writing, is selling over loan values. As a result, the regional has some empty storage space. It is intended that this be filled with milo from the Great Plains States.

The barley crop in southern Idaho this year is very large. Development of cattle feeding as an important industry in that section and northern Utah has meant that a greta deal of barley is marketed directly from farms to feedlots, bypassing both local and regional and competing facilities. Thus, truck transportation has complicated the co-op's problem of amassing and selling grain to some extent, and truck receipts and sales from the area continue to mount as nearly everywhere in the grain belt.

Mr. Dulles at 70

EXTENSION OF REMARKS
OF
HON. JOHN SHERMAN COOPER
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES
Thursday, February 27, 1958

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Dulles at 70," published in the New York Times of February 26, 1958. I call attention to two sentences.

Historials of the future no doubt will record that Mr. Dulles' tenure in his key position was a period of great controversy. But we hope they will leave no question that on his 70th birthday, Mr. Dulles had the gratitude of the American people for his efforts to secure the peace.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. DULLES AT 70

The physical and mental vigor that John Foster Dulles exhibits daily in his grueling post is so impressive that it probably came as a surprise to many Americans to learn that he was 70 yesterday. A much younger man might well be crushed by the burden of responsibility and the fatigue of frequent travel which are our Secretary of State's normal load, yet he seems to thrive with the passage of time.

Historians of the future no doubt will record that Mr. Dulles' tenure in his key position was a period of great controversy. But we hope they will leave no question that on his 70th birthday, Mr. Dulles had the gratitude of the American people for his efforts to secure the peace. We are sure we speak for the great majority of our fellow citizens in congratulating him as he enters the eighth decade of his life, and in wishing him many more years of good health, good cheer, and useful activity.

Legislation To Increase the Annuities of Retired Civil Service Employees

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. ASHLEY. Mr. Speaker, I wish to speak briefly on behalf of a bill which I am introducing for the relief of our retired Federal employees—a bill which I am sure requires little or no justification in the minds of my colleagues. The more than 150 bills that have already been intrduced to provide annuity increases for our retired Government workers is ample evidence of the overwhelming support for this legislation.

Back in the fall of 1956, the 84th Congress, quite appropriately and commendably revised upward the schedule of retirement benefits of persons covered under the Civil Service Retirement Act. In so doing Congress acknowledged that the existing annuities were inadequate and unrealistic in terms of the grossly inflated costs of day-to-day living, which had seriously depreciated the purchasing power of fixed retirement income.

For some imponderable reason, however, the Congress failed to make the annuity increases in Public Law 854 applicable to those civil-service employees who had already retired—over 240,000 faithful civil servants whose average age is in excess of 68 years and whose economic burden is increased by the added cost of medical and health care, so necessary

UNIVERSITY OF MICHIGAN LIBRARIES

with the inevitable infirmities of advancing years.

If by 1956 the already depreciated purchasing power of the dollar dictated an adjustment in annuity income for future retirees, how much more desperate must the plight today of those who had already retired when we stop to consider that the cost of living has risen steadily since the enactment of Public Law 854.

It is a stern but inescapable reality that the cost of food, clothing, rent, and medical care has reached such heights that whatever was envisaged as a reasonable pension income in the past is now altogether inadequate. To fail to provide these people who have given us years of loyal and conscientious service with this necessary economic relief is clearly to default on our moral responsibility.

I urge upon my colleagues prompt and favorable consideration of this long overdue legislation to increase the annuities of our retired civil-service employees.

Masters of Deceit

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. RIVERS. Mr. Speaker, I want to call the attention of my colleagues to a new book which is destined to leave a deep impact on the thinking of the American people. This book is Masters of Deceit by J. Edgar Hoover, Director of the Federal Bureau of Investigation, to be released on March 10, 1958, by Henry Holt & Co., of New York City.

In this book, Mr. Hoover discusses communism, national and international. I know of no man, either in governmental service or in private life, who has a more thorough understanding of communism than Mr. Hoover. For 40 years he has followed, step by step, the rise of this atheistic conspiracy. The FBI has become a vigilant tower of watchfulness, protecting the Nation against these rodents of Marxism-Leninism who would devour our institutions of free government. While many citizens slept, not recognizing the Communist danger, Mr. Hoover and his agency were working day and night to keep abreast of the party's nefarious activities. The Nation owes a great debt of gratitude to the FBI.

For this reason, in my opinion, Masters of Deceit is must reading for every patriotic citizen. All too often I have heard men and women say, "I wish I knew more about communism," or ask, "Where can I find truly authoritative information about communism?" In this book, they now have their answers. Masters of Deceit represents Mr. Hoover's opinions concerning communism, based on a lifetime of study. I know of no book where this information is more understandably and simply set forth.

Masters of Deceit opens with a discussion of the origin of communism, first in its international aspects and then in the United States. We see how the Communist Party, starting as a small, disorganized band in 1919, slowly gained in strength, influence, and power. Then Mr. Hoover goes into two questions which intrigue every person: "Why do people join the Communist Party?" and "Why do people leave the party?" The FBI Director sets forth a number of illustrative case examples which make these two chapters not only highly informative but also interesting.

One of the most valuable sections of the book is the discussion of the internal structure of the Communist Party: how the party is organized; how its leaders and members live; how the party's educational program operates; how Communist man is fashioned through Communist indoctrination, literature, and the party press. The reader can actually see the party in operation. This is one facet of the Communist movement which is little understood—just how the party functions from within.

Unfortunately, day after day we hear Communist propaganda, the fancy-sounding promises of what the party plans to do for the Nation. Many unsuspecting citizens are hoodwinked into believing that the party stands for American ideals. Mr. Hoover's discussion tells just how, within the party apparatus, the recruit is slowly indoctrinated in Marxism-Leninism and his allegiance is transferred to a foreign power.

Masters of Deceit tells also about the party's attack against non-Communist society through mass agitation, infiltration and fronts. Here we clearly see the deceitful tactics employed by the Communists to hoodwink our citizens. Again Mr. Hoover cites case examples to show the techniques which the party day after day employs to advance its evil cause.

The party attacks our society not only through aboveground channels—but also underground. In a most illuminating chapter the FBI Director describes the party's underground structure. In recent years the underground has played an important role in Communist strategy, hiding party fugitives, concealing its leaders and secreting confidential records. The reader can see the life of a member underground and the demands on his day-to-day existence.

Of special interest is the chapter on communism and religion. Here Mr. Hoover explains that communism is atheistic. Karl Marx bitterly denounced religion and all his followers, including Nikita Khrushchev, have continued this assault. The chapter details how the party is attempting to infiltrate churches in the United States and to influence church men and women to support the Communist cause.

Not only is the Communist menace described and analyzed, but Mr. Hoover throughout the book tells what patriotic citizens can do to combat it. He calls for vigilance, a knowledge of the true aims of the party and a willingness of Americans to work together in suport of freedom. After reading this book the citizen can say: "Here is a book of merit—a book which has meaning to my everyday life."

Masters of Deceit is recommended reading for the Nation. The author deliberately avoids sensationalism; the book, as Mr. Hoover states in the foreword, "does not pretend to disclose a body of material known exclusively to the FBI." It does attempt to explain the background and menace of communism in simple and understandable language. Seldom does a book come from such a distinguished pen with such a meaningful and timely message. In it we will find answers which will help us in our battle of survival with Soviet Russia.

Historical Test in Costa Rica

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 19, 1958

Mr. CRAMER. Mr. Speaker, the Americas Daily is one of the better known Spanish language newspapers published in the State of Florida and dedicated to a better understanding between the Americas. A recent editorial in that paper pointed out the efforts of the people of Costa Rica to provide a method of nonpartisan observation of their coming elections to assure free and effective selection of a president. This is certainly a sound attempt to reach a great goal and I call to the Members attention several excellent points in regard to the Commission that have been brought out in the accompanying editorial which I ask to be included in the RECORD.

The editorial follows:

[From the Americas Daily of January 30, 1958]

HISTORICAL TEST IN COSTA RICA

According to reports from San Jose, the Government of the Republic of Costa Rica requested from the United Nations Organization a list of persons among which it could select a United Nations Observation Commission for the presidential elections to be held in that Central American Repuolic Sunday.

It is understood that the Organization, or one of its agencies, submitted several names of world personalities to the consideration of the Costa Rican Government and that the Government, after inviting the leaders of the different political parties to choose among these names, selected three gentlemen of recognized international prestige. They are Dr. Horace Read, dean of the Law School of Dalhouse University, in Canada; Mr. Tingsten, a Swede, director of an important Stockholm newspaper, and Dr. Paul Negro, president of the electoral court of Uruguay.

Although no hint has been given, at least abroad, of how the United Nations observation mission will operate, nor which will be its true functions, and how they will adjust within the juridical technique regulating the relations of a state member of U. N. O. with this world organization, it must be accepted that it is only a historical test taking place in Costa Rica, which may have enormous repercussions in the international life of the different countries.

The results of this observation mission cannot be known as yet, nor even immediately after the elections are held, because a

reasonable lapse of time will be necessary to know the effectivity of this measure, and its positive scope.

Of course, from the viewpoint of political morality, as an effort to demonstrate good democratic intentions on the part of the Costa Rican Government, this test has to be considered of marked importance. In any case, it is a precedent in America, which may be opening the way to adequate improvement in the future. After all, any institutional progress of that nature requires a process of maturity, of good judgment in the application and analysis of its consequences, so that it may some day become a reality that nobody will dare to dispute.

Those interested in the development of modern international law, in the moralization of international democracy, will have in this case, for sure, an excellent opportunity for meditation, for investigation and study, serene and constructive. They will say, in due time, the last word.

Spellbinder Truman Taken To Task by Press for Mishandling Facts

EXTENSION OF REMARKS

OF

HON. ELFORD A. CEDERBERG

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. CEDERBERG. Mr. Speaker, I am daily grateful for the free and independent press which prevails in this country to protect us from the "Hysterical Harry's" whose demogogic outcries do not always measure up with the facts. Some people are as immune to facts as a duck's back is to water.

Harry Truman, who dropped off in Washington with his cure-all political kit a few nights ago, has been taken to task by the Washington Star for his mishandling of the facts in connection with Republican efforts to increase rates for postage of the slick magazines. They referred to Harry's tub-thumping speech before depression-scared Democrats who forked up a hundred dollars each to break bread with the ex-President.

The following is the Star editorial:

[From the Washington Evening Star of February 24, 1958]

UNKINDEST CUT

When Harry Truman takes off his coat and starts swinging at the Republicans, as he did Saturday night, a man can do one of several things.

If he is really prudent he will dive into the nearest bomb shelter and stay there until the raid is over. If he is not prudent at all he can attempt to separate fact from fiction and undertake a point-by-point rebuttal of the Truman charges. If he does this he will wind up in a position roughly comparable to that of the man who tries to wrestle with a cement mixer. If he is just moderately prudent, and this is where we come in, he will try to deal with one point—and be glad to call it a day.

Mr. Truman's main theme revolved around the terrible things that the Republicans are doing to this country and its economy. After listening to him we would hesitate to try to borrow a dime from our best friend. But the audience liked it—an audience of some 3,000 Democrats who managed somehow, recession, depression, or what have you—to scrape up $100 a head for the privilege of being there.

The one point with which we would like to deal, however, is this business of the 5-cent postage stamp. Mr. Truman said that this was a category reserved by the Republicans for any American who, by some stroke of good fortune, had managed to escape the other GOP oppressions. If they haven't skinned you in some other way, Mr. Truman said, don't worry. You haven't been forgotten. You'll get a 5-cent postage stamp. And then he interpolated to the following effect: This is a painless way to subsidize the slick magazines with their whisky and cigarette ads.

It was this which struck us as being the unkindest cut of all. For if this Republican administration has done nothing else, it has striven mightily to raise the postal rates on the slick magazines. Mr. Summerfield, the Postmaster General, has tried five times. And what has stopped him? A Senate Post Office Committee controlled in all except one year by, of all things, the Democrats.

A small point? Perhaps so. But anyone who might try to engage Mr. Truman on a broad front in a free-wheeling political slugfest would be lucky to come out of it alive.

Trade Agreements

EXTENSION OF REMARKS

OF

HON. WILL E. NEAL

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 27, 1958

Mr. NEAL. The economy in my District, Mr. Speaker, is supported by a variety of industries producing commodities for domestic use. For the most part, these industries have provided abundant employment, paying wages equal to top American standards.

During the past several years, under the administration of the Trade Agreements Act, imported commodities of similar varieties allowed to enter our domestic market have frozen a great number of these plants out of business. Many other diversified industries upon which communities have depended for substantial payrolls are finding it increasingly difficult to remain operating. Glass, pottery, and ceramic plants, that formerly supported prosperous communities, no longer exist.

My attention has recently been called to injuries being experienced by manufacturers of dyes, tools, and porcelains. Let me produce a letter just received from the Porcelain Products, Inc., located in the second city of my district.

PORCELAIN PRODUCTS, INC.,
Parkersburg, W. Va., February 24, 1958.

To Our United States Senators and Our United States Representatives:

Porcelain Products, Inc. of Parkersburg, W. Va., manufacturers high voltage electrical porcelain for use by the electric power utilities in generating, transmitting, and distributing electricity.

Starting February 17, 1958, and continuing for about 5 weeks, the House Ways and Means Committee will hear presentations of various industries, including the high voltage insulator section of the National Electrical Manufacturers Association, on the Extension of Trade Agreements Act.

Competition to our electrical porcelain industry comes primarily from the Japanese, where wages are one-tenth ours.

Unless domestic manufacturers are given protection against such competition, our industry will stagnate and go out of business due to labor being 65 percent of our cost of products manufactured.

Insulators are as essential to our Nation as electrict power is.

Please, therefore, give us your assistance and influence in voting to protect domestic industries and domestic labor.

Sincerely,

G. M. RUOFF,
President.

I would like to refer to a statement which appeared in the CONGRESSIONAL RECORD of July 6, 1953, page 8042, 83d Congress, 1st session, relative to a contract finally awarded to Japan in preference to a bid submitted by this company. Although the Japanese firm's bid was $29,000 under the Parkersburg Co.'s bid, we were able to show by careful estimates that the overall loss to the State of West Virginia through failure to realize its customary tax returns on the $100,000 wages required to produce the order plus the Federal Government's loss in witholding taxes, social-security tax, and unemployment-compensation payments reached a total of $100,000. Let me quote from my former statement:

Thus, we will subtract from the successful operation of a self-propelling American economy an overall sum approaching $100,000 to save $29,000 in a shortsighted belief that we can build up foreign competitors with no regard for our own industrial economy. The above figures reflect the situation locally as it applies to one American firm and does not go into the question of import duties. It certainly seems timely that terms and interpretations of the Buy American Act should be given careful scrutiny to explore and publicize its far-reaching effects on the American economy. Industrial workers are entitled to such review, and will demand it. In the meantime, this particular contract should be awarded to the American bidder.

Our opposition to this deal accomplished nothing. The contract was finally awarded to the Japanese bidder.

Positive Action Necessary To Limit Excessive Oil Imports

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 15, 1958

Mr. VURSELL. Mr. Speaker, Secretary of Commerce Sinclair Weeks, chairman of a special Cabinet Committee To Investigate the Crude Oil Imports, recognized the serious matter of the oil-import problem in a statement released February 8. Secretary Weeks has been in close touch with this problem over long periods of time. His recognition that it has become increasingly serious is encouraging, and his announcement that it will have the immediate attention of the Cabinet Committee should be commended.

UNIVERSITY OF MICHIGAN LIBRARIES

Immediate and vigorous action is needed to maintain a strong and dynamic oil-producing industry in this country. This is evident from the unhealthy conditions now permeating the entire domestic petroleum industry.

In the tristate oil producing area, where my own State of Illinois is the largest in production, oil-well drilling declined by 24 percent in 1957. So far in 1958, well completions are 23 percent below a year ago. Rotary rigs active in the tristate declined 31 percent in 1957, and have further declined by 20 percent in the first month of this year. This deterioration is not confined to any one State or area. It is evident throughout the 31 producing States. The results are reflected in serious impacts on our economy, and in drastic reductions in employment. Employment in the oil and gas producing industry, according to the latest figures of the Bureau of Labor Statistics, declined by 17,000 persons between August and November, 1957. Undoubtedly, employment has further declined with the worsening conditions in the industry.

More important than all else, a domestic petroleum industry which the Suez crisis only last year reminded us is our first line of defense for military fuels, is being undermined and is becoming stagnant.

In light of these circumstances, I hope the Cabinet Committee now recommends positive action to effectively deal with the import problem. Unless such action is forthcoming, the Congress will be compelled to provide legislative standards to effectively limit imports.

They Probe the Future

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 27, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include an article from the February 15, 1958, issue of the Saturday Evening Post entitled "They Probe the Future":

THEY PROBE THE FUTURE

(By Clay Blair, Jr.)

The year 1957 may go down in history as the year of the sputniks. Not since the explosion of the first atomic bomb has man's imagination soared so high or his fears been so deeply stirred by scientific achievement. Yet one point must be clearly understood: the Russians have not conquered space. To be precise, they have made a tentative step into space, comparable in significance to the first flight of the Wright brothers' airplane.

Despite Mr. Khrushchev's boast that Sputnik I made the long-range bomber obsolete, the earth satellites indicate no shift in the balance of military power. The fact is that guided missiles with nuclear warheads—reliable, accurate missiles that can be flung from continent to continent—are still a long way off. For many years, the manned bomber will remain the principal carrier for nuclear explosives, and our fleet of bombers is still the largest and best in the world.

Now, after a late start, we have mounted a massive program to build a family of guided ballistic missiles. Several 1,500-to-2,000-mile missiles have been tested successfully. That we did not launch a satellite first is not the fault of our scientists. They had the technique and urged that it be done. Washington, failing to perceive the enormous psychological impact of such a device, lacked the will. We lost the satellite race by default.

Actually, the Soviets have won a battle, but if we proceed wisely and sensibly, the campaign can be ours. An important factor in this campaign will be the backing we give basic aeronautical research, which leans heavily on the corporate genius of the National Advisory Committee for Aeronautics.

NACA, a potent Government agency almost unknown to laymen, is unique in scope and make-up. Founded in 1915 by President Woodrow Wilson, after it was clear that the United States lagged behind Europe in airplane development, NACA was charged with the responsibility of advising the President on aviation research. Since Wilson's day, NACA has grown into a research network manned by 8000 engineers and technicians, where most of the practical knowledge and much of the theory about aerodynamics in the free world have been spawned in the last forty-two years.

Our airplane and missile designers and manufactures seldom make a move without consulting NACA. Says A. E. Raymond, vice president, engineering, at Douglas Aircraft, "its work is used by us every day in the year and we could not very well get along without it."

Alexander Kartveli, Vice President, Reseach and development, Republic Aviation Corp., says, "I consider NACA as one of our most outstanding national scientific institutions. It has contributed enormously to the supremacy of American aviation."

NACA is boesed by 59-year-old Dr. Hugh L. Dryden, an internationally famous scientist who in his spare time is a lay Methodist preacher. Its engineers man three large laboratories: Langley Aeronautical Laboratory, in Virginia; a second aerodynamic facility, Ames, about 50 miles south of San Francisco; and Lewis, an engine and fuel lab in Cleveland. NACA does not design airplanes, nor is it the sole source of aeronautical theory. Universities such as M. I. T., Cal Tech, Cornell and Johns Hopkins contribute to the general body of knowledge, as do all aircraft, missile and engine companies, and the Armed Forces, which maintain their own aeronautical-research centers.

Most of the work in industry and the Armed Forces, however, is concerned with specific airplane designs—development work. NACA, on the other hand, concentrates on producing fundamental theories and concepts which have application to broad categories of airplanes and missiles. It is not pure research, in the sense of trying to find out what makes the grass green, to borrow one of Charlie Wilson's phrases. More precisely, it is what scientists call "directed" research; sooner or later, most of it evolves into projects that find their way into one of NACA's 53 wind tunnels and ultimately onto an airplane or missile.

Few of NACA's vast accomplishments become known to the public; some are too technically complex to describe, and many are classified for reasons of military security. Says a Navy admiral, "The Armed Forces and industry like to take credit for the big breakthroughs in aviation. But if you look into it closely, you can almost always trace them back to fundamental work at NACA."

To make certain that the needs of industry and of the Armed Forces are constantly kept in focus, and to avoid research duplication, the NACA staff is quarterbacked by no fewer than 29 committees and subcommittees manned by 500 of the Nation's leading aeronautical experts. They meet from time to time, without compensation, to monitor the agency's activities. The main committee—in fact, the National Advisory Committee for Aeronautics—reports directly to the President. Its Chairman is retired Air Force Lt. Gen. James H. "Jimmy" Doolittle, who won fame in World War II when he led the first bombing raid on Tokyo. Less well known is the fact that he is a distinguished aeronautical engineer.

During the last 2 years I have visited 2 of NACA's laboratories—Langley, in Virginia, and the Lewis flight propulsion lab in Cleveland—half a dozen times. It was a fascinating but slightly bewildering experience. I recommend that anyone following in my footsteps first take a short course in aeronautical engineering.

Langley is the oldest of NACA's facilities. Its original buildings and first wind tunnel were decidated in 1920, and it was here that a handful of pioneers began laying the hard foundation of modern United States aeronautical science. In retrospect, the early work seems incredibly simple. A breakthrough, then considered major, occurred in 1929 when an engineer discovered that a plane's speed could be boosted 15 percent by encircling the exposed pistons of an air-cooled engine with a cowling. During the 1930's, the lab was expanded and Langley engineers began stock-piling data on every conceivable aspect of aircraft theory—location of engines, shapes of propellers, configuration of seaplane hulls, operation of cooling systems, and so on ad infinitum.

One of their greatest achievements was the development of a family of wings—called the NACA airfoils—that at the time of World War II were used by about 95 percent of the aircraft in the world. "It is notorious," the British journal of the Royal Aeronautical Society huffed in 1935, "that many of our most capable design staffs prefer to base their technical work on the results of the NACA."

Today Langley is a massive installation, manned by an army of 3,200 scientists and technicians, blasting away at the strongholds of the aeronautical unknown with the most modern laboratory weapons man can devise. Its buildings, interspersed among the bulbous, snaking tubes of 23 major wind tunnels, have the brick-and-ivy look of a college campus, but, inside, the work is pushed at a frenetic pace. NACA engineers try to keep one jump ahead of the airplane designers, and one jump in their business can mean as much as 3 or 4 years.

Many of the men I talked to were probing the baffling enigmas of flight at 500,000 feet in space at speeds of 20,000 miles per hour. This is no long-range pipe dream with them, but an immediate, pressing demand. Right now North American is building an experimental airplane, the X–15, that in a year or 2 may fly at better than 3,000 miles per hour.

The problems are enormous. At supersonic speeds, airplanes heat up like furnaces. Some means must be found to keep the temperature down and preserve the structure of the plane, which could warp or melt. The faster planes fly, the more difficult they are to control, especially at extremely high altitudes where the air is thin and conventional control surfaces are less effective. New control techniques must be devised. Turbojet engines seem impracticable for sustained operations above 100,000 feet, and beyond 2,600 miles per hour reliable ram-jets, rocket, or nuclear engines must be perfected if man is to fly higher and faster.

Since the basic aerodynamic problems of high-speed aircraft and missiles are the same, much of NACA's fundamental research has a direct application in the missile field. Recently, NACA revealed that one of its leading engineers at the Ames Laboratory, H. (Harvey) Julian Allen, had made a major breakthrough. Allen had attacked one of the biggest problems in the development of the ballistic missile—the design of a nose

cone, or reentry body, that would not burn up like a meteor when it plunged back into the atmosphere at speeds of 15,000 miles per hour or more.

Many laboratories around the United States had tried to design a suitable nose cone, and various materials, shapes and construction techniques had been advanced, tested and discarded. Most of these early experiments involved the use of a sharply pointed nose cone to mimimize drag.

After a detailed exploration of basic aerodynamic heating Harvey Allen concluded that a successful nose cone should be very blunt—seemingly, an aerodynamic absurdity. However, he had reasoned that the stronger shock waves of a blunt nose would actually carry off as much as 99 percent of the frictional heat. Today all of our long-range ballistic missiles have very blunt warheads.

NACA is one of the smallest Government agencies, and the work it turns out seems all out of proportion to its size and cost. Its annual budget is about $70 million, not including money for construction of new facilities. Its present plant is valued at more than $300 million. A visitor gets the impression that every dollar is spent wisely. Says George Trimble, vice president, enginering, at the Martin Co. "We hear much talk about how inefficient Government-run organizations usually are, and indeed I have found most of them that way, but this cannot be said of NACA. In my experience I have rarely seen a research outfit with more talent or higher morale."

Many engineers have been lured away by salaries in industry 3 to 5 times greater than NACA can pay. But most of the good men remain at their posts with rare dedication, men like John Stack at Langley; H. Julian Allen, Abe Silverstein, at Lewis; and Dryden, who makes $20,000 a year, and recently, according to an aviation-company executive, refused an outside offer of more than $100,000. Says Sir Roy Fedden, dean of British aviation, "I look upon them as one of the finest and most selfless bodies of men in existence today."

Although the primary emphasis at NACA is on basic research, in emergencies it runs tests for the Armed Forces on special projects which the services are not equipped to handle. "In these days," says an NACA staffer, "the emergencies seem to occur with alarming frequency."

A recent case in point is WS–110–A, a secret Air Force project which for many months absorbed the working hours of many of the top engineers at NACA. WS-110-A (short for Weapons System 110-A) is more commonly known as the Air Force's chemical bomber project, so-called to distinguish it from the nuclear-powered airplane, which has suffered delays both budgetary and technical, and consequently is still a long way off. WS-110-A is the fantastic, manned airplane that will be the future replacement for the B-52. It will have a speed in excess of Mach 3 (2000 miles per hour at operating altitude,) and high performance from ground level to 75,000 feet, with a range of eight or nine thousand miles. The chemical bomber will be the first United States Air Force plane to consume exotic or zip fuels, made from boron, which have been exhaustively tested and examined at NACA's engine lab in Cleveland.

Two large aviation companies—Boeing and North American—ran a grueling technical race for the WS–110–A prize, since in these times fat aircraft contracts are rare. Before submitting their final designs, engineers from each company closeted themselves with NACA engineers to gather up the latest basic aeronautical data, including some recent NACA breakthroughs, which cannot be described for security reasons. Then each company presented its design to the Air Force in the form of hundreds of blueprints and specifications. However, the science of aerodynamics has become so infinitely complex that there are few men in the Air Force, or anyplace else, who can study a set of plans and tell if the airplane will do everything the manufacturer claims. There is much educated guesswork involved. The old, sure-fire way of buying a few test versions from each company has been abandoned because it wastes time and is too costly. Development of a few hand-built test models can run up to $750 million. So nowadays the Air Force turns to NACA for technical help in making its final decision.

In a case like this NACA walks a tightrope of impartiality. It will provide answers to specific Air Force questions about first one design and then the other. However it will not directly compare the two airplanes, or come right out and say which one is better, nor does it reveal information to one company about its competitor's airplane.

In the end, the WS–110–A contract went to North American, but the decision was not an easy one to make, since both designs, based on NACA data, were very close in predicted performance. Many other factors entered into the decision. One was the availability of engineering and production facilities. Earlier in the year, during the defense-economy waves, North American had lost the F–107 and the Navaho missile; Boeing still has a huge backlog of orders for B–52's, KC–135 jet tankers, 707 commercial jet transports, Bomarc missiles and other items. In their various conceptions of the WS–110–A, engineers had stretched to the outer limits of know-how in supersonic aircraft design, and, as in the case of all new planes, there is an element of a gamble involved. With its F–100, F–107, and X–15, North American has actually had more experience in the production of supersonic aircraft, so that was another point in its favor.

NACA's most prolonged and demanding emergency period occurred during the years 1939–45, when the Nation's air arms expanded enormously for World War II. In 1938 NACA, pointing to the development in Germany of aeronautical research facilities better than our own, began begging Congress for money to expand its own aging installations. Maj. Gen. Oscar Westover, chief of the Army Air Corps, grumbled about the congested bottleneck at Langley. A valuable year slipped by before money was authorized for the new aerodynamic laboratory at Ames. In 1939, a special NACA committee warned of the superiority of European aircraft engines, and urged the immediate construction of a powerplant research center. But it was not until June 1940—after Belgium and Holland had been overrun—that funds were provided to start construction of the Lewis Lab in Cleveland.

Many years would elapse before NACA could fully exploit these new installations for basic aeronautical research. At the beginning of World War II, the decision was made at the summit to fight with the weapons in hand. Under pressure, NACA temporarily abandoned virtually all basic aerodynamic research and concentrated largely on applied research—that is, making existing aircraft faster and easier to control, and production engines more powerful.

Between December 1941 and December 1944, NACA engineers reworked and patched up 115 different types of airplanes. One of the biggest headaches was a succession of tail failures on most of the Army Air Forces' fighters and bombers. After exhaustive tests in NACA tunnels, a remedy was found for each plane. Other aircraft were sent to NACA labs to see what modifications could be made to reduce drag. The speeds of some 30 aircraft were substantially improved in this manner. For example, when the P–39 came in for drag tests, it had a top speed of 340 miles per hour. After NACA modification, its top speed was increased 54 miles per hour. The P–51, designed with a new NACA wing, turned out to be the fastest propeller fighter in World War II.

The late Secretary of the Navy Frank Knox summed up NACA's contribution to naval aviation: "The Navy's famous fighters—the Corsair, Wildcat, and Hellcat—are possible only because they were based on fundamentals developed by NACA. All of them use NACA wing sections, NACA cooling methods, NACA high-lift devices. The great sea victories that have broken Japan's expanding grip in the Pacific would not have been possible without the contributions of NACA."

At war's end, when United States intelligence experts moved into German aeronautical-research centers, they found that German engineers had made sweeping progress in the investigation of highspeed flight. Behind the Nazi superweapons, such as the V–1 pulsejet missile, the V–2 rocket, the ME–262 turbojet airplane, lay a large body of high-speed wind-tunnel and theoretical data, which was miles ahead of similar data in the United States.

In spite of the fact that NACA's war work had been dictated by the decision to fight with existing weapons, the agency was criticized. In a long series of postwar policy meetings, steps were taken to restore NACA to its traditional role of providing basic research. NACA engineers, groggy from the unrelenting pressure of World War II, got set to face the even greater challenge of supersonic flight, which some authorities considered impossible.

Engineers at NACA did not believe supersonic flight was impossible, but they were aware of the formidable obstacles to overcome, not the least of which was the gathering of basic aerodynamic data. The first trouble they ran into was choking, a peculiarity of the flow of air through wind tunnels at about the speed of sound; it was impossible to establish with any degree of certainty how an airplane would behave at transonic speed. To get on with the investigation, NACA engineers devised other techniques. Small models, packed with instrumentation, were taken aloft in a B–29 and dropped; at Wallops Island, Virginia, an offshoot of Langley, other models powered by rocket engines were fired down a controlled range.

The most ambitious approach was conceived by Langley's John Stack: the development of a family of small, experimental research aircraft that could actually be piloted through the speed of sound. They were to be powered by rocket engines or a combination of rocket and turbojet engines; at that time, engineers did not believe the turbojet alone could push a plane beyond Mach 1. These small aircraft, called X models, were built under a joint NACA-Armed Forces-industry program. On October 14, 1947, Air Force Capt. Charles E. Yeager, piloted the first of these planes, the Bell X–1, to a speed of Mach 1.05, acquiring fame for himself and destroying the myth of the sonic barrier. Since then the other X models, the Bell X–1A and X–2, the Douglas Skystreak and Skyrocket, have repeatedly smashed altitude and speed records. More important than the records established were the data collected from these flights by NACA's High-Speed Flight Station at Edwards Air Force Base. All of today's high-performance airplanes benefited in one way or another.

Gratifying as these flights were, engineers still clamored for controlled laboratory studies at the speed of sound. The irrepressible John Stack had been working on this deficiency, and in 1949 he came up with an ingenious slotted-throat tunnel which would dispel the choking and permit a transonic flow of air. This tunnel, the first of its kind in the world, was put into operation in 1951.

UNIVERSITY OF MICHIGAN LIBRARIES

Some months later, a 31-year-old engineer at Langley, Richard T. Whitcomb, produced a revolutionary concept that had a dramatic effect on all our modern supersonic fighters. Whitcomb began by running drag experiments in the slotted-throat tunnel, and discovered almost immediately that the old methods of computing drag near the speed of sound were in error. The miscalculations had led engineers to underestimate grossly the total drag of an airplane. Perhaps, Whitcomb reasoned, that was why Convair's latest fighter, the delta-wing F–102, designed to be supersonic, had stuck just below the speed of sound. Having discovered a precise method of measuring drag and its effect on high-speed planes like the F–102, Whitcomb set about to find a way to minimize it. He succeeded in an astonishingly short time with a brain-twisting formula known as the area rule.

His concept called for a radically new approach to aircraft design. For those aircraft nearing completion Whitcomb recommended a treatment which would result in aircraft fuselages more nearly resembling Marilyn Monroe's torso than the traditional bullet. For that reason, his formula was quickly dubbed the Marilyn Monroe shape. If his ideas were followed, Whitcomb predicted, total drag could be reduced by as much as 25 percent. To aeronautical engineers, this was like saying he had found a way for man to run the mile in 3 minutes.

Whitcomb's concept was given a gimlet-eye going over by NACA experts and ultimately published in a secret NACA paper. Convair engineers came to Langley to investigate. The youthful Whitcomb asserted that with area rule the F–102 could be saved. Quite understandably, the Convair people were hesitant and slightly skeptical. Wind tunnels and theories had been wrong before; a modification of the F–102 would cost millions. However, to simulate an actual flight test, they built a one-fifth scale model of the F–102, with a Marilyn Monroe fuselage, and shipped it to NACA's Pilotless Aircraft Research Station at Wallops Island. Intricately instrumented, it was mounted on a booster rocket and fired. The tests confirmed Whitcomb's wind-tunnel results, and Convair decided to gamble.

The F–102 was hurriedly redesigned to incorporate area rule, and named the F–102A. On its first flight the plane zoomed through the sonic barrier while climbing, even before the pilot leveled off. The Air Force rushed teh plane into mass production, and today the F–102A is the backbone of the Air Defense Command. A later version, the F–106, with a more powerful engine, and even more area rule, is now coming off the production line at Convair.

Spectacular advances in the power of turbojet engines had made supersonic flight for military aircraft possible; Whitcomb's area rule, for which he was later awarded aviation's coveted Collier Trophy, made it practicable. Area rule not only shoehorned the F–102A through the sound barrier; it supercharged the performance of many jet planes then in the building or planning stage. With area rule, Grumman's F–11F–1 Navy fighter pierced the sound barrier with a third less thrust than other airplanes of equivalent power. It boosted the speed of Republic's F–105 and Chance Vought's celebrated F8U Crusader and enabled Convair's sensational B–58 Hustler, our first supersonic bomber, to barrel along at Mach 2.

Along with these dramatic achievements of the last decade, other NACA scientists have been churning out useful information by the basketful. NACA men have charted the entire field of vertical takeoff and landing. Though many authorities consider the seaplane a duck of the past, NACA investigation continues, and it has helped Martin in the design of its giant, jet-powered seaplane, the P6M. Just completed is a massive study of ways and means to control fire in an aircraft crash. Other engineers have been conducting aircraft structural tests to make sure that our upcoming jet transports do not fall in flight like the original British Comets.

Yet I returned from my visits to NACA's laboratories with the uncomfortable feeling that the agency ought to be doing much more. Each new breakthrough in areonautics opens up a new hornets' nest of problems that require skillful investigation. However, NACA lacks money, manpower, and equipment to meet adequately the demands of the jet-missile age. More advanced laboratory tools are required to explore fully the colossal problems of aerodynamic heating. A greater effort should be made in the field of exotic fuels, rocketry, and nuclear propulsion; but again it is a question of recruiting good people and building more sophisticated facilities. NACA's appropriations have increased from $24 million in fiscal 1946 to $71 million in fiscal 1958.

However, this increase has not been sufficient to keep pace with inflating salaries and the skyrocketing cost of complex equipment. For example, a modern wind tunnel in 1945 cost less than $1 million. Today, adequate wind tunnels cost more than 27 times as much. Now that vigorous steps are being taken to catch up with the Soviets in the missile field, NACA must have the tools it needs.

As Jimmy Doolittle says, "We have to plant the seed corn before we can harvest the crop."

Voices From Tokyo

EXTENSION OF REMARKS
OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 27, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Journal of Commerce and Commercial of February 14, 1958:

VOICES FROM TOKYO

On several recent occasions top leaders in Japan have spoken out on trade problems with an earnestness that does not appear to have been fully grasped in this country.

Premier Nobusuke Kishi, Foreign Minister Aiichiro Fujiyama and Masamichi Yamagiwa, Governor of the Bank of Japan, have all spoken gravely of coming events which could force a dramatic change in Japan's present orientation as a great trading power. In so doing they touched on a problem that poses a dilemma in Tokyo and something not much short of that for the United States.

Briefly stated, the dilemma is this: Japan feels she must achieve an export target of $3.2 billion this year. This amounts to an increase of 13 percent over the past year and its realization promises to be exceptionally difficult at a time when many markets are turning softer while export competition is turning harder. Yet, if Japan does not achieve this, she will be hard put indeed to absorb the expected increase of about a million people in her working force this year.

Japan has just emerged from the most successful trading year in her history. Just as this fact has attracted wide attention, it has distracted attention from the problems immediately ahead.

To maintain the growth of her economy at an annual rate of 5 or 6 percent, Japan must expand her exports. Her leaders have shown plainly that they want to expand them in the United States market. If they cannot expand sales here or, if worse, they cannot even maintain their present outlets here, they must look elsewhere. The word "elsewhere" has a particularly somber meaning in this connection; it means, primarily in China and Russia.

There is, of course, some room for trade expansion in other areas—notably in southeast Asia, the Middle East, Latin America, and even Western Europe. But the opportunities in these directions are quite limited by comparison with those in the United States and the Communist states. It would not solve Tokyo's problems to concentrate on these secondary areas alone. Nor would it solve them to depend on the United States market for sales of trinkets and specialty items. Japan needs outlets for her big export industries, by far the largest of which is textiles.

Demands for tariffs or quotas on Japanese goods in this country are seldom accompanied by any hint of the price this country might be called upon to pay for further curtailment of Japanese imports. Yet it can hardly be denied that any action likely to turn Japan's commercial interests from the free to the Communist world would be quite risky. Only trade might be involved at first, but it usually happens that where trade goes politics follows.

This newspaper does not, of course, maintain that the United States is under any obligation to open by artificial means markets here for any country that might otherwise turn to the Soviets. What we do maintain is that where the other country involved is competitive and energetic in promoting its own sales here, no artificial barriers should be placed in its path, especially when the security and well-being of that country is as vital to the security of the United States as Japan is today.

We feel it necessary to point out (though Japanese leaders have been careful not to say this in so many words) that Tokyo is rapidly approaching the hour when important decisions must be made relating to its future trade relations with the Communist bloc. Some, indeed, have already been taken, but none of these has been decisive thus far. The door still remains open. It is much less likely to be banged shut if Congress keeps the whole matter in its proper perspective this year when weighing this and that claim for more restrictions on Japanese goods.

Special problems have been raised in the United States, Great Britain, Canada, and elsewhere by imports of Japanese goods, particularly in the fields of textiles, chinaware and flatware. Some relate to cheap goods, some to charges of design piracy, and so on.

Japanese business leaders, as well as their customers, admit there has been substance to some of these charges. In other instances they have sought to meet criticisms from abroad, whether they thought they were justified or not.

In the case of cotton goods, Japanese producers agreed to place voluntary quotas on exports of certain categories to the United States (we put voluntary in quotes because the United States Government exerted too much pressure to make voluntary fit the circumstances). An attempt is now being made to negotiate a somewhat similar agreement on flatware.

Under the sponsorship of Jetro (Japan External Trade Recovery Organization), major exporters have been seeking with considerable success to upgrade the quality of their products, to pursue orderly methods of distribution, and to insure that there will be no basis in the future for foreign charges of design piracy on major items. The special design center for textiles, which has been working on this problem, is now entering its third year. The Government itself is sponsoring legislation to revise the patent law to this end on all products.

On the whole, Japan is approaching its critical decisions on future trade policy with the will to adjust her practices as far as possible to those in the American market.

Tokyo is making substantial progress in this direction. It is also continuing to buy a good deal more than it sells here. Congress would be making a serious mistake at high cost both to United States exporters and—more importantly—the national security if it should abruptly reverse this trend in the months ahead by yielding to protectionist demands for restrictions on Japanese goods advanced by local interests in this country.

The Arab Refugee Problem Is Still With Us

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 18, 1958

Mr. MULTER. Mr. Speaker, Ambassador Abba Eban, of Israel, has put forth compelling arguments in favor of a solution to the Arab refugee problem. I commend this lucid and carefully reasoned argument to all of our colleagues. The following is an abridgment of Ambassador Eban's statement made before the special political committee of the United Nations Assembly. This abridgment appeared in the Congress Weekly of December 16, 1957.

INTEGRATION VERSUS REPATRIATION

(By Abba Eban)

Some years have passed since the General Assembly adopted a resolution calling for the reintegration of the Arab refugees into the economic life of the Near East. Today, once more the United Nations confronts the frustration of its hope. Two hundred and seventy million dollars have been spent by the United Nations in 7 years, and the number of those receiving relief has increased and not diminished. Projects which would open new life for the refugees are held down by Arab governments in deadlock and suspense. The Arab governments which created this tragic condition by their invasion of Israel nearly 10 years ago now continue to prolong its existence and to withhold the constructive and merciful solution which lies within their power.

The refugees still inhabit a world in which the past dominates the future. This is also true of the General Assembly's annual debate. There is some merit in a careful reference to history; the more so after the far-flung accusations which we have heard from Arab States. Let us not cease to face the question of historic origin. Unless we understand how this problem was caused, we cannot rightly judge how it should be solved.

The Arab governments have again sought to remove themselves from direct responsibility for the refugee problem; to describe themselves as external to its history and its future; to lay its full burden upon the United Nations, upon Israel, upon the powers which have compassionately sustained the refugees for 9 years—upon all except themselves. Everybody knows in the depths of his heart that there is no hope of solving the refugee problem so long as the Arab governments pursue this line of disengagement. For the responsibility of the Arab governments is the central issue in the refugee debate; and their responsibility in the problem is threefold. Theirs is the initiative for its creation. Theirs is the onus for its endurance. Above all—theirs is the capacity for its solution.

The Arab refugee problem is a direct result of the war of aggression launched by the Arab States against Israel in 1947–48. If there had been no war against the people of Israel from the end of 1947 to the end of 1948, there would be no problem of Arab refugees today. Since the Arab governments have created this tragic problem it follows that the world community has an unimpeachable claim to expect their full assistance in its settlement. The claim is all the more compelling when we recall that the Arab governments, in their vast lands, command all the resources and conditions which would enable them to emancipate the refugees in full dignity and freedom.

There is nothing natural in the prolongation of this problem for 9 years. All the normal impulses of history would have promoted a rapid solution. No less than 40 million refugees have been created by military and political conflicts since 1945. In no case except that of the Arab refugees, amounting to less than 2 percent of the whole, has the international community shown such constant responsibility and provided such lavish aid. In nearly every other case a solution has been found by the integration of the refugees into their host countries. Nine million homeless Koreans; 900,000 refugees from the conflict in Vietnam; 8½ million Hindus and Sikhs leaving Pakistan for India; 6½ million Moslems fleeing India for Pakistan; 700,000 Chinese refugees in Hong Kong; 13 million Germans from the Sudeteniand, Poland, and other East European states reaching West and East Germany; thousands of Turkish refugees from Bulgaria; 450,000 Jewish refugees from Arab lands arriving destiute in Israel; and an equal number converging on our country from the remnants of the Jewish holocaust in Europe—these form the pathetic armies of the world's refugee population.

In no case but in that of Arab refugees have the countries in which refugees sought shelter obstructed their integration. The paradox is all the more astonishing when we reflect that the kinship of language, religion, social background, and national sentiment between the Arab refugees and their Arab host countries have been at least as intimate as those existing between any other host countries and any other refugee groups.

The discussion on the future revolves around two concepts: the one which is commonly called repatriation, and the other which is accurately described as integration. What is involved in the slogan of repatriation?

In 1948 the United Nations Economic Survey Commission estimated that there were 720,000 refugees. The number of those receiving relief has since grown to over 900,000, through various processes, many of them irregular, whereby nonrefugees have gravitated toward the aid facilities available under the United Nations relief program. These hundreds of thousands of Arabs are now in Arab lands on the soil of their kinsmen. Their hearts have been filled for 9 years with one single theme: hatred of Israel; disrepect for Israel's sovereignty; resentment of Israel's existence; the dream of securing Israel's extinction.

Repatriation means that these hundreds of thousands of people, or a significant number of them, shall be introduced into the state whose existence they hate and whose destruction they are resolved to seek. The refugees are all Arabs; and all the countries of the region, except Israel, are Arab countries. Repatriation means that these Arab refugees be settled in the only non-Arab country in the immediate region; in the only social and cultural environment which is alien to their background and tradition. Israel, which is the target of a state of war proclaimed by its Arab neighbors; Israel whose small domain of sovereignty is savagely begrudged by a people occupying a whole subcontinent; Israel facing threats to its security and integrity such as no modern nation has ever confronted, is to add to its perils by the influx from hostile territories of people steeped in their hatred of its very being.

This is what repatriation means. Can the mind conceive a more reckless and explosive course than this? Can there be any greater unkindness to the Arab refugee himself than to expose him to the invidious role of exploding Israel from within, perhaps reproducing the very circumstances which first made him a refugee? Every dictate of historic experience, the basic concern for a minimal stability in Arab-Israel relations, the impulse of compassion for the refugees themselves, and the most elementary respect for Israel's independence and integrity are violated by a solution on these lines.

It remains to compare the slogan of repatriation with the solution now advocated widely in world opinion: the solution by integration in Arab lands.

It is by integration in host countries of kindred culture and national sentiment that all the other refugee problems of our generation have been solved. With its 3 million square miles of free territory, its vast resources of mineral wealth, its great unharnessed rivers, its uncultivated but fertile lands, its swiftly expanding sources of economic wealth—the Arab world is easily capable of absorbing an additional population of relatively small scale.

Israel is convinced that all United Nations organs and agencies should henceforth be more assertive and consistent in proclaiming that the solution of the refugee problem lies in integration, and not in repatriation. No less important than its humanitarian work in sustaining the refugees is the duty of the United Nations to apply its moral influence toward an understanding and acceptance of the truth. The refugees should receive clear and emphatic guidance from the United Nations on the hopeful possibilities open for their salvation—integration in the Arab world.

Until 4-years ago there were thousands of Arabs displaced from their homes in Israel during the war of 1948, who were maintained at UNRWA's (United Nations Relief and Works Agency) expense in Israel. Israel then became the first country to integrate displaced Arabs. In his report to the 8th session of the General Assembly the director, recording the failure of Arab governments to follow a like course, spoke of this single ray of light:

"Had it not been for the assumption by Israel of responsibility for some 19,000 Arab refugees in Israel at the end of the previous year, the number would have been still greater."

By pursuing a similar program in the ensuing year and by developing its plan for the reuniting of families, Israel brought the total number of Arab refugees which were integrated into its economy and citizenry up to 48,500. If, in proportion to their own population and area, the Arab countries had adopted a similar attitude towards refugees on their own soil, this whole problem would have melted away.

The United Nations Palestine Conciliation Commission has paid a warm tribute to Israel's action in releasing bank accounts to the value of $8 million in favor of Arab refugees. While our neighbors maintained a ruthless economic warefare against us we have authorized the transfer of hard currency from Israel to hostile territory.

In the 10th session of the General Assembly in 1955, I reiterated my government's undertaking to pay compensation for abandoned lands as a contribution to Arab refugee resettlement. Two years ago my government responded formally and affirmatively

UNIVERSITY OF MICHIGAN LIBRARIES

to a suggestion by the Secretary of State of the United States under which an international loan would be made to enable Israel to discharge its undertaking. It is evident, of course, that the payment of compensation would have to be accompanied by the solution and clarification of certain problems relating to compensation itself. We do not make this issue, however, dependent on nonfinancial or noneconomic considerations. The Research Group for European Migration Problems in enumerating the positive elements in favor of resettlement states:

"Another hopeful element for the host countries lies in the compensation from Israel for damages suffered, which the refugees will in all probability ultimately receive, and which they will spend or invest in these countries. As a first step in this direction the frozen accounts of Palestine refugees in Israel have been set free. When the blockade on Israel is raised, when its ships can sail through the Suez Canal and it is no longer exposed to continuous political pressure from the Arab states, it will certainly willingly pay adequate compensation for the abandoned property of the refugees, provided a loan can be raised for this purpose abroad."

This is an accurate summary of Israel's position.

The Arab governments cannot seriously envisage that they can simultaneously strangle Israel's financial capacity and at the same time make claims on Israel's financial capacity for the payment of vast sums in compensation. Surely the affirmative duty of enabling refugees to receive compensation must be held by them in greater honor than the dubious pleasure of blockade. A solution of these two interrelated problems can be approached at any time and need not await a solution of the broader question of political relations.

These are direct contributions by Israel to the alleviation of the hardships of refugees. But these contributions by compensation and other means, important as they may be, are, after all, marginal to the main issue. What would it avail if compensation were paid or some symbolic gesture were made by Israel, if, at the same time, the 900,000 refugees continued to live in their present dependence on the international community?

We were told that if we released bank accounts, integrated the 45,000 refugees in Israel, reunited families, announced our acceptance of the principal of compensation, these steps would not only bring benefits in themselves, but would also open the hearts of Arab governments towards their acceptance of integration. We must record that nothing done by Israel, by other governments, or by the international community, has so far had any effect in making Arab policies more flexible. We do a disservice to the refugees and to the Middle East if we turn away from the central issue toward its marginal aspects.

The central issue is that there can be no solution of the refugee problem unless Arab governments abandon resistance to integration. There may be little that the General Assembly can do this year beyond making provision for the financial operation of UNRWA. But every resource should be devoted to persuading Arab governments to change their obdurate attitude. Open your gates to your kinsmen as we have opened ours. Abandon the inflexibility toward your kinsmen. Let the barbed-wire barricades fall. Let the Arab refugees freely move toward the new economic opportunities opening out in the Arab world. Let newly liberated Arab governments see in these refugees—as many other countries have found refugees to be—not a burden, but a potential reinforcement of their new societies and cultures. Let Arab governments join with the world in a cooperative effort to remove this tragic Arab problem from the Arab world. Let this be done and great rewards and blessings will fall to the peoples of the Middle East and to all mankind.

Preparing for the Astronautics Age

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 17, 1958

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to insert the following material at this point in the RECORD:

PREPARING FOR THE ASTRONAUTICS AGE

Approximately a decade ago Congress was faced with the problem of deciding how best to deal with the development of atomic energy. Should it be placed under military or civilian control? What type of agency was best suited to handle the problem? What role should Congress play in overseeing any program administered by the executive branch?

Today a similar issue is facing Congress, that is, how best to handle the problem of space technology. Should the Defense Department be given exclusive control in the field of astronautics, or should overall responsibility be placed in a civilian agency? If part or all of the program is to be placed in civilian hands, what agency should be given the responsibility? Or should a new agency be created? What should be the role of Congress in developing such a program?

BROAD SIGNIFICANCE

As was true with regard to the postwar debate on atomic-energy development, Congress is beginning to realize that space projects will have significance far beyond the military area. For this reason there is a growing feeling that responsibility for development of our space program should not be left entirely in the hands of the Pentagon.

Unquestionably the development and operation of military missiles, military satellites, and military space vehicles are a military function—and a function which the Defense Department should push vigorously. In addition, however, much will need to be done in the field of scientific research on space phenomena, and scientific exploration of the universe. A sound national program must include both nonmilitary and military aspects.

In my opinion, there is, furthermore, real danger that the nonmilitary aspects of space technology will be submerged if they are included as a mere adjunct to a military program. If this be true, the question then arises as to what would be the best civilian agency to take on this responsibility—or what type of new agency should be created.

NACA

Few people have ever heard of the National Advisory Committee for Aeronautics. Fewer still could describe its work. Yet this Federal agency, established in 1915, has played a crucially important role in American aviation development. For example, NACA developed the laminar flow wing in time to enable P–51's to escort our heavy bombers into Germany at a critical point in World War II. It did outstanding work in the postwar period developing supersonic aircraft. It has solved key bottlenecks involved in the development of ballistic missiles. For more than a decade NACA has been conducting research in fields leading to man's conquest of space. Its work has, among other things, led to the development of the recently publicized X–15 aircraft. This is the plane which it is hoped will lead to manned flight beyond the atmosphere.

HARMONY

In all of these projects NACA has worked closely and in harmony with the military services, the scientific fraternity, and American industry. Its personnel is of the highest caliber. The chairman of NACA is Gen. James H. Doolittle, retired, who, in addition to his military fame, has an outstanding scientific and industrial record.

Considering these facts, it has seemed to me that NACA is the logical agency to be given the job of spearheading our space program. At the very least, NACA should form the nucleus of any new agency which might be developed. It would be a tragedy if NACA's large pool of talent and experience were wasted merely because its activities have not been sufficiently publicized.

In order to place this question clearly before Congress, I am developing legislation which would direct NACA to take overall charge of our astronautics program. This same legislation would establish a Joint Committee on Astronautics, made up of Members of both the House and Senate, which would act as a congressional watchdog over the space program.

This committee would be modeled after the Joint Committee on Atomic Energy, which oversees our atomic-energy program. The proposal constitutes an attempt to promote in the astronautical field this same type of productive legislative-executive relationship.

TOO SIMPLE?

Far too often when acute national problems arise Congress creates complex new organizations which add to the Federal payroll, expand Government bureaucracy, but do not effectively attack the problems they were created to solve. Today, faced with a serious problem, Congress and the President have a ready-made solution which would save the taxpayers money and get the job done. Let us hope the solution is not so simple that it is overlooked.

The Urban Renewal Plan

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks I enclose a resolution adopted by the Boston City Council, Boston, Mass., memorializing the Congress to immediately overhaul the urban-renewal program with a view to expediting those programs now in hand and, secondly, for the purpose of placing additional funds in the urban-renewal program:

CITY OF BOSTON IN CITY COUNCIL

Whereas it appears that the economy of the United States is in the throes of a recession of unpredictable duration; and

Whereas the Federal Government is planning a program of public works for the purpose of stimulating the economy; and

Whereas the fund allotted by the Congress for the purpose of urban renewal is manifestly inadequate for the purpose; Be it therefore,

Resolved, That the Boston City Council memorializes the Congress to immediately overhaul the urban-renewal program with a view to expediting those programs now in hand and, secondly, for the purpose of placing additional funds in the urban-renewal program.

In city council February 17, 1958. Adopted.

WALTER J. MALLOY,
City Clerk.

An Appraisal of Dulles at 70

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks, I wish to include the text of a column by David Lawrence from the February 26 issue of the Washington Evening Star, entitled "An Appraisal of Dulles at 70." I am certain that all Members of the House, regardless of party politics, will unite in extending congratulations to our Secretary of State upon reaching the golden age of 3 score years and 10.

AN APPRAISAL OF DULLES AT 70

(By David Lawrence)

John Foster Dulles has just reached his 70th birthday, and naturally it is an occasion for appraisal of his accomplishments as Secretary of State. His dedication to the highest ideals of the American Republic has not faltered in the slightest because of the barrages of criticism often fired at him.

The controversy over what Mr. Dulles does and says is not really concerned with him as an individual. It is basically a conflict over rival ideologies in America.

The criticism is inspired for the most part by a little clique here of so-called liberals whose heroes are Messrs. Truman and Stevenson and whose left wing sensibilities have been aroused because Mr. Dulles will not take the Red Chinese to his bosom or draw into the high councils of the State Department those diplomats whose policies and advice would mean appeasement of the Communist regime throughout the world.

This clique has been so persistent that it has actually persuaded many uninformed onlookers in the Republican ranks that there must be something wrong with the Secretary of State. The constant repetition of the charge that Mr. Dulles allegedly has lost the confidence of our allies makes an impression, especially upon Americans who visit Europe from time to time and come in contact with persons of wide influence in the press. Many Europeans, indeed, dislike Mr. Dulles because he has not been either pro-British or pro-French, but, to their dismay, has insisted upon being pro-American.

The critics frequently make fun of phrases used by Mr. Dulles in his speeches. They single out and ridicule, for example, the phrase massive retaliation. It would have been tragic, however, if the Communist rulers in Moscow had become convinced that America was not back of the policy of massive retaliation. There might have been a serious miscalculation and a third world war except for the realistic pronouncements by the Department of Defense here, and especially by the Strategic Air Command, which has proclaimed unequivocally its readiness to back up the doctrine of massive retaliation.

Despite the sarcasm heaped on the Secretary for his policy of massive retaliation, it has stood the acid test of time. Only 2 weeks ago the British Government, itself, announced a policy of massive retaliation in warning the Communists that if they ever fired on British territory there would be no hesitation to use nuclear bombs in retaliation against Soviet territory.

There has been, also, a lot of satire about the so-called promised liberation of the states of eastern Europe. The critics argue that the talk of liberation did not help the Hungarians when they revolted and that, in effect, Mr. Dulles had promised to use military force to help liberate the peoples of eastern Europe.

Mr. Dulles, himself, however, in the 1952 campaign, when he first used the word "liberation," declared that what he had in mind was a peaceful liberation through the channels of peace and moral force. He never said America would go to war for such a purpose. There never has been any question, of course, that the moral force of the United States has been and will continue to be exhibited on the side of the oppressed nations. This has been revealed again and again in the United Nations forum.

Then there is criticism because Mr. Dulles a few years ago, at a time when the western alliance faced a crisis in Europe, said there would have to be an agonizing reappraisal by the United States of its policies if France failed to join with America and Britain in an accord in western Europe. The French Government actually did reappraise its own situation and did finally permit Germany to enter the North Atlantic Treaty Organization. The words of warning used by Mr. Dulles were persuasive—they had their effect.

The true test of the worth of a Secretary of State—who is really a secretary of peace—is whether he keeps his country out of war and whether, when other nations push America to the brink, a skillful policy averts war and deters attack.

The United States today isn't fighting a war, large or small, anywhere in the world. John Foster Dulles, with the unflinching support continuously given him by President Eisenhower, has fulfilled the basic mission of a Secretary of State—to keep his own country out of war. He has stood up for America. That's why the Democratic chairman of the House Committee on Un-American Activities, FRANCIS E. WALTER, of Pennsylvania, calls Secretary Dulles "a sincere, courageous, and dedicated American" and describes much of the criticism of him as un-American. This is true bipartisanship.

American Lithuanian Council, Lake and LaPorte Counties, Ind.

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. MADDEN. Mr. Speaker, on Sunday, February 16, 1958, the American Lithuanian Council of Lake and LaPorte Counties, Ind., held a meeting and banquet at East Chicago, Ind. This gathering was attended by a large delegation from northern Indiana and the following resolution was unanimously adopted:

The Lithuanian Americans of the Calumet region located in northwestern part of Indiana, assembled to honor with proper commemoration services the 40th anniversary of Lithuania's Independence Day, Sunday, February 16, 1958, passed unanimously the following resolution:

Whereas Soviet Russia, in utter violation of the international treaties and her solemn obligations, occupied the territory of the Republic of Lithuania and imposed upon the population the ruthless regime of a police state; and

Whereas despite the condemnation of these Soviet acts of aggression by the great powers of the free world, including the United States, Lithuania, as well as the other Baltic countries, is still subjected to the unscrupulous Kremlin rule of terror, murder and deportations; and

Whereas the Soviet Union by offering the so-called peaceful coexistence to the United States strives to achieve the recognition of her domination in eastern Europe, therefore, be it

Resolved, That this meeting urges the United States not to trust the Soviet rulers talk about peaceful coexistence, because the basic aims to conquer the world did not change; be it further

Resolved, That this gathering urges the United States not to enter into any new pacts or any new agreements with Russia, unless the Soviet Union agrees to restore freedom and sovereign rights to the enslaved nations of eastern Europe.

ALBERT G. VINICK,
Chairman.
Rev. PETER CELESIUS,
Secretary.

The House of Lords Debates Disengagement

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. REUSS. Mr. Speaker, discussion of a troop disengagement in middle Europe as a means of bringing about the peaceful liberation of the captive peoples behind the Iron Curtain is healthy. A significant contribution to that was made recently on the floor of the House of Lords by the distinguished Peer, Lord St. Oswald. Under permission to extend my remarks, I include important portions of Lord St. Oswald's address on January 22, 1958—Parliamentary Debates—Hansard—House of Lords, volume 207, No. 24, pages 129 to 135:

Lord ST. OSWALD. I most ardently hope that as the outcome of this debate the Government will formally take into account the possibilities, the opportunities, of a neutral belt in Europe, and, having taken them into account, will turn them to account.

I see here a chance to take the initiative, a dynamic initiative, in peace proposals. I think that most of your Lordships would agree that the great political absurdity of this epoch is that Soviet Russia, the only great power that in reality threatens the peace of the world, that has a whole string of savage, successful and unpardonable aggressions to its debit, can take on the guise of the paragon among peacemakers. Admittedly, even the Kremlin cannot hope "to fool all of the people all of the time" and many are now wise to the Russian pattern of peace manoeuvre. But the remorseless fact remains that the Russians know how to play upon the deep, the sometimes desperate, craving for peace of the majority of humanity. By threatening at one moment and placating the next, they maintain the war of nerves, and by every separate operation tighten or extend their hold upon the

UNIVERSITY OF MICHIGAN LIBRARIES

freedom of some part of humanity. They have taken the bully's licence to declare: "You want the best peace; we can refuse it."

My Lords, I have never been personally, individually brainwashed—indeed, I doubt if anyone would find it worth his while. But it seems to me that collectively the West is being subjected to the technique of brainwashing. As I understand it, a victim of N. K. V. D. is not continually tortured or terrified during a treatment. After a period of incessant pain and terror there is a period of relief, of apparent kindliness and solicitude. And the victim, having hardened himself almost by habit against incessant pain and mockery, is softened by solicitude, by the unexpected but calculated benevolence of his tormentors. And, once softened, another period of torture awaits him. I have spoken to survivors of this process and they have told me that by the end they even wished to believe the lies that were being put into their heads.

No one will regard this allegory as picturesque, and I hope that not many will regard it as being farfetched. I sincerely believe that it would be perilous for us to want to believe the Russians too intensely in this period. But is that possibility very far removed? The sputniks were employed as cunning instruments of torture, to inflict fear and uncertainty, to sap the assurance of the western peoples. They were accompanied by boasting and mockery from the Kremlin. Did they fail in their purpose? There was near panic in Washington and an immediate deflection in American foreign policy. Now comes the period of solicitude. I am sure that we must beware of that solicitude.

But, having said that, I am by no means led to the conclusion that summit talks should be avoided. They should be welcomed. They should be taken as an opportunity, not to swallow the Russian proposals but to expand them, an opportunity to take the initiative and put forward a plan that will dwarf the Russian plan. I believe that the instrument lies at our hand and is under discussion in this debate—an opportunity, not just to ban rocket bases, but to withdraw Russian forces from the satellite countries and NATO forces from Western Germany.

* * * * *

When I spoke in favor of the plan 6 months ago, the Government's technical objection, uttered by my noble and learned friend the Lord Chancellor, was that we should be sacrificing defense in depth. With all respect—indeed, with all reverence—to the noble and learned Viscount, I cannot help feeling that if we are reckoning defence in depth, today, in terms of 200 to 300 miles, the breadth of Western Germany, then we are indeed preparing to fight the last war, instead of prevent the next—a criticism which has been often enough levelled against our military pundits in the past. Surely, if defence in depth is to have any meaning at all in the nuclear age, it must be reckoned in thousands of miles.

My own perhaps rather primitive calculations discover that a neutral belt, that is to say, any neutral belt acceptable to ourselves as well as to the Russians, would provide a warning area some 800 miles wide at its narrowest point; and that is to say 500 miles more than the distance between the Iron Curtain and the channel ports. I am assuming that any treaty establishing such a neutral belt would give the right to Russia and to NATO to have civilian observers on the frontiers concerned; that is to say, the western and the eastern frontiers of the neutral belt.

The main disparagement of the plan is contained in the question of what would be done if the warning were given from the other side of this neutral belt; if the Soviet Army in force crossed the eastern frontier and swept back into the liberated territories. Again, I think it must be assumed that anything less than a major offensive could be halted and contained by the armies of the neutral countries themselves; and, my lords, we can take it that the newly freed nations would be vigorous and valorous in repelling any minor incursion with conventional weapons by their former masters after the free elections, written into the treaty, had been held.

* * * * *

The general argument advanced against the plan is the hypothesis that the Russians would never accept it. Apart from seeming to me no valid argument against trying it, that looks a dubious argument in itself. What, in fact, would Russia be giving up? An asset or a liability? From the Soviet point of view, the Warsaw Pact is worse than dead; it is actively dangerous. Economically, the whole satellite area is a burden. On the previous occasions, I offered your lordships figures to show that Russia was having to subsidize every satellite except Albania at tremendous cost. Since then Albania has been added to the list, and the all-round cost has been enormously increased. But the most commanding factor is the simple factor that Russia does not want a nuclear war in Europe. I think that that is generally recognized. Russia is quite as aware as anyone else of the devastation that nuclear war would bring upon the conqueror and the capitulated alike. The Soviet Government also has a vested interest in any plan which renders such a war less probable. Here is a plan, and here, I think, is a fair and feasible way of presenting it.

There is another reason that moves me considerably in supporting this plan. It would mean the release from bondage of 110 million human beings.

* * * * *

Your Lordships need no reminding that we have a duty toward these people. If we forget that duty, we are failing ourselves as human beings. By their valor in Poland and Hungary, by the everyday heroism of people living in those countries and refusing to give in, they have earned the admiration of the human species. In all conscience, it is only right that this admiration should be translated into practical understanding. While we speak today, a new anxiety is infecting those peoples, as they read of summit talks and nonaggression pacts to come. Needlessly, I hope, but inevitably, they are chilled by the fear that a nonaggression pact might include the recognition of a status quo in Eastern Europe; that they may be written off, dismissed as they were dismissed from western calculations until the risings in Poland and Hungary so little time ago. They are hungering for some western assurance on this point, before the summit talks begin. Because without it they are ominously aware of Khrushchev's persistent statement, that no problem of Eastern Europe exists, and the danger that he might demand it as a premise in summit talks. That danger is, I think, pointed in the interview he gave to the Daily Express a week or two ago. If ever we were to accept that premise, for convenience or to smooth the path of negotiations, apart from the human offense itself we should, to our own cost, be abandoning more than 100 million friends to cynicism and final slavery.

A positive alternative is a neutral belt, and I believe this neutral belt plan has a real chance of enactment if presented with courage and with its motives clearly stated. I disagree entirely with the argument I read the other day that the Soviet Government can well afford to enter protracted and superficially promising negotiations which in reality are unlikely to succeed. I believe precisely the opposite. Once such negotiations are entered upon, once the wholesome possibility of their fruits appears within reach, that whole vast population behind the Iron Curtain will be demanding a fruitful conclusion. No Government, however powerful, however ruthless, could afford to delay artificially, or to reject, that conclusion.

It may be thought by some noble lords that I have raised points outside the immediate subject of defense. But I have catechized myself on each point, and I am convinced that each is directly related to defense. Surely, in this age prevention is not only the first line of defense, it is the only true line of defense. We have within reach not only the opportunity to establish a warning area and to remove the current peril of spontaneous combusion leading to war; we have the opportunity to release into freedom those many millions of fellow Europeans and, by our concern for them, to prove, in terms of history, that what we have here ourselves is worth defending.

The Foreign Aid Symposium

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. UTT. Mr. Speaker, under leave to extend my remarks I would like to insert the following editorial which appeared in the February 26 issue of the Los Angeles Times:

THE FOREIGN AID SYMPOSIUM

A satirical novel of a couple of years ago—The Golden Bazoo—foretold a United States presidential campaign waged by rival advertising agencies. Not a pitch was overlooked in the titanic battle of computer-conditioned imaginations, not even motherhood. The electronic score gave one of the candidates a great lead when the tender lie was spread that his wife, in her middle 50's, was pregnant.

MARATHON SESSION

Now, motherhood has not yet been introduced into the battle for foreign aid, but almost everything else has, and yesterday's marathon performance, in which lambs rose up to roar like lions, and Mr. Truman killed no more Republicans than were needed for his daily meat, was a masterpiece in the most advanced technique of the opinion engineers.

Still, something essential was lacking in this unprecedented appeal of the Government to its constituents. It was not sincerity, for in spite of the format of the show the proponents of foreign aid were unquestionably sincere, even very frank, as Secretary Dulles was when he brought into open discussion a point that is usually left to inference: he said foreign aid provides jobs for 600,000 American workers.

NO TALK OF CHANGES

What is missing from the daylong exhortations by everybody from A to Eisenhower—that essential thing—was any talk about what Government people call implementation. The speakers were persuasive about the need for foreign aid but nobody, so far as we could follow, had much of anything to say about improvements in its administration. Indeed, there were no apologies for the failures of administration in the past, and from this one might infer, although perhaps he shouldn't, that no changes are contemplated for the future.

This has nothing to do with the arguments on the principle of foreign aid. Everybody knows these arguments, and almost everybody accepts the principle. The arguments were given in their classic form by Vice President NIXON in his televised press conference at the Press Club and they were repeated next day by President Eisenhower in his foreign aid message to Congress. Most of the

speakers at yesterday's grand forum repeated them again, excepting Adlai Stevenson, who added a fillip about the chicken inviting the weasel to supper: he wanted Russia to join us in aiding the backward peoples. And Mr. Truman wanted some new ideas.

The opposition to foreign aid, which the demonstration was intended to smother, is concentrated chiefly on economic assistance, and for this kind of spending Mr. Dulles was as concise a spokesman as the day produced. He said: "There is a tremendous expectation among the developing peoples of the world that something is going to happen to lift them out of the morass of hopeless poverty. Unless something can be done about that within the free world, inevitably they will be caught in the trap of communism to their own disaster and the ultimate undoing of the United States itself."

DIFFICULT TO FIND

With or without foreign aid to "developing peoples" ("undeveloped" now appears to be an offensive word) the United States could come to disaster. But foreign aid wisely used might very well save us trouble, as Mr. Dulles suggests. To administer it wisely requires a small army of well-prepared fieldworkers of a special breed, people who have art as well as understanding, practicality as well as sympathy. Like good teachers, such fieldworkers will be hard to find. But if they are found, they may prevail against communism. The rare ones who are now employed in aiding the developing peoples have been singulraly successful, a little candle of hope gleaming in the dark snafu of a wasteful bureaucracy—the bureaucracy which has been going around the world building roads where there is no traffic, dams where there is no working force, reduction furnaces where there is no fuel or metal, and ponds for edible fish a few hundred yards from the sea which is full of edible fish. Millions, yes, billions, of our money has been wasted by people who have not skill enough to persuade other people to buy stamps at the post office window, and as the suppressed stories of their misfeasances and nonfeasances come to light, the disgust with foreign aid as it is grows.

RUSH ACT FOR FUNDS

Yesterday's rodeo was intended to stampede the people and the Congress into granting money in the old way. The money is supposed to come first and after it the order, the plans and the constructive work. We had such a stampede after the Russians launched their first sputnik; Congress rushed into its chambers and, whenever anybody proposed an appropriation, doubled it. And nobody knew exactly what the money could be used for right away—unless somebody found a formula for converting wads of it into solid rocket fuel or for giving it to the Navy as heart balm for its Vanguard sorrows.

To cut off foreign aid would be as unwise as to grant all that was asked without question. Yesterday's pressure party would be damaging if it accomplished its purpose, but in spite of the purpose it may be useful if it induces a larger number of people, including Members of Congress, to think of foreign aid in terms of how as well as why.

Smut Protested, Mail Laws Asked

EXTENSION OF REMARKS
OF
HON. EDWIN H. MAY, JR.
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 13, 1958

Mr. MAY. Mr. Speaker, Mr. William A. Garrett, Washington correspondent for the Gannett News Service and the Hartford Times, has put his finger upon a subject that should be of interest to parents throughout the country. The flooding of the mails with pornographic literature must not be permitted to continue. So that my colleagues can have the benefit of the information developed in Mr. Garrett's article, I am placing it in the RECORD, as follows:

SMUT PROTESTED, MAIL LAWS ASKED

(By William A. Garrett)

WASHINGTON.—Parents, and even teenagers, in and around Hartford, have forwarded hundreds of complaints about pornographic matter being sent to young people in the mails.

A postal inspector said today that the Post Office Department has received bushels of such complaints, accompanied by demands that something be done to remove all this filth from the mails.

A long time ago a Kefauver subcommittee witness estimated that promoters of obscene or near-obscene pictures—not all using the mails—have built a $1-billion-a-year racket.

Postal authorities think it still is that, but their hands are tied. Last week some of them asked a congressional committee to do some untying.

The inspector read to this reporter passages from a few of the letters his department had received from Hartford. One was from a 17-year-old lad who sent along the stuff he was complaining about. "Look at this dirt," he wrote. "Please do something to stop it."

A Hartford mother with a son of 14 spoke of the undesirable letters he was getting "I am completely at a loss as to how to stop this thing."

A Hartford father concluded: "The advertisers are not only guilty of peddling filth but some even brag * * * that they are breaking the law."

Messages like that number well over 50,000 from all the States. But the volume is barely a trickle compared to the amount of lewd material in the mailstream.

Sometimes, the inspector said, this trash is what a boy gets even when he sends away for a cowboy suit or a model car or a missile kit.

This is just the beginning. To the young fellow now comes a torrent of lewd circulars. He is on the mailing list of numerous pitchmen.

Most of the trash, he noted, comes from the Los Angeles area.

The department gets orders against the distributors, barring their output from the mails as unlawful, but they go to court and get an injunction, and they stay right in business.

The bulk of the filth is destroyed by its receivers, but the inspector thinks they ought to save it and send it in—preferably to their Congressmen. That's the way to get action.

The inspector said there are 15 "major peddlers" in the racket, plus "hundreds of small timers who get in and out of trouble." Few are left in the New York area.

The department figures that 50 million direct-mail ads for pornographic junk are now going into homes annually priced at from $2 to $80—and often less obscene than the circulars themselves.

Prosecution is virtually balked, the inspector said, by a 1952 court ruling that a case may be brought only where the matter is mailed—not where it is received. If it is mailed in Hollywood, then, the United States Attorney in Connecticut where the matter is delivered can't do anything about it.

Post Office and Justice Departments have joined in asking Congress to let them prosecute the dealers where the complainant lives. They reason that parents on juries where the pornography is received would take good care of the promoters.

"Postmen," one inspector asserted, "are forced to carry mail they don't want to carry at a loss to the Department, into homes that don't want it."

In Hartford, Postal Inspector Thomas A. Peckenham said his office has been receiving "2 or 3 complaints each week" for the past several months on obscene literature sent to youngsters.

His office forwards the complaints and samples of the literature to Washington.

Postmaster John F. Heneghan said many complaints go through his office.

"Something should be done about it," said Mr. Heneghan. "It's a disgrace."

Hazleton Industrial Development Program Receives National Recognition

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Hazleton (Pa.) Plain Speaker of February 21, 1958, on the award presented to the Hazleton industrial development program called Can-Do by the Freedoms Foundation:

NATIONAL RECOGNITION DUE AT VALLEY FORGE CEREMONIES SET FOR SATURDAY

(By Charles Catherman)

Hazelton's restless urge for industrial development and the ensuing success of Can-Do have won a Freedoms Foundation award which will be presented to the Greater Hazelton Chamber of Commerce tomorrow at historic Valley Forge, it was learned today by The Plain Speaker.

The award, which will heap national recognition onto statewide publicity the city recently obtained through a Pennsylvania Chamber of Commerce award, is composed of a second-place honor medal and $100.

Hazelton, still basking in favorable publicity obtained from a community-development award from the Pennsylvania Chamber of Commerce, will be one of 54 individuals, organizations, and schools which will receive honors to be announced tomorrow.

PRESENTATION LATER

Tomorrow's ceremonies, which will draw the attention of the entire Nation, actually will include only the announcement of the award winners. The actual presentations are made on a regional basis at a later date.

Hazleton's selection as a winner brings added prestige to a city which boasts the fact it is the first in the United States ever to have two of its citizens serve on the Freedoms Foundation award jury.

Assisting in selecting the 1957 winners this year were Attorney Conrad Falvello, an international director of Lions International, and Attorney Louis G. Feldmann, junior vice commander in chief of the Veterans of Foreign Wars.

Because both men are residents of Hazleton, they disqualified themselves in the judging of the division which included the Hazleton entry.

The two local attorneys were among 31 judges on a panel which included State supreme court justices and executive officers of national patriotic, veterans and service club organizations.

TOTAL AWARDS

The awards, totaling $100,000, will go to individuals, organizations and schools for

UNIVERSITY OF MICHIGAN LIBRARIES

their projects, programs, writings, and other activities which contributed to a better understanding of the American way of life during 1957.

In the case of Hazleton, it will be an award for things done in 1957 through the energetic Can-Do industrial campaign which, at Valmont Industrial Park, has formed a nucleus of industry that is continually growing into an assurance of economic independence for the Greater Hazleton area.

But Can-Do's glorious successes would never have won a Freedoms Foundation award if the story hadn't been effectively presented to the award jury.

STORY PRESENTED

This was done through elaborate scrapbooks prepared by the chamber of commerce. The scrapbooks pointed out that more than $740,000 was raised through the combined efforts of service clubs, labor organizations, military groups, and other groups within the area.

This sum could never have been realized if hundreds of men and women working in the various industries of the region hadn't responded to the rescue cry and purchased the 3-percent, 15-year debenture bonds, the chamber pointed out.

FIRMS LISTED

The acquisition of the General Foam Corp. for the first speculative industrial building at Valmont Industrial Park was a direct result of the drive, the award jury was advised.

The location of Beryllium's Nuclear Division plant at Ashmore also was hailed as a significant advancement in the area's fight to ease unemployment.

The chamber of commerce scrapbooks also pointed out that 192,500 seedlings were planted in 1956 and 1957 in strippings, culm banks, and on other marred land in an effort to beautify the city entrances.

Other winning points:

The operation home improvement committee's fourth month publicity campaign on remodeling and repairing homes both inside and out helped create a new look in the Hazleton area.

AIRLINE SERVICE

The acquisition of scheduled airline service, the public's support at CAB hearings, and the installation of additional equipment at the Hazleton Municipal Airport by the chamber of commerce.

The city's enthusiastic endorsement of the Keystone Shortway and the chamber of commerce transportation committee's supplying legal advice, financial support and manpower to the Keystone Shortway Association.

The scrapbooks on the years 1956 and 1957, which included newspaper clippings, pictures, folders, and other descriptive material, also called attention to the city's exuberant centennial celebration, which was directed by the chamber of commerce through the centennial association.

Another award tomorrow will go to Pennsylvania State Chamber of Commerce, which will be recognized for its State community development contest in which Hazleton was a winner.

They Can't Say They Don't Know

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Rock Hill Herald of February 24, 1958:

THEY CAN'T SAY THEY DON'T KNOW

If Congress doesn't take any action to rid the big Federal agencies of pressure it won't be because the lawmakers are not aware that the pressure exists.

Last week Democratic National Committeeman Jerry W. Carter of Florida gave an investigating House subcommittee as frank a picture of wire-pulling as the group is likely to get if it meets for a 'coon's age.

"The only thing I done," said Carter, "was pull, under cover, all the wires I could." And he added, "I seldom pay my own way."

The subcommittee investigation undoubtedly will uncover more information about pressure on Government agencies. Undoubtedly there will also be heated denials and evasive answers.

Chapter and verse proof of cases where pressure has been used in the past is relatively unimportant. The important thing is for Congress to recognize that heavy pressure does fall on any big agency having the power to make regulatory decisions involving hundreds of millions of dollars.

Several Congressmen say they think the testimony shows a need for laws setting up a code of ethics for all regulatory agencies—such as the Federal Communications Commission, Civil Aeronautics Board and Interstate Commerce Commission.

This is a step in the right direction. The next step would be a law providing tough penalties for anyone who tries to use improper influence on a regulatory Government agency.

An Explanation of Our Mutual Security Program

EXTENSION OF REMARKS
OF
HON. F. JAY NIMTZ
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. NIMTZ. Mr. Speaker, I recently received a letter from a constituent in South Bend, Ind., proposing that consideration be given to the following three-point program for sending surplus foods, clothing, and farm implements to underdeveloped countries of the free world:

1. During World War II it was a slogan in our country that "Food would write the peace." If that be so, why couldn't food preserve the peace? In lieu of sending our dollars, send our surplus farm produce as food. Our dollars aren't enough, as they still need our CARE packages. Also food, in the quantities we have to ship, could not be sidetracked, without reaching the masses in these countries. This too, would help farm prices at home, and a price-support program might not be necessary.

2. Send clothing in lieu of dollars, again taking care of farm surplus, also this would create employment for many textile worker's who are now unemployed.

3. Send farm implements in lieu of large cash grants, to be distributed there by trustworthy organizations, to those whom it could help to become self-sustaining.

The above points would create employment in our country, take care of farm surplus, both of which would increase our tax revenue in sufficient amounts to meet or surpass our disbursements, thereby eliminating further deficits at this time.

There would be less chance of our aid being of any material help to any organization or people, suberversive in their thinking to our type of Government, if it should be misdirected or mismanaged. Too, the people who receive this type of aid will in general feel better toward the donor than if they received an outright cash grant, and if ever there was a time during peace, that we need to keep the moral of the people of the free world on a high level, it is now.

I am not a farmer or businessman, I am a supervisor at a plant in South Bend, Ind.

Mr. Speaker, I discussed the proposal of my constituent with officials of the International Cooperation Administration, and on February 24 I received a reply from Guilford Jameson, Deputy Director for Congressional Relations.

Under leave to extend my remarks in the RECORD, I include herewith Mr. Jameson's comments:

INTERNATIONAL COOPERATION ADMINISTRATION,
Washington, D. C., February 24, 1958.

Hon. F. JAY NIMTZ,
House of Representatives,
Washington, D. C.

DEAR MR. NIMTZ: This in in further reply to your referral of January 31, 1958, of a letter proposing a 3-point foreign-assistance program to send abroad (1) surplus foods, (2) clothing, and (3) farm implements.

Before discussing these specific proposals, perhaps it might be helpful to point out that the foreign-assistance program is not carried out by sending "hundreds of millions of dollars" to foreign countries. The great bulk of mutual-security funds are used to finance procurement of goods, including military hardware and consumer goods, needed to fortify the economic and military strength of the underdeveloped countries of the free world.

The people of these countries do not receive "outright cash grants" as a result of the mutual-security program, nor do they receive commodities free of charge. They pay for them with their own currencies, and the amount they buy is determined by what they earn in their own country and the extent to which goods that they need are available. Many of the commodities that these people need are in scarce supply in their own country or are not produced at all. Foreign exchange is therefore necessary if they are to be imported, and most underdeveloped countries are short of foreign exchange. The United States may decide to help countries in this situation because it is to our advantage that they develop economically in a free society and that they maintain adequate military forces. We may do so by agreeing to make funds available to the foreign government on a grant or loan basis. Such funds are then used to finance procurement of consumer goods; capital goods required for industrial expansion which will, in turn, increase employment and purchasing power; or military goods.

A large part of United States foreign assistance is furnished in the form of surplus foods and fiber. From April 1948 to December 31, 1957, $7.6 billion worth of agricultural commodities have been authorized for export from the United States under programs administered by ICA and its predecessor agencies. Since fiscal year 1954 the Congress has required that certain specified amounts of dollar funds appropriated for the mutual-security program could be used only to finance the export and sale of United States surplus agricultural commodities for foreign currencies. In fiscal year 1957 the minimum requirement was $250 million, and total sales of $286 million exceeded this target by 14 percent. The minimum requirement for the current fiscal year is $175 million, and we expect to achieve this by the end of the year.

Emergency programs administered by this agency include the Emergency Food Aid Act of 1951, under which a loan of almost $200

million of wheat to India was authorized. Currently, ICA is responsible for administering title II of the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480, as amended). This provision of the legislation authorizes the use of up to $900 million worth of surplus commodities held in stock by the CCC to help friendly foreign people to meet famine or other urgent or extraordinary relief requirements. Unlike goods supplied under the mutual security program, these commodities are usually given free to needy people in foreign countries who are unable to pay for them because of natural disaster, such as floods, earthquakes, drought and the like.

United States surplus agricultural commodities are also being furnished to friendly foreign countries under title I of Public Law 480. Agreements providing for sale of well over $2 billion worth of United States surplus agricultural commodities have been signed under this legislation in the 3½ year period ending December 31, 1957. The opportunity to purchase United States food and fiber for their own currencies, rather than with scarce dollars, has been of material assistance to foreign countries and at the same time has helped to reduce the size of United States agricultural surpluses.

Donations of United States surplus foods to CARE and other United States voluntary relief agencies to assist needy persons outside the United States are authorized under title III of Public Law 480. This program, initially authorized under other legislation, has been in effect since 1948 and by December 31, 1957, donations of approximately $1 billion worth of United States surplus foods have been authorized.

It is not practicable to finance purchases of American-made clothing for foreign countries because consumers in these countries simply could not afford to buy them. If a country has adequate spinning and weaving equipment, shipments of United States surplus raw cotton may be financed. If manufacturing facilities are not available, procurement of cloth may be authorized. In order to stretch mutual security funds as far as possible, authorizations for procurement of cloth provide that it may be procured from the cheapest source in the free world, including the United States.

ICA has financed procurement of a few agricultural hand tools and some of the voluntary relief agencies have also distributed these tools. On the whole, however, these programs have not produced worthwhile results. Most of the people in the underdeveloped countries are reluctant to change from the tools to which they are accustomed. The new tool, particularly one which requires a radical change in position and the use of different muscles, is likely to be discarded before the operator becomes experienced enough to appreciate the advantages which might be gained from it. Successful introduction of American or European types of tools or any universal tool requires that patient and persevering instruction be given in their use until the operator becomes familiar enough with them to appreciate their advantages. Such a program would be very costly in relation to the benefits derived.

American-made animal-drawn implements are not practical in many countries because horses or similar draft animals for which such machinery is designed are not available, and this equipment is not suitable for oxen or the type of animal power which is used.

Please let us know if we can be of further service.

Sincerely yours,

GUILFORD JAMESON,
Deputy Director for Congressional Relations.

Economic Conditions in the United States

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. LESINSKI. Mr. Speaker, America today is facing a grave situation in which firm and positive leadership must be exerted immediately if we are to maintain our Nation's economy and security at a high level. This is not a situation to be handled by platitudes and rosy promises of better things to come, such as President Hoover attempted to do 27 years ago. It is odd that the former President, during whose administration our Nation suffered the greatest depression in history, should at this time repeat his prosperity-is-just-around-the-corner speech, in an attempt to dismiss the present recession as he did the previous one. Let us hope and pray that forceful leadership and definite action will deliver us from the Hoover administration type of prosperity.

I believe that it is time for President Eisenhower to exert the leadership the American public expects of him. He has from time to time, but not often enough, evidenced the qualities of leadership the country needs, the most recent example of which is his letter to the Premier Bulganin. However, I feel that at this time the President must give careful thought and action to the needs of America, for whatever decisions he makes regarding Russia, a prolonged depression in our economy, without measures to correct it, could so weaken the Nation that the stand he takes could not be supported.

The recent proposal to initate a $2 billion Post Office Department renovation and construction program to alleviate the current depression has merit, because these projects have been needed in many areas for quite some time. However, such a program should have been conducted sooner, for the lack of facilities has made many operations slow and cumbersome.

Our economy has, since the Korean war, been supported by some twenty to forty billion dollars a year for defense purposes. In the light of those expenditures, the $2 billion which is proposed is a mere drop in the bucket for, while providing some relief, it is not sufficient when you consider that it will be spread out over 3 to 5 years. We must take action immediately to survey the needs of the entire Nation and provide forceful measures to improve and strengthen the economy.

The President and his deputies should come down to earth and take definite action to meet the actual needs of our economy today, instead of talking about possible future improvements.

One of the steps I suggest is an immediate cut in taxes, not for the privileged few—whom the administration seems to favor—but for the small taxpayers, the ones who will put the additional money right back into circulation. I believe that, with the Presidents' leadership, measures to remove the loopholes and special concessions in our present tax laws could be enacted. My bill, H. R. 9683, is a move in that direction and would not result in the loss of any money to the Treasury. In addition to cuts in income taxes, excise taxes, such as the one on automobiles, should be eliminated.

I would also suggest that definite steps be taken to improve the income of our Nation's farmers. Surely the President and his Secretary of Agriculture are aware of the fact that throughout history, whenever the farmers' income has declined, the rest of the economy also becomes depressed. The present policies fostered and promoted by the present Secretary of Agriculture should be abandoned and a progressive and constructive program established. Because of technical advancements in agriculture which enhance production, I do not believe that acreage control is the answer to the farm-surplus problem. I therefore strongly urge that a measure, similar to my bill, H. R. 6157, be enacted to place limitations directly upon agricultural commodities.

In addition, proper programs of public works for civil defense, reclamation, flood control, irrigation, soil conservation, and other needed projects be initiated without further delay. Defense contracts should be channeled into those areas where unemployment is widespread.

Another helpful move would be to increase the annuities of the retired folks so they will not have to go out and obtain jobs to make ends meet.

I would again emphasize that the need for implementation of these programs is urgent; and, while we all have faith in the future of America, we should take action today to prove that faith. It is of little comfort to a man who has been out of work for 5 or 6 months, who has exhausted his unemployment benefits, who is facing foreclosure on his home, and who is worrying about how he is going to feed, clothe, and provide needed medical care for his family, to be told that in the months ahead things will be better. He and the 4.5 million like him need help now.

I have been noting the reports on the upsurge of the number of crimes and incidents of juvenile delinquency and would raise the question as to what extent the unemployment situation has contributed to those conditions. A man facing the situation mentioned in the paragraph above, could very easily be tempted to resort to illegal means to maintain himself and his family.

The President has surrounded himself with men of business, many of whom are of high caliber and ability in their respective fields. However, one thought must be kept in mind, a businessman as such is out to make money either for himself or for the stockholders in his company. So at the expense of the buy-

UNIVERSITY OF MICHIGAN LIBRARIES

ing public, he must show a profit. And the approach of the various members of the administration has been just that, to sacrifice the good of the public for the benefit of special interests. There is a need in Government for business advice and ability, but the leadership should be in the hands of those who are aware of the overall problems of the Nation, for we in Government must give due consideration to all segments of the economy if we wish to act for the welfare of the entire Nation.

In view of present conditions I would suggest further that the President replace the majority of the members of his Cabinet with men of high caliber who have their feet on the ground, are aware of the total picture within the country, and will produce forceful and practical solutions to the problems not only of defense but of our Nation's prosperity and well-being. Lack of coordinated effort, inefficiency, and laxity should not be condoned by any President.

Many people are saying that history will condemn the Eisenhower administration for failue to exert leadership when it was most urgently needed. If the President wishes to retain in the eyes of the American public the fine reputation he gained during World War II. unblemished by the actions of his chancellor, Mr. Adams, and the other leaders in his administration, he must exercise the leadership the American public expects of him.

If the President should, perchance, get by the censors and read these remarks, I would assure him that I offer my comments sincerely and honestly, and would suggest that he invite some of the small farmers and businessmen around his Gettysburg farm to talk with him about their problems. I am sure that if he spoke frankly with some people other than those associated with big business, he would find that, with few exceptions, their respect for him has declined. I make this observation as a result of conversations I have had with individuals who had admired and voted for him.

Recognizing that the President does need relaxation away from the burdensome duties of his great office, I believe a few minutes apart from his putter, bridge table, or easel to exert the leadership the people of this Nation expect of him would bring back his prestige, not as a Republican President, but as an American who believes in the future of America and is willing to provide leadership for action to insure that future.

The Late Mr. James B. Post, Sr., of Wilkes-Barre, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record of February 20, 1958, upon the passing of James B. Post, Sr., leading businessman and civic worker:

JAMES B. POST, SR.

Death has come to James B. Post, Sr., Lee Park, Hanover Township, while his career as a businessman and his service as a civic-minded citizen were still in the ascendancy. His initiative in the commercial field was an asset to his associates and to his community. He was essentially a builder, as evidenced by the progress and the expansion of the enterprises he helped organize and which he directed.

He had many connections in the fields of business and industrial enterprise and as a member of clubs, fraternal orders, veterans' and civic organizations. His business career built along sound lines, his devotion to the public welfare, and his many personal services to his friends and the community can well be an inspiration to others.

He was a pioneer in the manufacture of ice and developed his early routes in the horse-and-buggy days. In recent years he had been one of the few local large ice distributors. Likewise, as a Glen Alden agent, he became a leader in the retail sale of anthracite. He was on the national board of Manufactured Ice Association of America. In recent years, he, with Harry Nicholson, had done the appraisal work for Hanover National Bank of Wilkes-Barre. He was one of the oldest directors of Franklin Federal Savings & Loan Association.

Firwood Methodist Church knew him as an active worker and a member of its official board. Although he was a member of a number of clubs, he was particularly interested in helping to carry out the program of Wilkes-Barre Kiwanis Club.

Mr. Post took an intensive interest in all his undertakings and his associates will miss him as an agreeable companion and one whose counsel was held in high esteem.

The Archbishop of Cyprus

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. CRAMER. Mr. Speaker, a recent article in World Outlook, a publication of the Methodist Church, clearly brought to the attention of many people the supreme dedication and outstanding work of the archbishop of Cyprus, Makarios Kykkotis, who once was a student in America. Today he is a leader among the people of the world. Archbishop Makarios—and the name means "shepherd"—is the subject of an article by Amy Lee. I think this story brings out much of the man who is behind the continuing struggle for freedom, spiritual and political leadership of a dedicated people. I include this article in the RECORD for the attention of the Members of the House and all who would support the cause of an ancient and great people:

ARCHBISHOP OF CYPRUS

(By Amy Lee)

A decade ago the man who is now spiritual and national leader of an island that has been front-page news in the last 2 years—Cyprus—was studying at Boston University School of Theology on a grant from the crusade scholarship fund of the Methodist Church.

Recommended for the scholarship by the World Council of Churches, Makarios Kykkotis was one of a group from the Greek Orthodox Church so honored. He was in his second year of the 3-year study course when he was notified of his election as Bishop of Kition of the Church of Cyprus, an independent branch of the Eastern Orthodox Church. In a letter dated April 23, 1948, to the late Dr. R. E. Diffendorfer, then executive director of the division of world missions of the Methodist Church, he wrote: "Even though from the time I learned that my name had been placed on the list of candidates for this position I made many attempts to withdraw it from the list, my attempts were in vain. The voting of the people resulted in putting on my weak shoulders this great and heavy responsibility, and upon receipt of the news I felt sorry because I am forced to stop my studies as a crusade scholar of the Methodist Church * * * I plan to leave the United States on May 8, 1948."

The weak shoulders of the former crusade scholar, now Archbishop Makarios, since his election in 1950, have borne far heavier responsibilities than their possessor probably foresaw—one of the heaviest being his 13-month exile by the British in the lonely Seychelles Islands, northeast of Madagascar in the Indian Ocean.

The archbishop is still in exile from Cyprus, but a beautifully appointed suite in New York's St. Moritz Hotel overlooking Central Park is a less arduous form of isolation than was the coconut-covered Seychelles where life is, he says, "very primitive. The people know nothing of what is going on in the world. There are no newspapers, no magazines, no radio—and no cinema. Once a month a ship stops." He speaks carefully, as if mentally translating his thoughts from Greek to English before expressing himself. A slight accent lends charm to his words. "The people are so naive. They couldn't understand why we wanted to leave." He gets up from the little sofa by the windows that face the park and picks up a coconut from a table. It has been polished to a dark luster, almost like mahogany. Two covers cut in the top open on little hinges and show two roomy compartments.

The archbishop's delight in this souvenir of a trying period in his life is characteristic of the simplicity and grace of his nature. It is the same sort of delight he finds in revisiting the places he knew as a crusade scholar at Boston University School of Theology. "I always go back to the old building," he says. "I visit the dormitory where I lived, and the cafeteria." This is the archbishop's third visit to the United States, and he is seeing quite a bit of it as he officiates in several Greek Orthodox churches—in New York, Boston, Philadelphia, St. Louis, San Francisco. "I couldn't accept all the invitations that have come," he explains, almost apologetically, "but I am going to as many as I can." There are about 350 Greek Orthodox churches in this country and 1 million Greek people. One of the first things he insisted on doing after his arrival in New York was to pay a visit to Methodist headquarters at 150 Fifth Avenue and express thanks to the Methodists for his crusade scholarship. The intricate schedule juggling this visit demanded might have daunted a less insistent—or less grateful—man.

Oldest of four children, Archbishop Makarios from his youth wanted to serve the church. Other than his paternal grandfather, who was a priest, there were no clerics in his immediate family. "My father was a shepherd," he says, and tells with gentle glee about the time his father, now 72, came to see him in Athens. Reporters

asked him what he thought about his son's being a bishop and he answered, "I thought he'd be a shepherd like me."

In a sense Archbishop Makarios is a shepherd, for as archbishop he is not only the spiritual shepherd of his flock but national leader as well: there is no separation of church and state in Cyprus. "The Archbishop of Cyprus is not appointed by an ecclesiastical hierarchy," he explains, "but is elected by the people. Ours is the only church which elects an archbishop in that way."

As to possibilities of future separation of church and state in Cyprus he has this to say: "I will not be the national leader after Cyprus gains its freedom and the people set up their own government, whatever it is—whether the island becomes a member of the British Commonwealth or unites with Greece." When he speaks of his homeland there is a note of longing in his voice, and hope, too, that soon the trouble will be over and the island free to decide its own fate.

The picture that stays in mind of this shepherd of the Cypriotes—is not one of an embattled political and church sovereign but of a gentle, soft-spoken man whose eyes light up when he smiles (and he smiles often), with a copy of the Times of Cyprus open in his lap to pictures of his father, the humble dwelling where he was born, the little school he attended, the village church. His name, Makarios, mean blessed.

Government Agency Ethics

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. PELLY. Mr. Speaker, the house of delegates of the American Bar Association, which is the governing and policymaking body of the association, has just approved a supplemental report on administrative law. Their resolution expressed opposition to off-the-record extraneous representations or pressures on Federal administrative agencies engaged in the exercise of their adjudicatory powers. It emphasized that the bar association had repeatedly urged a separation of functions in adjudicatory proceedings, and that hearing officials in Government be assured of an opportunity for fair, impartial, and independent judgment in the trial of agency cases. Also it urged that the integrity of the judicial process at all levels in the agency be protected by confirming decisions to the record taken at a public hearing free from any ex parte representations, influences, or pressures from any source, public or private, official or unofficial.

Mr. Speaker, the bar association's position which coincides with what I have repeatedly said in recent remarks in the well of the House is that it is desirable, in the interest of public confidence, to establish a code of ethics by statute to cover Government agency operation. The association asks for an appropriate code of administrative-tribunal ethics comparable to the canons of judicial ethics binding upon all persons engaged, interested, participating in or seeking to affect the result of the adjudication of agency-tribunal cases. Furthermore, the association has pointed out that in connection with an amendment in procedure and practice, the fundamental basis for improvement rests in legislative and agency implementation.

On a number of occasions, Mr. Speaker, I have urged consideration by the appropriate House committee on legislation including H. R. 10631, introduced by myself, to establish codes of ethics of Federal elected, appointed, and career public servants.

To indicate that there is widespread support for passage of such a measure to promote integrity in Government, I include the following resolution adopted by the house of delegates on February 25, 1958:

Resolved, Whereas the American Bar Association has repeatedly urged that the organization and procedure of Federal administrative agencies in the exercise of adjudicatory powers provide: (1) That hearing officers be assured independence of judgment and impartiality in the trial of agency cases; (2) that the integrity of the judicial process at all levels in the agency be protected by confining decisions to the public hearing-record in an environment totally free from any ex parte off-the-record representations, influences or pressures from any source.

Now, therefore, this association records its opinion that more effective agency and congressional action to those ends would improve and inspire greater public confidence in agency adjudicatory determinations, and believes it desirable that an appropriate code of agency-tribunal ethics comparable to the Canons of Judicial Ethics be established by statute binding upon all persons engaged, interested, participating in, or seeking to affect the result of the adjudication of agency-tribunal cases.

The Nation's Mental Minutemen

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mrs. GREEN of Oregon. Mr. Speaker, in years past, an educated person was one accorded deep respect by the community. Lampooning individuals because they had brains and used them was not fashionable.

We have come to place more emphasis on and regard for athletic prowess than on mental prowess. We have come to regard moneymaking prowess as the thing and have downgraded the ability to teach, to learn, and to know.

Brains must be upgraded in the United States. Respect for learning must be restored not because of any race with Russia but, rather, because it deserves to be recognized and respected, and because it is important to the preservation and protection of the American way of life.

I was particularly pleased to note in a recent column by the noted columnist, Malvina Lindsay, in the Washington Post and Times Herald, an allegorical description of an appeal which should be made to our Nation's youth not only to respect learning and learners but also to enlist in what she calls the Nation's mental minutemen.

Under leave to extend my remarks in the RECORD, I include this column in its entirety:

SHOCK TROOPS FOR AGE OF THE MIND
(By Malvina Lindsay)

The speaker at the recruiting rally wore no uniform, only a civilian suit, not especially well tailored. But the youthful audience stiffened to attention at his first ringing words: "Men and women, your country needs you. Who will volunteer?"

Then he lifted his hand in a warning gesture. "But understand, I am not asking for recruits to man spaceships or to set off for the moon. I am not asking for volunteers to handle long-range missiles, or even to take basic GI training. The enlistment to which I am calling you is not spectacular or even tangible. It is not a service that you can get over and done with.

"It is something more difficult, more arduous, even in some ways more hazardous. It is something that goes on forever.

"I am calling you to enlist in the Nation's shock troops for a mental combat that will determine whether man lives free or regimented on this planet. I am calling you to be volunteers in a mental vanguard that will determine whether this Nation leads or lags in the now-dawning age of the mind."

The audience stirred uneasily. "I will be more specific," continued the speaker. "First, will you volunteer to shorten your now prolonged adolescence? Will you start being men and women at college instead of boys and girls? This country can no longer afford to be regarded as the world's headquarters for Joe College and his feminine counterpart. Who will take the lead in bringing a more adult atmosphere to the American campus?"

A score of hands went up. "But wait. More is asked of you. How many of you will work harder, step up your studies and push ahead faster with the long professional and technical training required today of those who must give the skilled service the country is waiting for?"

Again halting a response, the speaker continued: "Who will volunteer for the most heroic operation of all? Who will dare to be a brain? Who will dare to study so seriously his mind will be stretched to its fullest capacity? Who will dare to speak correctly, to show respect for learning—and the learned—in all fields; to take the lead in giving knowledge and culture prestige among youth?

"Who is brave enough to risk being jibed at as a 'highbrow,' a 'grind,' a 'square,' because he is a member of the Nation's mental minutemen? Remember, this may be harder than carrying a pack on a long march, or facing physical danger. But also remember this country can only be saved from decadence—if not destruction—if a big enough army of both young and old smash the self-inflated forces of ignorance and institute a revival of learning.

"Now for the rewards to those who volunteer. I cannot promise you foreign travel, dashing uniforms, or physical adventure. But I can promise you a mental box seat at some of the most exciting dramas in man's history.

"Besides the lifting of the curtain on the space age, there is now occurring what may prove to be an even greater revolution in human thought. I am referring to new discoveries in physics, including the recent upset of previous concepts of the law of parity, and the accompanying implications of an antimatter universe.

"But I can also promise dramatic breakthroughs of knowledge on other fronts—perhaps new revelation of the origin of life. If there is any red blood in your brain cells, does it not throb at promise of such exciting adventure?

UNIVERSITY OF MICHIGAN LIBRARIES

"I can promise you the thrills of new knowledge and new opportunity in whatever fields your talents and interests lie. Your country needs you not only as scientists but as teachers as well, as scholars, public officials, other professionals. It needs you in every phase of the mental offensive which it must mobilize now that physical warfare is becoming obsolescent.

"Your Nation now is seriously challenged mentally by its Communist competitors. But beyond that, knowledge is on a new march in the world. If your country is not to drag its feet in this, it will need your minds—the best of them that you can give. Run; don't walk—to the nearest source available to strengthen them."

Fast Action Needed on Social Security Amendments

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. ASHLEY. Mr. Speaker, every day my mail brings scores of letters from old folks who reside in my district. All of them recount in pathetic terms their personal struggle to make ends meet on their small social security pensions. Theirs is by no means a new story, but rather a sad and worn tale of trying to stretch a static income to cover the inflated price levels of food, clothing, shelter, and essential medical care.

For more than 2 years now inflation has driven the cost of living steadily upward, whittling away the real income of the American people, wage earners, and businessmen alike. But our retired citizens living on fixed pensions which are uninsulated by either escalator clauses or profit markups, have been the sorriest victims of inflation.

Despite repeated protestations on the floor of both Houses, no effective action has been taken to relieve the mounting pressure on individuals and families caught in the painful squeeze between fixed income and ever-rising prices. And despite the fact that our national economy has been undergoing a general recession in recent months, the cost of living has continued on its upward trend to an all-time high now of 122.3 as reported for January 1958.

Some effective action must be taken and it must be taken soon to provide relief for our social security recipients. My call to action is contained in H. R. 10664 which I introduced recently to increase social security benefits by 10 percent and to provide insurance as well against the cost of hospital, nursing home, and surgical service.

The spectacular rise in life expectancy has vastly increased the number of older and retired persons in our society. At a time when their health needs inevitably increase with the infirmities of advancing years, their income is sharply curtailed while the opportunity of taking out health insurance is either denied or the premium rates are prohibitive. Our social-security laws must be amended to provide better methods of meeting this problem.

I believe the provisions of my bill are as sound and humanitarian as they are necessary. In a country that boasts to the rest of the world of our high standard of living, the long neglected and serious economic plight of our retired citizens cries out for immediate attention.

Since old age is the likely fate of all of us, the welfare of the aged should be the concern of all of us. We can no longer ignore the problems of the aged or postpone action to resolve or alleviate them. I urge the House Ways and Means Committee to undertake immediate consideration of this legislation so that both the House and Senate can complete the necessary action to inscribe it into law during this session of the Congress.

Postal Pay Bill

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. CRETELLA. Mr. Speaker, as a member of the Post Office and Civil Service Committee for the last 5 years and during which time the committee has acted several times on postal salary bills, I, like all of the other members have received a tremendous amount of mail from the postal employees and their families, urging my support for a salary increase.

Many of the letters were in the nature of form letters, others were factual, devoid of barbs, insults and castigations, but the following letter which I received from a postal employee of New Haven, Conn., a personal friend of mine and a loyal and patriotic Government worker, relates in concise, intemperate language not only his own plight but that of other postal workers in support of a postal pay bill.

The House committee did report out, on Tuesday of this week, a pay bill which I was happy and proud to support, and it is with pleasure that I insert the letter in the RECORD because of its outstanding, able and clear presentation:

NEW HAVEN, CONN., *February 26, 1958.*
Hon. ALBERT W. CRETELLA,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: My deepest apologies for taking up your valuable time with my seeming unimportant letter which I hope will, nevertheless, merit your kind attention and possible consideration.

Twenty one years ago, I entered the postal service, believing at the time, as anyone else might expect, that employment in the Federal service should be of such dignity and fair remuneration that it should be the pinnacle of desire for employment by every American citizen. The constant turnover in Federal agencies has proved the reverse has been true. People have been leaving the Federal services for jobs in private industry, which have, during all these so-called prosperity years, been offering better pays and fringe benefits which Uncle Sam hasn't even touched yet. Why has such a condition existed? You and the other Members of Congress know the answer. With only one small pay increase in about 7 years, and the cost of living rising year after year, month after month, some Federal employees lacked the faith that we have had each year that Congress would grant us a pay raise, and left the services for greener and more profitable pastures. We, who remained loyal, stayed to see each bill for a salary increase fade out like a summer romance.

I cheered with others when Congress voted itself a $7,500 pay increase, not only for the obvious reason and assumption that Congress would naturally use the same conscientous reason to vote a pay raise for Uncle Sam's little nephews as it did for its Members, but also because I knew that a better salary for Members of Congress, somewhat comparable with salaries in private employment, would encourage men of high caliber to seek the opportunity to serve in Congress so that the people could be assured that our Congress was made up of future statesmen.

Everybody knows, from the President down, that we have only received one small pay increase in the past 7 years, and yet, we have been referred to as the cause for inflation. Our accusers seem to forget that private industry has been granting yearly wage increases to its employees to help them meet the continuous rise in the cost of living while Uncle Sam's nephews have become the sacrificial victims of political artifices, as we have had to beg for crumbs from the table of plenty. Our purchasing power went lower and lower while official United States Government records will show everything was costing more and more. It's been the trend. Even my water company found some reason to raise the water rates again, even though I am sure that Mother Nature isn't charging any more for water than it has since the world began.

I married as soon as I entered the postal service, adhering to that basic marriage precept that the wife's job is homemaking, and the job of the breadwinner belongs to me, the husband. I graduated from high school in 1928, so I, like millions of others, experienced heartaches and misery of the depression, and my job in a Government agency looked like utopia, in 1936. The records available to you at the United States Department of Labor can tell you better than I can what has happened to my pay, as compared to the increased cost of living during the past 20 years. The pay that once seemed adequate enough to prepare a better tomorrow, has steadily decreased in purchase value. With the good Lord sparing me some of the misfortunes that have been happening to my fellow workers, plus sacrifices here and there, I have been able to keep my wife at home since we've married, even though I have worked at only my post office job. You are wondering how I lived? I haven't been living—just existing.

Without trying to seem sanctimonious, and with no offense intended to those who do—neither my wife nor I drink, smoke, or gamble. I am 47 years old, and I haven't yet been able to put enough aside to enjoy a vacation with my wife and daughter. I can't drive, and never own a car. I have not replaced my aerial which fell down about a year ago, because a new one would cost about 1 week of my take-home pay. Anyway, my TV, which supplanted our movie-going for years, needs more repairs than a broken heart. Right now it is just a magnified radio, just voice, no picture. I've had doctor and dentist bills, not too rough up to now, but enough to just about keep my nose above the waterline so I could breathe. Compared to the kind of tough luck the others have had, I still say that I have been a lucky fellow. Yet, I ask you, is this the kind of American way of living that we so proudly talk about? Or is it necessary in

order to keep up a good front that we sacrifice the basic foundation of our democracy, the home? We certainly won't get rich on any postal-pay increase. You must agree that something is very wrong when we have to sacrifice so much of tomorrow to get along today. Let me make a prophecy—if we get back to full employment, as I hope, we'll be just as far behind in take-home pay as compared to private industry as we are now, if not worse off, unless Congress decides to make the raise large enough to offset the wage increases private industry is going to demand. We certainly can't catch up if it takes 7 years for the postal employees to get the same kind of a raise private industry can get in 1 year. A pay should certainly have something left over to prepare for a better tomorrow, and when the cost of ordinary living exceeds the take-home pay, then somebody is asleep at the switch.

I've always considered myself a pretty fortunate fellow because the Good Lord has spared me and my family any serious illness during the years I have been at the post office. How much more fortunate than I imagined was brought out last August, when my wife was taken to the hospital for examination for a serious operation. The operation was so difficult and dangerous that after the X-rays, it was decided to try to create a cure through X-ray therapy, at least until it became vital to operate. No cure was effected but it is believed that further danger has been arrested. Not including the doctors' bills which will be billed under separate cover, the bill for the first week alone was $333, for room and services. Just imagine that, for one week for one person, $333. Do you think that such bills can be paid on a take-home pay of $139.13 every 2 weeks? Don't forget, Federal employees do not enjoy paid up hospital plan as given to employees in private industry. Uncle Sam is urging the high school graduates to continue on to college. Every father wants to send his child to college so that his offspring can be better prepared to meet the challenge of tomorrow, but you will have to admit that there isn't much more left of tomorrow that we can mortgage. The Good Lord in His infinite wisdom sent me only one child, so I have been able to struggle on a little better than some of my fellow workers. Can you imagine the financial plight of some fellows with three or more children, who through misfortune and illness, have become old friends with the four walls of a hospital sick room?

We love our country, and the postal employee, too, has fought and died to preserve our way of living. Yet, we have had to play on a losing pay raise cause because of political expediencies. It is about time that we receive a pay raise comparable to our long overlooked needs, and not comparable to ill advised political promises. We are having the highest budget in peacetime history, and yet, when it comes for Uncle Sam to take care of his little nephews, we are treated like the kids who are left home starving while papa invites everybody in the tavern to the bar for a drink.

Involved are not ships, planes, missiles, or submarines; not the dangerous oil lines in the East; nor those panhandlers who keep asking for more and more of our table of plenty—no—involved are Americans, who unlike those I have mentioned, have a deep and sincere reverence when they kneel in prayer, and thank God that there is an America.

Respectfully submitted.

JOSEPH J. VIGLIOTTI,
Legislative Chairman, Local 237, National President, Postal Press Association.

Fate of Employee, Service in Hands of Congress

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 30, 1958

Mr. BROYHILL. Mr. Speaker, I request permission to insert in the extension of remarks the following article written by W. O. Rittenhouse, which will be published in the March 5 issue of the Government Employees' Exchange, a newspaper for employees of all Governments:

FATE OF EMPLOYEE, SERVICE IN HANDS OF THE CONGRESS

(By W. O. Rittenhouse)

Two months have elapsed since Congress convened. Hearings on pay legislation proposed for postal and classified employees could have been completed. One of the many bills submitted during the early days of this session could have been approved. Prompt relief could have been provided for these deserving employees.

During these 2 months, the cost of living has continued to rise and the buying power of the Federal employee's pay check has continued to shrink. Last week the Government announced the cost of living hit another new high in January. It reached a level six-tenths of 1 percent above December, and 3.5 percent above January 1957. This occurred while unemployment climbed to 4,500,000 in January and while steps were taken to burden the American taxpayer with increased foreign aid.

Everyone, including the present administration, seems agreed that some form of pay legislation, providing across-the-board increases ranging from 6 percent to 11 percent, is merited. There will be no repeat performance of the prolonged and dramatic hearings that characterized last year's pay bills. Yet, there will be unnecessary delays. The Senate and House Committees on Post Office and Civil Service must agree on several essential points. An increase acceptable to the administration must be determined. The two committees must agree on whether the pay increase will be retroactive and whether the pay bill will be tied into the pending postal rate bill. While a pay bill will be approved sometime this session of Congress, it, like similar previous legislation, will be too little and much too late.

The statistical data furnished by subscribers to the Exchange and summarized in this column in the preceding three issues have demonstrated the extent to which increased pay is urgently needed by employees in all pay brackets. Information volunteered clearly portrayed how Federal employees have lived upon expedients and capricious measures until they can live no longer.

TAKE-HOME PAY

Generally, response to the cost-of-living survey conducted by the exchange has come from career employees in position to speak with authority. Their comments emphasized the need for Congress to consider what is merited in the way of actual take-home pay. Their gross salaries have increased, but their take-home pay has shrunk during the past 18 years through increasing payroll deductions for retirement and insurance purposes, Federal income taxes, and, more recently, State income taxes. For example, the District of Columbia income tax was almost doubled last year; this year, it will be twice the amount levied last year. These items are deducted before the employee receives his pay check.

The buying power of the take-home pay has been reduced through ever-increasing taxes on practically every commodity and service purchased, including food and other essentials. These and other significant items are not considered in establishing the Consumer Price Index frequently discussed during previous hearings on pay legislation. There are two questions to be considered in establishing an adequate percentage increase and an appropriate effective date of the increase. How much take-home pay does an employee receive? To what extent has the buying power of his pay check been reduced by every factor that causes him to spend more for goods and services in 1958 than he did in 1939?

An employee in Falls Church, Va., who reported no savings or ownership of property, computed that the administration's proposed 6.4 percent pay increase would give him $6.67 every 2 weeks above what he now receives and observed: "If Congress wants to give us a raise, it would have to be after taxes in order to meet the cost-of-living increase. The pitiful little raise this would give us would be spent in a food store in 5 minutes, and then only buy enough for one dinner." One in the District of Columbia in similar circumstances stated: "I have to work on Saturdays on an outside job to keep my head above water. I suggest that they pass the law on a percentage increase of the take-home pay. This would help us more." Another in Los Angeles, Calif., wrote: "My wife and I worked full time last year and I did part-time work. Our gross income was impressive. Last week I figured my Federal and State taxes. I found that more than one-third of our hard-earned income went into taxes. Our united effort accomplished no more than to pay these and other taxes, keep a roof over our heads, keep us from starving, and provide us with essential clothing and medical care. A pay increase based on gross income will not help our plight."

INCREASING DEBTS

Relatively few employees, in the high or low pay brackets, have saved money or own their homes. It is evident that many occupy higher grade positions than they did in the 1930's; as they were promoted, their standard of living necessarily rose. Many were unable during the housing shortage that existed during the 1940's and later to purchase homes at the inflated values then and still prevalent. Some were forced to use savings to pay rent and meet other essential expenses, and others went hopelessly into debt. When their financial problems were relieved to some extent by delayed and small pay raises, the increased income soon was nullified by higher taxes and prices for goods and services they and their families needed.

An employee in Vienna, Va., who reported no savings or ownership of property, wrote: "Every year I fall behind in amounts of $150 to $200 in debts or taxes." One in Indianapolis, Ind., wrote: "We are in debt up to our ears. Owe doctor and even have to charge our children's medicine till the next payday. We are not in debt for anything foolish—just necessities." Another in Nashville, Tenn., listed his several debts, and voiced the opinions of many by asking: "Why are we being taxed to death to exploit the resources of our Nation to send money to foreign people who don't want what we

UNIVERSITY OF MICHIGAN LIBRARIES

send, who don't believe in our form of government, who despise us and who would be the last to help us in time of need?"

JOINT EFFORT

In spite of their low incomes, Federal employees apparently feel they are expected to maintain a decent standard of living. Many found they could not do this on the reduced buying power of their take-home pay. First, the wife found full or part time employment. Next, in many cases, the husband found a part-time job. Proportionate increases in expenses resulted for understandable reasons. To make matters worse, the higher gross income placed these employees in a higher tax bracket. Increased taxes and expenses quickly siphoned off what actual profit might have been realized through their joint effort.

An employee in Hyattsville, Md., observed: "If my wife didn't work, just could not exist. Takes close living on both salaries." One in Dallas, Tex., wrote: "I feel that I am a very efficient person, but I could do a much better job if I did not have to work myself to death on a part-time job to make ends meet." Another in the District of Columbia stated: "Work 4 nights a week, 6 p. m. to midnight, to cover the bills and loans that get bigger all the time."

WAGE BOARD RAISES

Quite a few employees stated that postal and classified employees have been discriminated against, while wage-board, or blue-collar employees of the Federal Government have received frequent wage increases based on periodical wage surveys. For example, an employee in Ogden, Utah, wrote: "Last year blue-collar workers in our area received 7 percent raise. This year, they received 10 percent raise, making a total in the past 2 years of 17 percent. Then, President Eisenhower had the effrontery to say he had to veto our raise in order to curb inflation. We have news for him. Inflation has arriverd, but we certainly can't be blamed for it because of any pay raise we received."

This general opinion appears to be confirmed by figures released by the Navy Department showing the national average rates paid to its wage board employees as of January 1, 1958. These figures show that almost a third of the classified employees are paid below the average rate received by laborers. The average rate for a laborer is $3,702 a year, and the entrance salary now authorized for a GS–5 classified employee is $3,670. The services of a laborer are valuable, but should they have a higher market value than those of an employee in a shortage category, such as a skilled stenographer?

The plight of the Federal employee, as it exists today and as it will exist on his retirement, will not inspire the growing generation to seek Federal employment. It presents a picture that has never been appreciated by the Members of Congress whose sole idea of economy is to cut the Federal payroll and keep wages down. Members of Congress today hold in their hands the fate of the Federal employee, as well as the efficiency of the Federal service in years to come.

The Late Mrs. Louis A. Dessen, of Hazleton, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 27, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following news story which appeared in the Hazleton Plain Speaker of February 20, 1958, announcing the passing of a leading citizen of Hazleton, Mrs. Louis A. Dessen:

MRS. L. DESSEN TAKEN IN DEATH

Mrs. Louis A. Dessen, 711 West Diamond Avenue, civic worker and leader in Beth Israel Temple, died this morning at Harston Hall, Chestnut Hill, following an illness of several months. Her husband, Dr. L. A. Dessen, pioneer radiologist, died in 1945.

Her son is Dr. Edgar L. Dessen, president of Can-Do, Inc.

The Visiting Nurses' Association of Hazleton and vicinity was organized at Mrs. Dessen's home in 1940 when she, together with E. Jeanette Morse, headed a committee to separate the organization from its prior position with the Red Cross. A charter VNA member, she served on the board of directors since its inception, was a past president, and held other offices.

Mrs. Dessen was a member of the board of directors of the local Red Cross during World War II. As its chairman of volunteer services, she organized all wartime services, including motor corps, nurses' aids, production, surgical dressings, and staff aids. She represented the chapter at various Red Cross national conventions.

An active member of the Beth Israel Temple Sisterhood, Mrs. Dessen was a past president and a member of the board for more than 30 years. She also was a past president of the local medical auxiliary and a member of the State Federation of Temple Sisterhoods.

Born in Philadelphia, the deceased was the former Bertha Clara Weise, daughter of Mr. and Mrs. Martin B. Weise. She came to this city in 1911.

Surviving are three children: Dr. Edgar L. Dessen, this city; Mildred, wife of Lester Shapiro, Wilkes-Barre; and Reba, wife of Aaron Goldman, this city. Five grandchildren survive.

She also has a sister, Mrs. Anne Fromm, Los Angeles, Calif., and three brothers, Edward, Maurice, and Leo Weise, all of Philadelphia.

AFL–CIO Demonstrates Moral and Intellectual Maturity

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 19, 1958

Mr. MULTER. Mr. Speaker, Gerald W. Johnson, writing in the New Republic of February 3, 1958, points out that the AFL–CIO has not publicly been given its due credit for its house-cleaning actions. I believe that Congress and the American people should take note of this. Mr. Johnson's article follows:

VIRTUE'S PROFIT

(By Gerald W. Johnson)

When a man or a group perpetrates a villainy and gains profit and praise thereby, a wrong is done to every honest man. Everybody understands this. But when a man or a group does a good deed, and it is met with silence or damned with faint praise, another wrong is done every honest man.

This some people deny. Virtue, they say, is its own reward and a clear conscience is ample compensation for rectitude. Which is baloney.

The point is of contemporary interest by reason of the marked restraint shown by the public prints in praising the leadership of the AFL–CIO for throwing out the teamsters and other unions guilty of practices tainted with corruption. The press generally concedes that they did the right thing, but usually intimates that there was small merit in it because they had to do it to avert a scourging at the hands of the lawmakers.

They didn't have to do it. They could, and John L. Lewis says they should, have weasled out of it. When it is a matter of retaining an income of a million dollars a year, any second-class law student can produce one specious argument to justify it, and really learned counsel can produce 30. If you are willing to live as a self-constituted lovechild there are always excuses to be found.

The fact is that when the AFL–CIO gave the teamsters the old heave-ho the American labor movement exhibited a moral and intellectual maturity that signalized its coming of age. It is no longer in socage, villein or free; and the lords regnant of this world are never too pleased at having to make room for an addition to their company.

This is enough to account for the languor of the applause with which the deed was received. Bishops and bankers and able editors are uneasily aware that henceforth whenever they adopt a top-lofty tone in addressing Messrs. Meany and Reuther, some voice at the back of the hall will inquire, "And when did you ever sacrifice a million a year rather than be associated with crooks?"

As far as the individuals involved are concerned this is perhaps a matter of no importance, but it is important from the standpoint of the rest of us. The fact is that in this action organized labor has given an exhibition of honesty and courage that goes far to allay the apprehension excited by the sheer dimensions of the AFL–CIO—an apprehension that is shared by many true friends of labor.

Expulsion of the teamsters demonstrated that the present leadership of this giant organization is imbued with a decent respect to the opinions of mankind, and has the nerve and the energy to maintain that respect. Such men are fit to be entrusted with power, for in their hands power does not threaten, it safeguards the state.

That is the record. It is written, and it cannot be erased. But it can be deprived of much of its potential effect by coolness on the part of those who should praise it warmly. Expulsion of the teamsters was extremely costly to the AFL–CIO, and can be justified only by the credit that should accrue to honorable and responsible leadership. If no credit accrues, then the effort was wasted.

Labor can ill afford wasteful leadership. If the courage and honesty of the men who ejected the teamsters result in nothing but loss of income, then the logical course for the AFL–CIO will be to throw out Meany and Reuther, replacing them with leaders willing to strike hands with Judas Iscariot as long as he pays his dues.

The enemies of labor, of course, hope for just that. Committed to the proposition that any labor leader because he is a labor leader is presumably a scoundrel, they are left in an awkward position when the facts give them the lie. They are confident of their ability to deal successfully with scoundrels, but to be compelled to face able and honorable men would be a disaster.

That sentiment is shared by all self-seeking parasites who may have wormed their way into comfortable berths down the line of labor organizations. The teamsters seem by long odds the worst, but they are not the only union suffering from an infestation of such vermin. If the effort to delouse the teamsters gains little or no public applause, the present terror of all the

others will quickly subside, and with it the hope of strong, honorable, and responsible leadership not at the top only, but throughout organized labor.

The lukewarm reception of the extraordinary effort in the case of the teamsters is therefore at least as important to the public as it is to the individuals. Meany and Reuther are not our responsibility; let them look after themselves. But the encouragement by strong approbation of integrity and decency in any phase of public life is our responsibility, very much so. In this instance the mediums of general information have not discharged that responsibility with what a superficial observer is inclined to call conspicuous success.

Whose Money?

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from Manchester Union Leader of February 25, 1958:

WHOSE MONEY?

Using money from your and our taxes, President Eisenhower last Sunday used the presidential Government plane to fly his wife, Mamie Eisenhower, her sister and a lady friend to Phoenix, Ariz., where Mrs. Eisenhower is visiting the Maine Chance Farm of beauty expert Elizabeth Arden for "sun and rest" and not for beauty treatments, which reputedly cost $400 a week and up.

When White House Reporter Lawrence Burd of the Chicago Tribune asked Presidential Press Secretary Hagerty why the President had decided to go to Phoenix—a trip which takes a very considerable number of flying hours and which would cost $12,600 at commercial airline charter rates—instead of going directly back to Washington from his quail-shooting expedition in Georgia—Hagerty snapped, "I think that when the President of the United States wants to go any place that he wants to with his wife, that's his business and nobody else's."

When Burd said he thought he had a perfect right to ask the question Hagerty angrily continued: "Well, there's the answer. And when he has to account for that or make any reporting, I think you are getting a little out of bounds with your questions."

Hagerty sounded more like Hitler's press agent, Goebels, than the press secretary of a democratically elected President of the United States. But now, anyhow, we voters know that it is none of our business to have anyone ask questions about how President Eisenhower spends our money.

Almost 5 million Americans are unemployed, yet Eisenhower fools around shooting quail on millionaire George M. Humphreys' Georgia plantation, the reason presumably being that the ailing, aging President of this Nation in its greatest crisis needed a rest.

But there was nothing restful about flying 3,000 miles out of his way to Phoenix and back to Washington at the taxpayers' expense, while 5 million of them are out of work and counting their pennies.

And then look at the impropriety of Mrs. Eisenhower's visit to the Maine Chance farm of Elizabeth Arden, proprietor of a chain of beauty parlors.

If Mrs. Eisenhower wants to go to Maine Chance farm, that is her affair, but Business Manager Maydelle Bankston explains that "Mrs. Eisenhower and her party are guests of Miss Arden and will not pay any bills." Incidentally the First Lady and her party are staying at a cottage adjoining the resort where the rate is normally $600 a week.

The newspapers used to jump all over Harry Truman and the Democrats when the White House secretary showed up with a gift mink coat. But it is all right, apparently, for the Republican President's wife to freeload on Elizabeth Arden and give that smart lady thousands of dollars of free publicity in return.

What a scandalous picture of irresponsibility, not only to be witnessed by 5 million unemployed but every American who is seriously concerned with the future of his country.

Contrary to Mr. Hagerty's arrogant assumption, this is our business. It is our money that President Eisenhower is using to fly Mamie Eisenhower to a beauty parlor in Arizona, and it is our country that is being neglected while this sick, tragic old man stays away from his job in the White House.

What an example to the Government officials in Washington and in the cities and towns of our Nation. When they see the President throwing people's money around in that fashion, why should they think it was up to them to economize in Government spending.

Walter O. Noreen

EXTENSION OF REMARKS
OF
HON. EUGENE J. McCARTHY
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. McCARTHY. Mr. Speaker, the St. Paul AFL–CIO Trades and Labor Assembly has recently elected a new president. My good friend, Walter O. Noreen, has been elected to fill this post, the highest elective position in the St. Paul labor movement. Wally Noreen is devoted to the improvement of labor conditions; he is a student of government and legislation; he is indefatigable in his service to those he represents. I am pleased to call to the attention of the House this article from the St. Paul Pioneer Press on Wally Noreen.

The article follows:

CITY LABOR CHIEF—NOREEN A NATURAL FOR TOP OFFICE

(By Kathryn Boardman)

Walter O. Noreen, 38, who holds the top elective job in the St. Paul labor movement, has been a union member only 11 years.

He is the first elected president of the new AFL–CIO St. Paul Trades and Labor Assembly. By his personal merger of two interests—he likes to talk and he is a student of labor—he is practically tailored for the job.

Robust and aggressive, he has covered a good deal of union ground since he joined the National Federation of Post Office Clerks, St. Paul local 65, in November 1947. He now works in the postal savings division of the St. Paul post office.

Noreen, who has reddish hair, a carrying voice, and an extensive vocabulary, has been president of his 700-member postal clerks' union 6 years. Before that he served 3 years as secretary, and he has been on the board of the St. Paul Postal Employees Credit Union 5 years.

He is 5 feet, 6 inches tall, and keeps his weight between 170 and 175 pounds, not by playing games but by moving quickly around his office and walking fast—mostly to union meetings.

NO 5-DAY WEEK

To be president of the assembly, Noreen had to give up 1 of unionism's great boons to workers—the 5-day week. Before he became a double president he had Saturdays off from his job in the postal savings department at the main post office.

Through a special arrangement with Postmaster Sigurd A. Berteisen, Noreen now works every Saturday morning from 4 to 5 hours. He then is able to use this time during a week or a month, Mondays through Fridays, for civic or assembly lunch sessions.

It works fine for the postal savings department and Noreen, but it means he is away from home on Saturdays now. His wife, Catherine, and 2 sons, Edward, 11, and Jeffrey, 20 months, are not too enthusiastic about it. On his present schedule he seldom spends more than 1 evening a week at his home, 351 West Hurley.

Walter Noreen is known as a "great talker" and he is needled about being the man of "a few thousand well-chosen words." But he does not mind.

"Walter's a great talker, all right," Ed McKinnon, secretary-treasurer of the assembly, said, "but he knows what he is talking about. And he has the gift of making other people care about what he is talking about."

LIVE WIRE DESIRABLE

Some of the older assembly officers and delegates think it is fine to have such a "live wire" as president.

"He reads the CONGRESSIONAL RECORD every day of his life, and the labor press," one of them said. "Then he puts it in capsule form and gets the information around. He doesn't waste a minute of his time, but he doesn't give you the uneasy feeling that he's panting from one crisis to the next."

Noreen is the first post office clerk union member to be president of the assembly. Previous presidents have been pressmen, meatcutters, pipefitters, boilermakers, and drivers.

He was born in St. Paul, September 25, 1919. The family home, where his parents, Mr. and Mrs. Oliver Noreen, still live, is at 768 East Maryland. Mr. Noreen, Sr., now retired, was a member of the Brotherhood of Railway Carmen of America 47 years and worked for the Northern Pacific Railway 47 years.

Walter Noreen was graduated from Johnson High School in 1937 and from the Globe Business College in stenotype. He has taken extension courses at the University of Minnesota.

He spent 4 years in the Army during World War II. He has been a delegate from his union to the Trades and Labor Assembly 9 years.

He follows labor legislation with an eagle eye and has made frequent trips to Washington. He is active in a number of community affairs.

UNITED STATES APPROVES

He intends to use the hours he works on Saturdays and his vacation time for his assembly business, he said. The Federal Government encourages its employees to take part in the life of their home communities, and assembly members believe that Mr. Noreen is the only Federal employee to hold the presidency of such a labor body in a city the size of St. Paul.

There is one conflict in his position, however, but it is not new to him. As a Government employee he is under the Hatch Act, which means he may not make political speeches or campaign. The Hatch Act allows him to belong to a political party and to contribute to a party if he wishes.

UNIVERSITY OF MICHIGAN LIBRARIES

"I have plenty to talk about without making political speeches," he laughed. "That won't handicap me." He never expected to be president of the assembly, the highest honor labor has to offer a leader, but he is as happy with the situation as are the rest of the members.

He presides at two meetings a month in the labor temple. About 125 locals send between 150 and 200 delegates to these meetings on the second and fourth Wednesdays of each month. They represent some 50,000 union members.

Our Thoughts Go Back

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the National Tribune-Stars and Stripes, on February 27, 1958, as follows:

OUR THOUGHTS GO BACK

Every now and then our thoughts go back to the exciting days of 1917–19 when for the first time in the history of the United States we became engaged in a global war.

The Civil War was long past—the Spanish-American War was becoming a tradition and only those who fought through it remembered it.

In 1917 something new had been added to our history. After turning the traditional cheek time after time, the moment had arrived when we could no longer suffer the arrogance of an aggressive nation and we determined to throw our lot in with the defenders of what we had always considered the right.

As a consequence, after a stalwart exhortation by President Woodrow Wilson, the Congress of the United States declared war on the Central Powers.

The young men of 1917 knew little about warfare. In fact, they had schooled themselves along peaceful lines, asking only to be permitted to work out their lives in the happiness and prosperity afforded them in their native land.

However, a draft law was passed and every young man in a certain age group was ordered to register himself for the draft by June 5, 1917, or suffer the consequences.

Very few of the youth of that draft failed to respond to the draft. Yes, there were a few Bergdolls and others of his mentality who sought, by some means or other, to avoid service. But, thanks to the patriotism with which these young men of 1917 were imbued, the response was terrific.

Many volunteered, many awaited their draft call, but the result was so great that by the time the war was over some 4,800,000 youths had donned the uniform of their country, in the Army and Navy and the Marine Corps, and were in service.

At least half of the number saw service overseas and endured hardships which had never been suffered prior to World War I. Those who remember sunny France of those grim years smile now with a grim sense of humor at the thoughts of the muddy trenches of the western front, the long marches with full packs, the lack of food and medical care, the occasional gift of hot chocolate or coffee from the Salvation Army and the Knights of Columbus.

Yes, for those who survived without mishap, other than having their lives and their prospects broken up, they can get together now and then and joke about the days of long gone by and forget the suffering in the memories of the few good times they enjoyed, though so far away from home.

As we have said at the beginning of this editorial we often think about those young men of 1917–19 and wonder how they are getting along now.

Some have done well, some not so well, and some, for whom the breaks of fortune failed to turn up are now finding themselves wondering how they are going to get along in their later days.

Without hesitation, they did not fail to serve their country when their country called, and it is not strange that they should look to that country for some particular help when they find themselves, through age or disability, unable to care for themselves.

It must be remembered that these were proud young men who marched away in 1917 and 1918 to the tune of Over There, with the promise to their loved ones "We won't come back till it's over, over there."

We are reminded of an initiation scene by a fun group of a major veterans' organization. Without betraying any secrets we recall an elderly man, exhorting the young men of the day to join up in the service of their country.

Among other things he told them "Remember, we are all behind you now, and, the farther you go, the farther we'll be behind you."

Well, that's about the size of it now. A good many years have passed since the youth of World War I marched away to the cheers and tears of those they left at home, and sad to say, it would appear that "the farther they went, the farther their countrymen who stayed at home remained behind them."

A recent news item tells us that a good many of our older Representatives in the House and Senate are contemplating retirement. They can well afford to do so, having voted themselves sufficient retirement pay to, at least, permit them to live in comfort, if not luxury.

It is true they have contributed to this retirement fund from their salaries but it is also true that their salaries were not too small—much smaller were the returns a good many veterans of World War I received, with nothing to look forward to, at the best, than an extremely modest retirement on social security, if, indeed, they had been able to work long enough to secure that.

The major veterans' organizations of our land have long held as their prime reason for existence the welfare of their comrades of an early war and for their dependents.

Most of them have stood by that—sometimes wholeheartedly, sometimes halfheartedly. In the meantime, the vast majority of our people have gone about their own personal business without much thought of the very men who made their prosperity possible.

As a result there was organized only a few short years ago a new group, known as the Veterans of World War I of the United States of America. After some struggle they really got underway and now number among their members more than 100,000 veterans of the first World War.

This group, realizing that sight had been lost of their comrades of early days in the complex life which we now live, determined that their entire effort would be put forth toward seeing that their friends of the long ago, now old or incapable by reason of physical disability, should be cared for and they have asked Congress to grant this aid.

It might be said that their demand—no, not demand, but request—is exceedingly high. This group of veterans of World War I are not too demanding. As a matter of fact, judging by the millions and billions we have wasted away on more undeserving folks, including some of our enemies, it might be said that their request is a modest one.

At the last annual convention of this group they were authorized to seek what might be considered a more reasonable request, though adhering to their original petition to Congress.

Practically the only other request this group has made of Congress is the granting of a congressional charter which would permit their recognition by the Veterans' Administration of their right to represent their comrades before the various claims boards of the VA.

The request for monetary aid for their comrades is not too great nor is their request for congressional recognition of this swiftly growing group of representative veterans of our first World War one to be denied.

The money side is inconsiderable compared to the funds we have frittered away in behalf of strangers and should not even be considered when we recall the debt we owe these fighters of our earlier battles.

If we are going to stand behind these warriors of the past, let us not do so with irony, as did the elderly gentleman in the initiation scene we have referred to but, rather let us stand behind them with all the kindness and understanding of a grateful nation.

Let us show the world that while seeking to aid those abroad, we have not forgotten our own and do not intend to do so.

An American Ideal—Winning Essay, by Douglas Ellis, Sponsored by Longmeadow, Mass., Men's Club

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. BOLAND. Mr. Speaker, Longmeadow, Mass., is one of the finest towns in the Commonwealth of Massachusetts. It is a beautifully picturesque rseidential community that combines the best of the past with the modernity of the present and future. Its people take justifiable pride in this well-governed and well-kept town. A number of civic and cultural organizations contribute to its spirit and soundness. One of these is the Longmeadow Men's Club. Since its organization, it has played an important part in the betterment of the town. By its acivities and its programs, it has in the past and will continue in the future to make Longmeadow a better and happier place in which to live.

For 10 consecutive years, the Longmeadow Men's Club has sponsored an essay contest for pupils of the ninth grade in its schools. The subject matter is derived from the broad classification of the American way of life.

Mr. George D. Malkasian, chairman of the program, writes me that—

We have been most fortunate in having the wholehearted support and the unreserved endorsement of Mr. Howard Herrschaft, superintendent of schools, and Mr. Alfred Wood and Mr. Hugh MacFarlane, principals of the junior and senior high schools, respectively—and the town school committee.

This essay contest is a part of the regular curriculum of the students and the entire class participation makes this project not only unprecedented but unparalleled in the annals of our public schools—so we are informed. Our club bylaws are so amended as to insure the permanency of this project.

Mr. Speaker, I desire to congratulate the Longmeadow Men's Club for sponsoring this excellent program. It seems to me that there is no better way for students at this age and stage in life to get a better understanding of our way of living and the real meaning of America. For effective essay contests require study and research that necessarily imbue the contestant with a fuller and deeper appreciation of the subject of which he writes.

Mr. Speaker, I am happy to bring to the attention of the Congress the winning essay for 1957, titled "The American Ideal," by Douglas Ellis. I congratulate him on a job well done.

Under unanimous consent I include the covering letter from the Longmeadow Men's Club and Douglas Ellis' essay in the RECORD as part of my remarks.

The letter and essay follow:

LONGMEADOW MEN'S CLUB, INC.,
Longmeadow, Mass., February 24, 1958.

Hon. EDWARD P. BOLAND,
House Office Building,
Washington, D. C.

DEAR MR. BOLAND: The newspapers, magazines, and other mass communication media of this country devote so much time and space to the problem and results of juvenile delinquency that many Americans must find it difficult to properly understand and appreciate our American youth.

We thought you might be interested in the enclosed essay written by one young American, Douglas Ellis, for an annual essay contest sponsored by our men's club for the ninth-graders in our Longmeadow schools.

We feel this essay and the many that competed with it are eloquent testimony that our youth is still the most precious asset we possess for the task of continuing the American ideal and insuring a future world of peace and justice.

Respectfully,

EDWARD M. CLARK.

THE AMERICAN IDEAL

(By Douglas Ellis)

"I regret that I have but one life to lose for my country." These famous words were spoken by Nathan Hale in New York in the autumn of 1776, before he was hanged by the British for spying during the Revolutionary War. Hale and men like him have made America the greatest country in the world today. During the course of time, from the Revolution up to the present and undoubtedly in the future, this country has been and will be confronted with problems that have tried the strength and willpower of our citizens, but always, no matter how dark the situation, or how hard the problem may seem, men have distinguished themselves and those around them and rallied to the cause, whatever it might be. Why, one might ask, do men always seem so willing to give so much to their country even in the face of danger or personal injury? Men do this not for personal glory or for material gains, but they do these things because they realize what this country stands for. It is a symbol of democracy and a memorial to other men who fought for her well-being. These famous men all wanted the same things for this country, freedom from foreign control, equality for all men, freedom to speak out against unfair government, freedom to worship God as they saw fit. For these ideals men died, two world wars were fought, a civil war between the southern and northern parts of our country, wars with Great Britain, Spain, and others—all to protect the rights of our people.

However, it is not just through wars and actions of men like Nathan Hale that patriotism is shown. It is through the contributions of men and women of science, industry, business, and many other fields that America has become the greatest land in the world. Great American inventors like Edison, Einstein, Fulton, Whitney, Bell, Duryea, Ford, the Wright brothers, etc. have given, in the form of their work, a patriotism that is not measured in blood as that of war, but in help to all mankind. Recently, a doctor, Dr. Jonas E. Salk, was commended by all the world for discovering and perfecting a vaccine which was deemed almost completely effective in combating the dread disease, polio. It is men like Dr. Salk that have made and will make this country and its people great.

People all over this country live without fear of a police state or Government condemnation, they are almost all literate, they have, for the most part, good homes, they are protected from undesirable members of society; they usually work a 40-hour week, and attend church on Sundays. These things are all the work of the people and the will of the people. The people exercise one of their patriotic rights when they elect someone to a public office, whether it be the dog catcher or the President of the country. These people, living in a free country they created for themselves, are making a decision that comparatively few people in the world have the chance to make. Why do they have this chance? Because, they and their forefathers before them worked for this and other privileges.

Men like Franklin, Washington, Lincoln, Edison, Salk, MacArthur, Eisenhower, and ever so many others, soldiers, statesmen, inventors, and common workers have worked so long, for so much, for so many, and we are now enjoying the rights and products of their labors. As long as there are men who are willing to work long and hard with others this country will never perish from the face of the earth, unless a force mightier than that of man interferes.

It would take much longer to observe all the many factors that make America great but, outshining all the other factors is the American himself working continuously to make the world he lives in better for himself and those around him.

DeButts Rebuts

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. ABERNATHY. Mr. Speaker, during the last session I took occasion to draw the attention of the House to the refusal by Mr. Harry DeButts, president of the Southern Railway, to join other railroads in demands for freight rate increases.

Since increases in freight rates have been a major factor in the upward trend of prices, I was of the opinion that Mr. DeButts should be praised for his restraint and his wisdom.

That the course he took was in fact a wise one is attested in the brief item in the New York Times of February 26. The item is as follows:

DEBUTTS REBUTS

Last year when the Nation's railroads were pressing the Interstate Commerce Commission for increases in freight rates to help offset rising costs, Harry deButts, president of the Southern Railway, found himself on a lonely stretch of track.

He said the Southern was weary of losing traffic to trucks, and that rail freight rate increases would just make matters worse. He announced that his road would increase rates only when it would not result in more losses to trucks. Mr. deButts' critics in the rail industry were many. But the criticism became fainter as the Southern issued relatively good monthly income statements.

The January report came out yesterday. The Southern's earnings for the month were 40 cents a share, compared with 41 cents in January 1957. Meanwhile, most rails were reporting earnings much lower than a year ago, and in some cases big losses.

Administration Thinks of Reclamation, Resource Development, and Flood-Control Projects Only as Slump Curbs

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mrs. KNUTSON. Mr. Speaker, a headline in yesterday's paper reads "Reclamation Projects Studied as Slump Curbs." I think it very interesting that reclamation projects should be classified as "pump primers" by this administration, completely ignoring the half-century-old policy of this country to develop its natural resources, improve its industrial facilities, and store and increase its water and power resources. Giving away to private interests the great dam sites and resources, a heritage of all the people, is unforgivable. It is too sad to be a joke, this big-business administration's failure to think big enough to understand the great power potential of these sites and water resources if fully developed by the people rather than half-developed by private interests for quick profits. The contrast between Russia's understanding of this potential and the administration's lack of understanding is clearly pointed up in the January 24 Washington Window; Will Khrushchev Be Right?

Under permission to extend my remarks, I insert this lucid article in the RECORD:

WILL KHRUSHCHEV BE RIGHT?

Recently, in his annual budget message to Congress, President Eisenhower revealed that his administration would not seek or permit the start of any new water-resource development projects in the fiscal year starting July 1, 1958.

The President placed his primary emphasis on military spending and a reduction of domestic outlay in his $73.9 billion program.

Some 2 weeks prior to his budget message the President received a little-publicized letter from Senator JAMES E. MURRAY, Democrat, of Montana, chairman of the Senate Interior Committee, explicitly warning

UNIVERSITY OF MICHIGAN LIBRARIES

against any cutbacks in reclamation programs.

MURRAY enclosed a copy of a study on the relationship of river and related water-resources-development programs of the United States, Soviet Russia, and Communist China.

This report was prepared by a well-known authority in the field, Michael W. Straus, former United States Commissioner of Reclamation and Assistant Secretary of the Department of Interior.

MURRAY wrote the President that this report "establishes authoritatively that our country is rapidly losing out to the Communist leaders in the vital area of river development which is prerequisite to economic, industrial, military, and national strength."

The Straus study is a compilation of unclassified information showing what has happened in the three countries in the river-development field.

The author recalled the statement of Nikita Khrushchev, chief of the Soviet Communist Party: "The Soviet Union can in the next 15 years not only catch up with the United States in the production of basic items but also outstrip it."

The Khrushchev forecast, Straus believes, certainly includes hydroelectric energy, food grown by irrigation, water transportation, flood control as basic items in Soviet production.

Khrushchev, in an interview with William Randolph Hearst, Jr., American publisher, was positive as to what will happen in the next 15 years:

"We declare war on the United States in peaceful production. We declare that war. We will win over the United States. The threat to the United States is not the intercontinental missile. We are relentless in this."

Straus, in his study, sought to determine whether Khrushchev had any substance to his challenge.

He found that there was considerable variation, mathematically, in reports from various sources but that there was general agreement as to the trend.

He devoted considerable space to a study of kilowatt availability because, he said, there are recognized relationships between kilowatt availability and national strength—economic, industrial, or military.

Twenty-seven years ago, Soviet energy output was low but in the last three decades the nation has been on an all-out drive of unprecedented proportions, continuity, and results to attain world leadership in national kilowatt output.

Writes Straus:

"There is general agreement currently that the United States overall power-production capacity has in recent years been doubling by the decade. The Federal Power Commission's last authoritative figures (1948 through 1956) show a United States increase of 96.8 percent, while the same Agency's calculation for the same span gave the Soviet Russian increase as 137.8 percent.

"British sources give Soviet actually installed capacity (in megawatts or million watts) over a 38-year span as 1,000 for the year 1917; 11,000 for 1940; 10,700 for 1945 (reflecting World War II plant destruction); 36,900 for 1955; and add that at the end of 1960 (the end of the current 5-year plan) it is expected that the total U. S. S. R. installed capacity will be 75,000 megawatts, which would indicate slightly more than doubling U. S. S. R. capacity in 5 years contrasted with current doubling of United States capacity in 10 years."

An independent report of the Indian Government shows actual production of kilowatt hours in the Soviet Union rising from 2 billion in 1913, to 50 billion in 1948, to 118.6 billion in 1952, to 149 billion in 1954. This shows an increase of nearly 350 times the 1913 figure.

In the field of irrigation, the United States and the U. S. S. R. are virtually equal in the number of acres under irrigation. In 1951 the U. S. S. R. had 24 million under irrigation while the United States had 26 million. By 1956 the Soviet Union had 30 million to the United States 31 million. During the 5 year period Soviet increase was 24.8 percent while United States increase was 21.6 percent.

A similar story is told in water transportation—United States leads but the Soviet Union is coming up fast, endeavoring to achieve inland water transportation through multipurpose river and canal development.

Straus also studied the vast strides being made in Communist China which, generally, reports tremendous gains. China's total kilowatt-hour production, he reports, jumped from 7.2 billion in 1952 to 15.9 billion in 1957.

These are some of the facts that will determine the future of the world—a future that could be bleak for the United States if no new starts or limited resource development continue to be national policy.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Labor's Responsibility for Human Rights

EXTENSION OF REMARKS
OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, February 28, 1958

Mr. MURRAY. Mr. President, on Monday, February 3, the National Conference for Human Rights was held at the Bellevue-Stratford Hotel in Philadelphia. The conference was cosponsored by the Honorable George M. Leader, governor of Pennsylvania, and Mr. David J. McDonald, president, United Steelworkers of America. This was a momentous milestone in the efforts of our country to meet our problems in the field of human rights.

It was the privilege of those of us who attended the general session Monday afternoon to hear perceptive speeches by three outstanding leaders in the field of government, labor, and management. The speakers were Governor Leader, Mr. McDonald, and Mr. Joseph J. Morrow, personnel director of Pitney-Bowes, Inc.

Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the text of Mr. McDonald's speech, entitled "Labor's Responsibility for Human Rights."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LABOR'S RESPONSIBILITY FOR HUMAN RIGHTS

(By David J. McDonald, president, United Steelworkers of America)

First of all, I wish to express my deep appreciation to all of you for coming to Philadelphia today to join Governor Leader and me and our colleagues in this National Conference for Human Rights.

It is indeed rewarding to know that so many prominent leaders of our national community, representing almost every facet of American life, have been willing to take this time to come from many places to help make this conference an historic step in America's progressive effort to solve the problems of human relations.

This is a novel experiment, perhaps the first of its kind to be conducted under the auspices of the government of a great industrial State and the leadership of a large labor union.

The problems, for which we seek solutions, affect the lives of every citizen of our country and are in some way related to the things that affect the people who live in all the other countries of the world.

Governor Leader and Mr. Morrow have spoken on the responsibilities of government and industry in protecting human rights. I propose to outline what I believe to be labor's role in this field.

The whole broad subject of human relations and the protection of human rights is one that labor must of necessity give attention to daily. It is broad in the sense that we are obligated to negotiate contracts with employers which incorporate within their framework certain provisions which govern wages, hours, and working conditions. In essence, these contracts provide equality of treatment for all employees regardless of race, creed, color, or national origin.

And within this framework we have made real progress, particularly during the last 20 years. During this period the American trade-union movement has grown from 3½ million to over 17 million members. It is obvious that these workers are now in a position to include provisions in their agreements which will guarantee equality of treatment for the people under contract.

And it is significant to note that in our own union racial and intergroup relations have continued to improve from year to year as the workers' economic status has improved.

It is also significant that there have never been any outbreaks due to racial conflict in any of the plants where we have labor contracts. And this, in spite of the fact that serious breakdowns in race relations have occurred in the very communities where the plants are located.

As a member and officer of the United Steleworkers, I am justly proud of what we have done to date to free the steelworker from the economic and social restrictions which combine to prevent the full enjoyment of a happy life.

I would like to enumerate some of these accomplishments:

1. We have established equal pay for equal work in the steel industry.

2. The North-South wage differential which existed for so many years has been eliminated.

3. We have negotiated pension and insurance plans which permit steelworkers to retire under conditions providing substantial financial security.

4. We have developed educational facilities for training our members to assume the responsibilities of holding local union office and for participating in community service work.

5. Our Committee on Civil Rights, which was created in 1948, has played an important role in carrying the union's policy and program against discrimination into the local, State and national community. It has promoted a program within the union to prepare our members for dealing with the multitude of human-relations problems which are a part of everyday union life. We have no segregated local unions, and many Negroes hold local union office.

6. Enforcement of the union's basic policy of equal rights and representation has opened up many categories of employment heretofore closed to members of minority groups. Moreover, regional progress is now being made to establish on-the-job apprentice-training programs in the crafts.

7. Union support and guidance have played an important part in the enactment of fair-employment-practices legislation in 15 States and 40 cities—the majority of which are located in heavily industrialized areas.

8. We have participated in almost 100 district and national conferences on matters of human relations since 1954. We are affiliated with 25 State and national committees and organizations whose programs on human rights, civil rights, and civil liberties conform to the policy of the union.

9. Our nationally televised monthly union meetings have served to direct public attention to many of the things we are here to discuss today.

Now you have an idea of what we have been doing in this field. But we do not propose to stand on our record. Up to now we have attacked only the fringes of the problem as it affects the average citizen.

It is largely true that segregation ends when men and women enter the mill or factory, and for that we feel that the energies we have expended have not been in vain.

But the other 16 hours of a man's day are also important. Constitutionally and psychologically can a man be expected to work equally if he is not permitted to eat equally, reside equally, relax equally, improve his knowledge equally, play equally, travel equally—in short, live equally?

This is where we are falling short in America. This is the chink in our armour. Right-thinking and compassionate people everywhere feel the pull of this tainted weight. But the need for action has not manifest itself in those who are right-thinking and compassionate. And unless it does, we will not carry out our purpose.

Unions have their frailties because they are human in nature and in character—just as human as the leaders in the business world, and in religion, and education, and other walks of life.

There is still too much idle talking about what kind of a country we should have and the way society should be organized, and too little done in the practical application of the things which make freedom and justice meaningful.

I do not mean to infer that any one segment of our society is solely responsible for our failure to measure up to our role as leader among the democratic nations of the world.

For while I am the nominal head of a strong trade union numbering over one million men and women, I would be guilty of misrepresentation if I said there was complete unanimity of opinion among all our members on the subject of human rights. Unfortunately, we still have in our union those who get quite vocal about equality of opportunity, but never practice it themselves.

We have not been able to break down completely employment practices and community patterns which still deny minority members of our union the opportunity to work and live as full-fledged, law-abiding citizens.

Let me say with emphasis that the United Steelworkers of America and other great trade unions have dedicated themselves to the orderly attainment of equality of opportunity for all Americans. We are pledged to work for the elimination of discrimination in all its ugly manifestations and the prejudice upon which it feeds. We are going to attain this goal if it is humanly and legally possible to do so.

But while the responsibility of the forces of labor in America looms large in this enterprise, ours is not the sole responsibility. We have done what we have done because we believe in the fatherhood of God, the brotherhood of man, the tenets of the constitution of our union and of the United States.

Still the big job lies before us.

I have said this before, and I say it again today. The National Association of Manufacturers and the National Chamber of Com-

UNIVERSITY OF MICHIGAN LIBRARIES

merce, together with the local bodies of these associations, must speak out firmly and give their support for compliance with the Supreme Court's ban on segregation, for fair practices in employment and in housing, and in supoprt of legislation which will guarantee all Americans equal protection under the law.

I call upon those who formulate the policy for the great industries of our country to use their wide influence to help set the pattern in which these things can be realized.

The policy and administrative procedures under which they operate are largely made in the North. It is the obligation of those who formulate and enforce these policies to institute an educational program for management personnel so that they can join with us in helping to establish real American democracy, in the North as well as in the South.

We have already shown that men, all categories of men, work well together if given a chance. With the help of industry, we can make the mills and factories of this country the real classrooms of democracy.

If we are losing our prestige and our position of leadership among the countries of the world, we can attribute it in part to the fact that we have failed to avail ourselves of the tremendous human resources we have at our disposal.

In the light of our failure to practice what we preach, people in other countries tend to forget the things that are truly America. They forgot the magnificent contributions of individual initiative and cooperative enterprise. They forget the engineering and scientific skills that have made our way of life the goal of all men. They forget the enormous economic assistance we have poured into their countries. And they forget that this nation, twice in the past half century, has risen up as one to help defeat potential world dictatorship.

They prefer to look at our weakness.

Our treatment of minorities is one of the chief obstacles we face in our efforts to achieve world peace.

World peace is a moral ideal and our highest political ambition. It can be established only on the basis of high moral principle.

A nation's morals is not conjured up in legislative halls and judicial chambers. Morals is a substantive thing, rooted deep in the lives and homes of every citizen. On a moral issue, in world councils, our diplomats can be only as effective as the moral standards of the people they represent.

Consequently, our elected and appointed government officials in their efforts toward world peace, are being hamstrung by our national attitude toward minorities.

If we are losing the battle in the court of world opinion on this point, what is the effect upon ourselves here at home?

Race and religious prejudices are a cancer on our social, economic, and political fortunes. The problem of the Negro is especially acute. Negroes unwanted in the south are moving to the North, where they are equally unwanted. School districts in many parts of the country are being gerrymandered to assure the separation of whites and nonwhites. Newly built suburban developments are restrictively white. Older urban sections are filled to overflowing with nonwhite and foreign born—through their sheer inability to go elsewhere.

No Negro in America has full social, economic and political freedom. He may acquire one, or even two, of these freedoms. But never all three. The Civil War made his political freedom attainable. FEP laws make a stab at economic freedom. One doubts that social freedom can ever be legislated.

The northerner takes a smug attitude as he ponders the Negro situation in the South. He has nothing to be smug about. To all intents and purposes, there is as much segregation in the North as there is in the South. In general, the northerner accepts the Negro as a race, but not as an individual. In the South the Negro is accepted as an individual, but not as a race. From a Negro's point of view, he is as bad off in one section as another.

In spite of all the serious questions that demand our attention today, the problem of racial minorities is still our number one problem—as it was 95 years ago when the Emancipation Proclamation was signed.

We have failed to meet the challenge of building good human relations and establishing strong moral values, in keeping with our unprecedented material and technological progress.

In failing to provide equality of opportunity and equal protection under the law for all Americans, we have contributed to a tragic waste of manpower, talent, intellectual and moral energy, all of which are so necessary if our Nation is to continue to progress and to remain strong.

Our crying need today is for strong, courageous, intelligent leadership which realizes that we face the most weighty problem of the century, a problem so complex that it can only be dealt with by men and women who are dedicated to the principles of justice and freedom.

As the leaders of American culture, religion, education, industry, labor, and affairs of state, we have willingly or unwillingly inherited this responsibility. The problem is here, now, and alive. And it needs immediate attention.

We in labor accept our responsibility. Some measures we can take alone. And we will take them. In others we will need the help of everyone gathered here today and all your constituencies.

In brief, let me review our program:

1. We propose to set up a million-dollar-a-year scholarship reservoir. These scholarships will not be restricted to science and engineering, but will embrace a wide range of educational opportunity. Students will be selected from every walk of life without regard to creed, color, or origin.

2. We propose to select representatives from our membership to visit NATO nations as ambassadors of good will.

3. We propose to work out a program with industry which will insure upgrading the qualified employees without respect to creed, color, or origin. We propose to broaden the in-plant training programs for apprentices to qualify members of minority groups to work in presently restricted categories.

4. We shall expand opportunities in the union for minorities, making more positions of leadership available.

5. We shall support demands for Federal aid and finance for additional aid to education and equal educational opportunities.

6. We propose to work more closely with community leaders in broadening the influence of minority groups.

7. We shall support a program to abolish slums and provide badly needed low-cost and middle-income homes.

8. We propose to see to it that all citizens are accorded equal protection and justice under the law.

We believe these eight points are sound, reasonable, honest, and worthy of attainment. We pledge ourselves to their fulfillment.

Never before have so many influential leaders met to deal with this grave and urgent problem. Is it too much to hope that we will do more toward solving the problem than at any other event in our history.

Of course, the spelling out of precepts and a heightened understanding of human relations by leaders are only the preliminary steps toward achieving the objectives we discuss today.

But we all have a solemn obligation to convert sound precept into effective practice among those we represent. Now, more than ever before, the American people are looking for valid leadership. The very fact that you, as leaders of vastly influential American groups, have assembled here today in the search of means to perfect our desire is reassuring evidence. Evidence that we still have faith in our ability to establish domestic stability and to contribute to the achievement of permanent peace in the world.

The opportunity is ours.

In the words of my good friend, Dr. Howard McClusky, at our first human relations seminar at Penn State University in 1951:

"No one knows how much time we have, but it can't be long. It would be fatal to assume that somehow we will muddle through our inhumanities into some form of ultimate accommodation. Fate will not be so kind. On the contrary, it must be the responsibility of free men of good will to work increasingly for satisfying relations among people everywhere.

"It would not be extravagant to hope that the experience and example of our meeting here today will contribute materially to that goal."

Finnish People Celebrate Kalewala Day

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, February 28, 1958

Mr. PROXMIRE. Mr. President, today marks the anniversary of an important day for an important segment of the population of my State of Wisconsin. On February 28, 1835, the Finnish national epic, Kalewala, was first published in book form. This anniversary is an appropriate time to recognize the contributions made to the Nation and to my State by the Finnish people, and I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I have made in connection with the date.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR PROXMIRE

The Finnish national epic, Kalewala, consists of folk verses dealing with the deeds of three semidivine brothers of gigantic stature who lived in Kalewala, a mythical land of happiness and abundance. Its style was followed by Longfellow in his Hiawatha, and the epic and its rich mythology has had a strong influence on all Finnish art. It is a special source of pride to Finnish people everywhere.

Finland today is a strong ally of this Nation in the cold-war fight against international communism, and it is an important western outpost before the U. S. S. R. Finland has a fine record as a friend of democracy and of the United States. Indeed, it is the only country which has paid its World War I debts in full to this country. Today this northern democracy finds itself in need of economic aid, particularly in consumer goods as well as military assistance. In view of its past record of friendship and traditions of democracy, Finland should certainly receive a sympathetic consideration of its needs from this Nation.

Here in this country, Americans of Finnish descent are mostly employed in skilled building trades, as miners, in heavy industry, and as farmers. These are the fields which are hit especially hard by the growing and

threatening recession, and the Finnish-Americans, as all of us, are alarmed about rising unemployment in these fields.

Finnish people in Wisconsin have earned their reputation as a hard-working, hardy, self-reliant group. This is notable in their participation and leadership in the cooperative movement. Finnish people were primarily responsible for founding Central Cooperatives, Inc., of Superior, Wis., and many local cooperative groceries, service stations, bulk-oil distributors, creameries, insurance companies, and even burial associations. Sons and daughters of these cooperative pioneers have gone into almost every State in the Union, serving as experts in cooperative enterprises organized by other Americans.

Finnish-Americans are among the most independent, liberty-loving, and stubbornly free of all the people of our great country, yet they know and practice the virtues of mutual aid and cooperation to its finest degree. Their contributions to our Nation have been great, and it is most fitting that the Congress should give recognition to them on this day of cultural importance to them.

Funds for John Day Dam Project

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, February 28, 1958

Mr. NEUBERGER. Mr. President, an editorial was published in the Portland Oregonian of February 26, 1958, which admirably highlights the obvious path for the administration to follow in trying to check the current recession.

This editorial emphasizes that the great John Day Dam project on the Columbia River would not only put idle men to work on construction jobs, but would also provide industry-feeding, wealth-creating hydroelectric power to bring permanent employment in new industries in the vast Pacific Northwest. I ask unanimous consent that this excellent editorial, entitled "John Day: Jobs, Power," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JOHN DAY: JOBS, POWER

With both Congress and the Eisenhower administration now talking about public works to absorb the unemployed and stimulate the general economy, prospects for reasonable appropriations for John Day Dam and other Northwest projects are looking up.

Congress gave a technical start to John Day Dam by appropriating $1 million last year. The President accepted that but included only $2 million in his fiscal 1959 budget. Senator WAYNE MORSE says he will try to get $10 million. He also seeks $7 million for Cougar Dam, instead of the budgeted $5,500,000, and $2 million for Green Peter Dam instead of $310,000 for planning.

In his off-the-cuff talk to the National Food Conference Monday, President Eisenhower said:

"Naturally, we have to provide for our own security, but we have today on the shelves of Government all sorts of worthy projects, some of which have been already approved by Congress—or indeed where annual or partial appropriations have been made. If those things are useful—and we know they are because they have been approved both by the Congress and by the executive studies—then let's use this time of slack employment to push these projects."

Obviously, the industry-feeding, wealth-creating hydroelectric projects of the Columbia Basin, an area of depressed employment, fit perfectly into the kind of projects the President mentioned. Also, construction delays at John Day and other big projects would almost inevitably mean a power crisis in the Northwest in the mid or late 1960's. John Day Dam should have No. 1 priority.

Cotton Still Has To Be Competitive

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Friday, February 28, 1958

Mr. GOLDWATER. Mr. President, we in Arizona who depend on cotton, both short and long staple, for much of our livelihood are very happy indeed to see that the cotton growing sections of the South are beginning to realize, very slowly, that the present agricultural legislation is not working to their best interests, and that the way to get better income and better productivity for the farmer is in keeping with the suggestion which Secretary Benson has repeatedly made, namely, to get the farm problem out of politics and into the economic field, in which it belongs.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Cotton Still Has To Be Competitive," published in the Cotton Digest for February 22, 1958. The article deals with the problems of the cotton producer.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COTTON STILL HAS TO BE COMPETITIVE

Nero fiddled while Rome burned. The Congress is similarly fiddling around with several bills, while the cotton industry of the United States is rapidly going to pot.

Admittedly the Congress has gotton itself into an untenable position. When it is recognized by all concerned that the time has come to expand the cotton acreage in order to produce a sufficient supply of white cotton, the Congress can do little or nothing unless they want to look nothing short of ridiculous.

On the one hand they are paying the farmers to take their land out of cotton, and the demand for these payments has exceeded expectations. There is now a clamor in Congress for more money for the soil bank so that all the farmers that want in, can do so. There seems a reasonable probability that this additional money will subsequently be appropriated.

On the other hand there is a demand from the industry for an increase in acreage in order to provide the supply of white cotton that everyone knows will be needed before too long. That is the pocket that the Congress finds itself in. In its desire to "help" the cotton farmers, they are more than likely to create a situation so bad that the country will not recover from it for several years.

Probably the Eastland bill has the best chance of passage, but this will not go into effect for this crop. This bill would give the farmer an option of having his acreage reduced to the minimum, but will be given 81 percent of parity or thereabouts in the form of a loan. The alternative is to get a 30 persent increase and a 75 percent of parity loan.

On the face, this would seem to be a pretty good proposition for the farmer. If he had good land, and was a good farmer, he would take the 30 percent increase in acreage and the 75 percent of parity loan, and make himself a little more money. If he is a poor farmer on poor land, then he would take the 81 percent of parity and the smaller acreage and let nature take its course.

But the bill is not all that it seems. In the first place, the most important thing is to get the price of cotton down to competitive levels; competitive with other cottons but also competitive with manmade fibers. A loan of 75 percent of parity will not do this. It will result in a price too high to compete with manmade fibers, and little or nothing will be accomplished.

There is no question but that American cotton will sell throughout the world, when the price is down to a competitive level. This has been demonstrated conclusively by the surplus sales. Even now with these sales not yet discontinued because there is still some spinnable cotton available, exporters are bidding an average of about 28½ cents for this cotton.

What will happen under the present plans and progress on cotton legislation, if by chance we should have a very bad growing year? Weather throughout the old Cotton Belt, including Texas and even New Mexico has been very bad. Persistent rains have kept farmers out of the fields. Land preparation is far behind the average for this time of year. Even in the Rio Grande Valley, where cotton planting starts on February 1, only a relatively small amount of planting has been done.

Of course, the weather could become almost ideal at any time. With modern methods of cultivating and planting, the time consumed in preparing the land and doing the planting is much less than it was only a few years ago.

But we are just supposing. Suppose that the same thing happened to cotton that has happened to the vegetable crops in both the Rio Grande Valley and in Florida. Suppose we produced a crop of no more than 8 million bales.

This would create a very dangerous situation. There wouldn't be enough cotton to go around. Exports would have to be stopped, perhaps entirely, so that the proposed export subsidy would be of little or no use.

Still the Congress continues to fiddle much like Nero did. Senator ELLENDER is against any legislation at all, judging from the way he has been quoted in the public press.

It is indeed a sad commentary that the Congress should be willing to take the attitude that it does. It is manifestly for political reasons. Secretary of Agriculture Benson has told the Congress just what is needed. He hasn't minced his words. Last week we reported his four freedoms for the cotton farmer. But the Congress continued to fiddle around.

It is not a question whether the needed legislation could be adopted or not. There is no question but that it could be, if there were a genuine desire on the part of the Congress to do something worth while for the cotton industry.

They had rather limp along with a soil bank that is nothing more than a dole and that will be taken up only by the inefficient cotton farmers, who shouldn't grow cotton anyway, and with some form of an export subsidy with payment in kind to attempt to retain our export market.

The country needs more intellectual honesty in Government.

UNIVERSITY OF MICHIGAN LIBRARIES

We Reach One Agreement With the Russians

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, February 28, 1958

Mr. CASE of South Dakota. Mr. President, amid the shouting and the headlines one of the most significant steps toward international understanding in recent years has received less attention than it deserves. I refer to the agreement recently signed between the United States and Russia for the exchange of certain cultural, scientific, and industrial information.

Notice was taken, however, by the editor of the Washington Sunday Star in the issue of February 16, 1958. I ask unanimous consent that there may be printed in the Appendix of the RECORD the Star's comment and excerpts from the speech by United States Ambassador William S. B. Lacy. I commend the reading of the article to all students of international relations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A DIPLOMAT VIEWS DEALING WITH REDS

One of the few concrete accomplishments in Soviet-American relations in recent years has been the exchange agreement, covering individuals, publications, entertainment, science, industry, and other fields, signed last month. Ambassador William S. B. Lacy, who headed the American negotiating team, gave a revealing picture of dealing with the Russians Wednesday at a National Press Club luncheon. The following is excerpted from his speech:

"There were present in these negotiations, as there always are at some stage of the practice of old-fashioned diplomacy, two essentials. The first of these was privacy.

"Anyone who successfully handles affairs of any sort learns quickly that all business cannot be transacted in the middle of Main Street at high noon. Few, if any, major industrial mergers are consummated without at some point a quiet, man-to-man, straight-talking session, where final differences are resolved, and rough edges removed. Governing bodies, be they city councils or committees of Congress, find it necessary from time to time to go into executive session, either to get to the bottom of some delicate matter, or simply to discuss what to do next, without opening themselves to pressure to take one course or another.

"Any employments of privacy may be abused, just as any means of publicity may be abused, but this does not mean that either privacy or publicity are evil things in themselves. And if privacy is necessary for discussion of matters of business or government within nations, it is wholly indispensable for discussing matters between nations, especially at a time when any difference standing between us has in it the potential of our preservation or destruction."

CAREFUL PROGRESS

"The second essential to the success of this negotiation was that it was from our side a step-by-step affair.

"The approach of diplomacy varies with the nature and difficulty of the problem faced, of course, much as the approach of a mountain climber would vary with the type of slope he wishes to climb. But with an agreement difficult of achievement, as with a rock face difficult to climb, a realist must as a rule make his beginning at whatever point offers the least difficulty and the most promise, and then must work his way ahead, step by patient laborious step. If he approaches the matter carelessly or hastily, if he tries to skip any important steps, he at best will fail to reach his goal, and at worst may have a bad fall.

"We opened our side of the negotiations with a very simple, limited proposal, the proposal for radio and television exchanges. At that time voices were raised to say we were not proposing enough. But with patience and effort, and with continuous negotiation, an agreement was hammered out to cover that point and a great many others as well.

"And just as one proposal can provide the seed of an agreement, so we can hope that one agreement can help eventually to pave the way for other, broader discussions, on a meaningful and realistic basis.

"In addition, we needed patience, not only in getting through the negotiations, but in getting to them. This is perhaps the most important lesson of all to be learned from these negotiations."

LONG, LONG ROAD

"As we face dealings with the Soviet Union, we must be prepared if necessary, and our people must be prepared, to live through a generation, 2 generations, 10 generations, with no further progress toward a settlement between us. Indeed, the more willing and able we are to wait, the less waiting in the long run we will be required to do. Our opponent is skilled at knowing the limits of our patience. If he comes to see that he cannot exhaust them, he will be less tempted to try. He is a realist.

"And just as we must be capable of waiting as long as waiting may be required, so we must be prepared to make another attempt at negotiating whenever a legitimate meaningful opportunity presents itself. If necessary, we must be able to make a hopeful beginning a thousand times, and be disappointed a thousand times, and still be ready to try again.

"But as we must be hopeful, so we must be cautious. There is a wide difference between legitimate negotiations conducted in an effort to reach an agreement, and a negotiation conducted for other reasons. Any trader, whether in stocks or bonds, or horses and mules, can testify to that.

"Negotiations can be used for delay, for deception, for dividing friends, for discouraging and disheartening populations. We must separate the wheat from the chaff in these matters, for there is more grief than profit in threshing straw."

PITFALL OF EAGERNESS

"And one final thought on the matter of patience: Once any negotiation may be entered, we must recognize that a bad agreement could be worse than no agreement, in weakening our alliances, in compromising our defensive position, in creating false confidence or disillusion. It is too easy, when talk has dragged on long and fruitlessly, to be overeager to end it with some agreement, any agreement.

"So if the first lesson of this agreement is that old fashioned diplomacy, high-level horse trading, if you like, can pay off, the second lesson is that it will pay off only if employed with enduring patience. This patience includes the willingness to wait, the capacity to continue to hope and try again, the caution to avoid false and dangerous approaches, and the restraint from agreement until a meaningful agreement is to be reached.

"This is perhaps a grim picture. This Nation broke its frontiers, and built its industrial might, not so much through patience as through impatience. Buffalo Bill, Horatio Alger, either one, always had to be pushing ahead. But we were a young land then, and impatience is a luxury youth can indulge. We have occupied this position we hold in the world for less than half a generation. It is a position for which maturity is the first and most essential trait, and patience is the sine qua non of the sort of maturity we need."

CAPABLE NEGOTIATORS

"Recently there has been dramatized before the world the fact that Soviet scientists and engineers rank with any in the world in skill and knowedge. Their diplomats are not less capable, and we had better not forget it in our haste to train more engineers.

"Yet the fact that we could come together to bargain at all, and the fact that the bargaining did result in an agreement, indicates, we hope and trust, that the Soviet are coming to recognize that some bridging of the gap between us is both necessary and possible.

"Before I close let me touch on one further aspect of these negotiations for international exchange. By the fact of negotiating itself we were conducting an exchange of sorts. Ambassador Zaroubin and colleagues were tough bargainers, formidable negotiators, and neither side won all it wanted. But for all the battle of wits, no one irretrievably lost his temper and certainly we learned a mutual respect.

"And for all the restraints necessarily imposed upon us by our positions, it was inescapable that we should come to see each other not merely as representatives, or as forces, but as people—human beings.

"We served opposing interests, but we were also serving each according to his lights, the common cause of humanity's search for peace."

Income Tax Problems

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, February 28, 1958

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated February 15, 1958, which I have received from Mr. John Cascione, a certified public accountant, of New York City, dealing with certain income-tax problems.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JOHN CASCIONE CO.,
New York, N. Y., February 15, 1958.

Senator WILLIAM LANGER,
United States Senate Building,
Washington, D. C.

DEAR SENATOR: Income taxation has become a form of legalized political larceny. It is a trap baited for recalcitrant citizens; blackjacking and coercing them into submission to the crazy policies of some political leaders.

For nearly 20 years we have been scared out of our pants and had our shirts taxed off our backs; with Federal per capita taxes increasing 2,000 percent since 1933, when the New Deal arrived in Washington.

Repeated additions tao the already numerous tax deductions, to quiet and cater to special groups or individuals, have been one of the causes of high tax rates, and the main reason for the maze of rulings and regulations. A complete overhaul of the tax structure is necessary, beginning with the elimination of all personal deductions, leaving only exemptions.

Deductions have reached the saturation point of diminishing benefits; in the long run taxpayers are now in the same relative position, all receiving some special tax benefit. A 5-percentage-point tax reduction should replace the eliminated personal deductions.

In the past 5 years, there has been a gradual easing of the tensions between the East and West, which had reached a high point with the Berlin blockade and airlift. The low point was reached last fall, when prominent American politicians, newspapermen, industrialists and scientists entered Russia under the uplifted Iron Curtain; some of them to witness the pyrotechnic display of the sputnik skyrocketing into outer space.

The stupendous peacetime military outlays of the past can now be reduced to normal proportions, eliminating the arms race between former allies, and make possible an additional 5-percentage-point reduction in tax rates. Rates would then start at 10 percent instead of the present 20 percent and American taxpayers would be relieved of a burdensome tax load as well as the preparation of complicated evasion inducing tax forms.

The pernicious narcotic effects of taxation, its ever-mounting craving demands, is as dangerous to our body politic as dope to an individual. Continued at its present harmful degree, evasion, bribery, and corruption will become rampant and chronic. This will destroy the moral fiber of the Nation and American power to resist will become but a shell unable to withstand internal and external attack.

Sincerely,

JOHN CASCIONE.

The Need for a Tax Cut

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, February 28, 1958

Mr. PROXMIRE. Mr. President, many of us in the Senate of the United States believe that a tax cut will be one of the most salutary steps that we can take toward recovery from the current economic recession.

This morning the syndicated column of Stewart Alsop has a thoughtful discussion of the reluctance of the administration to take this step, and the growing awareness that it probably will have to be taken.

I ask unanimous consent to have printed in the Appendix of the RECORD the article, entitled "The Ides of March," which was published in today's Washington Post and Times Herald.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE IDES OF MARCH

(By Stewart Alsop)

Next April 10 is a day to circle on your calendar. For on that day, or soon thereafter, the President and Secretary of the Treasury Robert Anderson are going to have to make a decision which will rather intimately affect every adult American. They are going to have to decide whether or not to propose to Congress a massive tax cut to revive the sagging economy.

On the delicate subject of a tax cut, the administration has been talking out of both sides of its mouth. A couple of weeks ago, the administration line, as put out by Senator WILLIAM KNOWLAND and others, was that there would be no tax cut. This week the line has changed. Secretary Anderson and other administration spokesmen (including KNOWLAND) have said that there would be a tax cut "if circumstances warranted"—which means, if things go on getting worse.

The reason for this backing and filling is, of course, that the administration has not yet made up its collective mind. From the President on down, all concerned want very much to avoid a big tax cut, which would bring a huge deficit in its train. But the pressures, political and economic, for drastic action to reverse the present economic trend, are steadily mounting.

The present intention in the administration is to put off the dread day of decision until after April 10. The reason why April 10 is a magic date is simple. On that day (or possibly the 11th) the Commerce Department will announce the total of unemployed in the month of March.

On February 12, the President optimistically predicted in his first economic chinsup statement, that unemployment would go down in March. In normal times, such a prediction would be entirely safe. There is a regular seasonal upswing in employment in late winter and early spring.

But these are not normal times. Many economists, including some of the President's own economic advisers, are beginning to suspect that the President should have recalled the warning to Julius Caesar to "beware the ides of March." Unemployment figures for February, which are due to be announced in the second week of March, are expected to show another sinister rise, perhaps to over the 5 million mark.

If the March figures announced on April 10 show another rise in unemployment, the moment for decision will be at hand. For besides proving the President a poor economic prophet (which will give the Democrats another stick to beat him with) a March increase in unemployment will have a further unhappy meaning.

It will mean, inescapably, that the recession has gathered enough steam to override the normal March upturn. That in turn will involve the clear threat that the recession is getting out of hand, and turning into a real depression. In that case, it can be considered at least a 5-to-1 bet that the President will propose a massive tax cut to Congress.

It is still possible, of course, that the President will prove a good prophet after all. The administration's economic soothsayers put hopeful emphasis on the increase in housing starts, the fairly steady level of retail buying, and the upward trend in spending for military hardware.

Yet there is a certain whistling-in-the-dark note audible in such expressions of optimism. And from Secretary Anderson on down, all those who have the President's ear on economic matters agree that a big tax cut is the most powerful antidepression weapon remaining in the Government's economic armor.

Just how powerful is the tax cut weapon? The majority view among the economic soothsayers seems to be that a tax cut, besides putting money immediately into people's pockets, would have an important psychological effect. It should thus be powerful enough to reverse the tide and lead to a sluggish but certain recovery.

There is also a minority view among some economists and businessmen that we are in a much worse jam than anyone has publicly acknowledged. The pessimists see the vast load of consumer debt as the great danger. Millions of people have become used to buying everything from their vacations to underclothes on credit, and a lot of banks have plunged heavily in consumer credit paper. Thus, the pessimists believe, the national economy has a much more rickety base than appears on the surface, and there is no guarantee that a tax cut will set things right. For even a $5 billion tax cut will affect less than 1 percent of the total economy.

Thus the pessimists see the danger of a real bust, reminiscent of the thirties. But the pessimists, it should be hastily added, are in the minority. They have been wrong in the past, and on at least two occasions since the war, in 1947 and 1954, tax cuts have had an almost miraculously revivifying effect on the economy. And if the news is bad on April 10, a tax cut can be counted as next to a certainty.

Management's Responsibility for Equal Opportunity

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Friday, February 28, 1958

Mr. MURRAY. Mr. President, on Monday, February 3, the National Conference for Human Rights was held at the Bellevue-Stratford Hotel in Philadelphia. The conference was cosponsored by the Honorable George M. Leader, governor of Pennsylvania, and Mr. David J. McDonald, president, United Steelworkers of America. This was a momentous milestone in the efforts of our country to meet our problems in the field of human rights.

It was the privilege of those of us who attended the general session Monday afternoon to hear perceptive speeches by three outstanding leaders in the field of government, labor, and management. The speakers were Governor Leader, Mr. McDonald, and Mr. Joseph J. Morrow, personnel director of Pitney-Bowes, Inc.

Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the text of Mr. Morrow's speech, entitled "Management's Responsibility for Equal Opportunity."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MANAGEMENT'S RESPONSIBILITY FOR EQUAL OPPORTUNITY

(By Joseph J. Morrow, personnel director, Pitney-Bowes, Inc.)

The theme of responsibility for human rights, shared equally by the people of our Government, labor unions, and industrial managements, is a concept of which our conference planners should be proud. It represents an approach which is fundamental and at the same time usually comprehensive. To me, this theme is also deeply stirring, because it implies—and may very well help prove—that government, labor, and industrial management do not always go their separate ways but are quite capable of working together, as well as separately, toward solution of a problem which belongs to the entire Nation.

When we accept a share of the responsibility for the cure of our racial problems we are also accepting our share of responsibility for the problem itself. Whenever and wherever this happens, it means that American citizens are growing up—looking our shortcomings straight in the eye and resolving to do something about them. When we can do this with the weight and influence

UNIVERSITY OF MICHIGAN LIBRARIES

of government, labor, and industry behind us, we are on the road toward the kind of action which can someday end racial prejudice and the ills it has visited upon us.

"E pluribus unum" is a familiar motto which we see every day on the coins in our pockets. It refers, of course, to the unity of the 48 States: "one out of many." Maybe a more emphatic meaning might be evident from a translation as "out of many—one." This concise phrase can also be interpreted as a summation of our objective as a nation, our creed, our ideal: the creation of a single, integrated people out of many different people, of different cultures. The motto ought to be a reminder that if we are to remain one nation we must work to really become one people, discarding the divisions and prejudices which hamper us.

Under the pressures and anxieties of these times we live in, we have begun to realize that the philosophy of unity, equal opportunity, and freedom out of which the United States was born is not just an idea to be given lipservice and ignored whenever it gets in the way of immediate self-interest. Challenged by foreign ideologies and the complexities of a technological age, our own taken-for-granted philosophy is emerging for us as a practical blueprint for living—our greatest strength and best defense when we put it to work.

Perceptive leaders of business and industry, for instance, have realized that our way of doing business is a prime expression of freedom and equal opportunity in action which—adaptable as it may be to this or any other age—will cease to exist in its present form if we lose our other freedoms. They realize that the people who keep our industries running become a strong right arm for industry when their needs are respected and they are regarded as intelligent partners instead of mere working mechanisms. Finally, business leaders realize that their organizations are an integral part of the social and economic picture in their communities, with a responsibility not only to earn a profit for the stockholder but also to assume the kind of leadership which will further the well-being of the community and all those who comprise it. Through these combined realizations, industry's so-called social conscience has been awakened.

When we relate this awakening to our race relationships, a mixed picture presents itself. We know, for example, that a great majority of employers hire Negroes only for unskilled work. Whether they hire large numbers of Negroes or only a few, they are still following discriminatory practices which prevent the Negro from enjoying, as other citizens do, the equality of opportunity on which we pride ourselves.

The ratio of unemployment among Negroes runs higher than among whites—about 5 percent for Negroes as against 3 percent for whites—but the main difficulty in a healthy economy is not so much that of obtaining simple employment as that of obtaining good employment—the same kind available to a white man of similar ability. Although there is a proportionately higher percentage of Negroes than whites in the work force, Negro family income is only 56 percent as large as that of the average white family. The number of Negroes employed in agricultural work, and as laborers and domestics, has continued to decline while the number filling professional, managerial, white-collar, and skilled or semiskilled factory jobs has increased. In some cases, the percentage has almost doubled; but the greatest proportion of Negro workers can still be found in menial and low-paying jobs. In the North and West, more than 70 percent of employed Negroes are working in the lowest nonfarm classifications, while fewer than 33 percent of employed whites are in these occupations. And fewer than 1 in 10 northern Negro women hold clerical or sales jobs, compared to 2 out of 5 white women.

There are plenty of examples which prove that virtually no field of work is closed to Negroes. There are exceptional Negro men working in specialized fields everywhere; and while they may have found it hard to reach their present level, the great ability and drive common to unusual men have helped them push their way through the obstacles. Unfortunately, the average person—including the average Negro—has no such gifts. The reasonable degree of success within the reach of the average white man is far beyond the grasp of most average Negroes. Only when this large group, with abilities which lie between the unqualified and the exceptional, is utilized in average occupation—in equal proportion to whites—will we have real grounds for claiming that Negroes are enjoying equal economic opportunity.

We see much more on the credit side when we look at what has happened to the Negro's work opportunities in the past 40 years. His first real opportunity in industry occurred during World War I, when Negroes moved north in sizable numbers to take jobs in construction work, packing plants, and the steel industry. These employment gains nearly disappeared after the war and during the depression; but, with the coming of World War II, production needs and manpower shortages produced about 700,000 industrial jobs for Negroes, at least half of which were skilled or semiskilled. This time, a large percentage of Negroes who entered industry during the war stayed on at better paying industrial jobs. During the years of postwar adjustment there were opportunities for cutbacks and layoffs which might again have put the Negro worker back where he was before. The fact that most employers didn't use cutbacks as an excuse to remove Negroes from their payrolls indicates that they had really been assimilated into the work force, producing well, adjusting to their environment, and being accepted by their white coworkers.

The most significant gains in the employment of Negroes in skilled and semiskilled jobs have occurred since the war. Topflight industries have set an outstanding example in the utilization of trained and competent Negro workers—companies like International Harvester, General Motors, General Cable Corp., Standard Oil of New Jersey, Daystrom, Sylvania Electric Products, St. Regis Paper, Bristol-Myers, Doehler-Jarvis. This is only a partial list of the industries which, over the past 15 years, have helped along the progress of fair employment practices in industry.

So what we have today is a beginning, a groundwork for the job of securing economic equality for Negroes.

How fast and how far the trend toward fair employment goes will depend on all our employers; on their sense of what is right and fair, their courage, their degree of concern over what is going on outside the factory gates, their vision. More than any other group, business leaders have it in their power to invalidate Communist charges of injustice toward our nonwhite minorities, charges which have left their influence in all the corners of the world where nonwhites live, and have seriously reduced our prestige and leadership potential outside the Western World. Businessmen have it in their power, through a policy of equal employment opportunity, to serve the economy on which they depend, and this is becoming a recognized responsibility which goes along with modern corporate power.

While economic justice may be only half the battle for America's Negroes, it is the greater half. Improving the Negro's economic lot will breed social improvement and reduce the high price we pay for slum-bred crime, disease, and poverty. If industrialists really believe in the ability of our economic system to provide enough opportunity for everyone according to qualifications, then they must also believe that wasted ability is costly at a time when, according to Secretary of Labor James P. Mitchell, there are only 9 million skilled workers in a total civilian labor force of 66 million, a quantity insufficient for present needs, let alone for the future. Industry can help develop at least some of this latent ability by opening training, apprenticeship, and other educational programs to all qualified applicants, regardless of color.

If goods and services constitute our real wealth, then it follows that the more people we permit to create and consume that wealth, the better off we are. If we let Negroes find their true level on the basis of ability, joining with us in the creation of wealth, their increased earnings will give us one of the best consumer markets we can hope for.

But this won't happen while the Negro is denied skilled employment, a chance at promotion, and equal wage scales. Nor will the Negro achieve social, environmental, or educational equality until he has had a genuine opportunity to increase his income.

Since the employer is "after all" a human being, and in business to make a living, his fears of a fair employment program might understandably outweigh the broad advantages to the Nation—if the fears were justified. But in actual experience in most parts of the country, the personal difficulties and problems anticipated with an integration program just don't materialize to any appreciable extent. This would be understood by many more businessmen if they could shake themselves free of prejudices, habits, and apprehensions, examining the prospect of equal opportunity as they have traditionally, and skillfully, analyzed their business problems. Then—measuring the political and economic stakes against the risks—they would find themselves able to map out a program of action based on facts and realistic thinking, instead of heresay and emotion.

It is fundamental to American business to believe that if something needs doing, and we really want to do it, that it can and will be done. The problem of minority integration is essentially no different. The employer who has always just "understood" that Negroes are lazy, overaggressive, or unreliable on the job more than likely applies scientific personnel techniques in measuring the individual abilities and traits of white job applicants and supplements this with constant ratings of his white employees' actual performance. Some facts about Negro performance which would surprise the reluctant employer were unearthed through a National Urban League survey of 300 industries in 25 States during the last war. These plants employed altogether about 150,000 Negro workers.

In 215 of the 300 companies, management reported complete satisfaction with Negro performance. In 50 plants, the managers were fairly satisfied. In only 9 plants did management claim that Negro workers were not so good as whites. While 67 of the 300 plants reported higher absentee rates for Negroes, and 13 plants had found the Negro turnover rate to be higher than for whites, this type of difficulty occurred, for the most part, during the period of the Negro's adjustment to factory work and to urban life in general.

The chief objection voiced against integration is, of course, the employer's conviction that there will be discontinue or open trouble in the plant and community if Negroes are employed on an equal basis with whites. While avoiding or minimizing conflict does take careful planning and spadework, I know of no company with an integration program which hasn't made the transition success-

fully. In some cases the obstacles have been trifling; in others there have been some minor crises. Threatened work stoppages or walkouts have been rare. The important fact is that the crises or walkouts can be and have been avoided or averted by the application of principles basic to any good industrial relations program anywhere, and by getting good, professional advice and help right in the beginning from specialists in the field. The National Urban League—a nonprofit service with branches in a number of cities—will, for instance, send consultants at its own expense to talk over specific steps with businessmen who want to utilize Negroes in their work force.

First and foremost, top management must make a firm decision to employ Negroes at skilled work; consult with supervisors and the union about it; and be sure that everyone—including employees themselves—understands the new policy. When and if troubles arises, management must stick to its commitments, handling complaints or threats firmly, fairly, and consistently.

It is particularly important that supervisors be well indoctrinated and understand management's stand, for they will frequently be the first to cope with tensions or objections if these arise. Careful selection and briefing of the first skilled Negro employees, and strategically planned placements, are important too. No difference should be made in the treatment of Negro and white workers in the handling of complaints, promotions, or washroom and eating facilities. By avoiding the idea that it is involved in some kind of crusade or battle in the Negro's behalf, management will keep an objective, flexible approach to integration, treating each Negro employee as an individual who must stand or fall on his own merits.

Asking employees to accept Negro coworkers on an equal basis strikes deep at some of our most unreasoning human emotions; and doing the job right the first time is vital. But no policy, no matter how carefully planned, will be thoroughly successful unless the overall industrial relations house is in order. Employees have to be, in a sense, ready for integration. They will be ready if a background of harmonious relations already exists. Mutual trust and good will help along employee acceptance and enable them to feel respect for management's decision to establish a democratic work climate.

Every corporation which uses the tools of policy planning and effective communications in carrying out a successful integration program is, as we know, helping provide long-range benefits to the Nation and the economy. But there are more immediate benefits too. For one thing, the company will gain a certain amount of respect in the community and will, at least indirectly, influence community race relationships through its example and through the revised or modified attitudes white employees will bring back into their homes and social circles.

When employees' loyalty and feeling of partnership can be extended to cover the integration program as well as other management activities, they will have an added reason to take pride in being part of their company, and that is important to the way we humans work together. Equal employment opportunity is at least a start toward raising the living standards of Negroes in the community. Management, too, will gain employees who are in no way inferior to their white coworkers. Some Negro workers will be disappointments, some will be distinctly superior; but, more significant than failures or standouts is the great majority who, over the long pull, will do a good, conscientious, effective job just as do other employees.

The Negro's capacity to contribute to our economy is far greater than we realize, although social, economic, and educational patterns formed by prejudice and by our history still limit this contribution. The potential is nevertheless there, waiting to be released. This is the opportunity and the responsibility of our industries and businesses. The time for decision is now, and the time for action is growing short.

Protectionism and Stagnation

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of February 28, 1958:

PROTECTIONISM AND STAGNATION

Does this country believe in the free trade it preaches?

The question is often asked by foreigners as though the answer were negative. Actually the honest answer cannot be clear cut. On one side, the United States has cut tariffs, in return for comparable concessions from other lands, an average of some 80 percent in the 24-year history of the Reciprocal Trade Agreements Act. In that period American exports and imports have multiplied many times.

In recent years, however, the protectionist tide has been rising again and now threatens to swamp the administration's request to extend the act for 5 years, with authority to cut tariffs 5 percent a year. The request may be killed, or the extension may be so loaded with amendments it will be a protectionist, not a freer-trade, measure. The other day Secretary of State Dulles termed one such amendment "totally disastrous."

That language is doubtless too strong. Neither the United States nor world trade will collapse overnight if the trade act is not extended. All the same, the new protectionist trend is unfortunate and in the long run dangerous. That is so far the most concrete of practical reasons.

First, this is a competitive economy, and in that is the secret of much of its startling success. It is axiomatic that in such an economy businesses must either meet competition or go into other businesses or get out of business. Domestic businesses have been making these adjustments—technological competition alone has forced many of them—as long as there has been an America, and the result has been great and rapid economic growth.

Those firms and industries who complain that, for whatever reason, they cannot meet foreign competition are simply trying to rationalize their own failure. That is bad enough. What is worse is that to the extent their complaints are heeded the American economy loses its competitive character. Instead we get industries sheltered by the Government for no better reason than that they refuse to adjust to the logic of a competitive economy. And that augurs stagnation rather than expansion.

Second, this is a consumer-directed economy, which is another reason it is the richest in the world. If the consumer is to remain sovereign, he must have freedom of choice among all competitors. His choice must not be restricted, and his prices raised, by the pressures of a few. That way lies a different, and far less productive, economy than we have known.

Third, this economy is not self-sufficient; the United States must depend on trade for many necessary materials. To fail to follow the course of expanded trade could prove very short-sighted indeed.

Protectionism, then, strikes at the real bases of American wealth; it temporarily protects a few at the eventual expense of the many. But protectionism does even more. In the long run it strikes at the United States own interests in the world and in the peace of the world.

In self-interest the United States must be concerned with the political fate of other nations. It now expreses this concern largely in an expensive, indiscriminate and generally ineffective program of foreign aid. By encouraging trade expansion it could eliminate much of this and help provide the actual bases of wealth elsewhere, thus giving other nations tangible reasons for shunning communism.

The United States overriding world interest, however, is peace—and peace historically travels the route of trade. It is when the commercial arteries are choked that the economic causes of war are generated.

We do not suggest that the Reciprocal Trade Agreements Act is a perfect vehicle. But at least it moves toward the goal which should be this country's in its own most hard-headed interest. That ultimate goal is not simply freer trade, but free trade in practice as well as preaching.

Waterway Tolls Opposed

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 8, 1958

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following resolution adopted by the Legislature of the State of Mississippi:

House Concurrent Resolution 122

A concurrent resolution memorializing the Congress of the United States to refrain from placing tolls or restrictions upon the use of river waterways

Whereas the suggestion has been made whereby the water transportation industry of the United States of America would be restricted and burdened by the imposition of Federal tolls and controls; and

Whereas in the judgment of the Legislature of the State of Mississippi any river waterways' tolls would be detrimental to the economic development and prosperity of the people of the United States and should not be imposed: Now, therefore, be it

Resolved by the House of Representatives of the State of Mississippi (the Senate concurring therein), That the Congress of the United States be and it is hereby petitioned and requested to refrain from any imposition of restrictions or tolls on the free use of the river waterways of the United States and leave same free for unimpeded development and use; be it further

Resolved, That a copy of this resolution be mailed by the clerk of the house of representatives to Senators JAMES O. EASTLAND and JOHN C. STENNIS and to Congressmen THOMAS G. ABERNETHY, JAMIE WHITTEN, FRANK SMITH, JOHN BELL WILLIAMS, ARTHUR WINSTEAD, and WILLIAM COLMER.

UNIVERSITY OF MICHIGAN LIBRARIES

Senator Kennedy's Address at the Golden Jubilee Banquet of B'nai Zion

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MULTER. Mr. Speaker, the distinguished Senator from Massachusetts, the Honorable JOHN F. KENNEDY, delivered an outstanding address at the golden jubilee banquet of B'nai Zion, held at the Hotel Commodore in New York City on February 9, 1958.

Sharing the platform with Senator KENNEDY on that occasion were Simcha Pratt, Consul General of Israel, in New York; Dr. Harris J. Levine, president of the Jewish National Fund of America, who was the toastmaster of the evening; and Nathaniel S. Rothenberg, president of B'nai Zion. As dinner chairman, I had the honor of making the opening remarks.

Members of Congress who attended this important event were the honorable VICTOR ANFUSO, EMANUEL CELLER, ISIDORE DOLLINGER, LEONARD FARBSTEIN, JAMES HEALEY, LESTER HOLTZMAN, EDNA KELLY, EUGENE KEOGH, ALFRED SANTANGELO, and LUDWIG TELLER.

Senator KENNEDY's remarks were as follows:

ADDRESS BY SENATOR JOHN F. KENNEDY AT 50TH ANNIVERSARY DINNER, B'NAI ZION, HOTEL COMMODORE, NEW YORK CITY, FEBRUARY 9, 1958

It is a great pleasure to be here tonight in tribute to the 50 years of B'nai Zion and in honor of the special mission of the Jewish National Fund.

It is heartening to spend an evening where the focus is set on works of peace and social improvement, on the courageous and far-sighted efforts your organization has made to alleviate deep human needs. For the years of crisis, through which we have been passing for more than two decades, have left no more bitter heritage than the homelessness and landlessness of millions. Your works constitute one of the great social achievements of our time, combining the highest idealistic vision with the greatest practical vigor. And what work could be more heartwarming or more enduring than the great forest at Jerusalem. Your children and grandchildren when they visit Israel will find your monument.

There have always been skeptics scoffing at the possibility of making deserts bloom and rocky soils productive. In this regard, our own history as a nation and Israel's have many parallels—in the diversity of their origins, in their capacity to reach the unattainable, in the receptivity to new ideas and social experimentation.

In this country, throughout much of the 19th century, warnings were repeatedly proclaimed that mid-America and its plains beyond the 100th parallel could never be settled and made productive. One writer, traveling from Illinois to Oregon in 1839, spoke of the Great American Desert "burnt and arid * * * whose solemn silence is seldom broken by the tread of any other animal than the wolf or the starved and thirsty horse which bears the traveler across its wastes." The sterility of the plains, and their implacable resistance to civilizing influence or settlement, were themes of major writers, such as Francis Parkman in The Oregon Trail or Washington Irving in his Astoria. At best, these writers argued, a kind of nomadic existence could be salvaged from the mid-American land mass, from these "bare" and "wasted" plains with their "level monotony."

But on the Great American Plains—as decades later in the great Palestinian plains and valleys—determined settlers learned the truth of the epigram that "Rain follows the plow." By 1881 a great western town builder and scientist, Charles Dana Wilber, was saying: "In this miracle of progress, the plow was the advance messenger—the unerring prophet—the procuring cause."

These words sound deep resonances in the minds and memories of those who have observed the gradual Zionist fulfillment in Israel. History records several such breakthroughs—great efforts in which spiritual conviction and human endurance have combined to make realities out of prophecies. The Puritans in Massachusetts, the Mormons in Salt Lake City, the Scotch-Irish in the western territories were all imbued with the truth of the old Jewish thought that a people can have only as much sky over its head as it has land under its feet.

The Jewish National Fund, which for 47 years foreshadowed the existence of an independent Jewish state, and assembled long in advance a perpetual trust in land for the Jewish people, symbolizes this magnificent achievement. Just as our own West has sustained progress against the impacts of serious farm depressions, crop failures, credit crises, and droughts, so, too, Israel has had to exist on narrow margins of survival, on a constant climate of hostility and outside danger. Yet it has endured and its integrity remains unimpaired, and this success can be in a large measure attributed to the National Fund.

I cannot hope—nor pretend—to solve tonight all of the complex riddles of the Middle East. But I would like to suggest some perspectives which might help to clarify our thinking about that area and to indicate what lines our longer-range efforts might take. To do this requires, first of all, that we dispel a prevalent myth about the Middle East.

This myth—with which you are all too familiar—is the assertion that it is Zionism which has been the unsettling and fevered infection in the Middle East, the belief that without Israel there would somehow be a natural harmony throughout the Middle East and the Arab world. Quite apart from the values and hopes which the State of Israel enshrines—and the past injuries which it redeems—it twists reality to suggest that it is the democratic tendency of Israel which has injected discord and dissension into the Near East. Even by the coldest calculations, the removal of Israel would not alter the basic crisis in the area. For, if there is any lesson which the melancholy events of the last 2 years and more taught us, it is that, though Arab States are generally united in opposition to Israel, their political unities do not rise above this negative position. The basic rivalries within the Arab world, the quarrels over boundaries, the tensions involved in lifting their economies from stagnation, the cross pressures of nationalism—all of these factors would still be there, even if there were no Israel.

The Middle East illustrates the twin heritage of modern nationalism. In one of its aspects it reflects a positive search for political freedom and self-development; in another, it is the residue of distintegration and the destruction of old moorings. The Arab States, though some have had significantly varying lines of development, have all too often used Israel as a scapegoat and anti-Zionism as a policy to divert attention away from the hard tasks of national and regional development, and from special area problems.

One of these problems, that of the Arab refugees, which has lain like a naked sword between Israel and the Arab States, is a matter on which the books cannot be closed and which must be further resolved through negotiation, resettlement, and outside international assistance. But to recognize the problem is quite different from saying that the problem is insoluble short of the destruction of Israel, or only by the unilateral repudiation of the 1949 borders, or must be solved by Israel alone. Israel today stands as an example for all the Middle East, in spotlighting how economic modernization may be spurred and accelerated against high odds, great physical barriers, and constantly growing populations, as well as against all Communist blandishments. The growing influence of the Soviet Union in the Middle East and the further diminution of direct western influence in that area as a whole, we shall in all likelihood have to face as realities. And it is sheer delusion to underestimate the cutting force of Arab nationalism or hope to create puppet regimes or pocket western kingdoms in that area. This would only intensify antiwestern feeling in the Middle East and imperiled western relations with all uncommitted states.

Israel, on the other hand, embodying all the characteristics of a Western democracy and having long passed the threshhold of economic development, shares with the West a tradition of civil liberties, of cultural freedom, of parliamentary democracy, of social mobility. It has been almost untouched by Soviet penetration. Some of the leadership groups in the Arab states also draw inspiration and training from Western sources. But too often in these nations the leadership class is small, its popular roots tenuous, its problems staggering. In too many of the countries of the Middle East the Soviet model holds special attraction, the more so since the United States and its Western allies have not been able to develop more than tentative and often only expedient policies which hardly come to grips with the root causes of political disintegration and economic backwardness. To countries with relatively primitive or top-heavy economies and low industrial capacity, the Russian and even the Chinese passage to modernity in a generation's time inspires confidence and imitation—even as does Egypt's move in less than 10 years from a seemingly subjugated state to at least a strategic power. We now know that Soviet attraction is not grounded on threat or bluster alone, and that there are tensions and a critical restlessness which would exist even if there were not a Communist threat. Communism presents to many in that area the glamor of novelty, the breaking of fresh ground, of seeming to offer a disciplined, coherent, and irresistible answer to the overwhelming problems of economic management and progress.

In this light a simple military response is not adequate. For, apart from bequeathing to the United States latent anti-colonial resentments, military pacts and arms shipments are themselves new divisive forces in an area shot through with national rivalries, without historic frontiers, without, for the most part, skilled classes and political administrators who can pilot new states through the treacherous tides running through the Middle East.

Military pacts provide no long-term solutions. On the contrary, they tend dangerously to polarize the Middle East, to attach us to specific regimes, to isolate us very often from the significant nationalist movements. Little is accomplished by forcing the uncommitted nations to choose rigidly between alliance with the West or submission to international communism. Indeed, it is to our self-interest not to force such a choice in many places, especially if it diverts nations from absorbing their energies in programs of real economic improvement and takeoff. In the Middle East we are moving perilously close to an arms race which, in the long run, will be of benefit to no one. No other area

stands more in need of a real disarmament effort. The real mutual advantages for gradual demilitarization rather than buildup are unequalled. Already we have used the area for a pilot test of the United Nations Emergency Force; and this might well be supplemented by a similar international device to regulate arms traffic.

The contours of the outstanding economic and political issues in the Middle East lend themselves uniquely also to a regional approach. The project-by-project, county-by-country pattern of assistance is particularly ill-adapted in this area. The great river basins of the Middle East are international—the Jordan, the Nile, the Tigris, and the Euphrates. And there are other nations in the West besides the United States which can make important contributions in economic and technical assistance. There has been no lack of pointers toward what a regional policy might include—a multilateral regional development fund for both economic improvement and refugee resettlement, the Jordan River multipurpose scheme, a food pool making imaginative use of our agricultural surpluses, and, as a coordinating agency, a Middle East Development Authority to pool capital and technical aid in that area. This would encourage and provide incentive for realistic and constructive plans and projects, encourage a higher and more diversified level of private investment, and enable Arab leaders to participate in economic planning and administration.

Unfortunately, all these and other plans have so far lacked the active political leadership which can break the paralysis of purpose. Only external Soviet aggression, which is only one danger to the Middle East, has been the subject of high-level policy planning. No greater opportunity exists for the United States than to take the lead in such an effort which could diminish the internal bickering in that tense and troubled area, and bend new energies to new more promising, and more constructive ventures.

Needless to say, such proposals and programs should not be used as veiled techniques for placing new economic sanctions and pressures on Israel. Nor should they detract from our support of Israel's immediate needs. There is no reason why the United States should not conclude at once the $75 million loan promised through the Export-Import Bank, and make it clear that we will not sanction any barrier to free shipping on the Gulf of Aqaba, which is an international waterway. The choice today is not between either the Arab States or Israel. Ways must be found of supporting the legitimate aspirations of each. The United States, whose President was first to recognize the new State of Israel, need have no apologies—indeed should pride itself—for the action it took. But neither should we foreclose any effort which promises a regeneration of a much wider segment of the Middle East.

The Jewish state found its fulfillment during a time when it bore witness, to use the words of Markham, to humanity betrayed, "plundered, profaned, and disinherited."

But it is yet possible that history will record this event as only the prelude to the betterment and therapy—not merely of a strip of land—but of a broad expanse of almost continental dimensions. Whether such a challenge will be seized, cannot be determined by the United States alone. But as we observe tonight the inspiring experience of Israel, we know that we must make the effort—and that we can once again demonstrate that "rain follows the plough."

In his book One Man's America, Allistair Cooke tells the story which well illustrates our point. On the 19th of May 1780, as he describes it, in Hartford, Conn., the skies at noon turned from blue to gray and by midafternoon had blackened so densely that, in that religious age, men fell on their knees and begged a final blessing before the end came. The Connecticut house of representatives was in session. And as some men fell down in the darkened chamber and others clamored for an immediate adjournment, the speaker of the house, one Colonel Davenport, came to his feet, and he silenced the din with these words. "The day of judgment is either approaching or it is not. If it is not, there is no cause for adjournment. If it is, I choose to be found doing my duty. I wish, therefore, that candles may be brought."

Members of B'nai Zion, you who are here gathered tonight deserve thanks, for you have in truth brought candles to illuminate your people's way.

Human Rights Responsibilities in the Field of Government

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, February 28, 1958

Mr. MURRAY. Mr. President, on Monday, February 3, the National Conference for Human Rights was held at the Bellevue-Stratford Hotel in Philadelphia. This conference was cosponsored by the Honorable George M. Leader, Governor of Pennsylvania, and Mr. David J. McDonald, president, United Steelworkers of America. This was a momentous milestone in the efforts of our country to meet our problems in the field of human rights.

It was the privilege of those of us who attended the general session Monday afternoon to hear perceptive speeches by three outstanding leaders in the field of government, labor, and management. The speakers were Governor Leader, Mr. David J. McDonald, and Mr. Joseph J. Morrow, personnel director of Pitney-Bowes, Inc.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of Governor Leader's speech, entitled "Human Rights Responsibilities in the Field of Government."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HUMAN RIGHTS RESPONSIBILITIES IN THE FIELD OF GOVERNMENT

(By Hon. George M. Leader, Governor, Commonwealth of Pennsylvania)

Dr. McClusky, reverend clergy, President McDonald, Mr. Morrow, and friends, I saw this film for the second time today and I want to say that the impact on me was just as great as it was the first time I saw it.

I think the steelworkers and all of the writers, the directors and actors, and all the folks who had anything to do with the production of this great film deserve congratulations. I think they have put a series of situations on the table for our consideration, situations which all too often we have attempted to sweep under the rug.

I am honored to welcome this distinguished group to the Commonwealth.

It is appropriate, I think, that this conference for human rights should meet in Pennsylvania, whose tradition of tolerance, of brotherhood, of live-and-let-live, dates back to the time of William Penn.

Represented at the conference are four main groups which between them span a vast part of the American spectrum.

There are the representatives of labor; the spokesmen for business, industry, and farming; the leaders of civic, religious, and educational agencies; and the men and women who work in government.

All of you know the contributions made to human rights by each of these groups. You know what the unions have done to bring about equal rights in employment, and how the statesmen of labor, like David McDonald, have kept the faith. You know how much has been accomplished by enlightened management. You know the contribution made by America's clergy, and by the leaders of our civic and educational groups.

And all of you know how far we have yet to travel.

I have been asked to talk with you today about the responsibilities of Government in this, our combined effort. There seem to be two schools of thought on what that responsibility is.

One school believes that Government can do the major part of what needs to be done. The other believes that you cannot, by Government action, put an end to discrimination, prejudice, and the inequities they produce. The truth, I suspect, lies somewhere in between these two viewpoints.

Let me give you an example. The 15th amendment says that no citizens's right to vote shall be abridged or denied on the ground of race, color, or previous condition of servitude. And it adds that Congress shall have the power to enforce this article by appropriate legislative action.

That amendment was added to our Constitution nearly 90 years ago. Yet it did little or nothing, for many years, to prevent the disenfranchisement of Negro voters in most of the Southern and border States.

Then some 20 or 30 years ago, Negro registration in the South began to increase by leaps and bounds. As of this moment, southern voting rolls admittedly include only a fraction of those Negroes eligible to cast a ballot. But just the same, the increase has been substantial.

My point is that an amendment to the Constitution of the United States was disregarded for decades, and heeded only when public opinion caused it to be heeded. As public opinion grows stronger, as I think it will, Negro voters will undoubtedly increase in numbers.

But remember that the law did only part of the job, and can only do part of the job. The rest must be done by people who respect the law.

Following reconstruction days, American Government did little to protect minority interests until World War II came along. From 1941 on, however, Government has done much. It was in that year that the first Presidential Executive order of its kind was issued. It required that all companies contracting with the Federal Government to manufacture arms and defense materials should employ workers regardless of their race, national origin, or creed.

In all likelihood, this would not have been done voluntarily, notwithstanding the demands of war and defense, unless the President had acted. This was the beginning of Government action in the field of fair-employment practices.

There have been other actions, many other actions.

(a) The civil-service requirements of the Federal Government have resulted in a substantial increase in the number of Negroes holding white collar and supervisory jobs in Federal employment.

(b) The military services have been integrated.

UNIVERSITY OF MICHIGAN LIBRARIES

(c) Antidiscrimination commissions established by law have been responsible for at least 800 colleges removing questions regarding race, national origin, and religion from their admission form.

(d) The Supreme Court decision outlawing segregation in the public schools had been resisted in many areas, but there has already been a vast improvement toward greater integration in many of our schools throughout the Nation.

(e) Public and public-assisted housing are no longer on a segregated basis, and New York City has just passed the first law outlawing discrimination in private rental housing.

(f) Thirteen States—Pennsylvania among them—have now enacted laws creating FEPC's, or antidiscrimination commissions, with administrative and enforcement powers. And many cities, including Philadelphia, have adopted antidiscrimination measures and empowered administrative units to carry them out.

(g) The recent act of Congress creating a Federal Civil Rights Commission is a tremendously significant thing in itself, even though its scope is limited primarily to voting rights.

And so there is much being done by Government of real importance and value. But discrimination is still very much with us. It doesn't stop north of the Mason-Dixon line. We find it in Maine as well as in Mississippi; in South Dakota as well as in South Carolina.

In varying intensity, it blankets the Nation.

It makes little difference where the Negro lives in the United States, for he cannot change his problem simply by changing his address. In one part of the country his immediate hurdle may be an equal chance at education. In another it may be an equal chance to vote. And in another it may be an equal chance for decent housing, and still another it may be a chance for a decent job.

So this conference must have a knowledge of all the Nation's shortcomings, not simply the shortcomings of a particular area.

I have always thought that we construed civil rights too much in the negative sense. We seem to think of them as protective devices, as defense against the invasion of our individual freedoms, as subjects better left to the courts, to the lawmakers, to the lawyers, and to the due process of the law itself.

But must the individual citizen turn over his conscience to the legislators, to the lawyers, to the courts? If that were true, why would God have given every man a conscience?

A respect for the law is all very well; but it is even more important that we have a respect for the right. Recognizing injustice, it is not enough to hope that the law will some day get around to remedying the evil. There must always be the clear individual duty of opposing injustice.

Take the present situation in the South, where a majority of the voters fear, distrust, and oppose the concept of equality. They are indeed a majority; nobody can argue that point. But they are a majority in the wrong. And they are just as wrong legally as they are wrong by the yardstick of Christian morality.

Should the Southerner who believes in equality be shackled, therefore, by the majority opinion? I say that he should not. Knowing his cause to be just, knowing that he is right, he must stand alone if need be, and make himself heard. It is the easy way out to shrug helplessly and wait for the opposing majority to dissolve.

And so men of good will must do what they can, when they can, and where they can to make their viewpoints known, understood and ultimately accepted.

In the process, they are helping to create the climate of liberty, they are helping to keep this democracy honest.

Judge Learned Hand, one of America's great jurists, has said something very pertinent about this:

"What do we mean when we say that first of all we seek liberty? I often wonder whether we do not rest our hopes too much upon constitutions, upon laws, and upon courts. These are false hopes. * * *

"Liberty lies in the hearts of men and women; when it dies there, no constitution, no law, no court can save it; no constitution, no law, no court can even do much to help it. While it lies there, it needs no constitution, no law, no court to save it."

As Governor of this Commonwealth, I know a good deal about nationality groups. Within our State we have more than three-quarters of a million foreign-born citizens, and another 2 million who are either of foreign or mixed parentage.

I know something about the Pennsylvanians of other ancestry, other religions, other races than my own. For my part, I am a Pennsylvania Dutchman whose ancestors came to America nine generations ago. But I am still a Pennsylvania Dutchman and I pride myself upon it.

My identity as such is only part of my complete identity as an American, of course. But this is equally true of the newly naturalized citizen. He may speak accented English; he may read a newspaper printed in his native language; he may affiliate himself with a group made up of other Americans sprung from the same stock; he may preserve his language, his customs, his inheritance of national culture and folk wisdom.

He may have a darker skin or a different religion. But he is yet as much an American as I am, or anybody else is. The thing that counts is the actuality of citizenship.

American citizenship is given without reservation and without disclaimer. There are no strings attached. No trick clauses are hidden among the fine print. And no one is expected to start out with a fractional degree of citizenship and build it up to the complete whole over a period of years by seniority or bureaucratic endorsement.

By what right, then, do we discriminate? Obviously, by no right; and yet we do.

Recognizing that sad truth, we are attending this conference because we believe that all of us, working together, can help speed the day when discrimination will vanish from America, when the Constitution will be, in fact, what the Constitution was designed to be.

A world in which white people are in the minority watches and listens with critical intentness as we seek, after almost two centuries, to purge this Nation of its inequities. Indeed, a world which yearns for human freedom, for tolerance and brotherhood, will always watch the United States.

At the moment it sees a nation which eloquently professes its belief in equality while, at the same time, it seeks to bridge the yawning gap between profession and performance.

This is what we must change.

In the effort to make our deeds match our words, Government will continue to play its part. Government will continue to act whenever action will help. But in the long run, attitudes are more effective than laws.

The fight for equal rights will not be won until all Americans—regardless of where they live, where their ancestors came from, what God they worship—hold the basic attitudes of tolerance and understanding.

And fundamentally, that entails unremitting effort in our schools and churches, in our homes and places of employment, in our individual hearts and consciences.

"What then is the spirit of liberty?" asked Judge Learned Hand:

"I cannot define it; I can only tell you my own faith. The spirit of liberty is the spirit which is not too sure that it is right; the spirit of liberty is the spirit which seeks to understand the minds of other men and women; the spirit of liberty is the spirit of Him who, near two thousand years ago, taught mankind that lesson it has never learned, but has never quite forgotten, that there may be a kingdom where the least shall be heard and considered side by side with the greatest."

As we gather here, let us resolve that no differences of ancestry, no differences of race, color, or creed, are half so important as that which we share in common: Our belief in liberty, quality, and fraternity as the necessary conditions to an enduring republic.

All of you here today are leaders. You are the people who help mold opinion, who help create the climate in which human rights can thrive.

But whether you represent labor, or business, or industry, or farming; whether you influence your church, your civic, or your educational group; whether you work in government as an elected official or as a career public servant, remember this: No segment of this conference can work effectively alone. We must work together, in unison. We must work continuously and tirelessly if we are to achieve the best results. Otherwise, the progress we make for human rights will be slow and halting and uneven, like the 8-cylinder engine with 3 or 4 cylinders misfiring.

Let us stand together, then, believing that "the conscience and courage of Americans" can create that spirit of libery of which Judge Hand spoke so well; and let us pray that the "conscience and courage of Americans" will safeguard the very liberty they have created.

To this task, then, let us pledge our talents, our consciences, and our efforts, realizing that whatever this conference can accomplish will help armor the Nation more safely in the freedoms we cherish; will bring closer the day when the brotherhood America professes will be no different from the brotherhood we practice.

Distribution of Surplus Commodities

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 20, 1958

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following resolution adopted by the House of Representatives of the State of Mississippi:

House Concurrent Resolution 123

Concurrent resolution memorializing the Congress of the United States and the United States Department of Agriculture to give thought and study to a plan for the distribution of surplus food commodities in disaster areas through retail grocers rather than by and through the county departments of public welfare and the county governments

Whereas 60 counties of the State of Mississippi have now been declared disaster areas and approval for the distribution of surplus commodities has been given in these areas of Mississippi; and

Whereas the county welfare departments and the county governments have heretofore cooperated in a program for the distribution of surplus food commodities to needy families in the State of Mississippi by accepting said surplus commodities and thereafter storing, caring for and distributing the same at county expense; and

Whereas the large portion of such surplus food commodities are staple commodities such as flour, meal, rice, powdered milk, cheese, and other basic staple commodities, and the distribution of such, as heretofore distributed, has caused serious distress to small retail grocers in that the business of such small retail grocers is largely staple food commodities, and the distribution of same, as heretofore had, reduces the potential of distribution of foods by said retail grocers; and

Whereas the Legislature of the State of Mississippi recognized that the distribution of such surplus food commodities is of great service to needy families within the State of Mississippi, but believes that the same good results could be obtained through some plan of distribution of such commodities through the local retail grocers and would thereby keep leveled off the usual business of distribution of staple commodities by the small retail grocers; and

Whereas the Legislature of the State of Mississippi, after consideration, believes that the problem should be presented to this State's representatives in the Congress of the United States with request that thought and consideration be given by the proper committees framing modes of distribution of surplus food commodities through the United States Department of Agriculture, or other agencies, so that such distribution of such commodities may be made through the channels of retail grocers' trade, rather than through the existing method now provided for such distribution of such surplus food commodities: Now, therefore, be it

Resolved by the House of Representatives of the State of Mississippi (the State Senate concurring therein), That the representatives of this State in the United States Congress give thought and study to a plan for the distribution of surplus food commodities by the United States Department of Agriculture and allied agencies through retail grocers rather than through the county departments of public welfare and the county governments of the State of Mississippi.

Threat to Textile Industry

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, February 28, 1958

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Just Complaint," which originally appeared in the Nashville, Tenn., Banner and was reprinted in the current issuee of Southern Textile News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A JUST COMPLAINT

America's textile industry—not just the South's, but the Nation's—is imperiled by increasing inroads of Japanese cotton products. Unless its just complaint is heeded by Congress, it faces disaster.

To state that fact, and condemn a policy so detrimental to basic American interest—as it applies particularly to this field—is not to disavow the Reciprocal Trade Agreements Act. The Banner has upheld the latter and urged its extension as a practical formula for expanding mutually beneficial world trade.

As originally conceived by the late Cordell Hull, who fathered the program, the reciprocal agreement was reciprocal. Under it a foreign nation would sell to us what they had in abundance, and which we needed, and take their pay in commodities that we had in overabundance and which they needed. Briefly and simply that is its basic theory.

What of Japanese textiles, however? Japan takes United States cotton (which she needs) at a cutrate price, and ships back cotton goods which the United States does not need; products manufactured at wage rates approximately a tenth of those in the United States plants. The cotton is acquired for 7 cents per pound less than American manufacturers have to pay for it. In the American plants, wages, hours of work, minimum age standards, and the cotton prices are all regulated by the Government—and finally, the United States industry is asked to permit this unfair competition.

There are over a thousand cotton mills in the United States, all of them sharply competitive, and they can note proudly that there are no lawsuits pending for antitrust agreements.

The fact is that these Japanese inroads, subsidized by this formidable drain on United States resources—and a basic difference of production costs—are putting the American industry out of business.

No one is suggesting the crippling of Japanese industry. She is free to find her markets where she can. But an ounce of Good economic sense would emphasize that first consideration of America, policywise, is the American interest. That isn't selfishness; it is the natural objection of any industry or people to getting its throat cut.

The United States textile industry does not fear fair competition. It has thrived on that, making millions of jobs. Very properly it opposes unfair competition, created artificially, and subsidized by millions of the tax dollars it has helped supply.—The Nashville Banner.

Negotiation With the Soviets That Accept the Status Quo of Present Communist Conquests Will Increase, Not Decrease, the Likelihood of War

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

ANTISUMMIT SCHOOL PUTS FREEDOM BEFORE PEACE

(By Edgar Ansel Mowrer)

Every right-minded westerner desires a settlement with the Kremlin. It is obvious that the advent of new weapons has made the already urgent need of eliminating war doubly urgent. This is why a majority of the people approached recently by Gallup in 13 western cities were in favor of a summit meeting.

Now obviously, the best way to obtain this would be by an inner transformation of the human individual. The nuclear age demands a different sort of man. But no serious person believes any such transformation can be achieved overnight. Since the need is immediate, statesmen have to do the best they can with the kind of people now on earth. Therefore, they must approach a Soviet appeal for a settlement with extreme caution for past experience with the Kremlin liars is anything but reassuring.

SOVIET CHOICE

Starting with the assumption that both sides today desire a settlement, one may ask what divides the Soviets (and those in the West ready to accept their view) from those westerners like Secretary Dulles who emphatically do not?

An editorialist in the ardently pronegotiation-minded Washington Post recently summed this up succinctly:

Khrushchev's speech in Minsk presents the West with a choice. Are the Allies willing or unwilling to accept the status quo in Europe, or do they intend to continue pressure for Soviet withdrawal?"

This indeed is the issue. Roughly speaking, those who favor immediate negotiations with the U. S. S. R. on almost anything believe the one issue is peace. They may—academically—admit the only obstacle to peace is the Soviet's intention of keeping and spreading their conquests by nonviolent means. Some of them have twinges of conscience when they think of allies like Poles and Czechs being subjected against their will to the monstrous Hitler-like inhumanity of Communist rule.

But in their opinion avoiding a further war is far more important than any insistence upon freedom for Soviet victims. Therefore they are for as much peace as they can get right away and would be happy to accept the status quo as the price for it.

To be sure, they bolster their wish by further arguments about the equality of strength between the United States and the U. S. S. R., about the probability that Russia will fairly soon surpass the United States in productive power and even about the American wickedness in using A-bombs against Japan in World War II. But that is just window dressing.

LIBERATION FIRST

Opponents of immediate negotiations take another idea. They are both ethically and politically opposed to any settlement that does not mean a free and united Germany and the liberation of at least the European captive countries. (Some of them add China.)

Ethically they believe it was monstrous for FDR and Churchill not to do everything they could during World War II to prevent the Soviets from extending their blight over any European countries. To them, doing nothing to save the revolting Hungarians hurts far more than A-bombing Japanese who had treacherously sunk the United States fleet. For they have been trained to put freedom above peace—not the other way around.

Politically, they believe there can be no real peace through a settlement that (a) leaves Germany divided or united and unfree; (b) leaves the East European peoples under the Soviet yoke; and (c) permits the U. S. S. R. to continue to spread subversion and local strife throughout the Middle East. In fact, they believe such a settlement would make world war III more, and not less, probable.

They believe such a settlement on any but our terms to be worse than a continuation of the cold war. For they are convinced the West, once it puts its mind to it, can win the cold war.

Only the other day, Allen Dulles, director of the Central Inteligence Agency, stated publicly that "the U. S. S. R. has a national product of some 40 percent of our own"—not counting that of west Europe. With a little

UNIVERSITY OF MICHIGAN LIBRARIES

effort the West can outproduce the Communists in all vital weapons and still maintain a high living standard.

Why then accept a settlement that holds in itself the all but certain germs of a future war, when by holding out for another 10 or 20 years, we can drive the U. S. S. R. back into those Asian fastnesses where it obviously belongs?

Here, I suggest, is the gist of the argument on immediate negotiations with the Soviets at the summit or even in the cellars of secret diplomacy.

Warning No. 4

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MULTER. Mr. Speaker, I wish to call to the attention of our colleagues the desperate unemployment situation which has developed in the State of Connecticut and the leadership which Democratic Gov. Abraham A. Ribicoff is exercising. When will our Republican President take seriously the warning signs and the human hardships which exist throughout the country?

The following article is from the New York Herald Tribune of February 9, 1958.

LEGISLATORS TO DISCUSS JOB CUT WITH RIBICOFF

HARTFORD, February 8.—Leaders of the legislature will confer Monday with Gov. Abraham A. Ribicoff to discuss the State's growing unemployment situation and decide whether or not a special session should be called.

The meeting will be held at 9:30 a. m., Monday, at the capitol. During the conference the legislative leaders and the Governor will receive reports on unemployment by the State Labor Department and reports on future employment prospects by the State Development Commission. Top officials of these two agencies have been invited to the conference.

Growing unemployment in Connecticut has become a serious problem in the State, Governor Ribicoff said today. This week, according to the latest reports of the labor department, the so-called hard core of unemployment rose to 64,000. This does not include about 23,000 others temporarily out of work because of plant shutdowns.

HIGHEST SINCE 1949

The number of unemployed in the State at present is the highest since the summer of 1949 when 108,000 persons were out of work.

Also to be filed with the conference on Monday is a slate of recommendations drafted last Thursday by the mayors of 9 Conneticut cities. The mayors' group, which wants a special session of the legislature called, has suggested elimination of the 1-week waiting period before any jobless person becomes eligible for unemployment compensation, extension of the number of weeks compensation may be paid beyond the present 26-week maximum and consideration of increasing the compensation rate above the present $40 a week maximum. The mayors also are asking that State public works projects be speeded up to provide employment and that the Federal Government channel both public works and defense contracts into Connecticut.

The State development commission has been working on a survey of employment prospects in the State and the report will be given to the Governor Monday morning. Officials of the commission recently returned from Washington where they discussed Federal defense contract plans with officials and the State's Members of Congress.

COURSES OF ACTION

If a special session of the legislature is called it is likely it will be asked to consider 2 courses of action: elimination of the 1-week waiting period and extension of the number of weeks for compensation payments.

The labor department reported this week that in the past 52 weeks 22,500 persons exhausted their unemployment compensation benefits before finding new jobs.

Governor Ribicoff has already ordered the State public works and highway departments to speed up their construction projects to provide more employment.

The legislature is controlled by Republicans. Governor Ribicoff is a Democrat.

Student Needs and Responsibilities in American Education

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, February 28, 1958

Mr. HUMPHREY. Mr. President, the distinguished young president of the National Student Association, Mr. Ray Farabee, on leave from the University of Texas, recently made a statement here in Washington on Student Needs and Responsibilities in American Education. I think Mr. Farabee's statement deserves the attention of all Members of Congress, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STUDENT NEEDS AND RESPONSIBILITIES IN AMERICAN EDUCATION

(A statement prepared by Ray Farabee, president of the U. S. National Student Association, on leave from the University of Texas)

What is the role of the student in this period of widespread concern about American education? First, the student must become the center of a more adequate educational program that better meets his individual needs and the demands of a new age. Second, the student must assume a greater responsibility in his own education. Third, the student and his college must receive support from private and government sources which insure both opportunity and quality of education.

THE STUDENT IS THE CENTER OF EDUCATION

Amid talk and proposals for American education is the student—often a forgotten man, save for criticism of his failure to conform to preconceived concepts of what a student should be. Education suddenly demands the spotlight of attention, unfortunately by shock and crises, rather than leadership or rational conclusion. Let us hope that considerations of education will now go beyond the cliché and convention—that the student and his intellectual development will become the primary concern—and that our development of educational policy will be more than temporary solutions which fail to consider the basic and ongoing problem: the development of our most valuable resource—the human mind.

Technological influences on our society require a greater knowledge of science by all college students. This does not mean that we should abandon our traditional concepts of liberal education in order to mass produce engineers, but it means that our colleges must produce a better educated citizenry for world leadership in the sciences as well as in the humanities.

GREATER STUDENT RESPONSIBILITY

The student must assume a greater responsibility for his own education. American students are willing to meet greater academic demands, if higher standards mean more than increased quantity of memorization or greater doses of spoon-fed facts soon to be forgotten.

The United States National Student Association is sponsoring a series of campus programs across the Nation in order to bring resources of the student population to the solution of certain key problems facing colleges and universities. These include programs to—

1. Stimulate interest in teaching through information programs, student-run counseling services, and greater involvement of the student in the teaching experience.

2. Increase the effectiveness of teaching through student study of teaching methods, teacher evaluation, and student-faculty committees to consider improvement of teachings.

3. Improve the quality of curriculum through student-faculty study of curriculum, recommendations for improvements, and greater involvement of students in educational policymaking.

4. Enlarge counseling and guidance services through a greater use of students.

5. Increase greater equality of educational opportunity through campus human relations activity and conferences of southern student leaders to consider student responsibility in light of recent Supreme Court decisions and racial incidents.

6. Create greater awareness of academic freedom and the purposes of education through the sponsorship of a National Academic Freedom Week, April 20-26.

NEED FOR GREATER PRIVATE AND GOVERNMENT SUPPORT

The student and his college must receive support from community and government which will insure opportunity and quality for higher education.

Rising costs, growing numbers of students, and higher academic standards obviously have direct effects on the student. His ability to financially afford education beyond the high school is lessened. The student's opportunity to attend the college of his choice is diminished. It is harder to stay in college and do satisfactory academic work, especially if one does not have the advantage of a good high-school background, or if one must work part time.

There is an immediate need for a realistic program of Federal scholarships which will indicate that educators and legislators are concerned about the American student rather than the mere production of manpower for an international science competition. Students are not asking for a handout; but, they more than any other segment of the educational community, are aware of the increasing financial barriers to college attendance.

Elected student delegates from 250 colleges across the Nation called for the establishment of a Federal Government sponsored scholarship program at the 10th National Student Congress this past summer at the University of Michigan in a resolution which stated:

"United States National Student Association believes that such a program, if properly established and administered, would aid

greatly in overcoming the financial barriers which now prevent many qualified students from attending college, and would constitute an investment in America's future well-being.

"1. A Federal scholarship program should be adequately large so as to substantially alleviate existing financial barriers to college attendance.

"2. The scholarships should be awarded on a State-quota basis. When determining the number of scholarships to be given, both the number of high-school graduates in the State and the financial status of the State should be considered. The Territories of Hawaii and Alaska as well as the Commonwealth of Puerto Rico will be allotted quotas on the same basis as the States.

"3. The scholarships should be granted to students in all fields on the basis of a single examination, designed to predict success in college. A prerequisite for eligibility shall be a predetermined minimum percentile score on the single national examination. The exams should be distributed to the States by the Federal Government. No person shall be denied the opportunity to take the examination because of race, religion, color, creed, national origin, political belief, or sex.

"4. The amount of the scholarships will be determined for each individual based on his financial need.

"5. Each recipient shall be authorized to use his scholarship at any accredited institution of higher education in the Nation, subject to his admission."

Many of the bills now before Congress are encouraging in their provisions for meeting the needs of students and American higher education. The national executive committee of the United States National Student Association heartily endorsed the $1 billion program recommended by President Eisenhower, though it was felt that 10,000 scholarships a year would not be adequate. The defense-education program sponsored by Senator LISTER HILL and Representative CARL ELLIOTT which provides for 40,000 scholarships per year seems more realistic in light of the estimated 100,000 able high-school graduates each year who do not go to college because of financial reasons.

The United States National Student Association hopes that the 2d session of the 85th Congress shall rise to the challenge of more than immediate necessity and authorize a program of tax-supported aid to education which will provide the leadership to deliver us from present crises and insure future opportunity for able students who cannot afford higher education without financial assistance.

A Salute to Finland

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. MULTER. Mr. Speaker, February 28 will be a celebrated Finnish cultural holiday. I wish to take this opportunity to offer a salute to this brave nation which is the outpost of the West.

The origins of this outstanding cultural heritage are most interesting. In the early 19th century a Finnish doctor, Elias Lonnrat, would wander off from his practice to travel among the common folk, collecting the acient runes or folk lyrics which had been passed from generation to generation by word of mouth for over a thousand years. It began simply as a labor of love, but when the collected work, the Kalevala, was published, it became the outstanding symbol of all Finland.

The Kalevala proved to the Swedish-dominated intelligentsia that there was an original Finnish culture and a literature in the distinct Finnish language. It became and remains the focal point of Finnish nationalism. Coming at a time of deep psychological need when the people had suffered under both the Swedish and Russian yokes, this poetry was a gift straight from heaven, the epic of the Finnish people written in their own language. The Kalevala provides the key to all that is Finnish. It is the mainspring for all Finnish creative activity. It is most fitting that the cultural holiday celebrated on February 28 should be named Kalevala Day.

Today Finland celebrates her proud cultural heritage, a record of outstanding continuous progress. Finland is one of the few countries that never experienced the institution of serfdom; her people have a strong tradition of independence that is reflected in the culture. In the 17th century an adult Finn who could not read often suffered public humiliation in the stocks; nor could anyone be married until he had learned his A B C's. This policy of education enforced by the church resulted in the fact that Finland's time of literacy is counted in centuries. Today with the influence of a modern system of education instituted after independence in 1918, Finland's literacy rate is almost 100 percent, one of the highest in the world. Higher education dates from the founding in 1640 of Helsinki University, which today has an enrollment of 10,000.

Most of the important cultural activities of Finland today can be traced in inspiration to the Kalevala which by now, through additional efforts of collectors, is a huge treasure house of folk literature. In the works of Jean Sibelius, Aleksis Kivi, and J. L. Runeberg, names famous for their contributions to world music and literature, can be traced the motifs of the Kalevala.

But the cultural heritage of Finland does not lie alone in her great names. It lies, as the Kalevala did for so many years, with the common people. Finland celebrates this holiday as a recognition of the cultural achievement of individual citizens. Books, foreign as well as Finnish, enjoy a huge circulation in Finland. There is a thriving legitimate theater fed by over 3,000 amateur theatrical groups. Helsinki boasts a ballet and an opera, as well as sharing symphony orchestras with several cities. Choirs and choral groups are a national activity. The native film industry produces about 20 films per year and imports a large number of others, chiefly from the United States. In the practical arts Finland, with the rest of Scandinavia, has established a worldwide reputation for modern crafts in glass, wood, and stone.

The United States is happy to acknowledge the heights of Finland's achievements and add congratulations on this day of celebration. We feel close ties with this courageous nation. In the period extending from 1893 to 1914 more than 200,000 Finns settled here in this country, enriching our own culture. Unfortunately, today, under our discriminatory immigration policy, the Finnish quota is only 569 annually. We should take immediate action to correct this unenlightened policy.

When Finland became independent in 1918, encouraged by Woodrow Wilson's 14 points, their constitution was modeled partly on the United States Constitution. We in the United States watched breathlessly the unequal struggle between Finland and the U. S. S. R. and cheered the pluck of the smaller country that lost some of its territory but not any of its freedom. Living in the daily shadow of the Soviet world, Finland gives a clear example to the free world of democracy on guard.

Economically, Finland is as proud and independent as it is culturally and politically. In 1919, facing starvation, Finland received aid under the Hoover plan; they continued to repay every cent of that loan. In 1949 the 81st Congress of the United States decided to use the repayments to support a cultural exchange program between the two countries.

Even after World War II and the terrible devastation visited upon Finland by both Germany and Russia, Finland has steadfastly declined to ask for grants-in-aid, choosing instead loans which are being steadily repaid.

We of the United States are proud to claim Finland as a friend and partner in the free-world community. On this day of celebration it is well to again renew those ties of friendship that draw us closer together in this smaller, ideatorn world.

Milwaukee Foremen's Safety School

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, February 28, 1958

Mr. WILEY. Mr. President, I was pleased to receive an announcement this morning concerning the convening, on March 19, of the largest employee safety training school in the Nation—the Milwaukee Foremen's Safety School.

Last year, more than 300 firms in greater Milwaukee enrolled 10,800 employees for this excellent training course.

The program is, of course, designed as a service in the never-ending battle for human life and welfare.

It is a service to labor, to management, and to the families of every individual involved.

The State of Wisconsin, and Milwaukee in particular, have long had a fine tradition in industrial safety. The school, itself, has been in continuous operation since 1920. Milwaukee, as a community, is the birthplace of the National Safety Movement. In Milwaukee, occupational accidents have been reduced to less than 50 percent of the national level.

UNIVERSITY OF MICHIGAN LIBRARIES

That has meant a saving, last year, of no less than 57 lives and 6,000 crippling injuries. Had these occurred, there would have been an economic loss of $12 million additional in lost wages, medical costs, and lost production.

But, more important, who can reckon the toll in human happiness which might have been taken had these injuries resulted?

I want to congratulate the Milwaukee Association of Commerce for its inspired leadership in conducting this school. I am sure that 1958's participation and attendance will be the best ever.

I want, in particular, to commend the chairman of the association's industrial safety division, Mr. Joseph Cairnes, who is, incidentally, president of the Milwaukee Braves; Mr. James G. Dickinson, superintendent of accident prevention for the Wisconsin Electric Power Co., who is chairman of the school; and Mr. Clarence J. Muth, manager of the industrial safety division for the association of commerce, itself, who handles the overall program.

I send to the desk a bulletin announcing the various sections of the program and the schedule of events, and ask unanimous consent that its text be printed in the Appendix of the RECORD.

There being no objection, the bulletin was ordered to be printed in the RECORD, as follows:

MILWAUKEE FOREMAN'S SAFETY SCHOOL, 1958—CONDUCTED BY MILWAUKEE ASSOCIATION OF COMMERCE

DEDICATED TO THE CONSERVATION OF HUMAN LIFE

The tragic killing in America each year of 95,000 men, women and children on our streets and highways, in our homes and in the workshops of the Nation can and must be curtailed.

The Milwaukee Foreman's Safety School—in continuous operation since 1920—is dedicated to this objective—the conservation of human life through instruction in the basic principles of safety.

Since twice as many employees are killed and injured away from the job—in homes and in traffic—these same principle must now be applied to the growing "off-the-job" accident problem.

Milwaukee—the birthplace of the national safety movement—is setting a shining example of the effectiveness of safety education through the training annually of more than 10,000 supervisory employees in the fundamentals of accident prevention.

As a result, occupational accidents in metropolitan Milwaukee have been reduced to less than 50 percent of the national level—with a saving last year of 57 lives and 6,000 crippling injuries and an economic saving of $12 million in lost wages, medical costs and lost production.

The Milwaukee Association of Commerce through its industrial safety division welcomes your active participation in this training school—dedicated to the challenging objective of life conservation.

Enrollment last year, 10,800 persons representing 300 business firms in America's largest safety school.

THIRTY-EIGHTH ANNUAL SESSION, MILWAUKEE FOREMEN'S SAFETY SCHOOL, MILWAUKEE AUDITORIUM

Joseph F. Cairnes, president, Milwaukee Braves, chairman, industrial safety division.

James G. Dickinson, superintendent of accident prevention, Wisconsin Electric Power Co., chairman of school.

Clarence J. Muth, manager, industrial safety division, Milwaukee Association of Commerce.

Conducted by industrial safety division, Milwaukee Association of Commerce.

INFORMATION

Purpose: A safety training school for all interested employees of metropolitan Milwaukee industries and mercantile establishments.

Instruction: In the fundamentals of plant and manpower protection, causes, and control of occupational accidents.

Features: Addresses by outstanding safety authorities, films, discussions, and demonstrations.

Schedule: March 19, April 30, May 21, Milwaukee auditorium; 7:45 p. m., eight occupational sections; 8:45 p. m., general assembly.

Enrollment: No registration fee. Employees should be registered in section closest allied to occupation. Advance registrations should be sent by company to industrial safety division, Milwaukee Association of Commerce, 611 North Broadway. Those individuals not previously enrolled before opening of school may register on meeting nights at Milwaukee auditorium, Fifth Street lobby.

Certificates: Will be awarded to those who attended a minimum of 2 of the 3 monthly sessions of the school (including both sectional and general assembly meetings). All attendance cards will be collected at closing sessions.

Reception and ushering committee: Chairman, Robert E. Gess, Employers Mutuals of Wausau; Edward L. Hanley, Wisconsin Society of Professional Engineers; Arnold W. Rosmann, Norris, FitzGerald & Russell Co.

For further information call BR. 3-3000 or write Clarence J. Muth, manager, industrial safety division, Milwaukee Association of Commerce, 611 North Broadway, Milwaukee.

ELECTRICAL AND PLANT MAINTENANCE SECTION

Chairman, Thomas F. Hedglin, General Electric Co., X-ray department.

Vice chairman, Francis T. Murphy, Ladish Co.

The Louis Allis Co., Daniel Harper.

American District Telegraph Co., Lloyd O. Hanson.

Badger Meter Manufacturing Co., George W. Malen.

Downing Box Co., Robert F. Tallmadge.

Hotpoint Co., Phillip W. Kuehn.

Interior Woodwork Co., Rudolph H. Mertin.

George J. Meyer Manufacturing Co., Milton A. Ollmann.

Milwaukee School of Engineering, Harold E. Lowe.

Milwaukee and Suburban Transport Corp., Carl J. Andersen.

Mueller Climatrol, Wm. Smith Malloy.

Pittsburgh Plate Glass Co., Walter A. Kringle.

Ed. Schuster & Co., Inc., Charles E. Billenness.

Square D Co., Russell W. Allman.

Wisconsin Electric Power Co., Peter M. Cartwright.

Wisconsin Telephone Co., Jerome C. Kinville.

(North) Kilbourn Hall

Turn right, first floor. Sectional meetings commence promptly at 7:45 p. m.

1. Wednesday, March 19, 1958: Radiation—Friend and Foe, Howard H. Fawcett, safety engineer, research laboratory, General Electric Co., Schenectady, N. Y.

2. Wednesday, April 30, 1958: Industrial Codes and You, John H. Rouse, commissioner, Wisconsin State Industrial Commission, Madison, Wis.

3. Wednesday, May 21, 1958: Knowing's Not Enough, film, courtesy of United States Steel Corp. (Combined meeting with foundry section and food and beverage section).

FOOD AND BEVERAGE SECTION

Chairman, Franklin A. McVety, the Borden Co.

Vice chairman, Cyril V. McDonald, Froedtert Malt Corp.

Blatz Brewing Co., Gregg R. Meyers.

Blochowiak Dairy Co., George S. Rydzewski.

Continental Baking Co., George Prusynski.

Patrick Cudahy Co., Norbert R. Sherman.

Dairyland Cooperative Association, Hilmer F. Uttech.

Independent Milwaukee Brewery, William O. Schwan.

Miller Brewing Co., J. Lloyd Cantrell.

National Food Stores, Inc., Thomas C. Prohaska.

Pabst Brewing Co., William R. Forrestal.

Plankinton Packing Co., Eugene K. Winter.

Joseph Schlitz Brewing Co., Edward J. Steinkellner.

Sperry Candy Co., Frank P. Lenske.

Fred Usinger, Inc., Carl Usinger.

(South) Kilbourn Hall

Turn right, first floor. Sectional meetings commence promptly at 7:45 p. m.

1. Wednesday, March 19, 1958: Practice Safety First—at Home, Miss Margaret Wiesner, registered nurse, Milwaukee Sentinel, Milwaukee, Wis.

2. Wednesday, April 30, 1958: Back the Attack—at Work, Walter A. Weisleder, Wisconsin district manager, Liberty Mutual Insurance Co., Milwaukee, Wis.

3. Wednesday, May 21, 1958: Knowing's Not Enough, film, courtesy of United States Steel Corp. (Combined meeting with foundry section and electrical and plant maintenance section).

FOUNDRY SECTION

Chairman, Richard D. Lutz, the Falk Corp.

Vice chairman, Ralph J. Fiskow, Chain Belt Co.

American Optical Co., Arthur W. Nero.

Ampco Metal, Inc., Robert R. Tews.

Crucible Steel Casting Co., Ralph C. Steinmeyer.

Employers Mutuals of Wausau, Leroy S. Talbot.

Grede Foundries, Inc., S. Water Division, Alvin S. Nadolski.

Koehring Co., Bernard M. Schubert.

Maynard Electric Steel Casting Co., Leonard L. Bartell.

Motor Castings Co., Donald R. Tenley.

Nordberg Mfg. Co., Donald F. Possell.

Sivyer Steel Casting Co., Leo S. Nogalski.

Universal-Rundle Corp., Edward J. Schroedter.

Universal Safety Equipment Co., Thad J. Starszak.

Vilter Mfg. Co., Donald J. Baird.

Wehr Steel Co., Eugene C. Huebner.

Walker Hall

Turn right, first floor. Sectional meetings commence promptly at 7:45 p. m.

1. Wednesday, March 19, 1958: It's Happened—Now What? Gordon Lemke, research engineer, home accident prevention, Employers Mutuals of Wausau, Wausau, Wis.

2. Wednesday, April 30, 1958: Who's Going To Do It? Arthur Agostini, plant manager, south water division, Grede Foundries, Inc., Milwaukee, Wis.

3. Wednesday, May 21, 1958: Knowing's Not Enough, film, courtesy of U. S. Steel Corp. (combined meeting with electrical and plant maintenance section and food and beverage section.)

MILWAUKEE FOREMEN'S SAFETY SCHOOL, GENERAL ASSEMBLY, BRUCE HALL, MILWAUKEE AUDITORIUM

1. Wednesday, March 19, 1958: Selling Safety—It's Your Job, Gene Flack, New York

City, N. Y. "Sunshine Gene"—known from coast to coast as one of the most dynamic speakers in America—presenting a powerful, dramatic message as the lead-off speaker of our school. Presented through courtesy of Sunshine Biscuits, Inc., New York; Allis-Chalmers orchestra and ensemble; director, Leroy Vick; manager, Henry A. Mielcarek.

2. Wednesday, April 30, 1958: Safety Is a Way of Life, Dr. Carl S. Winters, Oak Park, Ill. World traveler—former crime commissioner of Michigan, current skid-row chairman of Chicago—two-fisted, hard-hitting, he-man with a double barreled challenge for action. Presented through courtesy of General Motors Corp., Detroit; Johnson Wax Men's Glee Club, Racine, director—Frederick Schulte; Milwaukee Police Band, Director, Dr. R. O. Brunkhorst.

3. Wednesday, May 21, 1958, special graduation program: Human Life at Stake, Hon. R. G. Knutson, chairman, Industrial Commission of Wisconsin, Madison, Wis.

Honorary 25-year awards to be presented to those enrollees who have actively participated in the school during the past quarter century. Lester S. Olsen, president, Milwaukee Association of Commerce.

Cutler-Hammer Band: Director, Arthur F. Gehrke; manager, Elmer F. Lewitz.

Hotpoint Choristers, Chicago. Director, John T. Engstrom.

An enchanting half-hour musical treat on the graduation night of America's largest safety school.

MACHINE SHOP SECTION

(Including erectors and assemblers of machinery)

Chairman, Wilbur J. Berard, Koehring Co.

Vice chairman, John R. Joerg, Harley-Davidson Motor Co.

A-C Spark Plug division, General Motors Corp., Edward P. Ebert.

Blackhawk Manufacturing Co., Albert C. Stevens.

Bradley Washfountain Co., Rudolph L. Tank.

Briggs & Stratton Corp., Anthony T. Dirksmeyer.

Caterpillar Tractor Co., R. H. Hennarichs.

Evinrude Motors, Lester C. Bloedorn.

Kearney & Trecker Corp., Edward D. O'Keef.

The Oilgear Co., Ralph L. Hansen.

Perlick Brass Co., Howard H. Perlick.

Smith Engineering Works, Kenneth J. Bowen.

The T. L. Smith Co., Kent M. Quantius.

Unit Crane & Shovel Corp., Frank J. Glisch.

Plankinton Hall

Turn right, second floor. Sectional meetings commence promptly at 7:45 p. m.

1. Wednesday, March 19, 1958: The Human Element, Joseph J. Banach, safety manager, Ansul Chemical Co., Marinette, Wis.

2. Wednesday, April 30, 1958: Sputniks and You, Carl Graeber, professional engineer, Milwaukee, Wis.

3. Wednesday, May 21, 1958: Fate in '58, Les J. Mangin, personnel director, Manitowoc Shipbuilding, Inc., Manitowoc, Wis.

MANAGEMENT AND SUPERVISORY SECTION

Chairman, James G. Reilly, Cutler-Hammer, Inc.

Vice chairman, Philip W. Behling, Pittsburgh Plate Glass Co.

A-C Spark Plug division, General Motors Corp., Dorr C. Snoyenbos.

Allen-Bradley Co., Murdoch G. Pryor.

Allis-Chalmers Manufacturing Co., W. C. Van Cleaf.

American Motors Corp., Robert P. Lang.

Bucyrus-Erie Co., Henry W. Fels.

Harnischfeger Corp., Robert O. Losse.

International Harvester Co., Jean G. Dapp.

Plankinton Packing Co., Walter E. Meyer.

Western Union Telegraph Co., Raymond H. Underwood.

(An advanced section in which attendance is limited to supervisory employees selected by each company—enrollment not to exceed 10 percent of company registration.)

Engelmann Hall

Turn right, second floor. Sectional meetings commence promptly at 7:45 p. m.

1. Wednesday, March 19, 1958: Safety Leadership Milwaukee Wide, Chief Howard O. Johnson, Milwaukee Police Department, Milwaukee, Wis.

2. Wednesday, April 30, 1958: Safety Leadership—In Modern Management, F. S. Cornell, executive vice president, A. O. Smith Corp., Milwaukee, Wis.

3. Wednesday, May 21, 1958: Safety Leadership in Multiplant Operations, Joseph A. Anderson, general manager, A-C Spark Plug division, General Motors Corp., Flint, Mich.

MATERIAL HANDLING AND TRANSPORTATION SECTION

Chairman, Clarence R. Seybold, Smith Engineering Works.

Vice chairman, Fred J. Ladwig, the Milwaukee Road.

American Can Co., Harold L. Rahn.

Chicago & North Western Railway Co., Carl A. Stark.

Cleaver-Brooks Co., William T. McGarry.

Globe-Union, Inc., Robert W. Schindler.

Harnischfeger Corp., Frederick C. Krieger.

Chas. A. Krause Milling Co., Walter D. Hooks.

Milsco Manufacturing Co., Rudolph E. Vetter.

Milwaukee Gas Light Co., Warren E. Fuhrman.

Northern Refrigerator Line, Inc., Norman J. Orlinski.

Northwestern-Hanna Fuel Co., Ray W. Rodgers.

Pfister & Vogel Tanning Co., Byron C. Goodman.

A. O. Smith Corp., Fred J. Salmon.

Socony Mobil Oil Co., Carl J. Mertins.

Union Refrigerator Transit Lines, Albert R. Erdmann.

Wauwatosa Fuel & Supply Co., Richard F. Kuether.

Wisconsin Ice & Coal Co., Jacob J. Makutz.

Woerfel Corp., Nick Doka.

Wrought Washer Manufacturing Co., Albert Cee.

Juneau Hall

Turn right, first floor. Sectional meetings commence promptly at 7:45 p. m.

1. Wednesday, March 19, 1958: What's on Your Mind? Dr. James Rohrer, consulting psychologist, Rohrer, Hibler & Replogle, Milwaukee, Wis.

2. Wednesday, April 30, 1958: Make Safety Your Satellite, M. J. McCarthy, safety consultant, Columbus McKinnon Chain Corp., Tonawanda, N. Y.

3. Wednesday, May 21, 1958: Safe-T-Formation, Dr. Howard Wilson, assistant director, management center, Marquette University, Milwaukee, Wis.

METAL TRADES SECTION

(Stamping, forging, welding, fabrication)

Chairman, E. Clark Woodward, A. O. Smith Corp.

Vice chairman, Joseph E. Carone, Pressed Steel Tank Co.

American Motors Corp., Edward Haverberg.

Babcock & Wilcox Co., Lee J. Hinyta.

Dings Magnetic Separator Co., Harry N. Wold.

Geuder, Paeschke & Frey Co., Chester J. Ziolkowski.

The Heil Co., Charles A. Baumann.

Inland Steel Products Co., Curtis B. Gallenbeck.

Interstate Drop Forge Co., Russell F. Lauer.

Ladish Co., George P. Dunn.

Lakeside Bridge & Steel Co., Eldridge W. Kieber.

A. J. Lindemann & Hoverson Co., Paul J. Dzierski.

Master Lock Co., Robert A. Kreilkamp.

Perfex Corp., Cornelius J. Kallas.

Reinke & Schomann, Inc., William Schomann.

Unit Drop Forge, division of Fuller Manufacturing Co., John Kavanaugh.

E. R. Wagner Manufacturing Co., William H. Horder.

Wisconsin Bridge & Iron Co., Herman J. Peters.

Market Hall

Turn right, downstairs. Sectional meetings commence promptly at 7:45 p. m.

1. Wednesday, March 19, 1958: Sight Security, Milton M. Bowman, safety coordinator, city of Cleveland, Ohio.

2. Wednesday, April 30, 1958: Teach Your Child To Be Safe, E. Clark Woodward, director of safety, A. O. Smith Corp., Milwaukee, Wis.

3. Wednesday, May 21, 1958: Anxiety and Frustration as Causes of Accidents, Dr. Paul J. Mundie, Humber, Mundie & McClary, Milwaukee, Wis.

ALL TRADES (MISCELLANEOUS) SECTION

(This section is intended for all trade groups not included in previous classifications)

Chairman, Herbert H. Koepke, Johnson Service Co.

Vice chairman, Edward G. Goldbeck, Milwaukee Solvay Coke Co.

Max Branovan Shoe Co., Max Branovan.

Cornell Paperboard Products Co., Henry Kvintus.

Evert Container Corp., Robert T. Wolter.

A. F. Gallun & Sons Corp., William R. Fritze.

Gaylord Container Corp., George W. Heckle.

M. A. Gerett Corp., Norman R. Will.

J. J. Jones Co., Chester C. Link.

Lakeside Laboratories, Inc., Albert A. Pickering.

Merchants Police, Inc., Edward R. Swanson.

Milwaukee Vocational School, George W. Farndale.

Northwestern Mutual Life Insurance Co., Richard A. Bergemann.

Nunn-Bush Shoe Co., Elmer E. Rexin.

John Oster Manufacturing Co., Harold J. Maury.

Weyenberg Shoe Manufacturing Co., Robert W. Nelson.

Bruce Hall

Milwaukee Auditorium. Sectional meetings commence promptly at 7:45 p. m.

1. Wednesday, March 19, 1958: Facts, Figures, and Frustrations. Thomas J. Cleland, director, industrial relations, National Paperboard Association, Chicago, Ill. (Sponsored by Cornell Paperboard Products Co.)

2. Wednesday, April 30, 1958: What's Your Hurry? Raymond A. Dahl, deputy inspector; director, police training school, Milwaukee Police Department, Milwaukee, Wis.

3. Wednesday, May 21, 1958: Are You Safe at Home? Mrs. Arno R. (Marie) Fischer, volunteer worker, American Red Cross, Milwaukee, Wis.

MILWAUKEE FOREMEN'S SAFETY SCHOOL PROGRAM ADVISORY COMMITTEE

IMMEDIATE PAST CHAIRMAN, INDUSTRIAL SAFETY DIVISION

1954–57: John H. Kopmeier, president, Wisconsin Ice & Coal Co.

PAST CHAIRMEN OF SCHOOL

1955–56: Michael F. Biancardi, Allis-Chalmers Manufacturing Co.

1953–54: Erwin C. Brenner, Milwaukee Gas Light Co.

1950–52: Myron E. Jolidon, Standard Oil Co.

1948–49: Arnold O. Olson, Wisconsin Motor Corp.

All sessions begin promptly at 7:45 p. m.

UNIVERSITY OF MICHIGAN LIBRARIES

Certificates will be awarded at close of school only to those enrollees who attend a minimum of 2 of the 3 monthly sessions.

Honorary 25-year awards to be presented at closing session on May 21 to those who have actively participated in the school during the past 25 years. Qualifications must be cleared through and authorized by the personnel and safety director of your company.

MILWAUKEE ASSOCIATION OF COMMERCE

President: Lester S. Olsen, Olsen Publishing Co.

Executive vice president: Ray H. Weisbrod.

INDUSTRIAL SAFETY DIVISION OPERATING COMMITTEE

Chairman of division: Joseph F. Cairnes, Milwaukee Braves.

Chairman of school: James G. Dickinson, Wisconsin Electric Power Co.

Philip W. Behling, Pittsburgh Plate Glass Co.

Wilbur J. Berard, Koehring Co.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D. D.

STANDING COMMITTEES OF THE SENATE

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Scott, Symington, Talmadge, Aiken, Young, Thye, Hickenlooper, Mundt, Williams, and Schoeppel.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Bridges, Saltonstall, Young, Knowland, Thye, Mundt, Mrs. Smith of Maine, Messrs. Dworshak, Dirksen, Potter, and Ives.

Committee on Armed Services

Messrs. Russell (chairman), Byrd, Johnson of Texas, Kefauver, Stennis, Symington, Jackson, Ervin, Saltonstall, Bridges, Flanders, Mrs. Smith of Maine, Messrs. Case of South Dakota, Bush, and Barrett.

Committee on Banking and Currency

Messrs. Fulbright (chairman), Robertson, Sparkman, Frear, Douglas, Monroney, Clark, Proxmire, Capehart, Bricker, Bennett, Bush, Beall, Payne, and Case of New Jersey.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Clark, Proxmire, Beall, Morton, Javits, and Hoblitzell.

Committee on Finance

Messrs. Byrd (chairman), Kerr, Frear, Long, Smathers, Anderson, Douglas, Gore, Martin of Pennsylvania, Williams, Flanders, Malone, Carlson, Bennett, and Jenner.

Committee on Foreign Relations

Messrs. Green (chairman), Fulbright, Sparkman, Humphrey, Mansfield, Morse, Long, Kennedy, Wiley, Smith of New Jersey, Hickenlooper, Langer, Knowland, Aiken, and Capehart.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Symington, Ervin, Humphrey, Thurmond, Lausche, Mundt, Mrs. Smith of Maine, Messrs. Martin of Iowa, Curtis, Revercomb, and Capehart.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Neuberger, Carroll, Church, Malone, Watkins, Dworshak, Kuchel, Barrett, Goldwater, and Allott.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Bible, Thurmond, Lausche, Yarborough, Bricker, Schoeppel, Butler, Potter, Purtell, Payne, and Cotton.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Wiley, Langer, Jenner, Watkins, Dirksen, Butler, and Hruska.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Thurmond, Yarborough, Smith of New Jersey, Ives, Purtell, Goldwater, Allott, and Cooper.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Scott, Neuberger, Church, Yarborough, Proxmire, Carlson, Jenner, Langer, Martin of Iowa, Morton, and Hoblitzell.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, Gore, McNamara, Neuberger, Scott, ———, Martin of Pennsylvania, Case of South Dakota, Kuchel, Cotton, Hruska, and Revercomb.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Talmadge, Curtis, Cooper, Javits, and Case of New Jersey.

Investigation of Conditions in Labor-Management Relations

EXTENSION OF REMARKS
OF

HON. JAMES O. EASTLAND

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, March 3, 1958

Mr. EASTLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the senior Senator from Arkansas [Mr. MCCLELLAN] at the annual dinner of the Traffic Club of New York City on February 20, 1958.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR JOHN MCCLELLAN AT THE ANNUAL DINNER OF THE TRAFFIC CLUB OF NEW YORK, NEW YORK CITY, N. Y., FEBRUARY 20, 1958

Mr. Chairman, it is a very great honor to be your guest this evening. It is a high privilege indeed to have this opportunity to address such a magnificent audience. I have looked forward to this delightful occasion with keen pleasure and anticipation.

I have long heard that your annual dinners are distinguished by the fact that they attract large numbers of outstanding leaders who are truly representative of the transportation industry and the traffic systems of our great country, and this one is no exception.

Before this informed group it would be fruitless for me to talk about the vital importance of transportation as it is related to the growth, economic power, and security of our Nation. You who are directly associated with, and who are so thoroughly acquainted with, the history and outstanding achievements of our transportation industry could hardly be impressed by any statistics that I might quote, nor could you be entertained by, or benefit from, any glittering generalities in which I might indulge.

Although I am in a general way familiar with pressing problems now confronting some segments of transportation, it would be most presumptous of me, with my limited knowledge, to undertake at this time any informative discussion of them, or to offer any suggestion of a legislative program for their solution.

Some of your difficulties I know need legislative attention. The Congress is aware of that, and I am persuaded that it will give early consideration to bills that are designed to remove discrimination and to eliminate inequities wherever they may now exist. To that end, I shall gladly cooperate with my colleagues who serve on the respective committees having jurisdiction over those measures and who have the initial responsibility for processing and recommending appropriate corrective legislation.

But tonight my remarks shall be addressed, not to matters of peculiar interest to the transportation industry alone, but rather to subjects of grave concern to all of our citizens everywhere.

I do not believe it is an overstatement of reality to say that we stand today at a crucial turning point in world history. International tensions, it seems to me, mount rather than diminish. Our security continues to be threatened; our safety endangered; our freedom and our very survival challenged.

No Congress within my service or memory has been confronted with graver or more urgent problems demanding attention and action. These problems involve intricate, complex, and highly controversial issues that must be resolved. Their proper solution will require wisdom, courage, and statesmanship of the highest order.

During the past dozen years in the cold-war struggle with atheistic communism, we have spent (under the stress of compelling necessity) more than $300 billion for an arsenal to keep ourselves and our allies prepared for any eventuality. The Defense Establishment we have built has been, up to now, sufficient to deter Communist aggression.

Our aim has been to maintain such control of the land, of the sea, and of the air as would provide us protection and security. But a fundamental revolution has recently taken place. Science and technology have been advanced to such unprecedented dimensions that dominance of the land, of the sea, and of the air is no longer militarily sufficient to insure our safety.

The new frontiers projected on the horizon of this satellite age are fraught with hazards and dangers that force us into a contest with Russia for the mastery of outer space and for supremacy in ballistic missiles. Our survival may well depend upon—and I believe it does—our ingenuity and capacity to not only keep pace with, but ahead of, the totalitarian world in those areas of science and technology. Should the Communist powers prevail in this contest, they will dominate this planet on which we live and have all humanity at their mercy.

Such a potentiality is horrible to contemplate, but such a possibility must be kept uppermost in our minds during the months and years ahead. In this cosmic duel we must be the victors, else we may well become the vanquished.

Let us not be deceived. The struggle on which we have embarked has no end in sight. It is a desperate, unrelating conflict of indeterminable duration. In the days gone by we have not been indifferent, but neither have we been sufficiently alert.

Made complacent by the knowledge of our incontestable superiority in the past, and by our overoptimism for the future, we have taken too much for granted. We relaxed our guard and miscalculated and underestimated what Russia was doing. Thus we have failed to assess properly the overall effort and progress she was making. We have simply been too slow to grasp and acknowledge the full import and significance of the Communist tyranny and its international conspiracy.

Recent Soviet successes present harsh and irrefutable proof that in some vital areas of science and technology Russia has gained, at least, a temporary lead and advantage. To me, this cold fact has somber implications of military peril which we cannot ignore except at the risk of our own destruction. We must recapture as quickly as possible that which we have lost. It is imperative that we do so. We cannot permit any considerations to interfere; we cannot brook any delay in our efforts to speed progress in that direction.

Our highest hopes and aspirations, our ultimate goals, are, and have always been, to preserve freedom, to promote tranquillity among all nations, and to establish an honorable and lasting peace. These ends cannot be achieved by our reverting to a posture of military weakness, or by our lagging second best to the totalitarian powers in our scientific and technological achievements. Such a decline in our international stature, if permitted to occur, would promptly expose and subject the whole free world to ruthless aggression and conquest.

The attainment of our objectives poses problems and necessitates projects that transcend in magnitude and importance all other tasks and issues awaiting resolvement. They must remain the top priorities of our labors and ingenuity.

To meet the exacting demands they have, and will, thrust upon us, we shall need to develop, conserve, and prudently use our economic strength and resources. Sound fiscal policies are vital if we are to keep our economy strong. The economic power that we shall surely need in the long and titanic struggle ahead is not reposed, nor can it be found, in an insolvent government and a bankrupt national treasury.

Nor can we tolerate, in this era of challenge and crisis, anything in our domestic affairs which has an adverse impact and a weakening influence upon the vigor and strength of our national economy. In my opinion, any improper practices, criminal activities, or oppressive conditions that prevail in labor-management relations definitely fall within that category.

When I first became chairman of the Senate select committee charged with the duty of investigating improper practices in management-labor relations, I had only a limited concept of the scope and the importance of the assignment that the committee was undertaking. Little did I realize then the full nature of the intimidation, coercion, force, violence, dictatorship, and corruption which were to be revealed, and the extent to which they had pervaded labor-management relations. The grim truth and ugly facts of the unwholesome conditions that prevail are now being brought to light before the bar of public opinion.

As you may know, the committee is now preparing, and will soon submit to the Senate, an interim report covering its work during the first year of its labors. When this report becomes available to the public, I strongly commend it to each of you as must reading. Although the press has given the committee's revelations fine coverage, it has been impossible for it to present the full story in all of its sordid details. I believe that when you read the report you will agree with me that the combined talents of our best fiction writers could not have created or contrived a more fantastic story.

The crime, corruption, and improper activities we have uncovered, as shown in the report, are so recurrent, shameful, and shocking as to constitute a national disgrace. It is almost incredible, almost unthinkable that such exploitation of the laboring man, of management, and of the general public as the committee has unearthed could happen in America, and, worse still, that it has occured, and still exists, with impunity.

I do not believe there can be found in the annals of Congress a record of any com-

UNIVERSITY OF MICHIGAN LIBRARIES

mittee that ever labored more faithfully than this select committee, or that developed more factual and valuable information for legislative purposes.

Last year we held 104 days of public hearings in which we heard 486 witnesses whose recorded testimony covered 17,489 pages of transcript. In addition, the committee held many executive sessions and conferences. For each witness who appeared before the committee, the staff interviewed another 20 or 25 people; and the staff also examined, checked, and screened literally thousands of letters, records, documents, and accounts. Nearly 100,000 letters were received. Seventy-five percent or more of these were from union members or their families. Thousands of complaints have been filed with us. Many of them have real merit and warrant committee action. It will never be possible, however, for this committee to process all of them.

From these facts alone, you can judge that the committee's task is stupendous. To describe it as colossal would be no exaggeration. It is certainly most arduous, difficult, and often unpleasant.

Necessarily, we have had to deal in many instances with people of low character, or of no character at all: manipulators and conspirators (both in labor and management), crooks, hoodlums, thieves, thugs, extortionists, and murderers. From such witnesses we try to get evidence—facts within their knowledge that would reveal what the public and the Congress have the right to know. Many of them resort to willful perjury; others invoke, capriciously use, and flagrantly abuse, the privilege of the fifth amendment; some sink into a coma of forgetfulness, and their memory faculties completely collapse when they are interrogated. Some of these witnesses who have appeared before us are among the Goliaths of the underworld and organized crime.

Professional criminals, racketeers, gangsters, and other assorted disreputable types have infiltrated the union movement—in some unions and some areas—to an extent that is alarming and dangerous. They have seized key positions from which they have been able to exploit labor-management relations for their own personal greed, gain, and profit.

Such infiltration has by no means been accidental. It has been the result of a deliberate and calculated effort by hoodlum and criminal elements to entrench themselves in the labor movement as a means of grabbing money and power. This infiltration constitutes one of the most critical problems which confront honest unionism. It poses one of the greatest threats to law and order, to our free economy, and to the civil and human rights to all of our citizens.

These elements not only flout the laws of common decency, equity, and justice—they have defied the AFL–CIO's enforcement of its ethical codes and standards and they will finally, if not stopped, challenge the very supremacy of our Government. These ruthless, evil men would, and will, unless prevented, create and perpetuate a gangster economy in this country.

Just take a look at the teamsters, the largest and most strategic labor union in the country, the one with which you in the transportation industry are directly concerned, and which wields tremendous power over the transportation services and facilities of our entire economy.

Notwithstanding the exposure of the corrupt and criminal activities of a number of its leaders, who befouled this great union with a racket-ridden, hoodlum-infested, scandal-packed administration, the Hoffa and O'Rourke elements still reign supreme, although the Teamsters International Union has been expelled from the parent federation, the AFL–CIO.

To illustrate the vicious and contemptible attitude of the rulers of the union, and their depravity of intellect and character, we need only quote from the remarks of Mr. Hoffa in an interview given to Mr. Clark Mollenhoff, and published in the January 12 issue of the Des Moines Register and Tribune and the Nashville Tennessean. In this interview Hoffa baldly declared that Glenn W. Smith, the teamster chief of Chattanooga, who served 2 penitentiary terms for robbery and burglary, and whom the committee exposed as 1 of the 3 men largely responsible for the violence and depredations committed in the Tennessee area, is the "kind of a guy needed to kick those hillbillies around" (referring to teamster union members in Tennessee and the South). Hoffa also is quoted as referring to truckers in the South as "them lice," and saying that the unprincipled employers with whom the union deals in Tennessee, and the "hillbillies" who are union members, make it necessary to keep men like Glenn Smith, "Hard of Hearing" Smith, and Don Vestal in official positions in the union.

Hoffa then, in effect, brazenly announced his purpose and intention to keep unreformed exconvicts, thieves, extortionists, hoodlums, racketeers, gangsters, and musclemen at the head of important local unions, and to rule and dominate by force and violence.

Another union comparable to the teamsters in the low stature of its leadership and administration is the International Union of Operating Engineers. There are a number of other unions—some of which the committee has already probed, such as the Bakery and Confectionery Workers International Union, and the United Textile Workers of America—which have a most unsavory record of dictatorial and corrupt operations. Preliminary investigations are underway by the committee preparatory to public hearings on still other unions which I am convinced will suffer in public esteem and confidence when their practices and conduct are bared to the spotlight of public inquiry.

The labor movement in this country has grown up. It is no longer a struggling infant. It is now big business. Labor organizations control billions of dollars of our national wealth. Their annual income from initiation fees, dues, and assessments exceeds $600 million. Their welfare and pension funds contain some $25 billion to $30 billion, with an inflow in excess of $5 billion annually.

This colossal and growing economic power must never fall under the management and control of this gangster element, which would make it a dynamic force for evil with a devastating effect on the economic, social, and political health of this Nation.

The rights of working people, the due-paying members of unions, and the public interest must be protected from the character of infiictions and exploitations to which I have referred.

The AFL–CIO can expel from its organization unions under corrupt leadership. It can condemn improper practices and place a stigma of disrepute on unions and leaderships that defy the laws of decency and integrity as prescribed by the AFL–CIO ethical practices code. But that is about the limit of what it can do. Notwithstanding the excellent and courageous efforts of Mr. George Meany and by his colleagues of the ethical practices committee, and the AFL–CIO executive board to drive these elements out of the parent federation of labor, strong remedial legislation is needed. It is imperative.

However commendable the action of the AFL–CIO with regard to such unions, mere expulsion lacks adequate corrective force.

The teamsters, for example, still operate as before their expulsion, with the same power, the same authority, the same arrogance. The union continues under the same corrupt leadership, with the announced purpose of continuing the shameful practices and criminal activities that brought dishonor to it. It can still impose dictatorial rule over its rank and file, denying them their proper rights under recognized democratic processes. It can continue to exploit management and the public. It is not out of business. It has not reformed, and no reformation is in sight.

Can Hoffa get away with this? Can others of his ilk get away with similar acts of defiance of the public welfare?

They can, unless the rank-and-file members show the courage to rebel against dictatorship, gangsterism, collusion, and thievery in their unions.

They can, unless the Congress of the United States enacts laws to liberate hundreds of thousands, if not millions, of American workers from the oppression and bondage to which they are now subjected by such malevolent, amoral men. Only the instrumentality of corrective legislation is left as a defense and protection against those segments of organized labor and their leaders who persist in their efforts to gangsterize the economy of this country.

The emphasis of responsibility in the legislative field is now shifting from the select committee to the Congress. During the committee's first year in existence, while it was in the initial process of factfinding, such congressional action was not feasible. Now, however, enough evidence has been amassed by the committee so that the Congress can, and should, legislate in those areas where the facts have been developed and evils have been brought to light. Otherwise, the intensive labors of the committee will not have reaped their rightful harvest.

I believe the Congress will take action; encouraging signs point in that direction. The President has submitted the legislative recommendations of his administration. They are reasonably good as far as they go. I support in the main their general objectives, but they are inadequate in scope and strength to meet the full legislative responsibility.

Some 14 separate bills proposing legislation in this field have been introduced in the Senate since Congress convened. Other bills, I am confident, will be presented during this session. Before, or simultaneously with, the filing of the committee's interim report I shall, myself, introduce a measure covering some of the areas in which the committee has already made startling disclosures.

In general, we must enact laws that will, among other things, clearly define and prescribe basic standards and requirements for the administration of union affairs. Such standards and requirements must include the establishing of firm democratic processes that will restore to the rank-and-file members the right to choose their officials by secret ballot in elections at stated intervals, and also to determine and resolve major-policy issues by like method and procedure.

A complete and accurate accounting for, and a full report of, all union, welfare, and pension funds must be required; the investment of such funds regulated and the willful destruction of the financial and other pertinent records of unions prohibited, with criminal penalties invoked for any willful violation of such requirements.

Unreformed exconvicts, gangsters, and racketeers must be declared ineligible to hold any official or representative positions in any labor organization. The expenditure of union, welfare, and pension funds for nonunion purposes; organizational picketing of certain types; the use of force and violence; the arbitrary imposition of trusteeships on locals for an indefinite period; and collusion in management-labor relations

must be prohibited; and the laws with respect to extortion and bribery must be strengthened.

Some sources are charging that it is the committee's purpose to induce Congress to enact restrictive, oppressive, and punitive legislation. That is not true. I shall never knowingly vote for a law designed simply to suppress or to oppress decent, honest unionism; but I am prepared to support legislation that is necessary to restrict, prohibit, and prevent the improper practices to which I have referred, and every law that I have suggested here tonight is definitely for the protection and in the interest of the rank-and-file members of organized labor and their families.

The arrogant, dishonest, crooked, and dictatorial leaders and the disreputable elements that have infiltrated some unions, and who are now engaged in the iniquitous exploitation of working people, of management, and of the public at large should not only be restricted, oppressed, and punished, but with the help of decent unionism and its leadership, we need to drive those characters out of the labor movement and keep them out.

With the cooperation, support, and good will of all honest and respectable elements of American citizenry, within labor and management, and without, the committee will continue its searching effort to bring to the Congress all of the information it needs upon which to predicate remedial legislation; and I have faith that the Congress will enact laws which will bring about badly needed reforms in labor-management relations, and thus render a lasting and constructive service to our country.

Benson Is Right

SPEECH
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. WAINWRIGHT. Mr. Speaker, will the gentleman yield?

Mr. BASS of New Hampshire. I yield to the gentleman from New York.

Mr. WAINWRIGHT. I would like to associate myself with my friend and colleague and say that he has done two things here today. Not only has he stood up—I might say this is in effect a nonpartisan matter—in defense of the Secretary of Agriculture and his policy, which is a courageous thing to do, but he has also spoken for the American consumer. The American consumer, for some reason, despite the fact that he is represented in Congress by 80 percent of the membership, is the true forgotten man. Certain segments of the farm population of America have been receiving the equivalent of a handout for any number of years, and no one has stood up in recent times to criticize this until you have done so today.

I may say, speaking for the largest potato-growing county of New York and one of the largest in the United States, that my farmers are behind the Benson theory of no handouts. They say that at least he is making an attempt to correct the situation. As the gentleman from Missouri [Mr. CURTIS] said, maybe he does not have the correct answer, but at least he is attempting it.

I want to congratulate the gentleman for bringing this to the attention of the House.

Mr. BASS of New Hampshire. I thank the gentleman for his contribution.

Address by Hon. Clifford P. Case, of New Jersey, at Fifth National Conference on International Economic and Social Development

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, March 3, 1958

Mr. SMITH of New Jersey. Mr. President, on Wednesday, February 26, my distinguished colleague from New Jersey [Mr. CASE] made an important address before the Fifth National Conference on International Economic and Social Development at the Statler Hotel here in Washington.

This address made a valuable contribution to our thinking on the subject of the importance of our mutual aid program. Because of the timeliness of the subject and the contribution which it makes to the mutual security legislation which we will presently be considering in this body, I ask unanimous consent that the address be published in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR CLIFFORD P. CASE, REPUBLICAN, OF NEW JERSEY, AT LUNCHEON SESSION OF THE FIFTH NATIONAL CONFERENCE ON INTERNATIONAL ECONOMIC AND SOCIAL DEVELOPMENT, AT THE STATLER HOTEL, WASHINGTON, D. C., WEDNESDAY, FEBRUARY 26, 1958

For some years now the United States has provided various types of assistance to other nations, both on a bilateral and a multilateral basis. These programs, under a variety of names—Marshall plan, point 4, mutual aid, mutual security, not to mention the various international or institutionalized programs—have generally enjoyed wide support. Of course, each year the request for appropriations has set off a debate. But overall, both parties have given their support and much of the argument has been over matters of detail rather than basic substance. Nevertheless, it is not news to suggest that this year the going for those who believe in the worth of the assistance programs is going to be much harder. This is particularly true of the economic and technical assistance programs.

Yet I think there is little doubt there will continue to be an assistance program in these areas. The reason is simple. There has to be. Basically we really have no choice as to that, though the form and the types and the amounts of assistance are another, and vitally important, matter.

It is not just the menace of communism that impels us. Certainly, that is important. Few will quarrel with the purely military assistance program. And most will recognize, too, that the military effort that our allies can put forth, especially those like Turkey, for example, in an exposed position, is directly affected by their economic situation. Hence the name of "defense support" for what is in effect economic aid to those countries with whom we are linked in defense pacts. The mutuality of interest in such activities is clear.

Neither is the threat of Communist economic penetration in the so-called uncommitted or neutral nations the whole justification for a program of economic assistance. Though the fact that the Communist bloc is now launched on an ambitious program of economic aid—and gives every indication of carrying it through—does indeed lend special urgency to our own efforts in this field.

In my own deep belief, were communism to disappear entirely from the world, we would still find ourselves impelled to help other nations in their efforts toward economic advance. For no nation, no less than no man, is an island entirely to itself, in Donne's famous phrase.

To turn an indifferent back to the struggles of other nations to realize their economic potentialities, and thereby to improve the well-being of their citizens, would be to go directly against all that is deepest and best in our tradition, to reject a basic precept of the heritage on which our society is built. It would also, of course, be to go against our own long-range material interests. But I stress the inherent rightness of our course because to debate the question solely on the basis of what's-in-it-for-us does injustice to our people, I believe. And it ill serves us in the eyes of others who are likely, not unnaturally, to take us at our own valuation.

As I see it, therefore, the real question we face is not whether we shall have an economic and technical assistance program, but how much and what kind of a program.

Most of the argument over economic assistance in the past has centered about the how much. No one who pays taxes can fail to have an interest in it. Last week the President submitted to Congress a program calling for $3.9 billion in mutual security funds for the next year. Of this, $1.8 billion is for direct military assistance and another billion for defense support and special assistance to allies, $788.5 million would be allocated to economic and technical assistance to other nations. (This excludes both the contingency fund and contributions to certain relief and other iiternational programs.)

These are large sums. Yet the need to which they are directed is far greater. Indeed it is estimated by reputable economists that 1 to 3 billion a year from all capital sources is needed to accelerate the economic growth of the underdeveloped nations. Obviously, the United States cannot finance all the capital needs of the underdeveloped nations. But the disparity in the figures suggests that at least part of our concern should be, not how we can cut the program further, but, considering the stakes involved, is it enough?

Nonetheless, money is by no means the only or the chief of our problems.

It comes as something of a shock to most Americans to realize that in many parts of the world his country and its intentions are regarded with skepticism and often outright mistrust. Sons of revolutionaries ourselves, we find it strange indeed to be looked at as the inheritors or protectors of an outmoded colonialism. The extent to which the stereotype of the capitalist exploiter has taken hold confuses and angers us. Striving in our own country to achieve equal dignity and equal opportunity for all men, regardless of their race, we are shocked by the depth of bitterness against the white man—any white man—among many people of another color.

The injustice of such attitudes may rankle but the fact is they exist. And we have to reckon with them if we hope to influence

UNIVERSITY OF MICHIGAN LIBRARIES

the new nations toward the ways of peace and freedom.

Throughout Asia, in Africa, and in the Middle East, the old societies are breaking up. Everywhere there is change and, above all, a new and driving determination to achieve a better life, one way or another. We cannot stop the drive—even if we wanted to—but we can hope to help it go forward in ways that will at least be not unfriendly.

In concrete terms, that seems to me to require first of all a clear showing of our genuine interest and desire to help these nations in their efforts to advance economically. It must be a sustained interest for the element of continuity is vital to successful development. Nothing could be more calculated to breed resentment and bitterness than to raise hopes, only to disappoint them later. Unless we, the public and the Congress, are prepared to carry through, whatever the scale of the program we adopt, we would be better off, in my judgment, not to start it in the first place.

Let us acknowledge frankly that economic development is a long-term undertaking and that if we really want to do an effective job we cannot confine our commitments entirely to the fiscal year. A multipurpose dam, for example, designed to provide irrigation, power and flood control cannot be accomplished overnight. Many months of planning and engineering are required. The construction itself may take years. If several countries are involved, lengthy negotiations may be necessary before even the first stage is reached. Without assurance that financing will be available, few countries can afford the effort and expense involved merely in preparing a well-planned proposal.

At the last session the Congress, somewhat reluctantly, did approve the establishment of a development loan fund and authorized appropriations for 2 years as contrasted with the administration's request for a 3-year authorization. But even this modest step was marred by actual appropriation of only $300 million as against $500 million requested for the first year and authorization of $625 million for the second year. The President had asked for $750 million for the second and third years. Already the fund has received applications totaling well over $1 billion, which is some indication of the hopes placed in it.

There are, of course, important, but surely not insuperable, questions of constitutional and legislative prerogative involved in any departure from the annual appropriations basis. The significant thing to me is the fact that much of the objection to a longer period of appropriation is based less on the constitutional grounds than on opposition to the longer term commitment itself. This view of economic assistance as a kind of emergency or temporary program to be determined almost anew each year seems to me, as I indicated earlier, a self-defeating approach.

There are other ways, too, in which the sincerity of our concern can be demonstrated. But none is likely to be more important or more far reaching than the influence and potential contribution of our businessmen.

Whether he chooses or not, the American businessman has a large role, for good or for ill, in the economic-assistance program.

I am thinking not only or even primarily in terms of capital. Capital contributed by private investment is important and it is encouraging to note that it has been flowing in increased amounts in some sectors. But the old pattern of private investment is no longer possible in many areas. Most of the new countries are determined to keep control of the development of their resources firmly in their own hands.

This is a basic premise which wise and prudent investment will accept or it will venture at its peril, as well as at the risk of discrediting further the free economic policies which in too many places invoke bitter images, however exaggerated, of colonial lords and hated foreign exploiters.

Far more than capital, however, the crying need of many of the underdeveloped nations is for know-how—technical, managerial, and administrative. Report after report on particular countries have pointed to the lack of trained and qualified personnel as the single most limiting factor on development efforts. It is noteworthy, for example, among the Arab States, Lebanon has probably the highest standard of living. Lebanon does not have the rich oil deposits of the other Arab States, indeed her natural resources are meager. But her people are relatively advanced and have the ability to organize themselves and make good use of such resources as are available.

Here is an area in which American enterprise is, I think, indisputably supreme. The American genius for effective organization is a hallmark of our country. We pride ourselves on our practicality, our pleasure in trying new approaches, our zest to get things done. What field offers a greater challenge in these respects than that of economic development? Provided, of course, they are accompanied by a willingness to adapt to the very different conditions that prevail among the underdeveloped nations and to take a long rather than a short view of their opportunities.

Such a positive constructive approach on our part can help immeasurably. Only such an approach can make clear that totalitarian methods are not required to achieve economic advance; rather, there is a real choice of roads to follow. Further, it can provide encouragement to choose the road compatible with the ways of democracy and the preservation of human values.

The task confronting the newly developing nations is enormous. Small wonder that so many of their leaders seem often to waver and shrink from the hard and often unpopular decisions that sound progress may require. We cannot and should not attempt to do the job for them. But we can help to strengthen their willingness to tackle the job and to enhance the chances of its successful accomplishment. The fate of millions turns on the choices that will be made over the next few years. Indeed, the existence of the free world itself—our own ultimate security—may be at stake.

Jefferson-Jackson Day Dinner, St. Louis

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 3, 1958

Mr. NEUBERGER. Mr. President, a most eloquent and informative speech was delivered to the St. Louis County Jefferson-Jackson Day Dinner in St. Louis on March 1, 1958, by the distinguished junior Senator from Tennessee [Mr. GORE].

In his able address, our colleague from Tennessee has emphasized the distinct responsibility which historically falls upon the legislative branch of Government when there is abandonment from the Executive in the White House. I believe that Senator GORE's address should be printed in the Appendix of the RECORD, and I ask unanimous consent for that purpose.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR GORE

The pleasure and joviality evidenced here tonight is characteristic of a Democratic rally. A Democratic get-together is synonymous with a good time. Even so, we have enough of the rebel and stubborn elements among us to make our party affairs not only interesting but uncertain.

There is no uncertainty about my pleasure and pride in being with you tonight. It would be an honor and a pleasure to speak to such a significant and loyal gathering as this under ordinary circumstances, but my pleasure in coming to Missouri is doubled by the fact that it has been my pleasure and profit to serve on committees and work in the closest harmony and friendship with your Senators. The privilege of their association in the Senate, the leadership which each has provided for our party and for our country prompts me to say that I am grateful to Missouri for Senators TOM HENNINGS and STUART SYMINGTON.

Senator HENNINGS, one of the outstanding constitutional authorities, not only in the Senate but in the entire country, has become a recognized champion of the rights of individual citizenship and has given the kind of leadership for election-law revision and reform in corrupt practices that makes us all proud to be Americans.

The one clear clarion voice for justice and fairness to beleaguered farmers, for adequate national defense, for educational and technological progress, and for permanent public improvements to strengthen our country's economy and productive capacity has come from Missouri's junior Senator STUART SYMINGTON.

The United States Senate is now performing a unique and unusual role in American history. It is a role of leadership with which the Congress can successfully cope only with the greatest difficulty, if at all.

By reason of constitutional limitations, the legislative branch of our Government cannot perform executive functions. By its very nature, its very division and diversity, it is hard for a legislative body to speak with that clear and certain voice which is the characteristic and function of executive leadership.

Yet the worldwide challenge to the greatness of our country and to the survival of our system and ideals, when we are plagued with weak executive leadership, constantly prods the United States Congress and, more particularly, the Senate into action, into qualified leadership of our country, and of the cause of freedom.

Once before, in the period immediately following the War Between the States, the legislative branch of the Government, especially the United States House of Representatives, provided leadership for the country. This was an attempt to usurp powers properly exercised by the President. The record of that performance is revolting to all decent sensibilities, the results tragic. The notorious Thaddeus Stevens led the Government and the country into shameful acts of prejudice, vengeance, and hatred. The deep scars from the Civil War were not allowed to heal, as they would have healed with time and the noble impulses of our people, but instead were kept open as a taunt and a prod to bigotry and demagogery of reprisal. These scars can still be seen today.

I hope and believe that the present ascendancy of the legislative branch of our Government will bring better results. At all events, we may be sure that the intent is not malevolent. The motivation springs from neither prejudice nor desire to usurp. Instead, the Senate is undertaking to encourage and spur the use of Presidential powers by the President himself, on the one hand, and to fill the vacuum of ideas and action

through legislation, committee studies and reports, and varied articulation, on the other.

To put it bluntly, we are trying to persuade and to help the President do a job that he ought to be doing himself.

The motivations that unify and propel the Senate, let me emphasize, are essentially good and, in important respects, nonpartisan. They arise from patriotic concern for our country and a compassion for the well-being of its people, from a deep faith in the Nation's greatness and out of a dedication to its future glory.

Even so, the kind of leadership which the needs of the country require and deserve, both at home and in affairs abroad, can come only from one who is clothed with the power, prestige, the honor and glory of the Presidency of the United States. The Constitution provides for it, our country expects it, conditions at home and in the world demand it.

Yet we do not have adequate executive leadership. I do not say this in a partisan sense, nor with pleasure. It is with sadness and concern that I say it. Nevertheless, I have never been one to believe that we will find the solution for any national problem by refusing to recognize and acknowledge it, thus hoping that it will go away if we just deny its existence.

Please forgive me if I refrain from undertaking to evaluate the reasons for the inadequacy of President Eisenhower's leadership. This is not essential to my thought tonight. It is the fact of its inadequacy rather than the reasons for it that impels the Congress into its present role of leadership.

Under the circumstances, the legislative branch has no choice but to do the very best it can, inadequately constituted and equipped as it is for the task.

Both the facts of today and foreseeable events are grim.

The grand alliance of free nations is threatened with gradual disintegration. The confidence of even our closest friends is shaken. Both friendly and uncommitted nations are tempted to follow a course of neutrality or outright hostility toward us.

Current Soviet superiority in ballistic missiles, rocket propulsion, satellites, large-scale atomic powerplants, number of submarines, and conventional military forces in being deeply disturbs the confidence of our friends and threatens the security of not only the United States, but the entire free world.

At home, partly for want of sound programs and partly because of rampant influences of selfish interests, an estimated 5 million Americans, with many dependents, are totally unemployed. Uncounted additional millions are working only a few hours per week. Farmers suffer depressed conditions. Bankruptcies are at the highest rate in our history, business failures at a rate equal to the early 1930's. Steel production is at only fifty-some-odd percent of capacity.

Meanwhile, the cost of living reaches an alltime high.

It is because of these circumstances that Senators and Congressmen with vision and concern, despite constitutional and organizational limitations and handicaps, are resolutely undertaking to fill the vacuum in national leadership.

It has been from the floor of the United States Senate, for instance, that the country has been alerted to the dangers from Russian military supremacy; from the floor of the United States Senate that the voice of the people has cried out against the social injustice and economic needlessness of widespread unemployment and suffering, the inequity of tax favoritism, tight money, high interest rates.

It is in the United States Senate that bold programs for conquering space are being molded; in which adequate programs to maintain American leadership in the fields of technology, nuclear power, and missile research have been presented.

But there are things that Congress can do and things that Congress cannot do. Congress can appropriate money for national defense but it cannot spend it. Congress can pass bills authorizing contracts for valuable public improvements but Congress cannot sign the contracts. Congress can provide the necessary laws for public welfare but Congress cannot administer the laws.

These are executive functions which only the executive branch of the Government can perform.

Congress has acted—acted in many fields. But congressional enactment of legislation, or passage of appropriations, as I have said, is not enough. Unless there is genuine acceptance of programs enacted by the Congress, and unless there is will to sincerely put them into effect, then congressional labors come to naught.

President Eisenhower and other administration leaders are now talking about a public-works program—if things get bad enough. Well, things are already bad enough. How much worse must they become to justify a public-works program to stimulate our economy, to provide employment by building needed public improvements. The administration still waits. Well, Congress is not only ready to act now, but has already acted. With foresight and concern, the Congress passed an omnibus rivers and harbors bill in 1956 which authorized a public-works program that would have brought, and would now bring, not only employment opportunities, but vast economic benefits to all segments of our country. The President vetoed this bill.

In 1956, Congress enacted a far-reaching highway construction program, the largest highway program in the history of the world. It was designed to interconnect all of our principal cities within 13 years, with magnificent multilane interstate and defense highways adequate to the traffic needs of 1975. Only 2 years later it stands in grave danger of being slowed down and stretched out from the planned 13 years to 24 years. Instead of proposing an acceleration of this vital program of highway improvement which could now be used to stimulate our sagging economy, the administration proposes to slow it down even further by diverting $68 million per year from the highway trust fund to other purposes.

President Eisenhower's atoms for peace speech, which was delivered to the United Nations in 1953, is, I believe, generally considered to be his greatest. I surely so regard it. Congress has sought to translate this commendable program into action by maintaining our leadership in the peaceful uses of atomic energy. The Eisenhower administration has fought these proposals consistently and, unfortunately, thus far it has fought them successfully. The result is that the United States which led in harnessing the strength of the atom is now losing its of large-scale nuclear power production.

The Joint Committee on Atomic Energy has been urging for several years projects to develop nuclear-powered rockets. Our pleas have fallen on deaf ears and the lack of effort has been shrouded in a cloak of secrecy ostensibly for security considerations. The money Congress appropriated for this project has not been spent. Is it any wonder we are behind?

The same fate has befallen our efforts to bring about an atomic airplane. Funds have been cut back, programs have been rolled back and stretched out.

Rollback. Cutback. Stretchout. Just wait until November and the American people will add another word to administration jargon—strikeout.

During the summer of 1957, the all-powerful Bureau of the Budget dispatched a letter to each Department of the Government which stated in part as follows:

"The President has requested that all agencies in the executive branch keep the rates of commitments, obligations and expenditures for fiscal 1958 at or below the level for the fiscal year 1957."

This meant that there was an arbitrary dollar ceiling imposed on defense expenditures no matter what action the Congress might have taken.

More recently a subcommmittee of the Senate, after full hearings, outlined 17 areas in which decisive action is needed if we are to hope to regain lost time in the field of missiles and rockets. But we have not had the decisive action we need. The Congress can recommend missile production but it lacks the power to make a contract to implement the recommendation.

In this distraught world, free nations look to the United States of America for leadership and inspiration, for initiative and imagination, for boldness and action. Instead they find vaccilation, timidity, indecision.

Through all of this the most eloquent voices, the most penetrating vision, the most logical analyses, the newness, the imagination, the boldness and the hope have principally come from the Senate of the United States. I would have to name but a few of many examples to illustrate my point.

Even so, ours is a forbidding outlook. But what would it be without the Congress to stir the country and the Government away from complacency toward concern, from fiction to reality, from nothing to something?

Our efforts have not been without fruit. The American people have now been awakened to their danger, and the voice of the people from North to South, East to West, demands action. Action. Action. This they will have, if not immediately, ultimately.

After the election next November there will not be, in my opinion, enough seats on the Democratic side to accommodate the new Democratic Congressmen.

And I think it overwhelmingly likely that the Democratic Party will be called back to power and responsibility in 1960. For this we must prepare. And to prepare for so great a privilege is to act responsibly today, tomorrow, and always—opposing on principle and supporting on principle, standing firm and alert, ready to oppose that which is wrong, willing to support that which is right.

Benson Is Right

SPEECH
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 27, 1958

Mr. BASS of New Hampshire. I thank the gentleman from Utah for his contribution.

Mr. WAINWRIGHT. Mr. Speaker, will the gentleman yield?

Mr. BASS of New Hampshire. I yield to the gentleman from New York.

Mr. WAINWRIGHT. Mr. Speaker, I think the gentleman from Utah [Mr. DIXON] gave a specific answer. I would add that the Secretary of Agriculture does one more thing in the field of leadership. He, almost alone, stands for some form of cutback on what has generally been referred to—to use slang—as a handout. It takes a lot of courage

UNIVERSITY OF MICHIGAN LIBRARIES

to do that. I think fundamentally the gentleman from Florida would, and should, agree with that.

PTA of Great Value in Solving Education Problems

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, March 3, 1958

Mr. KUCHEL. Mr. President, the National Congress of Parents and Teachers held its 61st Annual Founders Day at San Francisco on February 17, 1958. On that occasion, Mr. Randolph A. Hearst, president of the Hearst Publishing Co. and a distinguished member of a great American family, addressed the conference. The son of the late William Randolph Hearst, he is the grandson of the late Phoebe Opperson Hearst, a cofounder, in 1897, of the National Congress of Mothers which thereafter became the present Congress of Parents and Teachers.

In his address, Mr. Hearst made some excellent, practical, and constructive suggestions for improving education in America. I ask consent that the text of it be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

May I congratulate the Parent-Teachers' Association on this occasion of your 61st Founders Day. It is a distinct pleasure for me to accept this tribute to my grandmother as a representative of the Hearst family.

Sixty-one years ago, Mrs. Alice Birney approached my grandmother with an idea that was entirely new at that time, to form an organization of mothers dedicated to the idea of promoting the welfare of children through a closer relationship between the home and the schools, and also by cooperation between parents and teachers.

These two ladies were mutually attracted to each other. Both were intelligent, idealistic, and vitally interested in the welfare of children. On February 17, 1897, they launched the National Congress of Mothers which, a few years later, became known as the now famous Parent-Teachers' Association.

Today the PTA has grown to 11 million members. Four million of these are men, and 700,000 are educators.

The PTA has become a tremendously influential organization. It is nonpolitical in nature, and although its members and officers work with groups like the NEA and, on occasion, with some political groups, the PTA is completely independent.

Today the PTA faces the greatest challenge in its history. Since October 4, 1957—the day the Russians dramatically launched the first earth satellite and proved thereby to the world the extent of their scientific achievements—the educational systems of the free world and of totalitarianism—whether we like it or not—are at war.

This conflict cannot be settled by guns or diplomacy. It must be fought in our homes, and in the classrooms of our grammar schools, our high schools, our colleges, and our universities. There is no other area of decision.

The danger is a very real and present one.

By charting the scientific and technological progress of the two countries over the past 30 years, it is shown that the United States started on a high level and continued to rise steadily.

But it is also shown that the Russians started much lower, continued at an inferior level for 10 years or more, then began to rise rapidly, until today, although they are still behind, should the rate of improvement continue, they will soon overtake us. When, or rather, if this happens, the United States will then be a second-rate power.

Since the launching of the first sputnik, it was natural that our educational system would, and will continue to be, subject to criticism and public scrutiny.

A great many people, myself included, believe our present educational system is soft. We cannot blame the educators alone, for many of us who are most critical did nothing to prevent the swing toward so-called progressive education and its resultant mass mediocrity.

I believe in universal education. We have a duty to prepare our children for citizenship. We are a Republic, and only through proper mass education can we remain one.

We also have a duty to educate to the fullest the talented and ambitious children, and not allow them to be held back by the less capable or the indolent.

I favor establishing two types of high-school diplomas. One might be called academic and the other commercial or technical. The latter being one which prepares the student for a useful and respectable craft.

Parents, of course, should be informed which of these diplomas their children is working towards, and which one he has the ability to attain.

I recommend that greater disciplinary authority be granted to teachers. Sometimes the best cure for a short-attention span is a good rap on the knuckles.

Unquestionably, more emphasis should be placed on fundamentals. No child should be allowed to pursue an elective until these basic fundamentals are thoroughly mastered.

I believe that the competence of the teacher—not the cost of the school building or size of the gymnasium—is of paramount importance.

I believe there should be more emphasis on science, but not to the exclusion of other branches of learning.

In the world of today, and still more the world of tomorrow, the scientist must know something of politics and the social studies. Likewise, the politician must know the problems of the scientist.

We cannot afford to specialize to such a point that we exclude all other knowledge from our understanding. Our society is too complex and interdependent to permit the luxury of limited and arbitrary views.

These are criticisms which the last few months have shown to be general among the public. Whether they are valid or not remains to be seen.

There is no doubt, however, that we are facing an educational crisis. To meet it we look to the PTA to accept a responsibility it alone is in a position to exercise.

Whatever changes are made will be brought about by the people of this country, for school boards—rightfully so—are controlled in their policies by the desires of their local communities.

And we must not overlook the fact that the PTA is in a position to influence strongly the desires of the local communities.

This is a great responsibility. It is also a great opportunity. It takes a long time for governments to act. You can act immediately, and your actions will be felt immediately.

It might be desirable that at the next meeting of your national congress, the PTA should formulate an educational policy, in conjunction with competent educators, and then fight for it in every community in the land.

Should this be done, I am convinced that it would be one of the most effective ways in which Americans can meet a clear and immediate threat to our national existence.

By uniting in the support of a program like this, the 11 million active and devoted members of the PTA can be the most potent force in the United States to improve our high standards of educational and scientific achievement.

I hope that in your progress toward this goal you will continue to avail yourselves of our readiness to be of help.

Thank you.

Space Technology and the National Advisory Committee for Aeronautics

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, March 3, 1958

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able speech delivered by Dr. Hugh L. Dryden, Director, National Advisory Committee for Aeronautics, entitled "Space Technology and the NACA"; also a resolution adopted by the National Advisory Committee for Aeronautics. The NACA conducts an aeronautical laboratory near Hampton, Va.

There being no objection, the address and resolution were ordered to be printed in the RECORD, as follows:

SPACE TECHNOLOGY AND THE NACA

(Address delivered by Hugh L. Dryden, Director, National Advisory Committee for Aeronautics, at luncheon meeting of the Institute of the Aeronautical Sciences, New York, N. Y., January 27, 1958)

The topic of our day is the new frontier, space, and the new challenge, the conquest of space. The escape of objects and man himself from the earth into space has long been the subject of science fiction writers and the comic-strip artists. More recently, it has been a matter of interest to a growing number of serious-minded scientists. Now, it has acquired a new sense of imminence and reality. Space travel has stirred the imagination of man to an extraordinary degree. It is, however, one thing to desire to travel in space, and quite another to satisfy that desire. Early accomplishment of this goal will require major advances in science and technology.

This effort will stimulate industrial and economic development. Space vehicles will open the way to acquisition of much new knowledge about the earth and the universe. They will enable development of new military weapons. They will bring great national prestige.

The launching of the first manmade satellite on October 4 of last year produced an extreme swing of the pendulum from general lack of interest in space travel and even ridicule of its proponents, to expectation of early interplanetary flight. This essentially emotional reaction may make it very difficult to proceed with a sound program. En-

gineers have a special responsibility to be bold and imaginative, and yet they must be thoroughly realistic and practical. We must do our share in acquainting the public with the characteristic difference between engineering and technology, and other professions and fields of endeavor.

In many professions, for example, law, education, diplomacy, the spoken or written word plays a dominant role in accomplishment. The lawyer prepares a brief with great care, but often the key factor is the skill with which he pleads his case, and thus persuades others to accept his conclusions. Lawmakers debate the issues and resolve them by compromise and majority vote. Similarly in other fields, in sales and even in banking. A characteristic feature is that when the discussion ends in decision, the result is immediately at hand. There is no timelag or only a very small time lag between decision and accomplishment.

In engineering there is also much discussion, debate, and compromise. But when decision is reached to build a bridge, an airplane, or a space craft, there remains the "hardware" construction. The materials of our physical world cannot be talked or argued into the desired shape. There is a long timelag between the decision and the completion of the bridge, or airplane, or space craft. Like the time span between conception and birth of a child, no amount of discussion or investment of money can reduce this time interval to zero. Thus travel to the moon by manned or unmanned vehicles will require more than discussion and decision and allocation of funds. It will require much effort and time and will be soonest achieved by a systematic and orderly program of research and development. The public must be understanding and patient with the scientists and engineers in addition to providing the necessary funds.

I wish to discuss with you briefly my own views as to what the national program should be, the role of research, and specifically the role of the NACA. In speaking of the program as a national program I do not wish to exclude the possibility of the program being an international one; its technical character would be the same.

In my opinion the goal of the program should be the development of manned satellites and the travel of man to the moon and nearby planets. I omit for the present travel outside the solar system since the probable travel times seem well beyond the adult life of an individual even with optimistic extrapolations of known science and technology. The immediate goals should be more limited, and these I will discuss a little later.

There is rather good agreement that there are at least three general aspects of an adequate space program. These are: (1) Research in space technology to provide data for the design of useful and efficient vehicles, the provision of a safe environment for man and otherwise to insure the success of manned space flight operations; (2) design and development of scientific and military space vehicles and their launching, flight, and recovery; and (3) research on the phenomena of the high upper atmosphere and nearby space, such as the character and distribution of matter, cosmic rays, solar radiation, electric, magnetic, and gravitational fields, etc., and scientific studies of the universe made possible by the use of satellites and space platforms as observation sites.

You know as well as I, how eagerly those in astronomy, geophysics, and meteorology—to name only three of the interested scientific groups—anticipate the tremendous advantages that will result from such observation sites in space.

The development and operation of military missiles, military satellites, and military space vehicles are clearly a military function and it is well understood that a vigorous program is necessary. It is not so well understood by the general public that additional vehicles and operations will be required for scientific research on space phenomena and scientific exploration of the universe, in addition to those employed for research in space technology. The national program must include both nonmilitary and military aspects. It is perhaps the nonmilitary aspects of space flight that will have the greatest impact on the thinking and the future of all mankind.

The organization of the national effort is receiving much study. As you know the President and Secretary of Defense have announced the formation of an Advanced Research Projects Agency within the Department of Defense to which responsibility for military space projects is to be assigned. Responsibility for nonmilitary aspects has not yet been fully determined. Some groups have recommended the creation of a completely new independent civilian agency of government to conduct research and development in its own laboratories or by contract, to contract for and sponsor development of components and vehicles, and to engage in space flight operations. Some of these proposals restrict the activities of the proposed new agency to nonmilitary projects; others include at least the research aspects of military projects.

The basic reason underlying these proposals for a new civilian agency is plain. The scientific community, understandably, is worried about the possibility that the extremely important nonmilitary aspects of space technology would be submerged or perhaps even lost if included as a mere adjunct to a military program.

There is another solution to the problem of how best to administer the national space-technology program, one which clearly recognizes the essential duality of our goals—the prompt and full exploitation of the potentials of flight into space for both scientific and military purposes. Actually, this solution is old and well-tested. It is explicitly stated in the 1955 legislation that established the National Advisory Committee for Aeronautics with responsibility to supervise and direct the scientific study of the problems of flight, with a view to their practical solution. The committee structure of the NACA embraces both the nonmilitary and the military elements of aeronautics. The researches of the NACA are designed to be useful to both the nonmiliary and the military segments of aeronautics. The entire operation of the NACA is based upon the premise that coordinated teamwork effort by all parties concerned provides the surest guaranty of progress in aeronautics.

At its meeting on January 16, 1958 the National Advisory Committee for Aeronautics expressed its view that the national space program can be most rapidly, effectively, and efficiently implemented by the cooperative effort of the Department of Defense, the National Advisory Committee for Aeronautics, the National Academy of Sciences and the National Science Foundation together with universities, research institutions, and industrial companies of the Nation. Under this plan the National Science Foundation in collaboration with the National Academy of Sciences would plan scientific experiments and assign priorities for research on space phenomena for basic scientific purposes as previously described. The National Science Foundation would assume responsibility for financial support of scientists in the detailed planning, design and construction of special apparatus, related research and analysis of data for approved projects. The National Advisory Committee for Aeronautics would conduct flights for scientific purposes when within its capabilities or jointly, with appropriate agencies of the Department of Defense, in the successful pattern of the research airplane programs. The NACA would also coordinate and conduct research in space technology in its own laboratories and by contract in support of both military and nonmilitary projects.

Since the end of World War II the NACA has been engaged increasingly in research applicable to the problems of space flight and has designed and constructed the special aerodynamic, structural, and propulsion facilities required for this work. For example, studies were formally initiated in 1952 leading to the X–15 research airplane project, a cooperative project between the NACA, Air Force, and the Navy. North American Aviation is now building the X–15 and its is scheduled to make its first flight in about 1 year. The X–15 will be used to explore problems of manned flight into nearby space particularly the control of the attitude of the vehicle in space in the absence of aerodynamic forces, the safe return from space to the atmosphere without destructive heating, and the effect of weightlessness on the pilot.

The NACA is also engaged in studies of satellite configurations suitable for safe reentry at still higher speeds, both for manned and unmanned flight. The present program is far from adequate. Our rate of progress in solving the problems of space flight must be very greatly increased. The problem is essentially one of extension and expansion of effort. For this purpose new research facilities will be needed at existing laboratories and at new laboratories, including a launching site for space flights for research purposes. A larger staff will, of course, be needed. A greatly expanded contract research program is similarly essential to obtain assistance from groups with special competence in specific areas. Thus special talents, experienced staffs, and facilities of existing organizations can be pooled for the accelerated effort that is required. I would emphasize that these organizations already have demonstrated that they can work together successfully, and, perhaps equally important, that they have established the necessary close relationships with the scientific community and with industry.

To provide material assistance in its program the NACA recently appointed a special committee on space technology under the chairmanship of Dr. H. G. Stever, associate dean of engineering of the Massachusetts Institute of Technology. A partial list of the members of the new committee includes:

Mr. H. Julian Allen, Ames Aeronautical Laboratory.

Dr. Hendrik W. Bode, director of mathematical research, Bell Telephone Laboratories.

Dr. Milton U. Clauser, director of aeronautical laboratory, the Ramo-Wooldridge Corp.

Prof. Dale R. Corson, Cornell University.

Mr. James R. Dempsey, manager, astronautics division, Convair.

Mr. Robert R. Gilruth, Langley Aeronautical Laboratory.

Mr. S. K. Hoffman, general manager, Rocketdyne division, North American Aviation, Inc.

Dr. W. Randolph Lovelace II, Lovelace Clinic.

Dr. William H. Pickering, director, jet propulsion laboratory, California Institute of Technology.

Dr. Louis N. Ridenour, Jr., missile systems division, Lockheed Aircraft Corp.

Mr. Abe Silverstein, Lewis Flight Propulsion Laboratory.

Dr. James A. Van Allen, department of physics, State University of Iowa.

Dr. Wernher von Braun, Director, Development Operations Division, Army Ballistic Missile Agency.

The committee will also include representatives of the Air Force and Navy not yet designated.

This committee will take a fresh look at the research and development problems of

UNIVERSITY OF MICHIGAN LIBRARIES

space technology and make recommendations as to the needed programs. The first meeting of the committee has been scheduled for February 13. The major research fields which must find a place in the overall national program include space mechanics; space environment; energy sources; propulsion systems; vehicle configuration and structure; materials; launch, rendezvous, reentry, and recovery; communication, navigation, and guidance; space biology; flight simulation; measurement and observation techniques.

The design and development of vehicles should proceed simultaneously with research on space technology. While the goal is manned flight to planets within the solar system, the vehicle program must proceed in stepwise fashion. We have something to learn from the U. S. S. R. experience. So far as we know, they began as did we, with a supply of German V–2 rockets and the aid of German scientists and engineers. In contrast to our own development, their program proceeded in logical steps with consistent support from top government officials and at high priority. Larger and larger rockets were developed by the U. S. S. R. scientists, leading to ballistic missiles of steadily increasing range, with many missiles built and fired. A group was organized for scientific work on phenomena in the high atmosphere, using rockets. In addition to physical apparatus, animals were sent aloft, including dogs. As experience was gained and reliability increased, the first satellite was launched, followed soon by the second carrying the dog, Laika. It is said that Laika had already been aloft on a rocket and been safely returned. Probably the Sputnik II was the same type of rocket used in that work, now boosted into satellite orbit by large rockets from the ballistic-missile program.

We need a similar step-by-step program, each step fully tested. I think there will be needed two parallel lines of vehicle development, one unmanned, which should be able to proceed rapidly, and the other man-carrying, whose development will probably be somewhat slower. I personally am unwilling to be a party to trying to put a brave young pioneer into orbit until his demonstrated chance of successful return is much better than 50 percent. The earliest vehicles will be progressively larger unmanned satellites, carrying more and more complex equipment to perform more and more difficult scientific and engineering tasks. We may expect these to be followed by unmanned vehicles which travel around the moon, and later those which land on it. This line of development has already attained its first objective.

Concurrently, there should be a systematic program on manned vehicles. The X–15 is a research tool to get some experience in flight into nearby space. Other projects should be initiated promptly toward the goal of manned satellite flight. As the chief milestones are passed, other, more advanced goals should be set.

We have the talents and the resources to assure that we in America can lead the way. It is imperative, for the peace and welfare of the world, that we shall lead the way.

As I think about what lies ahead, I am reminded of the comment of Wilbur Wright, voiced many years ago: "It is not necessary to look too far into the future; we see enough already to be certain that it will be magnificent."

NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS RESOLUTION ON THE SUBJECT OF SPACE FLIGHT, ADOPTED JANUARY 16, 1958

Whereas the National Advisory Committee for Aeronautics is authorized by act of Congress (U. S. Code, title 50, sec. 151) to "supervise and direct the scientific study of the problems of flight, with a view to their practical solution * * * and to direct and conduct research and experiment in aeronautics"; and

Whereas the advancing flight performance of unmanned vehicles has reached outside the atmosphere into nearby space and the exploration of space by manned vehicles will soon begin; and

Whereas in the opinion of the Committee, the broad authority in its organic act includes the investigation of problems relating to flight in all its aspects, outside of, or within the earth's atmosphere, of aircraft, missiles, satellites, and outer-space projectiles and vehicles; and

Whereas the problems of space technology include energy sources, propulsion, materials, structures, control, guidance, communication, environment, launching, recovery, and human limitations and requirements with respect to the flight of such vehicles; and

Whereas since the end of World War II the National Advisory Committee for Aeronautics has been increasingly engaged in research applicable to the problems of space flight and has designed and constructed the special aerodynamic, propulsion, and structures facilities required for this work; and

Whereas the National Advisory Committee for Aeronautics in 1952 formally initiated studies of the problems associated with unmanned and manned flight at altitudes from 50 miles up and at speeds from mach number 10 to the velocity of escape from the earth's gravity which resulted in the cooperative NACA-USAF-USN project, the X–15 research airplane designed and now under construction for studying some of the problems of manned flight in nearby space; and

Whereas the urgency of an adequate national program of research and development leading to manned satellites, lunar, and interplanetary flight is now apparent:

Be it resolved, That the National Advisory Committee for Aeronautics express its view that an adequate national program must enlist the scientific and engineering resources of the Nation and must include:

1. Research in space technology to provide data for the design of useful and efficient vehicles and to insure the success of manned space flight operations.

2. Design and development of scientific and military space vehicles and their launching, flight and recovery.

3. Research on the phenomena of the high upper atmosphere and nearby space, such as the character and distribution of matter, cosmic rays, solar radiation, electric, magnetic, and gravitational fields, etc., and scientific studies of the universe made possible by the use of satellites and space platforms as observation sites.

Be it further resolved, That the National Advisory Committee for Aeronautics express its view that the national program can be most rapidly, effectively, and efficiently implemented by the cooperative effort of the Department of Defense, the National Advisory Committee for Aeronautics, the National Academy of Sciences, and the National Science Foundation, together with universities, research institutions, and industrial companies of the Nation.

Be it further resolved, That the National Advisory Committee for Aeronautics express its views that the development and operation of military missiles, military satellites, and military space vehicles is clearly the function of the Department of Defense; that additional vehicles and operations will be required for scientific research on space phenomena as well as for research in space technology; that these scientific flights should be conducted by the National Advisory Committee for Aeronautics when within its capabilities or jointly by the appropriate agencies of the Department of Defense and the National Advisory Committee for Aeronautics in the successful pattern of the research airplane programs with the cooperation of the National Science Foundation; that planning of scientific experiments and the assignment of priorities for research on space phenomena for basic scientific purposes be conducted by the National Science Foundation and the National Academy of Sciences and that the National Science Foundation assume responsibility for financial support; that the National Advisory Committee for Aeronautics has an important responsibility for coordinating and for conducting research in space technology either in its own laboratories or by contract, and therefore should expand its existing program and add supplementary facilities to those now available as necessary.

Be it further resolved, That the NACA Special Committee on Space Technology be requested to review the needed research and development in the light of the guidelines given above with a view to the early formulation of an adequate and sound program for the National Advisory Committee for Aeronautics.

Unsightly Billboards on Federal Interstate Highways

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES

Monday, March 3, 1958

Mr. COTTON. Mr. President, one of the ablest members of the Committee on Public Works is the distinguished Senator from California [Mr. KUCHEL]. During my years of service on this committee, I have been impressed with his marked capacity for approaching problems in a constructive and objective manner.

We who are deeply interested in enacting legislation to limit and control billboard advertising on the Interstate System of Highways are impressed by the new formula which has been introduced by the junior Senator from California, and which is based on an incentive to the States to bring about this necessary and praiseworthy objective.

I notice in the Sacramento Bee of February 12, 1957, an article written by Gladstone Williams, explaining the proposal of the junior Senator from California. I think the article is worthy of note throughout the country. Therefore, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Sacramento (Calif.) Bee of February 12, 1958]

NEWS BEHIND THE NEWS

(By Gladstone Williams)

Billboards: It has remained for California's Senator THOMAS H. KUCHEL to draw up a legislative formula which promises to break the impasse in the Senate Public Works Committee on proposals for curbing the erection of unsightly billboards on the new 41,000 mile system of Federal interstate highways approved by Congress.

He has offered a bill which is believed to have excellent chances of passage. Unless Congress acts at this session there is grave danger of billboard control legislation being lost. The vast highway program, which will

represent an investment of the people's money of upward of $37 billion, soon will get underway and this may be the last opportunity for Congress to do something about it.

At the last session the Senate Committee voted to kill a similar measure. The vote was by the narrow margin of 7 to 6. Senator KUCHEL was one of those voting to deny the bill committee approval.

Support: KUCHEL has never been opposed to protecting against unsightly signs and posters, but felt the legislation was unrealistic and unconstitutional. He preferred to delay action until a better bill could be worked out—one which would be given more chance of congressional approval.

The present Kuchel bill is the result. Already it appears to have enough support among members of the Senate committee to send it to the floor for action. Senator RICHARD NEUBERGER, of Oregon, one of the sponsors of last year's measure, has welcomed it. And the American Automobile Association has given it a clearcut endorsement—the first time the AAA has approved any specific bill, though long in favor of billboard controls.

Alined against those who want to keep the new turnpike free of roadside distractions has been the outdoor advertising industry, which appears to be well financed. It has been aided by certain segments of organized labor.

If a vote could be taken on the question there is little doubt about where the vast majority of the public would stand. But the public opposition is largely unorganized.

Senator KUCHEL's bill differs from others in two main respects. First, it would give the States greater leeway in permitting official directional signs and those advertising activities actually conducted upon the property on which they are located.

Also it would make no atempt to impose restrictions on communities through which the highways will pass.

Incentive: Senator KUCHEL describes his bill as incentive legislation. By that, he explains, "it would establish a policy of incentive payments to the States which would participate in a national policy of preserving the scenic beauty of nature through which the Interstate and Defense Highway System would run.

There would be no compulsion about a State accepting the national policy, but those which did would be allotted an additional 1 percent of the Federal highway fund. This is a little better than the three quarters of 1 percent proposed in last year's legislation. The Federal share would be 91 percent in States regulating billboards.

The bill offers new hope for bringing the road poster business under control. It remains only for the public to express itself on whether it prefers roadsides lined with natural scenery or those walled in by billboards.

Power on the Farms—REA Interest Rates

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 3, 1958

Mr. YARBOROUGH. Mr. President, many of us are concerned about repeated moves of this administration to try to raise the interest rates on REA loans. Those of us who were fortunate enough to have grown up on the farm know that the great REA program has proven one of the Nation's most beneficial, worthwhile, and progressive projects in all history. This, despite the fact that there always have been, and continue to be, selfish interests which have fought to ruin this remarkable flow of new energy and life to the farm.

Recently the Giddings, Tex., News, one of Texas' fine weekly newspapers, published an excellent editorial against the move to raise REA interest rates.

Mr. President, I ask unanimous consent to have the editorial, Rural Electrification, from the February 13, 1958, Giddings News, printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Giddings (Tex.) News of February 13, 1958]

RURAL ELECTRIFICATION

Rural electrification is one of the greatest blessings that has ever come to the farmer's aid in his continuous fight to make a living from the soil. With this blessing of modern science, he is able to have running water, heat, electricity, television, radios and all of the other many things that use electricity as their source of energy. This has put him on a par with the people who dwell in the city, according to Senator JOHN SPARKMAN, who was in Dallas Tuesday for the rural electrification meeting. President Eisenhower's mad infatuation for the Wall Street moneylenders and his mishandling of rural cooperatives is just another example of inept leadership.

It was only a short while ago when the Eisenhower moneylenders in the temple had the Federal Reserve bank raise the interest rate to their member bands and create the tight-money policy which he claimed would starve off inflation. After the Wall Street bankers had made billions out of the Government, and the people, he had them reverse themselves and drop the interest rate because of fear that the present recession would go into a major depression that would "curl your hair."

His every action has been in favor of the private power companies at the expense of the rural electrification cooperatives and other public power agencies. This was so obvious in his insistence that the Dixon-Yates contract be approved.

The cooperatives are aware of what this big business administration is trying to do to them and should it succeed, and the private power companies take over the rural cooperatives, then the only ones that will receive power will be those in densely populated areas and many of the boys and girls on the farm will again be forced to study their reading, writing and arithmetic by the light of a coal oil lamp.

We believe that the rural electrification movement is just as much the business of the Government as maintaining an adequate system of roads and a first-class postal service and that it should not be destroyed in order to enrich the bank accounts of a favorite few.

One Hundredth Anniversary of Oregon Statehood

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Monday, March 3, 1958

Mr. CHURCH. Mr. President, the State of Oregon soon will celebrate its 100th anniversary, and the President of the United States has signed an official proclamation heralding that event.

The junior Senator from Oregon [Mr. NEUBERGER], who was the author of Senate Joint Resolution 131, authorizing this Presidential proclamation, has written a most vivid and illuminating article for the New York Times of Sunday, March 2, 1958, entitled "Oregon Lays Groundwork for Its Centennial."

We of Idaho feel a particular affinity with Oregon because both our States were explored by the great frontiersmen, Meriwether Lewis and William Clark, and both were once part of what was known as the Oregon country. We of Idaho share with Oregon the great mile-deep Snake River Canyon, bordered by the Seven Devils Range of Idaho on the east and the Wallowa Mountains of Oregon on the west.

I believe the fine article written by the junior Senator from Oregon about his State, which includes descriptions of the scenic realm which Oregon shares with Idaho, should appear in the Appendix of the RECORD and I ask unanimous consent that it be so printed.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OREGON LAYS GROUNDWORK FOR ITS CENTENNIAL

(By RICHARD L. NEUBERGER, United States Senator from Oregon)

Valentine's Day, 1959, is a long way off but the State of Oregon is already busy planning a celebration that will start next February 14 to commemorate the 100th anniversary of Oregon's admission to statehood. Appropriatey on the Valentine's Day just past President Eisenhower signed the official proclamation "calling upon the people of the United States to commemorate with appropriate ceremonies the 100th anniversary of the admission of Oregon into the Union."

Oregon became a State on February 14, 1859. James Buchanan was the President who signed that act. Thus the year 1959 will bring Oregon's centennial, but President Eisenhower was empowered to herald the occasion 12 months in advance because many events associated with the historic anniversary will occur this year. Most of these occasions are certain to be of prime significance to tourists and wayfarers, if only because few States contain the variety of scenery and recreational pleasures which long has characterized Oregon.

This pioneer State of the rugged Northwest stretches from a picturesque and wooded seacoast to alpine ridges cloaked with eternal snowbanks. It includes peaks more than 2 miles high and chasms a full mile in depth. It can offer ski tournaments in summer and golf tournaments in winter. It has wildlife refuges measured by horizons rather than acres, and it has national forests the size of New England States. Roses bloom in Portland most of the year, although Mount Hood's frosty glaciers are never out of sight from Portland on a clear day.

ROSES AND CONIFERS

Trees of fir and pine are more intimately identified with Oregon in the popular mind than is a delicate flower like the rose, for it is true that Oregon produces far greater quantities of lumber than any other State. Oregon is host to long, cool spring seasons and to summers without searing heat. This climate offers ideal hospitality to the rose, and so it is that Portland this June will mark the 50th anniversary of its famous Rose Festival. The occurrence will serve to inaugurate the precentennial events of 1958.

UNIVERSITY OF MICHIGAN LIBRARIES

Portland's floral parade, principal feature of the Rose Festival, is rivaled only by that of Pasadena. Yet one great difference separates the two spectacles—the prize-winning roses of Portland are grown some 1,200 miles closer to the North Pole. To emphasize the contrasting diversions available in Oregon, a Golden Rose ski tournament is always held in connection with the Rose Festival. This take place at Timberline Lodge, in the solitudes of the Mount Hood National Forest, approximately 50 miles east of the city on a good State highway. In June of 1958, because the Rose Festival will be at half-century, a more elaborate occasion is planned.

INCREASING TOURISM

Anthony Brandenthaler, a lumberman from the upland community of Baker, is chairman of the Oregon Centennial Commission. He has predicted a substantial increase in the State's tourist trade this year, as a prelude to the 8 million visitors anticipated for the centennial year of 1959.

The dominant event of the centennial will be an exposition and international trade fair, to be held on the shores of the Columbia River, near Portland. It will continue from June 10 through September 20, 1959. Sponsors of the exposition hope to dramatize Oregon's strategic location on the Pacific frontier, with its deep harbors and sheltered bays. In addition to being a tourist attraction, it is designed to expand trade in Oregon fruits, lumber, fish, and grain with the countries of Asia.

Oregon's vivid past will play a strategic role in many of the plans for the centennial, and the active State Historical Society has had a major role in preparations. One such event is expected to take place this year. In 1956 Congress passed legislation authorizing the National Park Service to study the possibility of establishing a memorial park under Federal custodianship at Fort Clatsop, near Astoria, where the intrepid Lewis and Clark expedition spent the bleak winter of 1805–6. This report has been favorable, and the Interior Department has followed with a recommendation of a $280,000 governmental expenditure to launch the undertaking. If Congress approves these plans, the first national memorial park on the long 4,000-mile Lewis and Clark train could be dedicated this year.

Practically all such occasions in Oregon will involve, collaterally, innumerable sightseeing opportunities. Astoria, for example, is at the mouth of the Columbia River, mightiest of all the West's waterways. Some concept of the impressive proportions of the Columbia may be gained from the fact that it carries to tidewater nearly 10 times the flow of the Colorado River, author of the unsurpassed Grand Canyon. In fact, even the Snake River, chief tributary of the Columbia, contains more than twice the volume of the Colorado, and the Snake itself has trenched a 6,000-foot abyss along Oregon's eastern boundary known as Hells Canyon.

CONTRASTS

These two realms, some 400 miles apart, symbolize the wide range of contrasts which Oregon, near its first century as a State, offers to the traveler.

Some of the world's finest salmon fishing exists in the broad mouth of the Columbia, off the piers of Astoria. Boats owned by expert commercial fishermen are available for hire. The lordly Chinooks, weighing up to 70 or 80 pounds, cross the bar in thrashing schools as they return from salt water to fresh, on their mysterious migration to spawning grounds in the distant mountains.

The long Clatsop beaches, cloaked with glistening white sand, stretch southward from Astoria. Such resorts as Seaside and Gearhart are amply stocked with hotels, motels and good restaurants. U. S. 101 hugs the gnarled coastline like a lariat, extending to such other oceanshore resorts as Tillamook, Cannon Beach, Ocean Lake, Taft, Newport and many more. Golf courses are available at most such places, in addition to invigorating surf bathing in the chilly North Pacific for those who are young in heart and robust in health. The Centennial Commission has been encouraging the development of extra facilities for eating and lodging wherever feasible.

WILDERNESS

The Hells Canyon area of Oregon, by comparison, caters to the nomad who is willing to leave pavement behind and who does not object to terrain which has virtually been stood on end. This is a last great wilderness. In the Wallowa Mountains, which form the Oregon wall of the prodigious chasm, my wife and I have camped with the family of a cougar hunter, who made his living by delivering the pelts of the great cats at the county seat for $50 bounty apiece. This family never saw civilization through the long alpine winters. The mother educated their 8-year-old son with correspondence courses bought from a school on the faroff Atlantic coast. In these solitudes of Oregon there still is hunting for mule deer, stately elk and even cougar, if you can corner one on the dizzy rimrock. Out-of-State hunting licenses are somewhat more expensive than those for local residents.

The State has the most valuable national forests in the Nation. Ponderosa pine are as lofty as 20-floor office buildings, and a good deal more majestic. Creeks trill liltingly off rock ledges on their course to the Columbia. Trillium, Indian paintbrush, and the white puffs of bear grass turn meadows into a carpet of vivid colors. I doubt if any boy brought up in America has really savored what life can be in the spacious outdoors, until he has tented in the mountains of the Northwest.

Under the new $40 billion interstate highway program recently sanctioned by Congress, Oregon has two major roads which will qualify for such aid. One is U. S. 99, which bisects the State from Portland to Ashland in a north-and-south direction. The second is the principal artery of highway travel crossing Oregon from west to east—U. S. 30. This road is known all over the world as the Columbia River Highway, where it threads along the gorge which the great river has sliced through the Cascade Mountains and past such snowcapped sentinels as Mount Hood and Mount Adams. Sections of both U. S. 99 and U. S. 30 already have been built to 4-lane specifications. The entire routes are scheduled for such construction before the interstate program is completed.

CRATER LAKE

U. S. 99 goes through Medford, 1 of 2 main portals to Oregon's only unit of the national park system, the other entrance being the pine-lumber town of Klamath Falls. The park is Crater Lake, one of the extraordinary spectacles of nature's marvelous realm. Many epochs ago, an active volcano of the Cascade Range, Mount Mazama, blew off its summit in a mighty eruption. Crater Lake occupies the vast bowl thus created. Two-thousand-foot cliffs help to fashion a tureenlike effect, with Wizard Island a floating crouton in this massive receptacle. Crater Lake in color is an incredible blue—even bluer than the Mediterranean, claim experienced pilgrims.

Should your journey to Oregon include Crater Lake, be sure to vary this glimpse of a wonder of the outdoors by taking in a sample of mankind's talent, at the nearby community of Ashland. In August of each year, Ashland stages a Shakespearean festival which draws devotees of the theater in general and the Bard in particular from all 48 States.

NEW GLOBE THEATER

Southern Oregon College, which is in Ashland, actively sponsors this project. Thousands of visitors sit in their shirtsleeves and bare-armed dresses at a replica of the Globe Theater of Shakespeare's time. The balmy climate of southern Oregon makes this the natural thing to do.

Oregon, on the eve of its first 100 years as a State of the Union, contains nearly all of civilization's blessings, and yet is close to the frontier, too. While Oregon was a State, the last bitter war was fought with the encircled Nez Perce under the martyred chieftain, Joseph. Lieutenant Teller and H Company were wiped out to the last man, when a State government actually sat at Salem and passed laws.

Sixth Gold Medal Award of Honor of New York Southern Society

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Monday, March 3, 1958

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Mr. Hugh Gordon Miller in presenting to Dr. Francis Pendleton Gaines the sixth gold medal award of honor of the New York Southern Society.

Dr. Gaines is president of Washington and Lee University, and is one of Virginia's most distinguished citizens.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

ADDRESS BY HUGH GORDEN MILLER, HISTORIAN, NEW YORK SOUTHERN SOCIETY, IN PRESENTING TO DR. FRANCIS PENDLETON GAINES, THE SOCIETY'S SIXTH GOLD MEDAL AWARD OF HONOR AND ITS INFORMAL CITATION FOR THE RECORD, AT THE ANNUAL DINNER OF THE SOCIETY IN THE GRAND BALLROOM, HOTEL PLAZA, NEW YORK CITY, ON JANUARY 17, 1958

Mr. president, honored guests, ladies and gentlemen, not merely the South, but this whole country has just finished celebrating with practically unanimous acclaim, the sesquicentennial anniversary of the birth of a great southern hero—the hero closest to the southern heart and the southern tradition—a hero second only in our southland to one other hero, also a Virginian, the immortal Father of his Counntry, first always in war and in peace.

George Washington, at Mount Vernon, typified the eternal principal that the victories of peace are more important than the victories of war. That is the great truth we seek to emphasize this evening, in presenting our gold medal award.

George Washington thus became, as the sons of the Revolution the honored custodian of old Fraunces Tavern, and represented here this evening, will testify, he thus became the American Cincinnatus, even outshining in some respects the great Roman consul who always returned to his farm and his plow after his victories for the Roman Republic and just as General Lee, an ex-superintendent of the Military Academy at West Point, went so heroically to work for a few paltry dollars to build up Washington College in Old Virginia.

Two days from now will be the 151st anniversary of the birthday of Robert E. Lee. This society always, in some way, observes

that birthday. We are going to anticipate by 2 days, and observe that birthday, by delivering our highest token of distinction—a citation for the record, and our gold medal of honor—to Dr. Francis P. Gaines, who for the past 28 years has carried on and expanded and developed the great work of both Washington, the founder, and Lee, the builder, of Washington and Lee University, at Lexington, Va.

Tonight we will observe these two birthday anniversaries; in doing this, we are emphasizing General Lee's achievement in his final days in the vital realm of education, teaching the youth of this country, and the South especially, by precept and example, the very best way to be good American citizens, even in the most trying times, following the great War Between the States. We are going to do this by honoring in the most emphatic way we know how, the splendid American who for these past 28 years, has been ever building upon the original foundation laid by Washington, and reshaped and reorganized by Robert E. Lee, by originating a number of new and vitally important new and original departments of learning; which were soon followed for the first time, with great success, by most of the principal colleges and universities of the country.

What I am now commissioned to do, as the official historian of this society, and to do in the presence of the distinguished presidents of four important southern universities is to emphasize, and to climax by quoting from a book of Dr. Gaines the words of a fifth great (and New England) New England university president, a remarkable tribute made 50 years ago, as splendid a tribute as was ever paid by such a witness to any human being. I like to feel that this witness is with us in spirit this evening. I will quote that contemporary testimony a little later on.

I am commissioned now, in the name of this society, to present our medal of distinction emphasizing the first and primary importance of education, high, and low, as to grades, as the best weapon with which to advance the cause of peace and justice, at home, and contribute most to the defense of our country, and all the free world, in their greatest hour of peril.

I shall not detain you with a recital of the many scholastic and educational achievements of Dr. Gaines. You can get them from any Who's Who in America. His contributions to State and Nation in civil life, in both World Wars, and the Korean conflict, and in the periods of peace which followed—achieved without for one moment losing control of the destinies and advancement of his ever-growing university—would fill a book.

I well remember that when the lawyers of New York City celebrated the anniversary of the birth of James Madison, the Father of the American Constitution, at town hall, Dr. Gaines was the unanimous selection for orator of the day, and as usual he accomplished that assignment as a master of American history, literature and patriotism, and our great heritage of liberty and justice.

The lawyers of this melting pot of new citizens selected Dr. Gaines as an eminent American scholar who could properly present and interpret the work of the Father of the American Constitution in an instructive and effective way.

However, Dr. Gaines, with all his great literary achievements, will best be remembered and appreciated by this particular society in connection with a little book of which he was the author, and which this society sponsored and distributed as a patriotic contribution to the cause of good citizenship, entitled "Lee, the Final Achievement." In that little book, Dr. Gaines resurrected and emphasized the beautiful tribute by the great New England president of Brown University, which tribute I am sure that the New England Society, so long our opposite number, and so often represented on this dais as it is tonight, will fully approve.

I now quote from Dr. Gaines' book the beautiful tribute of that member of the Grand Army of the Republic. It is a requote from the words uttered 50 years ago by Dr. E. Benjamin Andrews, then president of Brown University, who said: "The question of greatness is a relative thing, and we in America will probably always differ as to the rank of our prominent men. But, if an American father were asked which of our great men he would want his own son to resemble, that father if he were wise would be compelled to answer 'Robert E. Lee.'" That testimony speaks for itself and places Robert E. Lee in his proper place in American history for all time to come.

We hope that Dr. Gaines will—perhaps under the auspices of this society, as before without any commercial purposes—someday edit a new and enlarged edition of his book, as a final and mutual contribution to the Lee Sesquicentennial concluded a few days ago. It could do more for humanity, by inspiring the youth of today, than a thousand sputniks whirling through outer space, whether any of them reach the moon or not.

In 1959, this country will celebrate the 150th anniversary of the birth of Abraham Lincoln, with an acclaim that will be heard around the world. The South will join wholeheartedly in that acclaim, just as it did in 1909 on the 100th anniversary of Lincoln's birth, and just as the North has recently joined in acclaiming Robert E. Lee, on the 150th anniversary of his birth. The whole country has long since come to know and understand the purposes of both of these great men. The country has come to more and more know and to understand what both those great American heroes fought for primarily when they began that tremendous struggle—one for the reserved rights of the sovereign States, which he declined command of an army to invade, and accepted command of an army to defend; and the other fighting for an indivisible and indissoluable Union of these still-sovereign States of the United States. And no American would have it otherwise today.

It is a remarkable fact that the only time, so far as this historian knows, at any rate, that any face has ever appeared on a United States postage stamp opposite the face of Washington was the face of Robert E. Lee, and that was in connection with the creation of Washington and Lee University.

Dr. Gaines, I now have the very great honor and pleasure to present to you this very informal citation, and our gold medal, our highest token of honor and distinction, along with our undying affection and esteem; and the fervent hope that we will often be together in the future, as we have in the past, either in person or in spirit, in support of the great work being done by you at that splendid institution, Washington and Lee University, at Lexington, Va.

Briefly, this medal is awarded, and I quote: "To a man or woman born in the Southern States, who renders the most unusual achievement in perpetuation of the history and traditions of the South."

I quote further from an interpretation of this directive in regard to that medal, as follows: "We award our gold medal of distinction for cultural and literary achievement, primarily, as distinguished from mere political or even military achievements. Mere political or military accomplishments and the mere holding of high office, for instance, often have to do with controversial and temporary matters of little permanent moment in the life of a nation."

This gold medal of honor and distinction has been awarded only 5 times during the 72 years of the active existence of this society. The last such award having been made to Miss Margaret Mitchell, in 1938, author of the superb historical novel concerning the War Between the States, entitled "Gone With the Wind."

Regional Power Corporation for Columbia River Basin

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. NEUBERGER. Mr. President, with a view toward opening discussion for means of advancing development of the resources of the Columbia River, I recently introduced a bill designated as the Columbia River regional corporation bill. The proposal for establishing a corporate structure by which new multiple-purpose projects could be built with power revenues has evoked considerable comment—favorable, lukewarm, and critical.

Mr. Malcolm Bauer, special correspondent for the Christian Science Monitor, recently wrote on the subject of the power corporation proposal. His article was published in that newspaper's issue of January 13, 1958. I ask consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor of January 13, 1958]

NEUBERGER TO PUSH POWER AUTHORITY FOR NORTHWEST

EXPANSION SPEEDED

(By Malcolm Bauer)

PORTLAND, OREG.—The new year promises to be a significant one in the development of the hydroelectric resources of the Columbia River system.

It will be a year of great expansion in the Pacific Northwest power empire, as dams and powerplants begun years ago come to completion. And it will surely be a year of major decisions in the continuing struggle between private and public interests for a dominant role in harnessing the great river and its tributaries.

Installation of new generators in both public and private hydroelectric projects in the next 12 months is scheduled to add 1,378,150 kilowatts to the capacity of the Columbia power system—the equal of 2 dams the size of Bonneville, which was the first big Federal project on the Columbia 20 years ago.

The flood of new kilowatts should relieve the power shortage which has been chronic for more than a decade in this region of low-priced energy. Officials of the Bonneville Power Administration, the marketing agency for power produced by Federal generators on the Columbia, estimate that the shortage will not return before 1965.

Bill proposed

Given the time it takes to build a major dam, however, 1958 is none too soon to plan to meet the crisis anticipated in 1965. The Federal contribution to the 1958 additions to the power pool will come from two projects: Chief Joseph Dam and the Dalles Dam, first authorized by Congress early in the decade.

For this reason, there is much Pacific Northwest interest in a bill to set up a

UNIVERSITY OF MICHIGAN LIBRARIES

Columbia basin regional power corporation, to be introduced in the new session of Congress by Senator RICHARD L. NEUBERGER, Democrat, of Oregon.

Bond issue

Senator NEUBERGER's proposal is that the Federal Government set up for the Pacific Northwest an independent regional agency to plan, construct, and operate the power facilities of the Columbia system. Such an agency would absorb the Bonneville Power Administration, which is merely a marketing and distributing agency. It would be governed by a board composed of Northwest residents, operating as an agency of the Federal Government.

Of overriding importance would be the board's authority to finance the construction of hydroelectric projects by issuing bonds to be retired out of power revenues. The uncertainty of congressional appropriations has been a major hindrance to growth in the Federal program in the Pacific Northwest.

The proposed agency would be similar to the Tennessee Valley Authority with respect to the power production and distribution activities of the latter; but it would not, as does TVA, have responsibility in other resource fields.

Clause preferred

The Neuberger bill is similar to a measure prepared by the Pacific Northwest Public Power Association, representing local public bodies engaged in the production and distribution of power.

The principal difference is in a suggested amendment to the preference clause, a provision of Federal law which for a half century has required that electricity produced by the Federal Government should go first to meet the requirements of publicly owned distributors and thereafter to private power distributors.

The Pacific Northwest Public Power Association naturally prefers to retain this clause as it is. Senator NEUBERGER's bill would modify the preference clause to give preferred classification also to private industrial organizations buying directly from the regional power authority.

FEDERAL-PRIVATE RACE

This provision of Senator NEUBERGER's bill is of particular importance to his native State, because Oregon electric utility systems are largely privately owned, whereas public ownership of power facilities dominates in the State of Washington.

Oregon utility executives foresee a time when public power distributors will demand all power produced in the Federal system in the Northwest, and private firms will be forced to rely on their own resources. Generally, they are opposed to the Neuberger bill and its treatment of the preference clause, which they would much rather see eliminated.

It is this fear of eventual exclusion from the product of the Federal system that has given an air of urgency and determination to the private power industry's drive to stake out private claims among the dam sites on the Columbia and its tributaries. With the executive support of the Eisenhower administration, they have more than held their own. More than half of 1958's new kilowatts will come from projects financed by private capital.

New effort pledged

The biggest of these are Brownlee Dam on the Snake River, Swift Dam on the Lewis River in Washington, and Pelton Dam on the Deschutes River in Oregon. The three have been built by the Idaho Power Co., Pacific Power & Light Co., and Portland General Electric Co., respectively.

The Brownlee project is the first of the three undertaken by Idaho Power in that section of the middle Snake in which public-power advocates wanted to build a high Hells Canyon dam. Oregon's Democratic congressional delegation is pledged to a renewed effort in this session of Congress to win congressional authorization and appropriation for the Hells Canyon Dam.

The Idaho Power Co. has rushed the Brownlee project, not unmindful that the further it proceeds, the less the possibility that Congress will pass a Hells Canyon bill, already rejected four times. The Brownlee project is scheduled to begin pumping 270,300 kilowatts into the Northwest power pool by next fall. Its entire works would be flooded out by a high dam at the Hells Canyon site.

Idaho Power Co. won the battle of Hells Canyon before the Federal Power Commission. A similar struggle has been raging in the same arena for the right to develop the Snake River downstream from Hells Canyon, to be discussed in the next article.

Traffic Safety—Blueprint for Achievement

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES

Monday, March 3, 1958

Mr. KUCHEL. Mr. President, all Americans have been greatly encouraged by the recent progress in the fight against traffic accidents. Total fatalities in 1957 were slightly lower than in 1956, despite an increase in the mileage of vehicle travel. But the toll of more than 38,000 deaths last year, and 1.3 million persons injured, is still a tragic and challenging record. It will not permit a single moment's letup in the campaign for safer streets and highways.

Recently, in Salt Lake City, Utah, at the annual meeting of the Utah Safety Council, an excellent address on this subject was made by Mr. T. S. Petersen, president of the Standard Oil Company of California, and a distinguished civic leader of the State of California. Mr. Petersen is chairman of the Business Advisory Council to the President's Committee for Traffic Safety, and in his Utah address he demonstrates how a business and industrial leader can fulfill the responsibilities which the safety challenge imposes on all of us.

Mr. Peterson's remarks also outline some of the constructive steps which will be taken this year to assist States and local communities in their quest for a solution of this problem, under sponsorship of the President's Committee. I ask unanimous consent, to have printed in the Appendix of the RECORD, the text of his address.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

UTAH AND TRAFFIC SAFETY—A BLUEPRINT FOR ACHIEVEMENT

Thank you very much, Governor Clyde, Mayor Stewart, Mr. Black, and members of the Utah Safety Council. The pleasure I've experienced at being briefly home again in Utah has certainly been supplemented at this meeting today. May I congratulate all of you on the enthusiasm you are displaying for a cause which is shared by, I am sure, everyone in the Nation—the common cause of traffic safety.

This enthusiasm on your part is, quite frankly, easy to understand. There is no one who is not continually reminded, day by day in many ways, how frightful the carnage on our roads and highways has become. One need only sit in an office and listen to the sirens on the city streets, or pick up a newspaper on the way home at night, to be reminded again and again how thoughtless drivers can be and how helpless, it seems, we have been up to now in finding a solutiton to our national traffic safety problems.

In using the word thoughtless, I am reminded of a newspaper article which appeared several weeks ago in my local newspaper. On Friday evening, January 17, the area where I live was covered by the worst fog in more than a decade. It came in from the sea at the height of the commuting hours and then lifted suddenly at about midnight.

The next afternoon, my newspaper headlined the remarkable fact that five persons had been critically injured in traffic accidents since the previous evening, all of them in accidents which happened after the fog lifted, none while the fog was on the ground.

One would surely think, reading this, that drivers today actually wait for good visibility so they can aim their vehicles at one another like a scientists aims a guided missile.

I'm sure you agree that we must put an end to this target practice. And we must do it as soon as we possibly can.

I said a moment ago that we seemed to be helpless in finding a solution to our traffic safety problems. Perhaps this language was a little too pessimistic for there is much being done today, in every State, and in almost every community. Most certainly in Utah you have hard-working organizations which are looking ahead to the job which remains to be done, not backward at what has already been accomplished.

I'd like, if I may, to join you in looking ahead for a few moments. Perhaps today we can put some dimension to this challenge we, as a nation, face and map out a few of the paths which must be followed if the job to which we have all given so much time is to be done.

Many of you will recall that the President's Committee for Traffic Safety held its first Western Regional Conference in 1956. Like many similar meetings, this one, being the first of its kind, spent much time simply getting off the ground. But this does not mean that nothing was accomplished. The opposite is true.

This first regional traffic safety conference was attended by delegates from 10 Western States and provided a common meeting ground for people who had expressed a real and active interest in traffic safety. It gave them the chance to get together and discuss their common problems. It gave them the chance to sit down and exchange ideas and plans, to give and receive basic philosophies which could be taken home and used in months to come.

And, most importantly, it aroused throughout the West, a much higher degree of citizen support for traffic safety work, the support without which any such program would collapse.

Your State is a good example of how effective this citizen support can be. In talking with many of you before this meeting, it has been clearly pointed out to me that the Utah traffic safety effort has, since you met with the other 10 Western States in 1956, received a great deal more citizen support and citizen participation. With this

added support, your council has been able to work more precisely and effectively these past 2 years.

It was most gratifying to witness the manner in which the Utah delegates returned from this 1956 meeting and set promptly to work doing what they could to supplement the efforts of the existing traffic safety program. Individual citizens, industrial firms and State organizations all took a renewed interest in the work that had to be done. In the last 2 years, your State, and particularly your safety council, has clearly demonstrated its support of traffic safety on both the local and the national level.

It is no idle compliment when I say that your statewide traffic safety organization now stands as an example of what can be done. This is not to say that your way is best, for what applies in one State may not apply in another. But it does seem that you have tailored the suit which best fits your particular frame. Others should look to Utah for guidance and I'm sure they do.

In an effort to provide you with a closer look at the national traffic safety picture, let me digress here for a moment and present some statistics which you might find of interest.

In December of last year, representatives of the President's Committee reported on the number of States which are presently organized in some way to promote traffic safety. Generally, the picture appears quite satisfactory. Of the 48 States, 39 have some kind of traffic safety organization. In the 11 Western States, 8 groups are at work to some degree.

These figures, however, are deceptive. Some of these State committees are primarily on paper while others are insufficiently staffed and financed to do the job required.

It is the responsibility of every citizen to encourage that something be done in those States where no group is functioning. Also, where an organization already exists, but citizens of a State feel a more effective group is desired, these citizens must make their desires known.

In States such as Utah, where an effective organization is already at work, various national groups stand ready to assist in whatever way they can. In these areas some very real progress can be made with the professional help so willingly offered and provided by the Automotive Safety Foundation, the National Safety Council, and the President's Committee, among others.

As an example, the increased field staff of the National Safety Council has been of tremendous help all across the Nation. It is now possible to furnish prompt, skilled assistance to any group interested in organizing a statewide citizen's traffic safety committee. The mere fact that this help is available greatly strengthens the national program.

Utah, incidentally, can be proud of the way in which it has made use of the aid offered by these people.

It's a good thing that you have this sound and workable organization, for the challenge which faces you here in this State is big beyond definition. Your patience and your dedication will be sorely tried in the months and years to come.

Perhaps the scope of the challenge may best be summarized by a quick look at a few key figures.

In 1956, 39,628 American men, women, and children met death in motor vehicle accidents. The latest available estimate for 1957 shows that this figure has dropped to about 38,500. Some improvement, yet, but still a tragedy of the first magnitude.

The highway death situation reached its climax, as you all know, during the Christmas holiday several weeks ago. In the course of that festive 30-hour period 224 died in highway accidents alone and countless others were injured. Imagine all that destruction in only a day and a quarter.

It is a double tragedy that most Americans, reading those holiday headlines, gave monentary expression to their shock and sadness and then went their way with not another thought to what must be done to stop this senseless trend toward more and more death and injury.

While it would be visionary to say that all traffic deaths are preventable, common observation and common sense tell us that undoubtedly most of them are preventable. We know that the rate of fatal traffic accidents can be reduced because it has been reduced.

In 1934, the nationwide rate was more than 16 deaths for every 100 million miles traveled by motor vehicles. By 1956, the national rate was down to 6.4. The rate for 1957 has not yet been published but it should be down a little, not much, but a little.

Yet the total of motor vehicle deaths in 1934 was 36,000, compared to the 38,500 for 1957. While the death rate has gone down sharply, the highway slaughter increases because each year more cars travel more miles, at higher speeds, in greater traffic congestion.

Street and highway traffic in America is the sum of 55 million automobiles, 12 million trucks, and a quarter of a million buses in motion on 3½ million miles of roads.

The daily movement of people and goods by this enormous, ever-increasing fleet of vehicles, public and private, makes motor transportation the largest single common activity in the American economy. In all its phases motor transportation is, and for many years has been, the Nation's biggest business.

We all know that the motor vehicle has made the American economy the most highly developed in the world. We have seen it change the face of our land, remold our way of life, and enrich our culture. It has enabled us to do more work and pursue pleasure more widely than any other people in history.

But the motor vehicle as a mass mechanism is accident prone. In the hands of 75 million Americans licensed to drive, the Nation's automobiles, trucks, buses, and taxis have become instruments of death and injury.

The risks of accident exposure and potential tragedy increase each day. Unchecked, such a toll would mean that scarcely any individual in the United States could escape during his lifetime the tragedy of having one or more of his friends, relatives or associates killed or injured in a traffic accident.

So far we have talked only of statistics. The human aspects of the accident problem are, of course, of even more concern. All of us have had friends, relatives, or fellow-workers killed or seriously injured in traffic. How few are the cases in which we did not shake our heads in the realization that the tragedy need not have happened, that a bit more caution and forethought, a trifle less speed, a gesture of courtesy, an extra measure of alertness on someone's part, would have spared a life.

No citizen can escape responsibility for taking part in the effort to cut down the needless human waste and economic cost of accidents. And I think everyone today can contribute a great deal to this effort. Indeed, you people have already done so.

Knowing the residents of Utah, I can easily forecast your next question, "What, specifically, can we do beyond what we have already done?"

The answer to that question lies in two places. The first is the creation of a proper traffic safety climate in the State itself; the second is the continued quest for a well organized and broadly applicable national program.

In any individual State, several things must be done before citizen representatives can go to a regional conference and either offer anything constructive or make maximum use of what they learn from others. What I am about to say holds true for every State in the Union.

Any workable traffic safety program needs, as I mentioned before, a high degree of citizen support. State officials, organizations such as the Utaah Safety Council, and interested individuals must have the direct and active support of their friends and neighbors. They cannot do their job otherwise.

The support is particularly vital in the realm of legislation, much of which, in spite of its motives and purpose, will be distasteful to some voters. Traffic safety takes money. Traffic safety takes reorganization: the renovation of outdated administrative functions. Traffic safety takes autonomy: the freedom to do what must be done and do it at once. All this must be accomplished by legislation supported by an aroused citizenry.

Traditionally, the American citizen, unless he is alerted to a specific need, is reluctant to agree to change and the expenditure of large sums years after year. Unless this man, this voter, is firmly aware of the havoc which our traffic is creating, you will not be able to get your money, your adequate personnel, your new roads, your organizational changes which are the basic needs for your future success.

And so, the course you must follow is clear. Use your present organization as the basis for rallying about you all the citizens of your State. Tell them again and again what must be done and then set out to do it. Therein lies your first great challenge.

Let me make it very clear that on both the State and national levels you will have the unqualified support of business and industry. A good example of this support lies in the degree to which business is represented at this luncheon today.

Speaking nationally, an outstanding illustration of what industry is doing to support the traffic safety movement is the recently announced Aim To Live program sponsored by General Motors Corp. and spearheaded by its president, Harlow Curtice, who is also chairman of the President's Committee for Traffic Safety.

General Motors has focused its attention on the critical realm of better vision at night in an effort to reduce the excessive night driving toll which last year took nearly 20,000 lives. The company has inaugurated a broad campaign designed to encourage motorists to properly aim their headlights and have them inspected at least twice a year. It urges them to observe the dimming rule and to limit their speed at night.

To make it easy for the driver to follow such a program, the company has enlisted the aid of its 19,000 truck and car dealers plus thousands of independent garages and service stations. By doing this, General Motors is offering concrete assistance to a program which it proposes.

Last week's issue of Life magazine and the latest issue of the Saturday Evening Post both carry 3-page ads which explain the program. Look at these ads and see what one company has done to help us all. Accept this one commendable project as evidence that business is doing something to help you meet the first challenge you face.

Now, what of the second challenge I mentioned earlier?

You in Utah will not be alone as you try to do a traffic safety job, as you try once again to acquaint your friends and neighbors with what must be done. Many others throughout the land are as enthusiastic as you and are working today toward the same end—greater highway safety. Many organizations, some national and some local, are also laboring with renewed and growing vigor. One of these is the group of which Larry Black is a member, the Business Ad-

UNIVERSITY OF MICHIGAN LIBRARIES

visory Panel of the President's Committee for Traffic Safety.

The entire President's committee has plans at work today which will help you tomorrow. If I may, I'd like to take a few moments to go over these plans with you.

As many of you know, President Eisenhower appointed this committee in 1954, charging it with promoting the national action program and developing active traffic safety organizations in every State. The committee held its first regional conferences in 1956.

As a direct result of these conferences, many State organizations are now functioning smoothly and have a firm footing on which to base their next step.

But many have asked since that time what direction this next step should take. In the hope that we can come up with an answer, 4 more regional conferences have been planned for 1958, 1 each in Atlantic City, Miami, Chicago, and San Francisco.

The background for these forthcoming conferences is interesting. Last December, the President's Committee sponsored a Public Officials Conference in Washington, D. C., attended by about 500 key State, county, and municipal officials from all across the country. Purpose of this meeting was to outline specific traffic safety needs nationally, State by State and city by city. In large measure, this work is now complete. A firm foundation has now been laid for the coming regional traffic safety conferences. It remains now to see what these meetings bring forth.

As far as Utah is concerned, you all know of the work which has been done here since this official's conference, and indeed, long before it met. Governor Clyde, following a suggestion of your own safety council, and in accordance with a fundamental recommendation of the officials' conference, took definite action. He created a Coordinating Committee of State Officials.

This coordinating committee is now developing a balanced program for traffic safety. Once this has been done your safety council can provide organized public support of that program.

Utah is already a leader among those States which have followed the action program formulated at President Eisenhower's 1954 White House conference. And you obviously intend to remain a leader.

Today, both your council and the governor's committee are gathering data and information on which will be based Utah's 1958 traffic safety program. In the near future, these two groups will meet to formulate statewide plans. Your package is almost all wrapped up and ready to take to the western regional conference April 8 and 9 for presentation to other western citizens.

The contents of this package are a good indication of the fine work which has been done in Utah to date.

In your State alone, recent additions to the National System of Interstate and Defense Highways total about 250 miles. Best available estimates indicate that these recent additions have meant, or will eventually mean, the expenditure of $100 million, with more to come later on. Such a vast increase is bound to have a tremendous effect on the State's economy.

Most of these new highways will be of the freeway type, four lanes divided by a median strip. Experience has already shown us that this type of construction minimizes the danger of head-on collisions. Recent testimony before Congress indicates that the death rate on divided roads is just about half what it is on the conventional type.

In addition to planning ahead for the new, safer roads and highways you need, Utah is to be congratulated for its work in highlighting the economic cost of traffic accidents. The research and planning division of your State highway department started more than a year ago to investigate the detailed cost of traffic accidents in which Utah passenger cars were involved over a 12-month period. It is my understanding that this study is in its final phases and the results will be known possibly within the next 2 or 3 months.

Still another commendable item in the package you will carry with you to your next Western Regional Conference is the high school driver training program which the Utah Legislature provided in 1956 by a $1 supplement to the State license fee.

Such legislative action, once it is outlined to those in other States, will serve as an example of what can be done. Talk about this in April when you meet with the citizens of other Western States. Let the West know that proper training can prevent accidents before they happen. Let the West know what your experience has been in this essential category of our traffic safety effort.

I am very happy to announce, incidentally, that Larry Black has agreed to serve as head of the Utah delegation to this forthcoming regional meeting. I know now that you will be prepared to do something specific while you are there.

The phrase "something specific" is the keynote of the April conference. Many of you have undoubtedly been to conventions and meetings where a good deal of work and effort has been put forth, while the delegates, once the affair was over, have been unable to answer the vital question, "What did we really accomplish?"

Too many times, conventions and conferences highlight a problem but propose no solution, leaving the delegates to say "This is all well and good, but where do we go from here?"

The President's Committee intends that the four 1958 regional conferences shall not fall into a trap of this sort. We intend that these meetings shall, with your help, do something specific rather than waste the time of the important people who will attend.

It is our sincere hope that all delegations attending these four conferences will bring home with them a positive plan of action, detailed down to the simples procedures and encompassing all the knowledge of the various traffic safety groups who will attend. The President's Committee believes, and has so planned its conference programs, that State delegations will find what they need to support them in the jobs they are doing at home.

Pinpointing your particular role in this April meeting, let me say simply that the Utah Safety Council will, and I speak from experience, be one of the groups which takes the lead in seeing that the conference accomplishes its purpose.

Beyond this, I am confident that your organization will, once the conference is over, continue to take the lead here in Utah and help push it to a high place on the roll of those States which place sufficient value on human life to be willing to do something about preserving it wherever possible.

There lies your second challenge—to share your knowledge and your ambition with others on common ground and from this conference and others to come, to gain the increased knowledge and ambition which will lead you to success in your efforts.

One more point: Let me ask that in the months and years to come you continue to speak up as you have done in the past rather than soft-pedal your plans. Ask through every public relations media at your disposal for added citizen support and, once you have it, you will find the money, the administration, the increased personnel, and the time to push your work to its conclusion. Speak loudly and you'll be heard.

All of us throughout the Nation who share your desire to make our streets and highways safe rather than sinister are watching what you can do.

We've seen the fine start you have made and how time and again you have renewed your dedication to the cause of saving lives.

Personally, this opportunity to meet with you today has been a tonic. I have the feeling that if you can accomplish as much as you have, others can do the same. Perhaps things aren't as bad as the figures indicate. Perhaps by the time our new roads are finished, and there are another 20 million cars and trucks on the highways, we'll have been able to infect all the people of Utah, and the entire country, for that matter, with a little of the enthusiasm which has carried us this far.

Perhaps then they will join us in helping to prevent this wholesale destruction. Perhaps they will sense that something concrete and effective can be done and, in the end, help us do it.

Thank you again for letting me talk with you today. May I wish you all the best of luck for the coming year—one which I pray will be both a safe and productive one, here in my native State and throughout the land.

Appropriations for Improved Library Services

EXTENSION OF REMARKS
OF
HON. THRUSTON B. MORTON
OF KENTUCKY
IN THE SENATE OF THE UNITED STATES

Monday, March 3, 1958

Mr. MORTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very excellent letter concerning the appropriations for improved library services, which I have received from Dr. Robert R. Martin, Superintendent of Public Instruction of the Department of Education for the Commonwealth of Kentucky.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COMMONWEALTH OF KENTUCKY
DEPARTMENT OF EDUCATION,
Frankfort, February 26, 1958.

The Honorable THRUSTON B. MORTON,
United States Senate,
Washington, D. C.

DEAR SENATOR MORTON: Kentucky's aspirations and accelerated efforts for greatly improved library services for our people seem to be facing serious appropriation obstacles in President Eisenhower's proposal of only a $3 million appropriation for the Library Services Act for 1958–59.

It is my understanding an appropriation of the above amount would reduce Kentucky's share to only $50,000. The present appropriation of $5 million gives our State program $137,000. A full appropriation of $7,500,000 would give Kentucky $221,000.

The impact of our efforts of the past few years to implement greatly improved library services is just now beginning to benefit our people. We now have 96 bookmobiles in operation which are closely geared to the development of regional library centers. We have 4 new regional libraries in operation and the establishment of 4 more is scheduled for 1958–59. Ultimately, plans call for about 15 regional libraries serving all sections of Kentucky. As you well know, this program of expanded library services, coupled with improvements in public education, would give great impetus to our efforts to raise the educational level of our people.

It is my understanding an appropriation of only $3 million would result in the clos-

ing of at least 2 of our newly established regional libraries and abandonment of the plans for the establishment of 4 regional libraries scheduled for next year.

Since an appropriation of $5 million will make it possible for Kentucky's program to only stand still at its present level, I want to urge you to exert your efforts and influence for the full appropriation of $7,500,000 for the year 1958–59. I am sure your help in this matter will be sincerely appreciated by not only the professional persons involved in our library program, but also by the many good citizens who have given so freely of their time and material support to our library program.

Cordially yours,

ROBERT R. MARTIN,
Superintendent of Public Instruction.

Results of McGregor 1958 Poll on National Issues

EXTENSION OF REMARKS
OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I would like to place in the RECORD the results of the questionnaire which I annually send to the people of the 17th Ohio District, the district which it is my proud honor to represent in the Congress of the United States.

It has always been my belief that it is the duty and responsibility of every elected representative to do everything possible to obtain the views of those he represents on the vital national and international problems which confront us all. For this reason, I instituted the annual courthouse meetings, and for this reason I also circulate this questionnaire among the people of the district.

In connection with the distribution of the questionnaire, I want to mention particularly that the newspapers of my district have again provided wonderful cooperation. This year every daily paper in the district, and most of the weekly papers, published the questionnaire in a prominent place in their papers, so that a great many people who could not be reached by direct mail were given an opportunity to express themselves on these important matters. I am deeply grateful to these public-spirited editors and publishers for their assistance.

I am, of course, sorry that I could not reach every one of my constituents with this questionnaire, but it is my conviction that the replies received, coming as they do from representatives of almost every walk of life, provide me with a very helpful indication of the trend of thinking among a good cross-section of my people. As a part of the questionnaire, I ask them to mention their occupation or profession, and this gives me an opportunity to tabulate the results not only by overall percentages but also by somewhat more stratified separate groupings. I feel that this procedure gives me a more accurate and complete analysis of their opinions.

The population of my district is about half rural and half urban, and nearly all of the labor and farm organizations are represented, as well as both large and small business. In addition, there are two universities and two colleges. I am happy to report that answers were received from representatives of every one of these groups, and especially gratifying to me were the large number of completed forms which contained additional comments on the various questions. It is reassuring to me to know that so many constituents in my district are interested in the important issues now before this legislative body and are eager to express their views on them.

The questionnaire and the results are as follows:

A QUESTIONNAIRE

In an endeavor to learn the views of the folks back home relative to several subjects of national importance that will be before the Congress, may we have your considered opinion?

NATIONAL DEFENSE

After 18 months of continuous study, the nongovernmental Rockefeller studies group last week reported to the Nation that the United States must boost defense spending by about $3 billion each year for the next several years if it wants to halt a rapidly deteriorating position in the military race with Russia.

(NOTE.—The 21-man panel which made the Rockefeller study was a nonpartisan, nongovernmental group headed by Nelson Rockefeller. It consisted of a cross section of American life—scientists, representatives of labor, industrialists, former defense officials and military officers, atomic experts, educators, and publishers. Among the panel members was Gen. Lucius Clay, well known in our district.)

	Percent	
	Yes	No
Do you favor a larger congressional appropriation for defense purposes?	76	24

TAXES

Before the successful launching of the Russian earth satellites, there was hope for the possibility of a tax cut this year. Now it appears that a choice must be made between stronger defense and lower taxes.

	Percent	
	Yes	No
Are you willing to postpone a tax cut in order that the necessary funds are available for defense needs?	81	19

EDUCATION

The Russians have apparently made tremendous strides in scientific education. Various proposals will be forthcoming concerning ways in which the Federal Government might assist in improving the level of education in this country.

	Percent	
	Yes	No
(a) Do you favor a system of Government-sponsored scholarships for the training of students showing exceptional aptitude in the sciences?	68	32
(b) Do you favor the appropriation of funds by Congress for construction of schools?	41	59

THE FARM PROGRAM

Do you believe that the "soil bank program" should be continued?	27	73
Do you believe that all Federal controls on farm products should be removed?	64	36

Economic Conditions in Washington County, Maine

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Monday, March 3, 1958

Mr. PAYNE. Mr. President, I ask unanimous consent that a very interesting and thought-provoking letter to the editor in the February 19 issue of the Portland (Maine) Press Herald from the Honorable Roscoe C. Emery, of Eastport, Maine, in regard to economic conditions in Washington County, Maine, may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NO ROOM FOR GLOOM DOWN EAST

To the EDITOR OF THE PRESS HERALD:

During the past year there has been a good deal of propaganda—that is probably the correct description of it—representing the economic condition of Washington County, particularly the Eastport area, as being depressed to the point of demoralization. In this connection I should like to present some facts that show a somewhat different picture.

There are certain indices that any economic study of this county worth a moment's consideration should take into account. Among these is commercial banking activity, which was greater in 1957 than in 1956 in the county as a whole. Savings accounts, except in banks paying minimum rates of interest, were generally larger in 1957 than in 1956, one institution reporting a savings department gain of no less than 13.7 percent. The Department of Banks and Banking states that consolidated reports of the savings banks (as such) in this county show an increase in deposits during 1957 of $362,863 to which must be added an increase of $304,000 in a savings institution of another type, a total of $666,863, which isn't bad for an area said to be in an economic plight. Tax payments have, in the main, been good. Every municipality—town, city, or plantation—in the county paid its county tax in full by January 1, 1958—perhaps not too many counties in Maine can equal that record. The county treasurer's report for 1957 shows that $30,000 was paid on the bonded indebtedness of the county, and that its net debt was reduced by about $25,000, indicating that it is continuing to walk out from under the bonded debt of $500,000 it assumed some 50 years ago in connection with the construction of the Washington County Railroad, now a part of the Maine Central system.

TONS OF BERRIES

The blueberry crop in 1957 was the largest in years, figures by one authority at 11 million pounds of processed berries worth $1,830,000 as compared with something less than 7 million pounds worth $800,000 in 1956. The sardine season in 1957 in this county was not as poor as has been reported—the county's total pack was only 50,000 cases under that of 1956. The State department of agriculture, in a release dated January 2, said Washington County had last season its best run of fish in 5 years. It is true that lobster fishermen were paid lower prices than in 1956, and that the clam fishery isn't, and probably won't ever again be the resource it has been in earlier years. It is also true that, as elsewhere in Maine, purchases of pulpwood fell off by as much as 30 percent, which is serious, but resulted mainly from a policy of reducing inventories so that it probably won't recur this year.

On the other hand, the tourist business, aided by improved conditions on Route 1, was materially better than in 1956, and farming, never previously a very impressive factor in the county's economy, has taken a turn for the better. According to County Agent L. G. Rozelle, "a million dollar industry has been built up in hatching eggs" and "Washington County is taking its place in modern agriculture with higher quality and efficiency in the lines of agriculture adaptable to the area."

Other, perhaps negative indices, include the fact, that Washington County had only five bankruptcies in 1957, compared with 10 in Piscataquis, with only about half of our population; 14 in Waldo, with only three-fifths our population; and 47 in Somerset, with only 5,000 more people than we have. Also, we have comparatively few foreclosures—never a mass foreclosure such as occurred in Aroostook last May when the Federal Deposit Insurance Corporation took over 20 pieces of real estate in the Fort Fairfield area alone. While figures on total gifts to such charitable funds as the March of Dimes, Red Cross, and Salvation Army are not available, it is believed they were not less in 1957 than in 1956 and previous years. There seem to be as many cars and trucks per capita here as in other rural areas of Maine; about as many TV sets, and wherever I have been in this county the people seemed to be both well fed and well clothed. Most of our residents own their own homes, and such mortgages as there are have been incurred mainly in the process of purchase. As stated, not many are under foreclosure.

MILLIONS IN CONSTRUCTION

On the more positive side, it should be pointed out that the St. Croix Paper Co. has spent $15 million in improving and enlarging its facilities at Woodland; a million-dollar bridge is nearing completion at Jonesport-Beale's Island; and a $30 million naval radar instalation is already underway in Cutler. Perhaps this depression talk and calamity howling has been slightly overdone, especially as the Quoddy tidal power project is now in the offing with all the enormous industrial activity it would involve.

It is true, of course, that unemployment, as listed in the Calais office, reached its highest point in 5 years during December but increase in unemployment is not peculiar to Washington County. There is increasing unemployment everywhere. It is also true that during December it is likely to reach its peak for the year in this county. Last summer blueberry processors had to import labor from Nova Scotia to harvest the crop, and pulpwood operators have for years complained about the lack of laborers in their line.

As to Eastport, which always seems to be singled out for special mention by the crepe-hangers, it so happens that Eastport doesn't owe a dollar of bonded debt and has a surplus of $75,000 on hand. Its city manager reported early in January that no less than 85 percent of the 1957 tax had then been collected, with 3 months remaining before the tax-lien deadline—as satisfactory a record as in any of the past 5 years. He further reports that its relief load is easy, its burden is light—amounting last year to only $1,800—and that excise-tax collections for 1957 were well above those for 1956. Deposits in the Eastport Savings Bank were larger on January 1, 1958, than on January 1, 1957, being now at an all-time high. There are plenty of new cars on the streets, and the dwellings here bristle with TV antennas. Eastport may not be as prosperous as some towns in Maine, but it is very, very far from being as badly off as it has been represented to be.

A SHOPWORN PHRASE

The disaster propaganda referred to, in which the phrase economic plight is a stock, if somewhat shopworn phrase, is not in any way helpful either to the welfare or the morale of Eastport or Washington County as a whole, and the time has come to put a stop to it by applying to vague derogatory statements the test of facts and figures, as was done under somewhat similar circumstances 4 years ago, when it was squelched by a single presentation of dependable information.

There is no place in this county for a negative or defeatist attitude. What we need and should cultivate is the same aggressive, self-reliant and resourceful booster spirit that has put many another area, some of them right here in Maine, well on the way to solid prosperity.

R. C. EMERY.

Industrial Development Conference Planned by Chicago & North Western Railway

REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 3, 1958

Mr. WILEY. Mr. President, on March 20 a precedent-making conference will occur in my State.

For the first time, I think, a major American railroad will convene a conference dealing with the importance of industrial development of the area it serves.

The conference, arranged by the Chicago & North Western Railway Co., and to be held in Milwaukee, will be attended by some 350 leaders of industrial development in Wisconsin cities, towns, and villages served by the railroad.

I may say, incidentally, that the Chicago & North Western is Wisconsin's largest railroad. It serves 85 percent of the State's counties, with 94 percent of its population.

The railroad's freight lines also serve more than 5,000 industries in the State.

Mr. President, we have all heard much of the increasingly difficult problems faced by America's railroads. We have heard, as well, of economic stagnation in many cities and States of our country. Here is an answer to such conditions, an answer worthy of being followed throughout the land. I am more than pleased to note that the Chicago & North Western is preparing to meet its problems head on by a forward-moving conference of this nature.

I may say, Mr. President, that I, for one, have long been interested in the issue of industrial development of my State, and, for that matter, all other States of the Union. Since my interest is naturally primarily in my own State, I have been in close contact with the State industrial development division, which had been created by the 1955 Wisconsin State Legislature. I have been in contact as well with many of Wisconsin's more than 170 development corporations, and with the bureau of community development, a vital part of the extension division of the University of Wisconsin.

I send to the desk two items. The first is a newspaper article, describing this March 20 conference.

The second, by way of background, is on the issue of industrial development, itself. It consists of excerpts from a splendid statement which had been made on November 19, 1956, by the very able director of the bureau of community development, Prof. R. J. Colbert.

Professor Colbert spelled out, step by step, the tasks of a local industrial development program—a procedure which has been tried and found to be effective in the course of more than a decade of worthwhile work by the bureau.

I ask unanimous consent that both items be printed in the Appendix of the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

INDUSTRIAL DEVELOPMENT PARLEY CALLED BY CHICAGO & NORTH WESTERN

As part of its program of industrial development, the Chicago & North Western Railway Co., today disclosed it will hold a statewide conference on industrial development for Wisconsin in Milwaukee on March 20.

More than 350 leaders in industrial development in cities, town, and villages served by the railroad in the State are expected to attend the 1-day meeting to be held at the Hotel Schroeder. The conference will be centered around addresses by national authorities on various aspects of industrial development and is believed to be the first of statewide scope to be sponsored by a railroad. Speakers will include representatives of several major industries.

"Industrial development and the selection of new plant sites by America's expanding industries have reached almost the status of a science," said Clyde J. Fitzpatrick, president of the North Western. "Industry today carefully studies many factors before it finally determines where it will make its home.

"Because the benefits of industrial development are shared by the railroad and the communities it serves for years to come, it is our hope that this conference will lead to a greater understanding by leaders in industrial development in Wisconsin of the needs of industry in seeking new plant sites."

Fitzpatrick also pointed out that the opening of the St. Lawrence Seaway in 1959 is an important factor to Wisconsin in attracting new industries seeking areas in which to settle.

The morning session of the conference will be devoted to specific aspects of industrial development. It will be addressed by John T. McCarty, consultant on public and employee relations services of General Electric Co., who will speak on What You as an Individual Can Do for Industrial Development in Your Community; H. McKinley Conway, editor and publisher of Industrial Development magazine, who will speak on What Specific Characteristics Industry Looks for in a Community; and Otto W. Pongrace, manager, engineering, and construction service department, Ford Motor Co., who will discuss Plant Location Factors Considered by Industry After a Community Is Selected.

The afternoon session will be opened by an address by Ben W. Heineman, chairman of the North Western, on the Railroad's Role in Industrial Development. Dr. Harold M. Mayer, of the department of geography of the University of Chicago, will speak on What the St. Lawrence Seaway Means to Industrial Development in Wisconsin and the Middlewest. James C. Downs, Jr., chairman of the board of Real Estate Research Corp., Chicago, will address the conference on What Price Industrial Land?

The North Western is Wisconsin's largest railroad, serving 85 percent of the State's counties containing 94 percent of Wisconsin's population. The railroad's freight lines also serve more than 5,000 industries in the State.

EXCERPTS FROM ROY J. COLBERT'S STATEMENT ON TESTED PROCEDURE FOR INDUSTRIAL DEVELOPMENT

* * * * *

For more than a decade, the Bureau of Community Development has been working with communities in all parts of Wisconsin. Careful community case records are kept as a basis for avoiding duplication of effort, for assembling needed information, and for evaluating the results of our efforts. Thus, we have learned that certain procedures have proven more effective than others. I will briefly outline what we find most useful and effective.

1. In the first place, we insist that the community appoint or select a group of trusted and respected citizens as a committee for industrial development.

This committee must have the authority and approval for creating and executing programs of action. What is everybody's business is nobody's business, and nothing gets done. This, more than anything else, explains why so many promising communities have made so little progress. While local business and professional man stand ready to help, no one is willing to stick out his neck for fear he will be criticized by others in the community. Consequently, it is necessary that he be appointed to serve on a committee that has instructions to go and get what this community needs in order to make it prosper. Such a committee may be appointed by local government or by local organizations. With this accomplished, the community is ready to invite the cooperation of the university and the many other agencies that can help. It can study local needs and resources and do something about them. In some instances it may be necessary for this group to form a development corporation to raise necessary capital to buy factory sites or to finance construction of suitable buildings for lease, sale, or rent to manufacturing concerns. (We shun subsidies of all sorts, including tax exemptions. We regard such practices as unsound.) We now have in Wisconsin some 170 such local industrial development corporations, most of them in small communities. Most of these are organized as profit corporations; a few are nonprofit; a few others are set up as departments of local governments, as municipal corporations, similar to water departments, or city-owned powerplants. They have proven to be a most effective means of developing or attracting industries and in getting communities to better understand their resources. They have done much to unite rural and urban people.

2. The next necessary step in an effective program for economic development is getting the facts about what the community has in the way of industrial potential. No investor is likely to buy a pig in a poke—he is sure to ask many pertinent questions about the community. He wants to make sure that his investment will not only pay dividends, but that it will be a congenial and satisfying service. We have listed some 15 standard questions that appear in almost every prospect's check list of requirements for plant locations (see Wisconsin's Economic Outlook, p. 32). Consequently, the local committee or corporation must be ready with accurate information when contacting a manufacturer or investor who is interested in plant location. The bureau aids many communities in collecting and preparing such folders or brochures for careful and personal use in their visits or interviews with investors or prospects (a brief outline or guide is provided the committees and they are urged to have the high school social science classes help in collecting and organizing the information and maps).

3. The next step of such a local program is to carefully survey what manufacturing is already established or available in the community. Too often we take for granted the small or even the larger local employers. It is not fair to attempt to recruit outside companies until we have become acquainted with what we have in our own backyards. Perhaps, through thoughtful and considered cooperation it is possible to improve, expand, or stabilize the employment opportunity already established. This should be the very first responsibility of the local committee or corporation. (Again, the bureau provides check sheets for local committees to help them make sure that they get the information that is necessary for intelligent service.) The importance of this step is, I believe, so evident that we need not detail or illustrate it further at this time.

4. The next step for the committee or corporation is to carefully consider what kind of industry or business is most appropriate and suitable for the community—taking into account any manufacturers already in the community. For example, if there is already in the community a plant that employs a large number of women, it would not be economically wise to invite into the community another manufacturer who employs largely women. The newcomer would no doubt have to pirate some workers from the established plant. The committee should attempt to build a diversification of job opportunity. This is but one of many factors that must be considered when attempting to determine what is best for a given community or areas. Nevertheless, this is an important matter that should help the committee to determine what industries to seek or encourage.

5. The next fundamental step for the local committee or corporation is the preparation of a definite prospect list, and a carefully planned campaign to get acquainted with industries that are expanding or considering new locations. It is indeed astonishing to find how few people are acquainted with American industries. We use and take for granted the products of hundreds of industries without considering them as job-making establishments. Then, too, hundreds of new processes and inventions are almost

daily creating the basis for new industries—plastics, electronics, chemicals, atomic energy, not to mention others in a long list. There are a number of sources of help for the committee when it starts on its campaign to get acquainted—the lists and directories of the United States Department of Commerce, the classified directories of State manufacturers, trade associations, and magazines. In undertaking this campaign to get acquainted with industry, we have advised against broadside advertising. We believe that personal and direct relations get quickest and most satisfactory results.

6. Be careful. This is good standard advice to the community that is seeking to expand its economic opportunities. There is no question but what there is keen competition among States and communities for good industrial prospects. This has attracted some rather fast-talking promoters who see a chance to shake down the overanxious. Consequently, when considering an independent concern for location in the community, the committee should apply a few fundamental tests. The honest and dependable companies will help rather than take offense. First, examine the company's financial status, its credit base, its rating. If it insists on selling stock in the community as a condition of accepting the location, beware. That is not generally done by reputable concerns. The company should be able to pay its way and get the capital it needs (though it may need financial counseling). It may need to rent or lease its building, but it should have the means to meet its payroll and other obligations, including taxes. Second, what is the managerial history of the company? Faulty management explains more business failures than any other cause. Consequently, it is important to carefully consider this fact. If the firm has started with little and made much; had good labor and community relations; met all obligations promptly; diversified its products and kept pace with improvements—that is good management. Third, what about the company's market, sales organization, and practices? Is it able to sell what it produces? Does it have only one customer, or has it a wide diversified market? Who are its customers? Answers to these questions may give the committee valuable help in deciding whether to go slow or fast in locating the concern in the community. By carefully considering these simple tests, the committee may be able to avoid costly mistakes.

7. The final step in the bureau's procedure relates mainly to manufacturing concerns that have been in the community for some time—some before the program got started and others were brought in by the committee. Often these small industries are doing well and could do better if they were able to enlarge their plants, modernize equipment, diversify their products, widen their market, or otherwise improve. In other words, they need more capital to grow and employ more people. Local banks are often hampered in making adequate loans to these industries. Furthermore, those who head these industries are often not experienced or acquainted with procedures in business or corporation finance. Careful and thoughtful counseling not only helps them improve and grow, but it helps expand and stabilize local employment opportunity. This service often involves encouraging sole proprietors to incorporate, and thus insure continuation of their enterprise no matter what happens to them. Incorporation also improves their credit prospects. It is this growing need for appropriate credit and credit counseling that led to the bureau becoming interested in creating the State Industrial Development Credit Corp. which, in fact, is an association of banks, insurance companies, and other lending agencies of the State. The bureau also cooperates with the Federal Small Business Administration in these matters.

* * * * *

WHAT IS THE EFFECT OF INDUSTRIAL DEVELOPMENT ON THE LOCAL COMMUNITY?

Often we hear thoughtful local leaders ask, "What will be the effect of bringing an industry into our community?" Some of them hesitate because they think of manufacturing plants in terms of belching smoke, noise, dust, and the attraction of outsiders to run the town. Needless to say, such imagined conditions do not develop. Perhaps the most outstanding result that one sees after a few years of industrial growth of a small community is the fact that there has been an increase in the population and an increase in the number of new homes that have been built. By looking closer one sees that this increase of population is not from outsiders but rather from the young people born and raised on the nearby farms and in the community. They have remained in the community because of job opportunities. Otherwise, they would have joined their older cousins and sought employment in the faraway places. Looking again, one sees improvements and expansions in the services, a larger volume of business, and an improvement in educational, recreational, and health facilities. Many surveys have been made to learn the actual impact of growing industry on the community. Such surveys have revealed that the community has not only improved the economic status of rural and community people by furnishing regular and adequate employment, but it has vastly improved that part of the standard of living which is furnished by the tax dollar. It has provided a broader and more stable tax base. It has done much to cement a closer relationship between town and country. The expression that one gets from many of those who have had a hand in the development program is "I do not understand why we haven't made this start earlier."

Americans Need Jobs Now—Eisenhower Report Lacks Realism

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. PRICE. Mr. Speaker, the statistical evidence of the economic recession that grips us has been given wide attention. There are now 45 labor-market areas that have more than 6 percent of their work force unemployed. Our industry has been operating 25 percent below productive capacity. The Nation's output of goods and services has been falling—from a yearly rate of $439 billion in the third quarter of 1957 to $433 billion in the fourth quarter.

This economic sickness that has stricken us comes at a time when we should be growing stronger, not weaker. Our population is expanding rapidly, bringing with it new demands for goods and services; many nations around the globe are developing economically and are in need of the products of our factories, and we have no doubts that we are in a productive race with the Soviet Union and the Communist world.

There are 4,500,000 Americans officially out of work, and millions more who are earning less because of shortened production rates. These men and women, indeed, every man and woman in the country, looks to their leaders for creative plans for ending this condition. And what does the President tell them? In his economic report in January, he said "the decline in business activity need not be prolonged." Essentially, this is the keep-your-chins-up line that does not encourage business expansion or pay the piled-up bills of the unemployed.

The President, under provisions of the Employment Act of 1946, is required to submit to Congress a suggested program to promote maximum employment, production, and purchasing power.

The President failed to do this in his report. In the following article Stanley H. Ruttenberg, director of the AFL–CIO department of research, suggests that political reasons prevailed in the President's economic report. Mr. Ruttenberg also presents indicators for doubting that there will be some magical moment when soon unemployment will vanish and idle assembly lines will begin rolling at a rapid pace.

Mr. Ruttenberg's article, which appears in the March issue of the American Federationist, official publication of the AFL–CIO, follows:

AMERICANS NEED JOBS NOW—EISENHOWER REPORT LACKS REALISM

(By Stanley H. Ruttenberg, director, AFL–CIO department of research)

Economic statistics are more than just numbers. At this time they tell an unpleasant story about the present state of the economy.

About 4,500,000 Americans were out of work in January. More people were unemployed than at any time since 1950. Even during the 1954 recession, unemployment did not reach this height.

But this number—4,500,000—applies only to the full-time unemployed. It does not measure the loss in working time or in take-home pay caused by lower production. In December, the Nation's manufacturing workers were employed the lowest average number of hours since before World War II—39.3 hours per week.

Unemployment insurance claims in January were much higher than the normal seasonal rise could explain. In mid-January total claims exceeded mid-December claims by approximately 825,000. The year before a comparable increase was only about half as great. Even in the recession of 1953–54, it was only 550,000.

Recent Labor Department statistics have added 21 communities to the list of labor market areas with substantial labor surplus (meaning that more than 6 percent of the labor force is out of work). That makes the total 45.

These figures are not mere statistics. They point to millions of individual workers who have been laid off and cannot find new jobs. They point to communities and industrial cities like Pittsburgh and Bridgeport where the level of unemployment is large enough to cause problems for all parts of the population.

In short, they point to the fact that Americans need work now.

Other economic statistics also warn of dangers. The Nation's total output of goods and services has been going down at a time when economic growth is imperative. Between the third and fourth quarter of last year, the figure dropped from a yearly rate of $439 billion to $433 billion, and output was continuing to fall at the beginning of this year.

Consumer buying power declined 1 percent between the third and fourth quarters of 1957 and is continuing to drop as a result of rising unemployment and shorter workweeks. Industrial production fell over 2 per-

cent in December, a drop of almost 8 percent below December 1956. With the index still falling, it was estimated that the drop from January 1957 to January 1958 was almost 10 percent.

Freight loadings have been dropping since last summer. The decline from September to December was 26 percent—causing layoffs for workers in the railroad industry.

American industry has been operating at about 25 percent below productive capacity, and a decline in capital goods investment is expected in the first quarter of 1958—from a yearly rate of $36.8 billion in the first quarter last year to a $35.5 billion yearly rate.

Despite mounting unemployment, falling output and these other economic warning signals, the President's Economic Report in January hopefully told Congress that "the decline in business activity need not be prolonged." These reassuring words have not fooled business, labor or academic economists who attacked the lack of realism in the report.

Even worse, it is clear that the report has failed to propose a program to meet today's threefold challenge:

1. Reversing the current economic downturn is a responsibility of the Government right now. The report's hope that this condition won't be prolonged does nothing to cure real and current problems. We now have 4,500,000 Americans out of work. We are losing the production of important goods because of falling output. We are losing needed revenue because of declining business activity. These problems won't just blow away.

2. America faces the problem of meeting the Soviet challenge. Time is a most important factor. We cannot afford to wait to see whether the economy might turn upward in the second half of this year. We must make the money, minds, and goods of our country available to make sure the Russians do not surpass us in technological, scientific, or military fields. A declining economy hampers our chances. A growing economy would make our basis for meeting the challenge secure.

3. America has a growing population—a population requiring expansion of economic and social programs necessary to our way of life. Programs must be started now to meet these needs. Programs previously started must be expanded, not curtailed, if we want to promote the health and welfare of our citizens.

By failing to recognize and suggest ways to meet the current challenge, the President's economic report has failed to carry out the requirements of the Employment Act of 1946.

This law says that the President must submit a report to Congress each year on current and projected economic conditions and must suggest a program to promote maximum employment, production, and purchasing power.

Evidently prospects of next November's returns have made it seem politically impractical to report the facts realistically and propose programs that would carry out the duty imposed by this law.

Though prosperity, security, and a balanced budget are political goals for proper returns next November, needed action for the economy and for security might produce an unbalanced budget temporarily. The solution to this dilemma seems to have been to place almost mystical emphasis on the balanced budget—and hope that security and prosperity will be produced just by the power of thinking everything will be all right.

But it is dangerous and deceptive to make such a report to Congress. Even if the administration is correct in thinking that the second half of this year will show a slight improvement, we will have lost millions of dollars' worth of production, millions of productive man-hours and millions in revenue.

Even if there is some upturn—and there is no absolute assurance that there will be—unemployment will not just blow away. A serious unemployment problem will exist for some time. Joblessness will continue long after an upturn starts, and the administration admits that not much change in direction can be expected before June.

The reasons that a change would not affect unemployment immediately are quite clear.

First of all, if new orders increase or production picks up, unemployed workers will not be hired right away. The first step will be to lengthen hours of work for the people now employed.

Secondly, the report itself contains indications that productivity will increase. This means that even greater output would be possible without hiring a single additional worker.

Furthermore, the labor force increases every year. In the past 5 years 800,000 persons, on the average, have joined the ranks of those looking for jobs.

Despite these realities, the President's Economic Report pays very little attention to the critical question of unemployment. In the section called Appraisal of the Current Economic Situation, neither employment nor unemployment is mentioned. It is in this section that the report cheerfully says that the decline need not be prolonged. This is a curious fact in a report whose purpose is supposed to be the promotion of maximum employment as well as maximum production and purchasing power.

The report, however, does give some economic reasons for its optimistic view. Three factors are emphasized as positive signs for economic improvement: increased military contract placements, higher State and local government spending, and an upturn in construction.

It is true that the Defense Department will put about $4 billion to $4.5 billion more into contracts during the first half of 1958 than at the low point last year, but the present budget shows that the rise will not continue in the last half of this year. While $4 billion to $4.5 billion would have some positive effects on the economy, it isn't enough to insure the results the administration has predicted.

Nor do proposed expenditures by State and local governments look promising. These governments have been taking in less and less money because the whole economy has been heading downward. They may decide that since they have less money to spend, they will cut back some of the projects formerly planned.

Even though the tight-money policy has been eased slightly and State and local bonds may be offered at lower interest rates, there is no strong basis for forecasting a larger upturn in State and local spending.

Construction does not seem to improve the picture either. In 1957 the physical volume of construction was behind the level of 1956. Though Government agencies predict that construction spending will go up about 5 percent, part of this upturn in volume will be counteracted by higher costs. As a result, the construction rise in volume will not reach the 5-percent figure. Nor will enough more homes be built in 1958 to give much hope of a large upturn in that area.

Surely these weak bases for predicting an upturn cannot satisfy the American people. It is not responsible for the administration to grasp at them to make possible a psychological basis for a balanced budget proposal that may jeopardize needed defense requirements and probably will threaten the fulfillment of the economic and social needs of the American people.

The President's economic report should have recognized the psychological and economic facts of life. A downturn with rising unemployment and declining production calls for programs that will build economic strength now. Economic prosperity will give the United States a strong base for all defense needs and social and economic progress requirements.

We cannot afford to wait for a program to meet these problems. These actions must be taken now:

1. Defense spending should be stepped up to meet whatever is necessary to restore strength to our military establishment—regardless of the budget.

2. Consumer spending must be encouraged rather than discouraged by the administration. Increases in wages and salaries are essential now.

3. Tax cuts in the form of raising individual exemptions by $100 would reduce the tax burden on low- and middle-income families.

4. Coverage of the wage-and-hour law should be extended to millions of low-wage workers, and the minimum wage should be upped to $1.25 per hour.

5. Comprehensive Federal housing and urban redevelopment programs are essential.

6. The social-security system should be improved.

7. Federal legislation for additional uniform minimum standards for State unemployment insurance systems is necessary now.

8. Federal aid to the States for school construction cannot wait for tomorrow's children.

9. A Federal program of assistance to distressed areas is vital.

The time for action on these items is the present. Joblessness and military security cannot be ignored while we hope for better times.

This Nation was not built on a cost accountant's ledger but by democratic efforts to promote the general welfare of the Nation and its citizens. This is not the time to look for a bookkeeper's paradise. We must move without delay to strengthen the Nation and the economy for the benefit of the American people.

A Lion in the House

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 15, 1958

Mr. VURSELL. Mr. Speaker, under leave to extend my remarks I include in the Appendix of the RECORD an article about our distinguished minority leader, the Honorable JOSEPH W. MARTIN, JR., of Massachusetts. This article was written by Larston D. Farrar, a business writer who is known to many of us here, and published in the January 1958 issue of the Lion, which is circulated internationally to members of the Lion's Clubs of the world. It is appropriately entitled "A Lion In the House."

The article follows:

A LION IN THE HOUSE

(By Larston D. Farrar)

JOSEPH WILLIAM MARTIN, JR., at 72, is the official minority leader of the Republicans in the United States House of Representatives. For more than 30 years, since shortly

after he was elected to the House of Representatives in 1924, JOE MARTIN has been an honorary member of the Attleboro, Mass., Lions Club and he has taken an active and continuing interest in the activities of that club, as well as in the doings of Lions everywhere. Some years ago, North Attleboro, Mass., JOE'S home town, started a Lions club and the Attleboro club has been sharing their famous member with his home-town Lions.

Mr. MARTIN'S interest in the Lions Club was underscored several years ago, at the Lions International Convention in Madison Square Garden, New York City, where he said:

"I am proud to come and speak at this great convention of one of the great forces for building a more peaceful and understanding world. I am also proud of my membership in the Attleboro club of your organization. Through that membership, I am cognizant of the fine part this organization performs in building better communities, and supporting and sustaining the more unfortunate * * *."

Michael J. Lane, Washington attorney and a Lion's ambassador of good will, declared recently: "I have always found JOE MARTIN to be a real Lions booster. Besides taking an active interest in the organization, he has performed yeoman service for us whenever possible for him to be of help. He is a real Lion."

JOE MARTIN himself is quite reticent about speaking of his help to the Lions. He indicates that his record can speak for itself. This also is true of his official record, which is an impressive story of accomplishment in the Republican Party.

Known as "Mr. Congress" to most Republicans, he has been either minority leader of the House of Representatives or Republican Speaker of the House of Representatives ever since 1939.

There are many Republicans on Capitol Hill who look to JOE MARTIN for leadership and value his counsel. Almost every morning he has breakfast with various of his colleagues and it is apparent that they like JOE, even those who disagree with him most violently about party strategy.

JOE MARTIN is distinctive in appearance. He has a face that reflects anger or joy very quickly. His blue eyes glow, or smolder, as the case may be, behind bushy black eyebrows. He usually has a ruffled look, and his shock of dark hair frequently is windblown, giving him an unkempt look at times that, according to society writers, makes women want to take him in tow and mother him. None has so far.

As he walks down the ancient and hallowed marble corridors of Congress, his blue eyes usually twinkle and there is a bounce to his step that belies his years as he greets friends and political enemies with a smile. Sometimes he pauses to exchange stories with a colleague, or a particularly close friend, and, always, he is accessible to those who want to see him.

JOE MARTIN does not play golf or other sports. As a young man, he was a fairly good shortstop and had a chance to play semipro baseball, but passed it up. His only hobby these days is walking, and, due to his hurried schedule, he doesn't get much chance even for that.

After arising early in his suite in the Hay-Adams House, situated across Lafayette Park from the White House, he goes by taxicab to Capitol Hill, where he eats breakfast in the Congressional Dining Room. He goes to his office, on the second floor, to greet his secretary, and a raft of assistants, and busily goes through his personal mail.

He generally spends an hour or so dictating replies and taking calls, and then he meets with his party associates in the House to plan strategy for floor battles to come. The House ordinarily meets around noon, and he is present for the start of the session. After a while, with the session under way, and fully aware of the schedule of speeches to follow, he goes downstairs for lunch. Sometimes, at this hour, he and other congressional leaders go to the White House for lunch with the President.

In the afternoon, if the House remains in session for debates, the minority leader must stay in the House of Representatives virtually all of the time. While debates are going on, he confers with his secretary who brings him messages and letters to be signed, as well as filling him in on other matters that need attention.

After the session—whether it ends early or late—he goes back to the office to clean up the loose ends of a hectic day. He gets a little while to read more letters, to work on a speech or to meet a delegation of businessmen from his district.

By the time he leaves the office, it is dark, except perhaps in the summer months. He may go to a reception or a cocktail party, before having dinner with friends, or at his own hotel. In the evenings, since JOE is a bachelor, he is much-sought-after guest.

JOE MARTIN, as Speaker of the House for the 80th Congress (1947–48) and the 83rd Congress (1953–54), won a reputation for being a fair and proficient presiding officer. But as is the case with many speakers, he frequently was trying to juggle several ideas in his head at the same time, and naturally pulled more than one boo-boo. In the spring of 1955, while the House was debating foreign aid, Mr. MARTIN arose to defend the administration's request. He said he based his views on the judgment of the President and General Motors. There was, according to the newspapers, general laughter, among his colleagues over this fluff. Mr. MARTIN hastily corrected himself to say that he meant general staff—a term he uses interchangeably for the Joint Chiefs of Staff.

JOE MARTIN was born November 3, 1884, (appropriately enough, since this is general election week) in North Attleboro, the eldest son of eight children. His father, now deceased, was a blacksmith, of Scotch-English descent. His mother, nee Catherine Katon, was an Irish Catholic, and she is still living at 93. He has 3 brothers and 1 sister still living.

The Martin family was of slender means in JOE'S childhood. He started throwing newspapers at the age of 5 or 6, and later worked in jewelry shops and as night telephone operator, to help rear the family. He declined a college scholarship in order to go to work as a newspaper reporter on the North Attleboro Evening Leader at the age of 18. After 6 months, he went over to the Attleboro Sun at a salary of $10 a week. He sent two younger brothers through Dartmouth College. After 5 years as a newspaper reporter, he saved $1,000. He has never been in debt and still has the first savings account he opened in the Attleboro Savings Bank in 1902. At this time, he persuaded several local citizens to join him in pooling a fund, into which he put his own $1,000, and purchased the North Attleboro Evening Chronicle. Under his management, circulation rose from 800 to 4,000 daily. He was, in fact, the youngest publisher of a daily newspaper in the United States when he was 24. He still owns the Chronicle, which his brother operates for him, and in 1941, he purchased the Franklin (Mass.) Sentinel, a weekly newspaper which also has prospered under his ownership.

When he was 21, he asked his father whether he should pursue baseball (he was then getting some local fame for his batting and fielding) as a career—follow the newspaper business—or go into politics.

"You'll be better off JOE, if you stick to newspapering," his father replied. "Politics is a dirty business."

"That's why I'm getting into it, dad," JOE replied. "It needs to be cleaned up, and you can't do that by holding your nose and standing on the sidelines."

Actually, he stayed in the newspaper business and pursued politics. His first experience was in managing a friend's campaign for the State legislature. When he was 27, he became a candidate himself, winning his race for the Massachusetts house of representatives by a substantial majority. He next was elected to the Massachusetts State senate, serving there until 1917, when he temporarily retired from politics.

While in the Massachusetts legislature, he made friends with Calvin Coolidge, then chairman of the Senate Committee on Rules. Coolidge made MARTIN secretary of his committee and the two became lifelong friends. In 1924, when Coolidge ran for President, MARTIN climbed on the bandwagon and was elected handily to Congress. He has returned to the same seat ever since.

When Roosevelt was riding the crest of the New Deal, JOE rode the waves, too. Once, when he was joshed about voting for many New Deal measures, MARTIN replied, with a twinkle in his eyes: "The world moves, and I move with it."

In short, he rolls with the political tides. He is not militant, in temperament, but he hates to see either public suffering or crookedness in public life. He has always championed labor's right to organize, has supported social security, voted for the Fair Employment Practices Commission and many other Roosevelt measures. Although he supported most of the preparedness policies in the pre-Pearl Harbor days, President Roosevelt referred to him contemptuously as the leader of a famous triumvirate: "Martin, Barton & Fish." (Joe Martin, Bruce Barton and Hamilton Fish.)

JOE MARTIN has retained his leadership of the Republicans by cultivating the newcomers to Congress, in a personal way, and leading the Representatives by suggestion rather than by dictation. He has never "laid down the law" in an autocratic manner although he usually has had his way in the end.

"Mr. Congress" has played important roles in every presidential campaign since 1936. He helped to nominate Alfred Landon, then Governor of Kansas, in 1936 and served as eastern campaign manager, but could not get him elected. The same was true in 1940, when he backed Wendell L. Willkie and was chairman of the Republican National Committee. In 1944 he supported Tom Dewey, and also in 1948, although in the latter year he, himself, was a dark horse who harbored hopes that the nomination lightning might strike him. Otherwise, he has told wealthy backers who wanted to see him run for President: "I have no ambitions to be in the White House, I am perfectly satisfied to remain in the House of Representatives. My one ambition is to be Speaker of the House." He has achieved that ambition on two separate occasions, and may again.

The Gifted Child—A Vital American Resource

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 3, 1958

Mr. WILEY. Mr. President, on several occasions I have spoken in the Sen-

ate about the need for specialized educational facilities for American youngsters who rank in the highest group on intellectual-quotient tests and other examinations of intellectual attainment. Among these most superior youngsters are the future scientific geniuses of the land—the Edisons, the Farradays, the Einsteins. Among them, as well, are the future leaders in the liberal arts and the humanities. I am pleased to point out that the task of identifying talented youngsters and giving special training to them is moving full speed ahead in the State of Wisconsin.

I had earlier pointed out the fine role of the University of Wisconsin and cooperating high schools in this process.

I now wish to point up the activities of the Milwaukee public schools, under Superintendent Harold S. Vincent.

The Milwaukee program was described in the Miwaukee Journal of February 16, 1957. It is a symbol of what can be done, what is being done, and what should be done in every school, if the Nation is to obtain the fullest benefit from its best-qualified youngsters.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EIGHTEEN THOUSAND TO TAKE TESTS SEEKING GIFTED PUPILS

(By Robert L. Dishon)

More than 18,000 elementary and junior high school pupils will take tests next month as part of a plan to enrich studies for gifted children in the Milwaukee public schools.

The examinations will be the first in a continuing testing program. Eventually, the results will provide teachers, principals, and administrators with information on the direction and rate of learning of each child.

The testing service also will supply data which school officials will use to formulate stronger courses of study for average and slower learners.

The testing program is part of a more extensive study being made by Superintendent Harold S. Vincent and his staff to find out how best to identify talented pupils and teach them.

SUGGESTIONS STUDIED

Now being studied are these suggestions:

Establishment of special classes and perhaps special schools for gifted pupils.

A pilot project of fourth- fifth- and sixth-graders in a special class as an experiment to obtain information for future planning for gifted pupils.

Changes to strengthen curriculums in the junior and senior high schools.

School officials also are studying what might be done in in-service training programs to prepare teachers better to handle gifted children.

Each high school now decides what, if any, programs will be offered to gifted pupils. Special classes for gifted children are organized in several high schools. Other schools have none. In junior high and elementary schools, the brighter pupils are taught in special groups in regular classes.

WANTS ENRICHED WORK

"I am hopeful," said Vincent, "that out of the studies will come enriched work, possibly starting the teaching of some of the things a little earlier also more advanced work.

"In back of it all has to got to be a recognition by everybody that we all have to work harder in the schools—pupils, teachers, and parents. We must create a better respect for the schools and that is something the schools can't do alone. We need the full consent, knowledge, and understanding of parents."

The first test in the new citywide program will be given to eighth graders March 11, according to G. Dwight Rowe, coordinator of testing services.

AID FOR COUNSELORS

Intelligence and achievement tests will be given to all fourth, sixth, and eighth graders. Also, eighth graders will be given a special science test, the results of which will be used next fall when the pupils enter high school or the last year of junior high school.

The test results will be used to determine how effective present programs are and how they might be strengthened. They also will be used by teachers under whom the pupils will study next fall and by guidance counselors.

A special staff will be employed this summer, with a $3,000 grant from the Edward A. Uhrig Foundation, to develop thorough case studies on about 100 of the most gifted children identified by the tests.

"This," said Dwight Teel, assistant superintendent in charge of curriculum and instruction, "will give us a great deal of evidence on giftedness. This is a field where we need some experimentation.

"We are aiming at making sure that all these (gifted) pupils are identified and that adequate programs are provided for them. We also want to determine in what area the pupil is gifted."

PILOT PROJECT EYED

School officials also are studying the possibility of a pilot project in which a group of pupils from the fourth, fifth, and sixth grades would be placed in a special class as an experiment to obtain information for future planning for gifted children.

Teel said he hoped to meet soon with officials of Marquette University, University of Wisconsin in Madison, and the University of Wisconsin—Milwaukee to work out a program to give talented high-school graduates credit or advanced standing for certain high-school work.

Talented pupils are taught differently in some city high school. Some schools have no special programs. At least 2 schools have had classes for the brighter pupils more than 20 years.

Bay View high school; for example, has special classes for gifted children and seminar classes for some 45 of the brightest children, according to Principal Bernard C. Korn. At Bay View and other schools, talented pupils are identified through testing, teacher observation, and guidance conferences.

FIFTEEN PUPILS IN SEMINARS

Seminar classes in chemistry, social science, and English have about 15 pupils each. These are the brightest pupils and are invited into the classes, Korn said. They meet at the beginning of the semester and about a month before the end of the semester.

At the initial meeting, each pupil selects a project to work on. During what would be the normal class period, he works on his project. The teacher is available for conferences. Several pupils may work together on a project.

Another 350 talented pupils at Bay View are in special classes in music, art, and the regular academic subjects. These classes were started 20 years ago, Korn said.

Rufus King high school has special classes in science and mathematics. About 150 pupils are in the mathematics classes and about 110 in special biology, chemistry, and physics classes, according to Principal Walter L. Brauer. The program has been operating about 4 years.

MOVE AHEAD FASTER

In the science classes, the emphasis is on more extensive work by pupils. Talented mathematics pupils not only get more extensive work but are encouraged to move ahead faster. Some are studying analytical geometry and calculus.

A different approach has been used at Riverside high school for more than 30 years. Rapid, medium, and slow learners are grouped according to their ability in English, history, science, and mathematics classes.

Selection of the brighter pupils, said Principal Merton S. Lean, is made when a pupil enters the ninth grade at Riverside. Test records and previous achievement are studied to select the pupils, according to Lean. Riverside teachers also discuss the pupils and their performances with principals of the elementary schools the pupils attended.

A program for rapid learners was started at Custer High School 2 years ago. It will be expanded next fall, said Raymond F. Michalak, principal. Sixteen special classes offer enriched programs, in English, mathematics, history, and science for sophomores and juniors.

Next fall, other classes in contemporary problems will be started for seniors, according to Michalak. They will function as seminars similar to those at Bay View. A special class also will be started next fall for pupils in all grades who are talented in art.

Federal Regulatory Agencies

EXTENSION OF REMARKS

OF

HON. WILLIAM E. PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 3, 1958

Mr. PROXMIRE. Mr. President, on Thursday, February 20, the Waukesha, Wis., Freeman, printed an excellent article favoring providing a guide for proper conduct for the Federal regulatory agencies.

Mr. President, I ask unanimous consent that this article be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SENATE BILL WOULD REGULATE REGULATORS

Quite unwilling to agree that $22,000-a-year men on 6 Federal commissions are entitled to gifts from the industries they regulate, Senator WILLIAM PROXMIRE has introduced a bill in the Senate to make such honoraria illegal. Yesterday he was joined by seven Senate colleagues in sponsoring the measure which this newspaper, for one, hopes gets speedy and unanimous approval in both Houses of Congress. Having proved to be a master publicist in his own behalf, Wisconsin's junior Senator is quickly establishing a reputation in Washington for doing the logical thing at the proper time. He accompanied his bill with a statement to the effect that present law governing Federal agencies is inadequate and the country needs "a clear and positive guide for proper conduct." He added:

"The people have a right to unquestioned confidence that the decisions of agencies, such as the Federal Communications Commission, will reflect disinterested judgment in the public interest."

Until Dr. Bernard Schwartz began telling a Senate committee and the Nation about some of the worst cases of double dealing

among commissioners, the American people seem to have had unquestioned confidence that the decisions of its Federal agencies reflected disinterested judgment. We believe this to be true since the veracity of the six Federal agencies involved has seldom been questioned. Since the first of these, the ICC (Interstate Commerce Commission) was created by Congress in 1887, an auro of infallibility has surrounded them. Their decisions, while somewhat harsh and inexplicable at times. were usually regarded as in the best interests of the Commonwealth. Members of Congress must have had faith in the unimpeachable character of these Commission members, since they set their salaries high, much higher, in fact, than Congressmen themselves enjoyed until the last few years. Even members of the President's Cabinet receive only $3,000 more per year.

Perhaps it was this high regard for the judgment of appointees to the ICC, FCC, FTC, SEC, FPC, and CAB which seemed to make it unnecessary to draw up detailed rules of conduct like those Senator PROXMIRE is now proposing. A parent often feels dutybound to tell Mary and Johnny to be on their best behavior the day they enter kindergarten, like not bringing home the blackboard chalk, the classroom blocks, or other honoraria laying around loose. By the time college graduation rolls around, such instructions appear wholly unnecessary.

But we seem to have entered a new era in public as well as private conduct. These alphabetical Government agencies which make decisions involving billions of dollars, have been pictured as less concerned with good behavior than is desired. Dr. Schwartz, the law school professor, dared to claim than an unholy alliance existed between them and big business. For this he was promptly sacked but on second thought was called back to explain what he meant. If the American people have become somewhat cynical about their Government in Washington, we can hardly blame them at times. We now find ourselves agreeing with attempts to regulate the regulators and applauding a Senator's efforts to make the Ten Commandments part of a commissioner's oath of office.

A Texan Learns About Washington

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. TEAGUE of Texas. Mr. Robert E. Baskin, a staff writer for the Dallas Morning News, was recently assigned to Washington. He was given as his first assignment the job of writing a series of articles on Washington, D. C., its history, its political status as the Nation's Capital, and the problems which face it.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include in 6 parts the 6 articles written by Mr. Baskin:

[From the Dallas Morning News of December 8, 1957]

I. TEXAN IN CAPITAL—WASHINGTON CAUGHT UP IN DILEMMA

(By Robert E. Baskin)

WASHINGTON, December 7.—To an outlander the city of Washington in this fall of 1957 is a city both strange and wonderful.

It is a world to itself; it is unlike any other center of population in the United States.

Physically, it is a beautiful city, with its orderly development, started in the time of the first President. There is the Mall, the Capitol, the White House, and the great gleaming Government buildings, and there are the parks dotting the city in just the spots where they ought to be.

And, too, there are the slums, the ugly back alleys, and the ill-smelling upper reaches of the Potomac River. And there is the traffic in the late afternoon, far worse than Dallas', as the office workers hurry to their segregated homes in Virginia and Maryland.

There are the Negro areas, where block after block of row houses have been taken over by an ever-increasing influx of colored people.

And along Massachusetts Avenue there are the embassies representing a host of nations who in the last 10 years have found that their very existence can depend on the decisions, and whims, of the Capital of the United States.

Whose Capital is this?

Although it is identified as the Capital of the United States of America, it has become the Capital of the democratic world. Here is where the money comes from; here is where the great decisions must be finally approved in the unremitting struggle with the Communist world.

There is a self-consciousness about Washington in its relations with the rest of the world.

Its ears are attuned to the whispers, the thinking and the reaction of the world's peoples.

What will Ghana, or Afghanistan, or Belgium, or Britain, think of what we are doing? Can the Soviet Union reap a propaganda harvest out of this?

These may be subconscious questions, but they exist nonetheless. They extend to domestic issues, particularly in the civil rights field.

There is obviously not so much concern about what Kansas will think of this or that, or, more particularly, Alabama.

Just after the decision was made in 1954 to integrate the schools of the District of Columbia, 2,000 students struck briefly.

Washington learned then how closely it is watched abroad. There were anguished telephone calls from Western Europe and elsewhere, wanting to know what had happened, what the outcome would be.

On Capitol Hill the Congress finds itself caught up in the current of the new internationalism.

It is sometimes hard to remember that an individual Congressman comes from a mountain district in West Virginia, a wheatfield district in Nebraska, or city district in Chicago.

Here in Washington he must learn to wrestle with the great issues of the day—foreign aid, the military budget, scientific development—complex issues that he little dreamed of when he mounted the hustings.

Is this the Capital of his constituents? Most of them probably are aware that they have a representative in Washington, a strange faraway city where they devise the forms you have to fill out and where your income tax finally goes.

But if they came here, they would find it difficult to recognize as a Capital that somehow is representative of the Nation. But things vitally affecting their lives are done in Washington almost every hour.

In that sense, it is their Capital.

This fall Washington is a troubled city.

Russian scientific advances have aroused much greater alarm here than in the inland areas, providing another instance of the Capital's sensitivity to world opinion.

The illness of the President, the failure of the Vanguard missile and other recent events have contributed to the general uneasiness.

At the White House, the State Department and the Pentagon, the scientists, diplomats and military experts come and go in a never-ending stream.

On the Hill congressional committees are inquiring into the Nation's missiles program. A new budget is being formulated for the next session of Congress that is expected to be substantially higher than the last one.

There is every indication that the big government that was born of the New Deal will become bigger than ever.

But Washington is a troubled city on its own home front, the 70-square-mile area that constitutes the District of Columbia.

A great racial and sociological change is taking place in the Capital. Whatever the merits of integration, this change is one that has caused grave concern among the District's residents.

Members of the Negro race are pouring into Washington. They now make up 46 percent of the population. Great areas of the city have been relinquished by white residents, who have moved to Virginia and Maryland.

The school population, since integration, is nearly 72 percent Negro, and the decline in white pupils is continuing.

Demands for home rule and the vote are mounting again, and there are predictions that eventually these things will be realized, making the District of Columbia, in effect, another State.

Washington's crime rate is high, and the police department has been under fire from the National Association for Advancement of Colored People for alleged discriminatory policies.

The growth of Metropolitan Washington has created enormous problems in municipal affairs, traffic, water, and other fields. The population of the city in the metropolitan area has just reached 2 million.

All of these problems are extremely complex.

Efforts to solve them are of concern to every citizen of the Nation, whether they realize it or not. For this is the Federal City, the city originally laid out for the whole Nation.

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. TEAGUE of Texas. Mr. Speaker, the following is Mr. Baskin's second article entitled "The Growth of Washington and the Problems Arising From It":

[From the Dallas Morning News of December 9, 1957]

II. TEXAN IN CAPITOL—THE GROWTH OF WASHINGTON AND THE PROBLEMS ARISING FROM IT—WASHINGTON COPES WITH VAST GROWTH

(By Robert E. Baskin)

WASHINGTON, December 8.—The population of metropolitan Washington this fall reached the 2-million mark, making it the ninth largest city in the Nation.

That appears to be just the beginning of a vast expansion, that is at once governmental, residential and mercantile.

By 1980, it is estimated that the area will have 3,400,000 residents. By 2000, a population of 8 million, with Baltimore and Washington becoming one huge metropolis, is foreseen.

In 1940 the area had less than a million people.

This huge increase in population is changing the face, the ways and, in some instances, the thinking of the Nation's Capital.

How did it happen?

"Washington used to be a slow moving southern-type city," says William Press, executive director of the Washington Board of Trade who is a native of the District of

Columbia. "But in recent years the city has taken on vastly more importance.

"When F. D. R. moved in with the New Deal and the Government began going into new fields, the big change started. Since that time economic controls, international finance and Government spending operations have been concentrated in Washington, with many representatives of industry, both foreign and domestic, and all types of economic groups moving their bases here.

"The Federal Government in Washington is now dealing with every phase of modern life.

"World War II gave further impetus to this trend.

"The old Washington wasn't too darned important. New York was much more important. But now somebody in Washington is fooling with somebody's affairs in Dallas and everywhere else in the world every minute.

"The whole outlook has been broadened, and the tempo of the city's life has stepped up tremendously."

Older residents of Washington can look back nostalgically on their graceful capital of earlier times—a pleasant place to live, with broad avenues, attractive Federal and Georgian architecture, good schools and gracious living.

Not all of this is gone with the wind, of course.

The Georgetown section of the city, in particular, remains a place of residential beauty. Society continues to function, but it is increasingly a heavily publicized type of society, with the cocktail party and social-climbing rivalries predominating.

The District of Columbia itself, the federally administered heart of the metropolis, has run out of space. It is only 70 square miles of real estate with great areas devoted to governmental buildings and parks. This area contains 860,000 of the metropolitan area's 2 million residents. The others live in Montgomery and Prince Georges Counties, Md., in Fairfax and Arlington Counties, Va., and in the cities of Alexandria and Falls Church, Va.

The overflow from the District of Columbia has created grave problems for the neighboring Virginia and Maryland areas. For example, Fairfax County, Va., needs 7 new high schools in the next 3 years.

Residential building goes on endlessly throughout the area.

Decisions on such areawide problems as water, sewage systems, and highways become complex. Frequently they require acts of Congress, acts by State legislatures and approval by county and city governments.

A joint congressional committee headed by Senator ALAN BIBLE, Democrat, Nevada, is begininng hearings this winter on Washington's metropolitan problems. No one sees any possibility of a Federal authority being set up to administer the metropolitan area.

But there is a possibility that an overall agency, authorized by Congress and the legislatures of Virginia and Maryland, will be proposed to deal specifically with highway, water, and sewage problems affecting the area.

As an older city, Washington has the slum developments that have plagued other cities. But it has been worsened here by the influx of many impoverished families, nearly all Negroes, in the last few years.

It is no exaggeration to say that Washington is rapidly becoming a predominately Negro city. In 1950 Negroes accounted for 35 percent of the district's population. Today 46 percent are Negroes, and 71.9 percent of the school population of the District of Columbia is Negro.

This has changed the tone of the city. The exodus of whites to Virginia and Maryland has been accelerated following integration of the school system in 1954.

In addition to the school situation, the spread of Negroes to formerly all-white neighborhoods has been stepped up. The principal extensions have been in the northeastern part of the city. The northern and southern areas remain predominantly white but Negroes are moving there, too.

In the metropolitan area 77 percent of the population is white, no change in the overall ratio having occurred in recent years, because most white persons fleeing the District of Columbia traveled only as far as the segregated Maryland and Virginia areas.

Businessmen are deeply concerned over the change that is taking place. Real estate men have found themselves in a particularly trying situation.

"The pattern always runs like this," says a representative of a large real estate firm. "You have a good white rental area. Then Negroes begin to infringe on it. You soon get vacancies and they can't be filled with whites. So you integrate, open up the vacancies to Negroes. They move in, and all the white tenants move out. Then it happens on the next block. In addition, white families with children have moved out in large numbers since the schools were integrated.

"Negro tenants mean continual additional supervision for real estate agents. You have to go to court much more often to collect rents from them than you do for whites."

What has caused this influx of Negroes to the District of Columbia?

There are two major factors, most Washingtonians agree:

1. There is more job opportunity and less discrimination in the district. (Nearly one-fourth of the district's 231,000 Federal employees are now Negroes.)

2. Washington is the southernmost northern metropolis and Negroes moving out of the South reach it first in their journey northward.

It is also significant that there are no Negro ghettoes in Washington, such as New York's Harlem, although they are concentrated more heavily in some places than others.

The District of Columbia government is moving ahead vigorously to wipe out slum areas.

In Foggy Bottom, along the Potomac, once one of the worst slum eyesores, a new "city within a city" public housing project is being erected. It will be complete with a stadium, auditorium, shopping village and other features. This will be an integrated development, costing between $25 and $30 million, but many whites are reported moving in or preparing to move into the excellent apartment houses.

A large-scale slum clearance project is being undertaken in the northwest part of the city.

In Georgetown erection of better-type apartments and homes has tended to stabilize the white population there.

New apartments near the core of the city have found plenty of white tenants to move in.

But the overall trend continues to be toward a predominantly Negro city. No one can foresee an end to this trend.

OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. TEAGUE of Texas. Mr. Speaker, the third of Mr. Baskin's articles, entitled "The Washington School Situation—A Violent Change," follows:

[From the Dallas Morning News of December 10, 1957]

III. TEXAN IN CAPITAL—THE WASHINGTON SCHOOL SITUATION—A VIOLENT CHANGE—NATION EYES VAST SHIFTS IN SCHOOLS

(By Robert E. Baskin)

WASHINGTON, December 9.—The public schools of the District of Columbia in the last 4 years have undergone the most sweeping change of any school system in the country.

It has been a change that has caused dismay and alarm among parents, some educators and virtually all southern Congressmen.

But it has been viewed with equanimity—and even enthusiasm—by those who share President Eisenhower's sentiment that the District of Columbia should be a model of nondiscrimination.

The change came on a September morning in 1954 when the public schools were integrated, following the Supreme Court's ruling that separate schools were inherently unequal.

This fall the school population adds up like this: Total students, 110,761, of which 71.9 percent or just about 80,000 are Negro.

White parents are fleeing the District to the segregated towns of Maryland and Virginia, or sending their children to private schools.

In the last year white enrollment in the District schools has decreased 2,755 pupils while 5,388 more Negro students have been enrolled.

Dr. Hobart Corning, the District School Superintendent, calls this an alarming change of balance.

The increase in Negro students has been going on for 10 years but it has accelerated in the last 5 years. In 1950 Negro students exceeded whites for the first time.

There are some schools, but not many, that are either all white or all Negro, because of their residential areas, but the influx of Negroes to Washington, coupled with the loss of white population, is expected to eliminate the all-white schools.

To an outsider, particularly one from the South, the events of integration here can only be viewed with shock. The change is one that cannot be told with cold statistics.

The violence of the change has not been in terms of physical conflict. It is a violence of abrupt change, of a new way of life for Washingtonians accustomed to certain southern viewpoints.

The only demonstration was in the spring of 1954, when 2,000 students went on strike, apparently opposing integration. Many of them gathered in Franklin Park, across from the school administration building. Dr. Corning declined to treat with them, and they dispersed.

Other than that, the change has been accomplished with no major incident. But there have been little incidents, about which teachers have testified, that contribute to unease—incidents involving switch-blade knives, unwed mothers, lack of personal hygiene and interracial contacts.

And most distressing of all has been the decline in educational accomplishment, a fact ruefully conceded even by the most integration-minded educators.

In the midst of all this teachers of both races have been caught in a difficult situation. The burden is on them to educate whomever the school authorities send them. There is every indication that most of Washington's teachers are carrying on in the face of difficulties with a professional spirit.

An example of what has happened at one school may be found at McKinley High School at Second and T Streets Northeast. In 1953 this school had an all-white student body of about 700. Today it has 1,055 Negro students and 199 whites.

Dr. Charles Bish, the energetic white principal, admits that the first year of integra-

tion was a tense one. Since then, he says, things have progressed in a more orderly fashion.

"We moved too rapidly," he says. "Policies were still being formulated, and there was an element of fear present.

"We had a few incidents. One Negro boy was caught with obscene cards. He was expelled. On another occasion a Negro boy pulled out a long knife to sharpen a pencil and the place almost caught fire.

"All these stories about Negro boys saying things to white girls—I haven't been told about any here, not in the last 2 years."

Integration has meant death to high school social life. There are no more school dances, dinners or other similar events.

"I have found," says Dr. Bish, "that the community takes over these functions—the churches, civic organizations and others—and it's just as well, because we may have had too many frills."

The school has its own swimming pools, but "we've gone out of the swimming business since integration," the principal says.

Dr. Bish is acutely concerned over educational standards.

"Educators ought to have the say on scholastic standards for admission, promotion and graduation," he says. "Keep education in the picture. Many people have forgotten this. This is no device to avoid integration, but the standards must be kept up. It isn't justifiable to have a 7th grade student in the 10th grade just to avoid hurting someone's feelings."

To support educational standards Washington schools have adopted what is known as the "4-track system," in which all courses are divided into four groups—basic, general, college preparatory and honors. Students are assigned to groups after extensive tests.

The last two categories are for bright students. The basic and general groups have decidedly lower standards. Percentagewise, more Negroes gravitate to basic and general and more whites to the two upper groups, Dr. Bish says.

"You are dealing with the merging of different cultures and because of this you have a greater range of individual differences," the principal believes. "Therefore you must seek homogeneous groupings—bright students with bright students, average students with average students, and so forth."

The 4-track system is not without opposition. All graduates, no matter what group they are in, receive the same diploma. This, opponents contend, diminishes the value of a high-school diploma and it also allows students with below-par abilities to be graduated.

Before integration the Washington schools were divided administratively into a white division I and a Negro division II. In division II many Negro teachers had reached administrative positions of importance. They have not lost their tenure or standing because of integration. The assistant superintendents in charge of elementary schools and vocational schools are Negro.

Throughout the system, which includes 127 elementary schools, 23 junior highs, 11 senior highs, 5 vocational highs, 1 school for pages at the Capitol and a 4-year teachers college, Negro teachers hold jobs. There is every indication there will be more of them.

"We have always had more Negro applicants for teaching positions than white applicants," says Miss Margaret Pepper, executive assistant to the superintendent. "We do have a problem in getting white teachers, since there are more opportunities for whites elsewhere. We have had no problems with Negro teachers conducting mixed classes."

The last published figures showed 2,256 Negro educational employees to 1,824 white.

Miss Pepper, who has been a teacher and administrator in the schools here since 1921, says that integration proved that the Negro schools weren't equal.

"While we did our best to make our separate schools equal, we have found since integration that they weren't equal," she says. "Our educational standards are now just what they have always been, but the level of achievement has been lowered."

The school system also is more aware of disciplinary problems, Miss Pepper reports.

"Before integration the white schools followed a policy of encouraging self-discipline for students; in the Negro school there was more authority imposed by the teachers. There has had to be an adjustment in this field," she says.

Much concern has been given to the fact that while Negroes constitute nearly 72 percent of the school population they make up only 46 percent of the total population of the District of Columbia.

While private schools cause some of the disparity, there are other reasons. Negro families are generally larger. The white population is composed of many older people and many single women who work for the Government.

The change that has taken place has had its shock effect upon many individuals, both black and white.

One of these is Miss Margaret Tripp, a white elementary school principal, who perhaps has her counterparts all over the District.

This is what she told a congressional committee in 1956:

"I have a large percentage of Negro children to be instructed * * * I think I have more Negroes than white teachers, and I am a member of a minority group. I have no feelings of inferiority about it, but I am in a minority for the first time in my life, and that is an adjustment."

A Texan Learns About Washington

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. TEAGUE of Texas. Mr. Speaker, the following are Mr. Baskin's views and comments on the controversial Davis committee report:

[From the Dallas Morning News of December 11, 1957]

IV. TEXAN IN CAPITAL—THAT REPORT ON SCHOOLS KEPT ALIVE

(By Robert E. Baskin)

WASHINGTON, December 10.—The most serious charges against Washington's integrated school system have been made by a congressional subcommittee, which was embroiled in controversy from the moment it began its work.

Today in Washington there is still controversy, sometimes bitter, over the report issued by the committee this year.

A majority of the committee urged a return to the segregated system, contending that "the evidence * * * points to a definite impairment of educational opportunities for members of both white and Negro races as a result of integration, with little prospect of remedy in the future."

Two members of the subcommittee assailed the majority report, although they conceded that much factual information has been developed by the investigation.

"The statistics speak for themselves," said the dissenters, "and it is not a record of which anyone can be proud."

The subcommittee was headed by Representative JAMES C. DAVIS, Democrat, of Georgia. Southerners were in a majority on the panel, and this made the whole proceedings suspect in the minds of many persons.

In addition to this, the hearings were conducted just before the general election in 1956, and there were allegations that Democrats were trying to damage the Eisenhower administration.

Testimony produced by the hearings was of a type calculated to make headlines.

Witnesses related incidents involving unwed mothers, sexual activities, vandalism, school-age venereal disease and a wide range of juvenile delinquencies. But they also testified about less sensational matters, such as overcrowding in classrooms, teaching techniques and school costs.

The committee majority, composed of Representatives DAVIS, JOHN BELL WILLIAMS, of Mississippi, WOODROW W. JONES, of North Carolina, and JOEL T. BROYHILL, of Virginia, made specific findings after the hearings.

1. Integration was too hasty and without sufficient preparation.

2. School integration had greatly accelerated an exodus of white residents to Virginia and Maryland. "If the exodus continues at its present rate, the district will become a predominantly Negro community in the not too distant future."

3. Differences have been shown in the ability to learn and educational achievement between the average white and Negro students.

4. These differences have created a most difficult teaching situation in the integrated schools.

5. Morale and health of some teachers have been damaged, and there has been a loss of some teachers, which creates a difficult replacement problem.

6. Discipline problems and delinquency resulting from integration were described as appalling and retarding to educational progress.

7. Sex problems have become a matter of vital concern to parents. The number of cases of venereal disease among Negroes has been found to be astounding and tragic.

8. The operation and maintenance of the district schools have been more adequately financed than the average school system. The teachers' salary scale is among the highest.

Many of these findings were bolstered by direct testimony from teachers and vital statistics.

But minority members of the committee, Representatives A. L. MILLER of Nebraska and DEWITT S. HYDE, of Maryland, protested the report as dwelling on sordid items almost entirely.

"We have a feeling that a more objective approach would uncover some good things in the educational and social life of the District schools," MILLER and HYDE said.

They also complained that leading questions were asked at the hearings. In this field, political considerations were to be noted.

Witnesses repeatedly were asked if they considered integration in the District schools a model to follow for other communities faced with integration. This seemed to be a slap at the President, who had expressed the hope that the District of Columbia would be a model of nondiscrimination.

The minority report also said that the majority's recommendation for a return to segregation obviously cannot be done without a constitutional amendment.

MILLER and HYDE, while differing, have this to say:

"The facts brought to light by this investigation seem to indicate that Negro leaders, and those actively interested in the advancement of the Negro people, have much work to do among Negro people and that all of the difficulties attended with integration are not caused by the seemingly uncompromising attitude of the white people."

During the course of the investigation by the subcommittee, a part of the House District of Columbia Committee, there were re-

ports of attempts to intimate anti-integration witnesses. Supt. Hobart Corning had to give assurances to all teacher witnesses that they were free to testify as they wished.

There have also been accusations that the subcommittee called only those witnesses at the public hearings that would produce pro-segregation testimony.

"Many persons were called to the private hearings that weren't called to the public hearings," says Miss Margaret Pepper, executive assistant to the superintendent.

Miss Pepper, and the school authorities, also believe that too much attention was given to such things as a number of teenage unwed mothers, virtually all of whom have been Negro.

"There has been no increase in unwed mothers because of integration," she says. "There is no evidence of relations between the races.

"There will always be incidents, but they are not necessarily due to racial conflicts."

The committee also explored the field of juvenile crime. It found that in 1955 Negroes under 17 were charged in 1,438 felony complaints, while whites accounted for only 376—a percentage of 79 percent by Negroes.

Vandalism at public schools has shown a marked increase since integration, the subcommittee said.

The group showed its greatest alarm over sexual incidents and venereal disease rates. A number of teachers testified about these conditions in detail, including incidents of attempted rape, assaults, soliciting by Negro girls and other sexual affronts.

A Department of Health report showed that of 854 venereal disease cases reported in 1955, 97.8 percent was among Negroes.

The subcommittee also expressed concern over classroom overcrowding, citing figures to show that the average class size has increased since integration over both segregated branches of the schools in earlier years.

The Davis Committee's work will remain a topic of conversation here for a long time to come. There are few neutral views about the matter.

Liberals and members of the National Society for Advancement of Colored People contend that it is tuned to the ears of southern constituents, that it is one-sided and inflammatory.

Some Congressmen think that the report may not have gone far enough, that conditions are getting increasingly worse as Washington's Negro school population mounts to near the 75 percent mark.

Congressman BROYHILL, a Republican, who represents the northern Virginia area adjacent to the District of Columbia—and who was a member of the subcommittee, professes to see little hope for the future.

"It looks like we're heading for chaos," he says. "That may sound emotional and dramatic, but it is nonetheless true.

"The only solution is a return to segregation in the District, and that does not appear to be at all practical."

A Texan Learns About Washington

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. TEAGUE of Texas. Mr. Speaker, in his fifth article Mr. Baskin reviews the perennial question "Should District residents have home rule and vote":

[From the Dallas Morning News of December 12, 1957]

V. TEXAN IN CAPITAL—FEDERAL CITY STILL ARGUES HOME RULE

(By Robert E. Baskin)

WASHINGTON, December 11.—Residents of the District of Columbia have a unique status in our national democracy, and it is a highly controversial status.

They have no vote, either for President of the United States or the men who administer their city government.

They are taxed by their city government and the Federal Government, and this taxation includes two levies on income, one by the United States and one by the municipal administration, which is an agency of the United States.

To an outsider, who is confronted with this situation for the first time, this seems manifestly unfair. The old battle cry of the revolution against taxation without representation immediately comes to mind.

But the issues involved in home rule for the District of Columbia are not nearly so simple.

The subject of the vote and home rule is hotly disputed here. So far all efforts to pass legislation to achieve home rule have been blocked by the House of Representatives' District of Columbia Committee.

Representative OLIN (TIGER) TEAGUE of College Station, has been a member of this committee for 11 years.

"There has been a big drive for home rule every year since I have been here," TEAGUE says. "It is led by people who are looking for power for themselves or by idealistic dreamers.

"As soon as I came up here, I made it a point to read up on the history of the District. It was obvious, even when the Capital was in Philadelphia, that the Nation needed a capital city that belonged to the whole country, not just to the residents of the city itself.

"The District of Columbia—a Federal city—was the result.

"The Capital City should never be controlled by any one group. It must represent the whole Nation."

Authority for the District is found in article I of the Constitution. It limited the area to 10 miles square (100 square miles) and specified that Congress "shall exercise exclusive jurisdiction" over the District.

In 1788 Maryland and Virginia ceded to the Federal Government a 100-square-mile area, straddling the Potomac River. But the young Capital City, meticulously laid out by Major L'Enfant, grew very slowly. Wits referred to it as "the city of magnificent distances." In 1846 it was decided that the entire area would never be needed and Virginia's portion of the District was ceded back to that State. This was a colossal though understandable lack of foresight, and it left the District with 70 square miles of land, which today is bulging with overpopulation.

In the early years there was experimentation with various forms of home rule. In 1802 the mayor was named by the President and the city council elected by the people. In 1812 the council was allowed to elect the mayor, and from 1820 to 1871 the people elected the mayor directly. A territorial form of government, with a Governor, Legislative Assembly, and a nonvoting Delegate to Congress, was set up in 1871. All of these officials were appointed by the President, except for the Delegate, who was popularly elected.

Apparently none of these systems worked well. In 1874 the present form of government began to emerge and was spelled out exactly by Congress in 1878.

Administration of the city government since that time has been by three Commissioners, two appointed by the President and the third a ranking member of the Army Corps of Engineers, who is in charge of public services and works. Other facets of the municipal government are divided between the other two Commissioners.

Congress acts as sort of an extraordinary city council for the District. Home-rule proponents say District matters take up too much of Congress' time, but in this way the national will, and not just the regional will, is expressed.

Federal property in the District, which is almost half of the area, is not taxed, but Congress, since 1954, has annually appropriated $20 million to help defray costs of the municipal government. The result is a debtless city, and all expenses are paid out of current revenues.

There are those who think the Federal Government is getting quite a bargain. William Press of the Washington Board of Trade estimates that the Government would be paying $40 million annually if it paid the equivalent of taxable values.

Taxation of the people here, like all taxation, continues to mount. Washington not only levies an income tax, but it has a 2-percent sales tax as well. Both taxes long have been considered unthinkable in Texas.

But it is generally conceded that the District Government is a highly efficient one and virtually free of corruption.

Opponents of home rule say that the vote for the District's residents is overemphasized. Residents can always maintain their voting rights in their home States if they choose. However, Congressman TEAGUE of Texas says he favors allowing a vote for President and Vice President.

What is the source of the major opposition to home rule?

Opponents frankly are concerned over the character of the city government that would emerge. They note that 46 percent of the District's employees are now Negroes and this percentage is rising. They believe that the government would be dominated by Negroes, creating an unrepresentative situation for the Nation's Capital.

"While 10 to 12 percent of the national population is Negro, 46 percent of the District's population is Negro," says Representative JOEL T. BROYHILL, Republican, Virginia, a member of the House District Committee. "We cannot afford to have a national capital that is altogether unrepresentative of the whole Nation."

Tight Federal control, too, is believed necessary because of the constant growth of the Federal Establishment.

There are 231,000 Government employees in Washington, and the bureaus, the departments, the Congress, and virtually all agencies never seem to have enough room. This is the consequence of big government.

For example, the President's executive staff formerly occupied an annex of the White House. When the State Department moved out of its old building across the street, the executive staff spread into that large structure. It is now overflowing and there is talk of erecting a new building.

Once upon a time one House Office Building was sufficient. Now there are two, and a third is under construction.

A second Senate Office Building is nearing completion.

Temporary buildings erected in World War I along the Mall are still standing, and they are full.

Foreign governments are erecting enormous establishments to keep abreast of the free world's affairs.

In 1952 extensive hearings were held by the House District Committe on a partial home-rule proposal. This plan would have set up a 15-member council, to be elected from the city's wards, and a mayor appointed by the President, who would carry the administra-

UNIVERSITY OF MICHIGAN LIBRARIES

tive burden. Congress would have had veto powers over the council. A District delegate to Congress would have been elected, but would have no vote. There was no provision for voting in national elections. Zoning—a vital item in the Capital—would have to be approved by the National Park and Planning Commission.

This bill, moderate as it was, never left the House committee, although it had been passed by the Senate. The committee felt this was only the first step to full home rule.

Some Congressman expressed a preference to ceding the District back to Maryland rather than adopt such a measure.

The bill was supported by a number of civic groups, labor unions, and various religious bodies. But it had powerful opposition from the business community.

An opposition witness, Rufus S. Lusk, of the Washington Taxpayers Association, said: "The caliber of members of this committee and the other committees of Congress is very far above what we would have on a city council. * * * Occasionally politics get into it, but not very often. They do the best they can. You cannot expect to get that with a city council."

One thing is certain at this time: No home-rule legislation can be expected as long as the House District Committee, with a number of southerners on it, is constituted as it is.

"But," said a Congressman, "if home rule ever gets on the floor of both Houses, it will be passed. There are too many northern Congressmen concerned about the Negro votes in their districts. To vote against home rule, in a sense, would be considered an anti-Negro vote, the Capital's population being what it is."

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. TEAGUE of Texas. Mr. Speaker, in his sixth and final article Mr. Baskin reviews the recent NAACP charges against the Metropolitan Police Force:

[From the Dallas Morning News of December 13, 1957]

VI. TEXAN IN CAPITAL—NAACP WAR WON EXCEPT WITH POLICE

(By Robert E. Baskin)

WASHINGTON, December 12.—The National Association for Advancement of Colored People has just about won its war in the Nation's Capital, but it has lost one significant battle.

In the last 10 years elimination of discrimination and bars to Negroes has proceeded at a breathtaking pace.

Public transportation has been desegregated.

Hotels, restaurants, and other public places have been opened to Negroes, although few of them seem inclined to frequent the better class establishments.

Public schools are fully integrated.

Negroes have taken over vast residential areas.

Tremendous job opportunities have been opened up, particularly Federal jobs.

"A generation ago Negro workers accounted for 3 percent of the civil-service jobs in Washington," Secretary of Labor James P. Mitchell reported recently. "Today they make up 24 percent. In 1940 less than 1 percent were doing supervisory work; today 16.6 percent hold supervisory jobs, and more than 300 Negroes of distinguished ability have been appointed to positions of responsibility in the Eisenhower administration."

The NAACP has kept up pressure through the years for these things. But it has not been content, despite the fact that the District of Columbia's life has been severely jolted by the rapidity of the social change.

This fall the NAACP aimed its fire at the District's Police Department.

It claimed that Police Chief Robert V. Murray, a widely respected, veteran officer, and his Department were practicing brutality and race discrimination. The NAACP said it had 14 cases of brutality to present. It demanded that Murray be ousted.

On top of this, the organization asserted that the Police Department had a gag rule which prevented brutality cases from being aired. The three District Commissioners then took an unusual step.

They directed that officers who knew of brutality or race discrimination could report them to the NAACP, without approval of their superiors.

The FBI was called into the case. After an investigation, it found nothing to warrant Federal action because of brutality or discrimination.

But the NAACP kept up a drumfire of criticism of Chief Murray, and finally hearings were ordered to clear the situation.

Eugene Davidson of the NAACP complained that only 281 of the authorized force of 2,300 men in the Police Department were Negroes. This, he said, was unfair in a city where 46 percent of the population is Negro.

The hearings were conducted before the District's three Commissioners in an atmosphere of tension.

Congress manifested its interest from the start. Chairman JOHN L. MCMILLAN, Democrat, South Carolina, of the House District of Columbia Committee proposed a full investigation of the NAACP's activities in the district.

"We have a private organization (the NAACP) completely killing the morale of the police department," MCMILLAN said.

Senator HARRY F. BYRD, Democrat, Virginia, charged that the NAACP had grown so powerful "under sponsorship of the Federal Government" that it had been granted the privilege of questioning individual policemen as to how they obtained evidence.

"This," said BYRD, "gives the NAACP a privilege that a United States Senator does not have. It is the equivalent of permitting the private questioning of FBI agents without the authority of J. Edgar Hoover."

The hearings went extensively into promotions, assignments, and other treatment of Negro policemen. Murray and his senior officers testified that promotions and assignments were based on merit, regardless of race.

The hearings lasted 9 days. The findings of the three commissioners were a complete repudiation of the NAACP charges.

No brutality or race discrimination was proven, the commisisoners said. They expressed complete confidence in Chief Murray.

Thus came the first real setback for the NAACP in at least 10 years here.

Commissioner David B. Karrick said he was convinced that the community standing of the NAACP in the district was hurt by the charges against the police department. Washington newspapers and other observers accused the NAACP of recklessness.

There remains a likelihood that Congress may go ahead next year with a full inquiry on the NAACP's activities here.

Meanwhile, the efficiency of Murray's police department is indicated by a declining crime rate. However, the District's crime rate still may be considered a high one, with Negro offenders far in the majority.

In fiscal 1956, Negroes committed 7,794 major crimes compared to 2,324 committed by whites. These crimes ranged from murder to auto theft.

Officers have testified that arrest of Negroes have been much more difficult since the NAACP began its campaign against Chief Murray.

The NAACP apparently intends to maintain its pressure.

"Public officials here jump through hoops every time the NAACP shouts," says Congressman JOEL T. BROYHILL (Republican, of Virginia) of the House District of Columbia Committee.

"Since the influx of Negroes into Federal jobs in the District, there has arisen a kind of discrimination in reverse, a leaning over backward. A white supervisor, for instance, will be afraid not to promote a Negro employee over a white worker because he fears the NAACP will complain. We have had a number of complaints along those lines."

There is a heavy representation of Negroes in the guards of the various Federal buildings and in the national park police, which are the police force for the areas owned by the Federal Government.

What more can the NAACP ask in the Nation's capital?

No one here is quite sure. There aren't many more fields to conquer. There is no question that the District of Columbia has led the way in changing from a segregated city to an integrated one. The abruptness of this change has left visible and painful wounds.

So far the segregated communities in Virginia and Maryland have been viewed by white residents as havens. And they have moved there by the thousands.

But these havens may not last long.

Maryland is undertaking gradual integration of its schools in compliance with the 1953 Supreme Court decree.

And the NAACP is attacking segregation in Arlington, Va. There the State of Virginia has posed a massive resistance policy that would close down public schools to avoid forced integration.

So the war—the cold war of domestic America—goes on. It provides a disturbing picture to a visitor from the provinces.

The eternal question—what is the solution?—is in nearly everyone's mind in the Capital City.

Looking at the confusion in the public schools, the interracial antagonisms, the gargantuan Federal Government and the political tensions in Washington, the visitor may well conclude:

"This isn't the solution."

Mortality Rate of Top Soviet Rulers

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 6, 1958

Mr. REUSS. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following list of some of the leading figures in the U. S. S. R. who have been purged, as compiled by Commonwealth Survey, official organ of the United Kingdom overseas information services in its November 12, 1957 issue, pages 998–1006, which may be of interest to scholars in the field of Soviet studies:

Name	Office	Date
EXECUTED		
Abakumov [1]	Minister of State Security	
Alksnis	Air Force Chief	1937.
Beria	Minister of Internal Affairs	December 1953.
Bubnov	Commissar of Education	1937.
Bukharin	Member of Politburo, 1919	March 1938.
Bulanov	Yagoda's Secretary	Do.
Chernov	Commissar of Agriculture	Do.
Drobnis	Former member of Central Committee, Communist Party.	January 1937.
Dekanozov	Georgian Minister of Internal Affairs	December 1953.
Eideman	Corps Commander	June 1937.
Eskaraev	Deputy Chairman, Kazakh Council of Ministers.	March 1938.
Feldman	Corps Commander, Chief of Personnel of General Staff.	June 1937.
Goglidze	Uzbekistan Minister of State Security	December 1953.
Grinko	Commissar of Finance	March 1938.
Ibragimov	Crimean Prime Minister	1928.
Ikramov	President of Turkmenistan	March 1938.
Ivanov	Member, Central Committee, C. P	Do.
Kamenev	Member, Politburo, 1917	August 1936.
Karakhan	Deputy Commissar, Foreign Affairs	December 1937.
Kazakov	Kremlin Doctor	March 1938.
Khazani	Police Interrogator, Georgia	September 1955.
Khodzhaev	Prime Minister, Uzbekistan	March 1938.
Kobulov	Deputy Minister, Internal Affairs	December 1953.
Komarov	Deputy Chief, Investigation Department, Ministry of State Security.	December 1954.
Kork	Army Commander, Head of Frunze Military Academy.	June 1937.
Krestinsky	Deputy Commissar, Foreign Affiars	March 1938.
Krinyan	Police Interrogator, Georgia	September 1955.
Kulumbetov	President of Kazakhstan	March 1938.
Lerin	Secretary, Azov-Black Sea Executive Committee.	December 1937.
Levin	Kremlin Doctor	March 1938.
Leonov	Chief of Investigation Department, Ministry of State Security.	December 1954.
Lordkipanidze	Chairman, Adzhar Central Executive Committee.	October 1937.
Likhachev	Deputy Chief Investigation Department, Ministry of State Security.	December 1954.
Mdivani	Deputy Chairman, Georgian Council of People's Commissars.	July 1937.
Merkulov	Minister of State Control	December 1953.
Meshik	Ukrainian Minister of Internal Affairs	Do.
Mgaloblishvili	Prime Minister, Georgia	Autumn 1937.
Muralov	Former Commandant, Moscow Military District.	January 1937.
Orakhelashvili	Chairman, Transcaucasian Council of People's Commissars.	December 1937.
Putna	Corps Commander, Military Attaché (London, Berlin, Tokyo).	June 1937.
Primakov	Commander of Kharkov Military District	June 1937.
Pyatakov	Member, Central Committee	January 1937.
Rakhimbayev	Candidate Member, Central Committee	1928.
Rosengolts	Commissar, Foreign Trade	March 1938.
Rukhadze	Minister of State Security, Georgia	September 1955.
Rykov	Member, Politburo, 1924	March 1938.
Rapava	Minister of State Control, Georgia	September 1955.
Ryumin	Deputy Minister of State Security	July 1954.
Sadvokasov	Alma Ata Party Secretary	March 1938.
Serebryakov	Member, Politburo, 1920	January 1937.
Sharangovich	Second Secretary Byelo-Russian Central Committee	March 1938.
Sheboldayev	Party Secretary, N. Caucasus	December 1937.
Smirnov	Member, Central Committee, C. P	August 1936.
Stavitsky	Police Prosecutor, Georgia	September 1955.
Steiger	Soviet Diplomat	December 1937.
Toroshelidze	Member, Central Executive Committee of Soviets	July 1937.
Tseretell	Deputy Minister of Internal Affairs, Georgia.	September 1955.
Tukhachevsky	Marshal of Soviet Union, Deputy Commissar for Defence.	June 1937.
Uborevich	Army Commander	June 1937.
Vlodzimirsky	Head of an M. V. D. Investigation Department.	December 1953.
Yagoda	Commissar, Internal Affairs (NKVD)	March 1938.
Yakir	Army Commander, Commander Leningrad Military District.	June 1937.
Yenokidze	Member, Central Committee, C.P.	December 1937.
Yevdokimov	Member, Central Committee, C.P	August 1936.
Zelensky	Member, Central Committee, C.P	March 1938.
Zinoviev	Member, Politburo, 1917	August 1936.
Zubarev	Deputy Commissar, Agriculture	March 1938.
Zuckerman	Head of Department of Foreign Affairs Commissariat.	December 1937.
UNNATURAL OR SUSPICIOUS DEATHS		
Chervyakov (suicide to avoid arrest).	Chairman, Byelo-Russian Council of People's Commissars.	1937.
Dzerzhinsky (heart failure).	Candidate Member, Politburo, 1925; Head of Cheka (Secret Police).	1926.
Frunze (reported died from operation).	Commissar for Defence	1925.
UNNATURAL OR SUSPICIOUS DEATHS		
Garmarnik (suicide to avoid arrest).	First Deputy Commissar of Defence, Head of Political Administration of Red Army.	1937.
Lyubchenko (suicide).	Candidate Member, Central Committee, C. P.	1937.
Ordzhonikidze (died suddenly after conflict with Stalin).	Commissar, Heavy Industry	1937.
Raskolnikov (poisoned).	Ambassador. Fled to France, 1938	1939.
Tomsky (suicide to avoid arrest).	Member, Politburo, 1922	1936.
Skrypnik (suicide)	Education Commissar, Ukraine	1933.
Trotsky (murdered in Mexico).	Member, Politburo, 1917	1937.
Zhdanov, paralysis of the heart.	Member, Politburo, 1939	1948.
ASSASSINATED		
Kirov	Member of Politburo, 1930	1934.
IMPRISONED AND DISAPPEARED		
Radek	Member of Central Committee, C. P	January 1937.
Sokolnikov	Deputy Commissar, Foreign Affairs	Do.
Rakovsky	Chairman, Ukrainian Council of People's Commissars.	March 1938.
Bessonov	Counsellor, Soviet Embassy, Berlin	Do.
Pletnev	Kremlin Doctor	Do.
DISAPPEARED		
Preobrazhensky	Member of Politburo, 1920	Not heard of since 1936.
Syrtsov	Candidate Member, Politburo, 1930	Expelled 1930, vanished same year.
	1936	
Arkus, Fatyanov	High officials of the State Bank	
Maryassin	Chairman of the State Bank	
	1937	
Aitakov	President of Turkmenistan	
Akhun-Babaev	President of Uzbekistan	
Atabaev	President, Turkmen Republic	
Goloded	Chairman of Byelo-Russian Council of People's Commissars.	
Gorshenin	Secretary of the Komsomol	
Isaev	President, Kazakhstan	
Isakeev	Chairman of the Kirgiz Council of People's Commissars.	
Kaminsky	Commissar of Health	
Khalepsy	General	
Khripin	Corps Commander, Red Army	
Kruglikov	State Bank Chairman, appointed 1936	
Musabekov	Chairman of the Azerbaidzhan Council of People's Commissars.	
Orlov	Admiral, Deputy Commissar of Defence, Chief of Naval Forces.	
Postyshev	Secretary of the Ukrainian Central Committee, C. P.	
Prokofiev	Deputy Commissar of Internal Affairs (NKVD).	
Rudzutak	Deputy Chairman of the Council of People's Commissars.	
Shotemor	President of Tadzhikistan	
Sivkov	Commander of the Baltic Fleet	
Sulimov	President, RSFSR	
Svanidze	State Bank Vice-Chairman, appointed 1936.	
Unshlikht	Candidate Member, Central Committee, C. P.	
Urazbekov	Chairman, Kirgiz Council of People's Commissars.	
	1938	
Belov	Commander, Byelo-Russian Military District.	
Blukher	Marshal of the Soviet Union, Commander of Far East Army.	
Boldyrev	Commissar of Health	
Chubar	Commissar of Finance	
Dybenko	Commander, Leningrad Military District	
Eikhe	Commissar of Agriculture	
Gorbachev	Army General	
Gribov	Commander, N. Caucasian Military District.	
Kalmanovich	Commissar of State Farms	
Kashirin	Army General	
Kireev	Commander of the Pacific Fleet	
Kozhanov	Commander of the Black Sea Fleet	

[1] Execution reported December 1954, but believed to have occurred much earlier. Abakumov was last mentioned in the press in January 1950, and was not present at the 1952 Party Congress. (See p. 1004.)

Name	Office	Date
DISAPPEARED—con.	1958	
Kosior	Deputy Chairman of the Council of People's Commissars.	
Krylenko	Commissar of Justice	
Ludri	Admiral, Head of the Naval Academy	
Lyubimov	Commissar of Light Industry	
Makharadze	President, Transcaucasia and Georgia	
Mezhlauk	Deputy Chairman of Council of People's Commissars.	
Smirnov	Commissar of the Navy	
Velikanov	Commander, Trans-Baikal Military District.	
Viktorov	Admiral, Deputy Commissar of Defense, Chief of Soviet Naval Forces.	
Yegorov	Marshal of the Soviet Union, Deputy Commissar of Defense.	
Yezhov	Commissar of Internal Affairs (NKVD)	

Name	Office	Date
DISAPPEARED—con.	Later Years	
Charkviani	Candidate Member, Central Committee, C. P.	1952.
Kapustin	Secretary, Leningrad City C. P. Committee.	1949.
Khrapchenko	Chairman, Arts Committee, Council of People's Commissars.	1948.
Kolesnikov	President, Soviet Red Cross	1948.
Kuznetsov [1]	Lieut.-General, Secretary Leningrade Party Committee.	1949.
Nikitin	Member, Party Central Committee	1948.
Popkov [1]	Candidate Member, Central Committee	1952.
Rodionov [1]	Chairman, Council of Ministers, RSFSR	1952.
Shakhurin	Commissar for Aviation	1946.
Shikin	Col.-General, Chief of Political Administration, Red Army.	1949.
Tyulenev	Army General, Commander Kharkov Military District.	1949.
Vosnesensky [1]	Member of Politburo, 1941	1949.

The following members or candidate members of the Communist Party central committee disappeared between 1936 and 1939:

Akulov, I. A.; Antipov, N. K.; Bauman, K. Ya.; Beloborodov, A. G.; Blukher, V. K.; Chudov, M. S.; Gikalo, N. F.; Eliava, Sh. Z.; Kabakov, I. D.; Khataevich, M. M.; Knorin, V. G.; Kosarev, A. V.; Lominadze, V. V.; Lomov, G.; Miliutin, V. P.; Osinsky, V. V.; Preobrazhevsky, E. A.; Pyatnitsky, I. A.; Rukhimovich, M. L.; Serebrovsky, A. P.; Schmidt, V. V.; Smilga, I. T.; Stetsky, A. I.; Sulimov, D. E.; Uglanov, N. A.; Yakovlev, Y. A.; Zatonsky, V. P.

THE POLITBURO [1] 1917–57

Below is a list of members of the Politburo of the Communist Party of the Soviet Union from its inception in 1917 to 1957 showing the length of their service and their fate. Present members are marked thus *. Most of them served as candidate members before being promoted, but many candidates failed to secure election.

[1] The Politburo was replaced by the Praesidium of the Central Committee of the party in 1952.

Members

Name	Date of election	Date of removal	Fate
Lenin, V. I.	1917	1923	Died 1924.
Stalin, J. V.	1917	1953	Died 1953.
Trotsky, L. D.	1917	1926	Murdered 1940.
Sverdlov, Y. M.	1917	1919	Died 1919.
Zinoviev, G. E.	1917	1926	Executed 1936.
Kamenev, L. B.	1917	1927	Do.
Bukharin, N. I.	1918	1929	Executed 1938.
Sokolnikov, G. Ya.	1917	1918	Imprisoned, disappeared 1937.
Bubnov, A. S.	1917	1918	Executed 1937.
Krestinsky, N. N.	1919	1920	Executed 1938.
Serebryakov, L. P.	1920	1921	Executed 1937.
Preobrazhensky, E. A.	1920	1921	Disappeared 1936.
Tomsky, M. P.	1922	1929	Suicide 1936.
Rykov, A. I.	1924	1930	Executed 1938.
Molotov, V. M.	1925	1957	(See above.)
*Voroshilov, K. E.	1925		
Kalinin, M. I.	1926	1946	Died 1946.
Rudzutak, Y. E.	1926	1937	Disappeared 1937.
Kuibyshev, V. V.	1927	1935	Suspicious death 1935.
Kaganovich, L. M.	1930	1957	(See above.)
Kirov, S. M.	1930	1934	Murdered 1934.
Kosior, S. V.	1930	1938	Disappeared 1938.
Ordjonikidze, G. K.	1930	1937	Suspicious death 1937.
Andreev, A. A.	1932	1952	Out of Office.
*Mikoyan, A. I.	1935		
Zhdanov, A. A.	1939	1948	Suspicious death 1948.
*Khrushchev, N. S.	1939		
Beria, L. P.	1946	1953	Executed 1953.
Malenkov, G. M.	1946	1957	(See above.)
Voznesensky, N. A.	1947	1949	(See footnote 1.)
*Bulganin, N. A.	1948		
Kosygin, A. N.	1948	1952	Not reelected.
Saburov, M. A.	1952	1957	Dismissed, July 1957.
Pervukhin, M. G.	1952	1957	Do.
*Kirichenko, A. I.	1955		
*Suslov, M. A.	1955		
*Aristov, A. B.			
*Byelayev, N. I.			
*Brezhnev, L. I.			
*Furtseva, E. A.			
*Ignatov, N. G.	New members added July 1957.		
*Kozlov, F. R.			
*Kuusinen, O. V.			
*Shvernik, N. M.			
Zhukov, G. K.	1957	1957	(See page above.)

[1] In his secret speech at the 20th Congress of the CPSU in February 1956 (see Vol. 2, p. 1023) Khrushchev revealed that "those who innocently lost their lives," as a result of the Leningrad Case, "included Comrades Voznesensky, Kuznetsov, Rodionov, Popkov and others." The Leningrad case occurred in 1940 when a large number of Zhdanov's followers in that city were removed from their posts. Complicity in it was one of the charges against Abakumov, whose execution was announced in December 1954, and was also alleged against Malenkov in a speech by Khrushchev in July 1957. Some Zhdanovites who disappeared in 1949 were "rehabilitated" in 1956.

Some candidate members

Name	Date of election	Date of removal	Fate
Dzerzhinsky, F. E.	1925	1926	Died of heart failure 1926.
Petrovsky, G. I.	1925	1929	Relegated.
Uglanov, N. A.	1925	1929	Disappeared 1937.
Chubar, V. Y.	1926	1939	Disappeared 1939.
Syrtsov, G. I.	1930	----------	Dismissed in December the same year and not heard of again.
Postyshev, P. P.	1934	1937	Disappeared 1937.
Shcherbakov, A. S.	1941	1945	Suspicious death 1945.
Bauman, K. Ya.	1929	1930	Disappeared 1936.
Melnikov, L. G.	1953	1953	Dismissed, June 1953.
Bagirov, M. D.	1953	1953	Dismissed, July 1953.
Shepilov, D. T.	1956	1957	(See above.)

Tragedy of the Arab Refugees

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 24, 1958

Mr. MULTER. Mr. Speaker, the following article very clearly sets forth the facts about the tragic situation of the Arab refugees. It is very clear from this presentation that the Arab leaders are practicing thought control over the refugees and using them for political purposes. This explains the Arab leaders' refusal to cooperate in any solution.

The following article is from the publication Prevent World War III, winter-spring 1958 issue:

THE TRAGEDY OF THE ARAB REFUGEES

A major impediment in the struggle for peace in the Middle East is the Arab refugee problem. The society has stressed the importance of this question which cannot be solved by resort to power politics (see Prevent World War III, No. 50, Will the U. N. Solve This Problem?). The humanitarian aspect of this burning issue must also be the concern of all men of good will. History will not forgive nor forget those who continue to indulge in self-seeking stratagems while the lives and happiness of thousands of men, women, and children are at stake.

The annual report of the director of the United Nations Relief and Works Agency for the refugees (UNRWA) (July 1956 to June 1957) makes reference to these considera-

UNIVERSITY OF MICHIGAN LIBRARIES

tions when it discusses the major factors hampering the work of the agency. The report notes that these difficulties have, in a large measure, arisen because the humanitarian problem with which the agency is dealing represents for the Arab governments a burning political issue, both of internal and of foreign policy. The implications of this observation touch the very root of the refugee problem.

For years the world has been led to believe that the Arab governments were solely concerned with the human welfare of the refugee masses who live in makeshift camps and depend upon United Nations relief. There is no doubt that this impression has helped to disguise the antiwestern policies of certain unscrupulous Arab leaders. Not a day passes without the propaganda mills of these politicians grinding out bitter denunciations against the West as though the plight of the Arab refugees was deliberately engineered by western policymakers.

But this is only part of the story. These Arab leaders strive in every possible way to maintain a state-of-war psychosis among the refugees. All sorts of demonstrations are organized to keep the emotions of the refugees at white heat. There are many examples of how these Arab leaders keep repeating to the refugees that some day they will return and destroy Israel by fire and sword. Recently, a Syrian leader, Akram al-Hawrani, addressed a huge rally in which he promised the refugees that the day was near when they would destroy the usurpers of their rights in Palestine: "The 1948 plot, the great imperialist plot which has caused you to be driven from your country shall never be repeated. This plot will not be reenacted. The hand which stretches out to conclude peace with Israel will be amputated; its owner shall be killed. There is to be no peace with Israel, no peace with Israel. The Arabs will return to their homes and properties in the near future, triumphant and victorious with God's help." A few days after this fire-eating speech prominent Egyptian leaders addressed a rally in the Gaza strip at the unveiling of a monument dedicated to the Arab refugees. The monument portrayed a refugee soldier pointing his left hand to the lands of Palestine and carrying a machinegun in his right hand. The Egyptian General Al Latif praised the intrepid spirits of the refugees while his listeners chanted "Return to Palestine."

This is the humanitarian solicitude that Arab leaders display to the refugees who live in misery. The need homes. They require adequate nourishment and medical care. Above all, they should enjoy the fruits of productive labor, but Arab leaders who pretend to speak for them, seem to be oblivious to these basic human requirements. Thus, the Arab refugees seem to be suspended as it were, between life and death. There is an old military precept that desperate people make good soldiers. It is this idea which seems to guide the Arab leaders in their approach to the refugee problem.

The results of Arab policy show up clearly in the refugee camps. The noted journalist and author, Hal Lehrman, recently analyzed this aspect of the problem after a careful on-the-spot investigation (Commentary, September 1957). He observed that the refugees were in a state of abysmal ignorance. Whatever ideas and information they had, seemed to be derived from common or controlled sources. He further reported that the refugees "were being systematically cut off from knowledge of any fact which might diminish a die-hard determination to go home."

The state of ignorance among the refugees is the trump card of those who are determined to manipulate these people as though they were pawns. They are unaware of the vast transformations which have taken place in Israel. They do not know that many Arab states are in a position to provide them with new homes, and they are ignorant of the fact that the very same Arab leaders who profess to champion their cause, block every realistic attempts to alleviate their condition. Instead, they are fed a diet of stereotyped slogans which paint the West as a bloodless monster and Israel as its heartless offspring. This isolation from the real world is bolstered by the internal makeup of UNRWA. Mr. Lehrman reports that the agents of this United Nations organization are "almost to a man themselves refugees from Palestine." This is like employing a sick man to take care of his fellow patients in a hospital. The fact is, as Mr. Lehrman points out, that these agents numbering close to 10,000 have the most to gain as job holders "from keeping the problem unsolved and the job alive." Moreover, these U. N. agents who seem to be more cultured, relatively speaking, than their fellow refugees, exploit their brethren as weapons in the effort to regain their lost advantages resulting from the exodus from Palestine.

Tied in with this rather strange situation is the fact, as reported by UNRWA, that the majority of the teaching staff among the refugees is recruited from the refugees themselves. A number of weeks ago the director of UNESCO, Dr. Luther Evans, disclosed that UNESCO funds were being used to teach Arab children to hate Israel. Dr. Evans detailed the uses of the $100,000 fund and mentioned that part of it was going to schools for Arab refugees and in every one of those schools the kids are taught that they are going to push the Israelis into the sea, he said.

The vested interest which thousands of Arab U. N. agents have in blocking a solution of the refugee problem so as to secure their jobs, and the indoctrination of refugee children as mentioned by Dr. Evans, is complementary to the outside activities and propaganda of the Arab governments. The net result of the outside and inside work is to fasten upon the refugees a naive and inflexible outlook which is tailor made for those who exploit the problem for ulterior motives.

Nor can we ignore the direct controls of Arab leaders through agents who have infiltrated these camps. Their function is not only to inform, but to punish those who dare to question the wisdom of a Nasser. It is therefore well-nigh impossible to gage the true sentiments of these people who must reckon with the provocateur and the secret agent. This is another way that the Arab refugees are kept in line. They dare not ask the simple question of their great leaders in the Arab world, "If you are so concerned with our plight, why don't you give us some of your lands which you can well spare so that we can produce and contribute to the general development of all Arab countries?"

Needless to say, this question can hardly be answered honestly by the Arab leaders. As Mr. Lehrman shows, this leadership has prevented the execution of many sound programs for the rehabilitation of the refugees—which, incidentally, would have also benefited the nonrefugee Arab masses. It was the Arab leaders who, after lengthy negotiations, turned down the Jordan Valley Authority project which would have brought into cultivation wastelands in Jordan as well as Israel. The excuse for rejecting the project was flimsy. The Arab leaders said that the JVA could not be accepted until the refugee problem had been solved. Yet, as Mr. Lehrman points out, it was precisely the JVA which could have helped to solve the problem.

Numerous other projects have been proposed by the United Nations and other interested parties but invariably the Arab leaders, without consulting the refugees themselves, have turned them down. Indeed, Mr. Lehrman reports that there is a fund of $200 million for large-scale projects to integrate the refugees in the Arab countries, but it stays practically untouched because the Arab leaders have other ideas. To put it simply: They would rather see the refugees vegetate on relief handouts than lose them as a valuable weapon in their anti-Western campaign.

Even UNRWA is looked upon with a sort of contempt any cynicism by Arab leaders. In this connection the Director of UNRWA reported numerous cases of obstruction by the Arab Governments, notably in his attempt to remove ineligible persons from the Agency's relief rolls. He also cited obstacles put in the way of UNRWA's work by the four Arab host Governments. This, of course, has made it most difficult for UNRWA to calculate the exact number of genuine refugees and has increased the inefficiency of administration. In addition to these impediments, Mr. Lehrman reveals that the Arab Governments obstruct "UNRWA's efforts by harassing its officials, by charging excessively for warehouse and other local services and even by profiting from tariffs on imports for refugee use."

As a matter of fact, the Arab leadership discriminates against the refugees by limiting their political rights and by refusing to grant them working conditions comparable to those of non-Arab refugees. Mr. Lehrman quotes one UNRWA official: "Arab leaders do not give a damn whether the refugees live or die."

The citation of the above-mentioned facts must be taken into consideration if a realistic, just, and humane solution of the refugee problem is to be attained. Many sincere people start from the premise that these refugees were forcibly expelled en masse by the Israelis and therefore the Israelis must make amends. The premise is without foundation. In actual fact, the mass exodus of the Arabs from Israel stemmed out of the invasion of Israel by the Arab States in 1948. This aggression took place in direct violation of U. N. resolutions calling for the establishment of the State of Israel. As part of the military operation against Israel, Arab leaders organized and encouraged the mass exodus of the Arab peoples living in Palestine. This is confirmed by Arab sources no less than by other authoritative reports on that situation. For example, the London Economist carried the eyewitness report concerning the Arab flight from the city of Haifa: "* * * There is but little doubt that by far the most potent factors were the announcements made over the air by the Arab Higher Committee urging all Arabs in Haifa to quit. The reason given was that upon the final withdrawal of the British the combined armies of the Arab States would invade Palestine and drive the Jews into the sea. It was clearly intimated that those Arabs who remained in Haifa and accepted Jewish protection would be regarded as renegades."

On April 3, 1948, the Near East Arabic Radio said: "It must not be forgotten that the Arab Higher Committee encourages the refugees to flee from their homes in Jaffa, Haifa, and Jerusalem, and that certain leaders have tried to make political capital out of their miserable situation. The Arab States must not allow the future of the refugees to be sacrificed to make political capital out of their fate."

Emile Ghori, the secretary of the Arab Higher Committee and one of its representatives before the United Nations, admitted to the Beirut Telegraph on September 6, 1948: "The fact that there are these refugees is the direct consequences of the Arab States in opposing partition and the Jewish State. The Arab States agreed upon this policy unanimously and they must share in the solution of the problem."

On September 27, 1948, the Near East Arabic Radio attacked the Arab Higher Committee's record in these words: "It is be-

UNIVERSITY OF MICHIGAN LIBRARIES

smirched by the flight of its leaders and their encouragement of the Arabs to leave their homes even though no previous arrangement had been made for their housing and resettlement."

Space does not permit additional citations but anyone conversant with the tactics of the Arabs in 1948 and 1949 knows that it was precisely the Arab States that looked upon the refugees as pawns in their conspiracy to destroy Israel.

Contrary to Arab propaganda the State of Israel has always shown sympathy and solicitude for the Arab refugees. Indeed, when the war broke out the Israeli Government made a number of attempts to halt the flight of the Arabs and appealed to them "to play their part in the development of the state (Israel) with full and equal citizenship and due responsibility in all its bodies and institutions, provisional or permanent" (May 14, 1948). In 1948, it was estimated that there were more than 40,000 Arab refugees living in Israel. Between May 15, 1948, and 1950, Israel spent a total of $11 million in the care of these Arab refugees. Indeed, during that period it is estimated that Israel spent at least $1 million more on its Arab refugees than all the Arab States together on the remainder of the Arab refugee population.

The many thousands of Arab refugees who remained outside of Israel were not forgotten by the Israeli Government. On August 8, 1949, Israel notified the Palestine Conciliation Commission that it would accept the return of 100,000 Arab refugees. The Arab States rejected this compromise and demanded the unconditional repatriation of the entire Arab refugee population. On December 1, 1950, the Israeli representative at the United Nations informed the U. N. that "without waiting for peace negotiations the Government of Israel is ready to detach the compensation problem from the general framework of peace negotiations and to make payment into a U. N. reintegration fund" for the Arab refugees. In initial installment of £1 million into such a fund was offered by Israel. One year later the Israeli Foreign Minister reaffirmed Israel's willingness to deal with the problem of resettling the refugees as a special problem before the final settlement of the Arab-Israeli conflict. The Arab States rejected all of these offers and sought Israel's unconditional surrender to their terms.

In this connection it is important to note that during the first 3 years of its existence Israel was obliged to absorb close to 700,000 Jewish refugees. Approximately half of these unfortunate people had fled from persecution and oppression in the Moslem lands of the Middle East and north Africa. It is significant that the number of Jewish refugees coming into Israel during this 3-year period was approximately equal to the number of Arab refugees.

There are many United Nations reports, surveys, and documents attesting to the fact that the Arab States could, if they wished, alleviate the plight of the Arab refugees and absorb them in their respective economies. However, it is also a fact that the Arab countries studiously avoid this responsibility. While in their propaganda the Arab countries bemoan the state of these refugees, they show no inclination to cooperate with the United Nations with a view toward helping these unfortunate victims. There is no doubt that, if the Arab States showed a genuine determination to better the living conditions of the Arab refugees, the State of Israel on the basis of its past pronouncements, would generously contribute to this effort.

From the foregoing it should be obvious that the Arab refugee problem is capable of solution provided that there is a sincere desire on the part of all concerned to reach agreement. But what shall we say when some who claim to speak for the refugees, refuse to sit at the conference table and prefer to dedicate statues of soldiers pointing machineguns toward Israel? Only the combined efforts and goodwill of Arabs and Jews can put an end to this tragedy. The Israelis have always expressed a willingness to help in untangling this complex problem. It is clearly up to the Arab governments to show a similar attitude by word and by deed and to renounce the policy of exploiting these unfortunate people as pawns in their efforts to prevent peace in the Middle East.

Federal Regulatory Agencies

EXTENSION OF REMARKS
OF
HON. WILLIAM E. PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, March 3, 1958

Mr. PROXMIRE. Mr. President, an analysis of the impact of the recent collapse of fair-trade leadership by top manufacturers appeared in the March 2 issue of the New York Times in an article by Hebert Koshetz. In the course of this article it is pointed out that without the benefit of some protection as to minimum prices, the small dealer will be unable to continue selling branded merchandise that enjoys national acceptance, and without such merchandise, he truly will be hard pressed to stay in business.

Mr. President, the small retailer whose back is already to the wall in thousands of cases throughout America because of the current economic slump, faces a grim and perhaps impossible future unless the Congress acts to provide protection against cut-throat, predatory price competition.

Mr. President, I ask unanimous consent that the part of the article dealing with the problems of the small retailer be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

Last week, small retailers were dealt something of a blow by the news that General Electric Co. had abandoned so-called fair trade or the fixing of minimum prices for its small appliances. Other manufacturers of appliances and hardware items followed suit and many discount houses and department stores were soon in the throes of a miniature price war on these goods.

The move by the producers of small appliances will have wide repercussions in retailing circles and one of the things it probably will bring about is a hue and cry for stronger fair trade legislation at the national level. Without the benefit of some protection as to minimum prices, the small dealers will be unable to continue selling branded merchandise that enjoys national acceptance, and without such merchandise, he truly will be hard pressed to stay in business.

SUPPORT FOR FAIR TRADE

It is inconceivable that large manufacturers such as General Electric, Sunbeam, and others will not back national legislation for minimum price selling. Flaws in the present fair trade laws which have been passed by the States have made it difficult for these manufacturers to control retail prices. From one standpoint it seemed that their insistence was aimed at the consumer and that in effect they didn't want him to get a bargain.

But the problem goes deeper than that. Physical distribution of any product on a national scale cannot be accomplished without the small, independent retailer. The convenience that he provides the customer by stocking the goods and providing a point of sale when the product is sought cannot be overestimated.

Despite the growth of large supermarkets, chainstores, and department stores, the small retailer still distributes close to 50 percent of all consumer goods. Eliminating him means the removal of the propinquity of thousands of products and a deep cut in overall unit and dollar volume, not to mention the employment and rentals involved in the great American distributive machine.

Address of Donald A. Williams, Administrator of the Soil Conservation Service, Before the 12th Annual Convention of Soil Conservation Districts

EXTENSION OF REMARKS
OF
HON. FRED MARSHALL
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks, I wish to call attention to the address of Mr. Donald A. Williams, Administrator of the Soil Conservation Service, given before the 12th annual convention of the National Association of Soil Conservation Districts at Minneapolis, Minn., on February 17, 1958:

ADDRESS OF DONALD A. WILLIAMS, ADMINISTRATOR OF THE SOIL CONSERVATION SERVICE

I am delighted to be here with you today at the start of your convention. I have looked forward to this occasion for a long time. In fact, for a year—ever since your last convention in St. Louis. You see, your annual meeting is one of the highlights for me each winter.

It's a great inspiration to be with you. You are dedicated men * * * dedicated to the welfare of your home community. You are dedicated to the protection and improvement of the soil and water resources in your soil conservation district because these resources supply the lifeblood to your community, to your State, and to your Nation—today, and in the future.

You are public officials of your State. You have the public interest at heart. You give freely of your personal time and energy without pay. If you didn't, you wouldn't be attending this convention on your own time. I am most proud to be associated with you. And, of course, it is always good to be among old friends. During the past year I have visited with literally thousands of district officials at your State association meetings, at area meetings, and on other occasions.

Let's pay tribute to the ladies' auxiliary and to their president, Mrs. Mungle. She has a full program lined up for the ladies this week. At some of the State association meetings I have been impressed with the lively interest of the ladies in the soil-conservation cause. I want to encourage you ladies to keep up this good work.

I view my participation in your convention as an annual opportunity for a two-way look at the road we are traveling together. Nolen

has asked me to concentrate my remarks this afternoon under the title "Service Through Districts."

That is a most appropriate subject. Because the primary purpose for the existence of the Soil Conservation Service is to serve America through soil-conservation districts.

Of course, we in SCS don't have any exclusive rights on that opportunity. Many of you are, and all of you should be bringing all other available conservation services to your communities through your district.

Our goal is a mutual goal. Your goal and our goal is to help farmers and ranchers get useful conservation plans working on all their land. We'll find the pot of gold at the end of our rainbow when all needed soil and water conservation measures are in full operation on all farms and ranches in the Nation.

Therefore, I want to devote my remarks at this session to three questions.

Where are we in conservation progress?

How did we get where we are?

How can we get on with the job faster?

TWENTY YEARS OF PROGRESS

Let's look at the first question. What progress has been made in soil and water conservation? We could start by comparing today with 20 years ago.

Where were you 20 years ago? Were you as concerned then as you are now about soil conservation? I suggest that each of you turn your thoughts back to 1938.

The Soil Conservation Service was just 3 years old then. I was an SCS engineer working on demonstration projects in the State of Washington. The soil conservation district movement was in its infancy. Many of you were working vigorously to get a soil conservation district law enacted for your State and to get district organization started.

The first State enabling acts were passed in 1937. Twenty-one States enacted district laws that year. By 1938 only 13 districts had been organized.

It was another 10 years before all State legislatures had passed district enabling acts providing for local initiative and responsibility in developing district soil and water conservation programs aimed at solving local soil and water problems. Between 1938 and 1948 there were 1,936 districts organized and 530,000 farmers and ranchers had become cooperators.

Today there are more than 2,775 districts in operation. They cover more than 1¼ billion acres of land. About 93 percent of all farms and ranches are within these districts. More than 1¾ million farmers and ranchers are district cooperators.

Eighteen States are totally covered by districts. Most of the other States have only one or two holdout counties. In only a handful of States is there any significant area of farmland not in districts. And in all but one of these States, district organization is proceeding rapidly. There were 62 new districts organized last year.

The evidence is clear. You have moved ahead rapidly and effectively over the past 20 years. Obviously, you are over the hump as far as district organization is concerned.

CONSERVATION CONCEPT BROADENED

During this same period there evolved a changing concept of soil conservation and the conservation objective. While the original objective was to overcome the menace of erosion to American land, gradually that concept was broadened. Today the objective is to use each acre of agricultural land within its capability and to treat it in accordance with its needs for protection and improvement.

The modern concept involves increasing soil productivity and increasing standards of rural living for today, tomorrow, and for posterity. It combines the objective of national welfare with better living for the people who work the land.

Modern soil and water conservation is putting to work on the land needed combinations of effective practices—combinations planned for and fitted to the soil and water resources of the land, acre by acre.

As one travels almost anywhere across our Nation, conservation progress is self-evident. You see field after field of crops being grown in contour rows that go around the hills. Waterways reach back into fields like fingers waiting to carry the excess flow of water from heavy rains. Mile on mile of terraces slow down the water and guide it to waterways. Moisture soaks down twice as deep in fields protected with proper conservation treatment.

Many sloping fields are farmed in contour strips where gullies once were eating their way up the hillside. Livestock graze on lush pastures of newly adapted grasses, or on range restored to high productivity by good management. Larger populations of wild birds and animals reap the benefits of improved habitat which conservation farming provides.

More than one-third of all farms and ranches are in some stage of having a basic conservation plan applied through a Soil Conservation District. About 1,160,000 district cooperators already have basic conservation plans fully developed with some effective conservation measures in operation. Soil surveys have been completed on more than a half billion acres.

District cooperators have constructed more than one million miles of terraces. Almost 850,000 farm and ranch ponds have been built, covering more than 1½ million surface acres.

They have planted nearly 4½ million acres of trees. They are using conservation crop rotations on 60 million acres—contour farming on 35 million acres—strip cropping on 15 million acres—and conservation use of grassland on more than 100 million acres.

District cooperators have leveled 5 million acres of land for irrigation. They have improved water application on 8 million acres—obtained better soil drainage on 19 million acres—improved wildlife habitat on nearly 4 million acres.

These and other measures are being used in a wide variety of combinations as needed on individual farms and ranches.

The progress is impressive, indeed.

WATERSHED PROTECTION

Another development in the broadening concept of conservation came about in 1954 when Congress enacted the Watershed Protection and Flood Prevention Act. You all know it as Public Law 566. The purpose of this Act was to help meet the needs of local people who are faced with problems on small watersheds. It, too, is founded on the soil conservation district principle of local responsibility and leadership.

It provides a means for bringing the water element into balance with the soil element in our total soil and water conservation effort. It offers a means to work on difficult problems that can be solved only through group action.

Since 1954 application for watershed assistance have been received from more than 800 local sponsoring organizations. Of this number, 310 have been approved for planning. On most of these, planning assistance is either under way or completed. Operations have been started on 69 of these projects.

Progress in this area is at least beginning.

In order to get watershed protection help a local community must qualify as a local organization with authority under State law to carry out, maintain, and operate the proposed works of improvement. When the legislation was encased many interested communities could not qualify as a local organization. Since then, 38 States have enacted 80 different pieces of legislation bearing upon problems of implementing the new watershed protection authority.

To me, this, too, represents significant progress, although changes in State law are still needed in many States in order for the watershed program to be fully effective.

Now, let's look at the second question. How has all this been accomplished? Of course, there has been a multitude of contributing factors. The Federal Government has, throughout this period, carried on conservation services through research, education, technical assistance, cost-sharing, and credit. State governments have provided conservation services in varying degrees. Some county governments have furnished help. A wide variety of private interests have put their shoulder to the wheel.

But farmers themselves have made by far the greatest contribution. And that is as it should be because the final responsibility for soil conservation rests with the people who own and operate the land. The services of Government agencies and private groups can be effective only to the extent that the farmer himself wants to move ahead.

TEAMWORK AND COOPERATION

The largest single other factor behind this notable progress has been teamwork and cooperation. Over the years there has been a steady strengthening of relationships among the various organizations offering conservation service. The Soil Conservation Service has always stressed the need for good relationships with our sister agencies of government and with soil conservation districts—our partners in the soil and water conservation effort. Since I have been Administrator, I have emphasized teamwork and cooperation more than any other single item.

Those of you who were in St. Louis last year will recall that I reported to you then on a plan of action on how to work toward outstanding relationships between districts and the SCS. The plan was developed by a committee of State conservationists and officers of NASCD.

We have followed through in SCS to put into effect the recommendations in the plan insofar as our personnel are concerned. Your national association and State associations have taken similar action as far as district officials are concerned. I won't take you time to review these suggestions today, because many of you are already following them.

Last September, Nolen Fuqua and Bob McClelland met with our State conservationists at our annual meeting to again review ways and means of further strengthening district-SCS relationships. We shall continue such emphasis.

We have given comparable emphasis to teamwork and cooperation with our sister agencies of Government. Our relationships have improved markedly over the years. They will continue to improve despite a current rumor campaign by one selfish special interest group.

Let me digress for just a moment to comment on that rumor campaign. Reports on it reach us from various sections of the country as the Washington located special interest rumor factory continues to grind out rumors in one distorted fashion after another.

Probably you have been confronted with some of them yourself. For example, it was charged that SCS was recommending that ACP administration be taken away from the ASC committees as a first step toward abolishing the committee system. That rumor was false in concept and deceitful in origin. SCS has not and does not intend to make any such recommendation to any person, organization, or agency at any time.

UNIVERSITY OF MICHIGAN LIBRARIES

Another example is a charge that I personally am attempting to wreck the ACP. Again, nothing could be further from the truth. I have always believed, and I continue to believe, that Government cost-sharing in conservation is in the public interest and is vital to adequate conservation progress in our country. In 1953 I served as Administrator of ACP in another rather trying period. The steps taken then toward more cooperation of that Federal activity with local and State units of government and toward more enduring conservation have met with your approval and strengthened public support.

I do emphatically believe in the necessity for sound, enduring conservation work, and I will continue to say so. There is urgent need for more, not less, cooperation and teamwork in the conservation effort. I believe, too, that there is room for more consistent conservation policy among the various elements of the job and a more effective voice of State and local government in their direction.

Now that I have that off my chest, I want to report some tangible evidence of teamwork and cooperation.

LOCAL CONTRIBUTION GROWING

We have made a study of the amount of local, county, and State funds used last year for assistance in the soil-conservation district program. We found that local and State interests—both private and governmental—are contributing at least one-fourth of the annual operating costs of districts. A local contribution of $1 is being made for every $3 made available from the Federal Government.

Costs to individual farmers and ranchers for applying conservation measures on their land were not included in these estimates.

Most State governments are appropriating larger sums at each session of their legislatures to help districts carry on their work. In 1957 these State appropriations approached $5 million.

County and local funds and facilities are made available to districts through local government grants or appropriations and by contributions from business and private sources. These amounted in value to at least $20 million in 1957.

There is another form of private help, too, that is extremely valuable. I am referring to the time, efforts, and expenditures of thousands of citizens who lend personal support to districts because they believe in this approach to an urgent problem.

We can only guess at the tremendous educational value of conservation subject matter in advertising sponsored by local firms in support of district programs. A wide variety of soil and water conservation activities are conducted by farm publications, newspapers, banker groups, and others. The dollar value of such help can only be estimated broadly. Therefore, it was not included in our study. However, the value of such services donated in 1957 is probably equal to, if not greater than, the $25 million value of local, county, and State contributions.

This gives us some measure of the value of this type of teamwork and cooperation. It has many implications.

For one thing, it is an indication of the growing appreciation of the district form of democracy in action in America. Districts have thoroughly proved their effectiveness as tools for getting the soil and water conservation job done in a democratic way. You have won the confidence of community, county, and State leaders in government, business, industry, and other segments of our society.

Twenty years ago the financial support to the district movement was entirely from the Federal Government. The Federal Government has continued to supply districts with scientists and technicians through SCS. While the current cost of financing these technical services is less than $73 million, the local support has grown to about one-third of the support furnished by the Federal Government. This represents a growth of non-Federal support from zero to one-third in a period of only 20 years.

It is interesting to observe that this development has sprung up during a period in American history distinctive by the degree to which people have turned wholly to the Federal Government for help in solving their problems. This means to me that local people have come to view the district program as an effective means of combining local, State, and Federal effort for the accomplishment of soil and water conservation.

The study offers proof that your program for greater service launched by NASCD several years ago is unfolding successfully. If tax money had to be used to pay for all of these contributions to the district program, the total effort would cost the American taxpayer appreciably more than it is costing.

In effect, the conservation program is getting tremendously effective help that we had not counted on in the early years of the job. Because of it, Federal funds available for technical assistance are achieving perhaps one-third more than would be possible without such support.

As the conservation movement has moved forward, an increasingly large percentage of the SCS appropriation used for salaries has gone each year into the cost of supplying trained scientists and technicians to districts. In 1957, 93.4 percent of our salaries paid were for field technicians. Only 6.6 percent were paid for overhead and administration.

FASTER PROGRESS NEEDED

Now, let's turn to the third question. How can we get on with the job faster? And we do need to speed up progress.

I noted in your grassroots survey that most of you said that progress is too slow in your district. You reported that 2½ million farmers and ranchers still need to develop their basic conservation plans. Also, some conservation plans that have been developed need revision. And there is still an enormous job to be done in conservation treatment on cropland, grassland, and woodlands—and in watersheds, too.

You reported the need for SCS scientists and technicians to help farmers with conservation jobs on the land as holding back progress in most districts. More than three-fourths of you reported a serious shortage of SCS technicians to assist in district operations.

You reported a lot of other facts, too. I was highly impressed with the broad scope of information assembled in the survey. You must have spent many hours district-by-district assembling this useful information.

There are many things that can be done to speed progress. We certainly can't cover them all here this afternoon. Studying your convention program, I concluded that finding ways to speed up conservation progress might be called the theme of this convention.

We noted earlier that in most parts of the country you are over the hump in district organization. We know how to tackle this conservation job, both technically and administratively. I think one of the big opportunities for the future is in the expansion, development, and perfection of your program—district-by-district.

I have observed over the Nation that progress is substantially greater in some districts than in others. There is also a direct correlation between the rate of progress and the degree of leadership exercised by the district-governing body. Much more good conservation work gets done on the land when the district-governing body is doing things.

You men attending this convention undoubtedly come from districts where the most work is being done. The fact that you are active in the affairs of your national association leads me to the conclusion that you have an active program in your district.

It follows, too, that you develop more aggressive district programs when your State association has a positive program of action. Over the years I have attended a good many State association meetings. I want to tell you right now that the ones I have been to during the past year have been the best ever. One of the outstanding recent developments in the entire district movement is your increasing interest and participation in State association affairs. I want to publicly congratulate you men who are giving State associations this vigorous leadership.

There are always dozens and dozens of things that you can do in your home district to strengthen your district program. These are being pointed up for you through the work of State soil conservation committees, State associations, and your national association. For example, in some States district-training schools are offered. Many States have published excellent district supervisors handbooks which spell out in detail your duties and responsibilities. The Soil Conservation District Foundation has made available to you a Guide Book for Action Programs.

This type of assistance can be extremely helpful to you. It cannot, however, strengthen your district program one iota if you don't make use of it. Take the Guide Book for example. It is full of ideas that have worked in districts somewhere. Those ideas cannot help you strengthen the conservation program in your district if you don't have it and use it. I recommend the Guide Book as a useful tool for every district official.

Of course, an annual plan of action for your district is a must to efficient operations. Most of you make an annual written plan. Some that I have seen are dandies. Can the plan of action for your district be improved to speed up conservation progress? Are you using the program for greater service to carry out that plan?

I like to describe the program for greater service as a program for putting everybody in the community to work for soil and water conservation—the chambers of commerce, bankers, equipment dealers, schoolteachers, the clergy of all denominations, newspapers, radio stations, 4–H Clubs, Boy Scouts * * * everybody. A good program for greater service has a-job-for-everybody and somebody-for-every-job.

You help in speeding conservation progress by keeping local, State, and national leaders informed on soil and water conservation accomplishments and needed resources. You help by continuing active State and national associations.

USDA TOOLS

You help by making the most effective use of all available conservation tools. And there are many of them. You've been getting more all the time. There are 7 different tools available from the Department of Agriculture to help carry out your district program. I want to list them and ask some questions about them.

1. As you might expect, I will mention first the technical assistance from the Soil Conservation Service. Is too much of the time of our local technicians required to do nontechnical jobs? If clerical help would be furnished by the State or county, could more efficient and effective use be made of your technical help?

2. There is educational help furnished through the Extension Service. Are you using all the help you can get, or getting all the help you can use, on the educational

phase of your district program from the county agent?

3. There is help available under certain circumstances for watershed protection work under Public Law 566. Are any State legislative actions needed in your State to make your district eligible for watershed protection help?

4. There is cost-sharing help for farmers in applying conservation practices on the land available through ACP. Could more enduring conservation benefits be attained in your district through ACP cost-sharing geared to planned conservation operations?

5. Credit is available for needed soil and water conservation loans through the Farmers' Home Administration. Do all of your district cooperators know that if they cannot get needed credit for the financing of certain conservation installations through private credit, that credit for this purpose is available through FHA?

6. The conservation reserve phase of the soil bank offers opportunities for receiving rental type payments for taking cropland out of production. Can some district cooperators who have delayed making needed land use adjustments, convert such land from crops to grass or trees under the Conservation Reserve?

7. In the 10 Great Plain States, there is the new Great Plains conservation program. I want to comment briefly about this activity, since it is new.

The purpose of the Great Plains conservation program is to help farmers and ranchers in the 10 Great Plains States to achieve agricultural stability by carrying out a plan of operations which will help to minimize climatic hazards and protect land from erosion and deterioration by natural causes. It is in addition to the other conservation services which have been operating for some time.

By law, this program must be based on the farmers and ranchers conservation plans of operations. The program assures Federal cost-sharing for applying needed soil and water conservation practices for a period of years. It emphasizes land use changes and wind erosion control and moisture conservation and management practices that in combination will provide the most enduring conservation benefits. It offers a new opportunity for the practical application of sound scientific principles for speeding up soil and water conservation in the Great Plains region.

Soil conservation district officials everywhere should take note of the underlying concept in the Great Plains conservation program. The whole approach is founded on a basic conservation plan. A farmer is not eligible for cost-sharing help until he has developed a sound plan of conservation farming for his entire operating unit. The purpose of the cost-sharing is to help in applying the measures in his conservation plan. In other words, to get help he has to plan his farm and farm his plan.

This principle has countrywide application. The various conservation tools that we have—conservation credit, technical assistance, cost-sharing, conservation reserve—these can all be used on individual farms for most effective conservation if the conservation course for the farm is charted by a basic conservation plan.

I am firmly convinced that increased emphasis with farmers on sound conservation plans for their land can be the key to more efficient use of our various conservation tools to help speed up conservation progress.

There are many other things that can be done, too, I am sure. You will be discussing various ideas throughout this week. I hope you can pick up at least some ideas during this convention that will help you strengthen the soil and water conservation program in your district.

In closing I want to leave you with one thought that I picked up from a recent issue of the Reader's Digest. It is a slogan attributed to the American salesman. It is this: "If you have made up your mind that you cannot do something—you are absolutely right."

I know you men have made up your minds that you can and will do more things to quicken the rate of conservation progress.

Business Week Looks at Alaska

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. BARTLETT. Mr. Speaker, increasingly the attention of the Nation is being directed toward Alaska. This is for many reasons. One of them is because the Territory is so important in defense of this country. One of them is because of the drive for Alaska statehood. One is because of the growing awareness that in Alaska is a storehouse of treasures which will enrich for generations to come our supplies of needed raw materials. Business Week, in the February 1, 1958, issue, took an overall look at Alaska in an informative article which I take pleasure in calling to your attention:

OIL RUSH, AIR HUB, AND DEWLINE: THAT'S NEW-STYLE ALASKA FRONTIER—OPENING OF 20 MILLION MORE ACRES OF TUNDRA TO OIL HUNT, PLUS FARM SURGE AND TAX BAIT FOR INDUSTRY, GIVE NEW FILLIP TO ECONOMY, BUT TODAY'S SOBER-MINDED ALASKANS SHUN WORD "BOOM"

Picture a land mass stretching from Maine to Florida, from the Great Lakes to the Gulf of Mexico, embracing our 20 easternmost States. Wrap around it a coastline greater than that of the United States itself, and you have an image of Alaska.

But that's only one image, and an extremely deceptive one. For Alaska, twice the size of Texas, one-fifth as large as all the 48 States together, is a single entity only by virtue of the fact that it was delivered to us in one package. In its variety of climates and economic resources, it could be half a dozen States.

Dream of a star

In the months just ahead, both Houses of Congress will be asked to vote on statehood for Alaska. The bill has cleared the hurdle of committee hearings. That's as close as Seward's folly has come in 90 years to realizing its dream of self-determination.

By no means is that dream shared by all the 215,000 Americans—whites, Indians, and Eskimos—who populate Alaska. Among the champions of statehood, however, the conviction is strong that the United States is ready to add a 49th star to the flag. And this heady prospect has imparted a buoyancy to life in that little-known frontier that sits astride the Arctic Circle.

Boom in the making?

A Business Week reporter emerged from a hard look at the Territory last week muttering that Alaska is on the threshold of a boom. Alaskans don't like the ugly cylical connotations of the word "boom," and they abhor the living-cost gyrations that a genuine, hell-roaring boom could evoke. Away out at the end of the supply line, where freight costs are double because there's no backhaul to speak of, they've already got all the high cost of living they can stomach.

That's why people like Bill Snedden, publisher of the Fairbanks Daily News-Miner, and Bob Atwood, editor of the Anchorage Daily Times, soft-pedal the boom talk. They point out that the Alaska economy no longer rests on salmon and gold. The accident of geography and some purposeful planning have given Alaska other economic props.

Far northern livelihood

The military forces, accounting for possibly one-fourth of the population, contribute importantly to Alaska's dollar wealth. White civilians outnumber by 3 to 1 the Eskimos, Indians, and Aleuts.

Federal employment, numbering some 15,000, is responsible for the largest block of civilian income, in excess of $60 million. Mainly because of large defense works, construction payrolls have been running a close second, although they are down now.

Economists pierce the air with anguished cries when they try to analyze Alaska. Whatever statistical bases are available crumble under the quirk of seasonality—the carpenter who shifts to taxi driving in winter, the fisherman who takes his bundle back to Seattle after the fishing season. The Territorial Employment Security Commission can't build up its unemployment insurance fund because of seasonal drains.

I. JET AGE FRONTIER

Jack London and his contemporaries created vivid fiction about the Arctic after the Klondike gold rush of 1897. It was both vivid and authentic, and it created a lasting image of Alaska as a frozen waste in which man's struggle against the elements ends in disaster. No comparable literary figure has come forward to record that the dogsled in Alaska is as outmoded as the horsecar in New York.

The Boswells of the Yukon, mushing up to a Dewline station on the Arctic coast today, would be shocked to find Sector Superintendent Randall Joyner working in his shirtsleeves in a steam-heated office, at his elbow a phone that connects him to his home office in New York within moments.

If they hit Anchorage at the right time, of course, they would see dogsleds racing a measured course on Fourth Avenue—although the snow might have to be imported, and the dogs and their Eskimo owners would have been flown in from remote corners of the Arctic.

Busy skies

In Anchorage, the Civil Aeronautics Administration operates the fifth busiest airport in the world, ranking behind Chicago, Los Angeles, New York, and Miami (London, busiest foreign port, ranks far down the list). This is due in large part to the fact that private planes are almost as popular as autos. But the 8,400-ft. runway is also an important domestic and international traffic center. Anchorage is a refueling point for Scandinavian Airlines System flights between Copenhagen and Tokyo. Air France is planning to make it a way station.

Frontier with 1958 trimmings

The frontier flavor is unmistakable—the low, flat buildings, the hustle, the feverish scrawling on cocktail napkins at the bar of the Westward Hotel, the walk-up office buildings. But it's a 1958 kind of frontier. The skyline is broken by two 14-story apartment buildings of steel and glass that tower nakedly over their neighbors. Jet planes streak across the sky in the midday dusk. The landscape is dotted with new schools, and more are on the boards.

Anchorage, with a population of 100,000, is Alaska's largest city. That population figure is deceptive, for it includes not only some residential suburbs of lovely homes but

UNIVERSITY OF MICHIGAN LIBRARIES

also the families of servicemen temporarily at nearby Elmendorf Air Force Base and Fort Richardson. Its true value as an economic statistic is limited because more than half the working population is employed by the Federal Government—a tax-exempt employer, as City Manager George C. Shannon is quick to point out.

II. UNCLE SAM'S HAND

Evidence of Federal domination in Alaska is never very far below the surface. The Government owns something more than 98 percent of all the land. In distributing largesse, the absentee owner has been about as benevolent as you could expect a bumbling bureaucracy to be, but in its lack of understanding of local needs and conditions it perpetrates what feel to Alaskans like some towering injustices.

City's burden

Take the Alaska Railroad, a modern, efficient, 440-mile system that links Anchorage with Fairbanks in the interior and Sewurd on the Kenai Peninsula. It's owned by the United States and does a profitable business. Its central offices and yards are in Anchorage.

The railroad, being Government owned, is exempt from city taxes. Until recently the railroad maintained its own fire-protection system at a cost of $90,000 a year. As the city improved its fire rating, the railroad proposed that its properties be taken under the municipal wing for a fee. The city agreed to do it for $30,000 a year.

The shift was made, but then the ponderous machinery of Federal Government began to turn. We'll pay no fee, said Washington, fire protection is the city's responsibility. So the railroad saved a clear $90,000 and the city was saddled with the fire-protection job, receiving for it no payment.

Redtape paradise

It isn't that Washington sets out with malicious intent to be a freeloader, but rather that an economic complex the size of Alaska is a paradise for the redtape-happy bureaucrat. In some matters the Great White Father in Washington is the soul of generosity; he picked up half the tab for 11 schools that Anchorage has built since 1950.

Welcome change

Alaskans have been carrying on an abortive vendetta with Washington for a good many years. Recently they've been less caustic. The reason for the change is Fred Seaton, Secretary of the Interior.

"Fred Seaton has done more for Alaska in the last 16 months," says Bill Snedden, the Fairbanks publisher "than anybody else in the last 50 years."

To appreciate the tenderness of that sentiment, you must understand that past Secretaries of the Interior have been about as popular in Alaska as a fuel-oil salesman at an anthracite convention.

Seaton celebrated his 48th birthday in December. The Fairbanks Chamber of Commerce had one of its members bake a 220-pound birthday cake, and flew it to Washington for presentation by Delegate E. L. BARTLETT.

III. TODAY IT'S THE OIL RUSH

The latest Seaton gesture to win Alaska's approval was his revocation of Public Land Order 82, by which the Government in 1943 blocked off the whole Arctic coastal slope against oil leasing and exploration. Some 20 million acres of tundra are thus restored to the public domain, and the scramble for leases is on.

In the long term, Alaskans view this gesture as one step in many that will permit their economy to find its own level. There is also a short-term advantage. Lease applications must be accompanied by a filing fee of 25 cents an acre.

Peanuts? Talk to Gov. Michael A. Stepovich, the dark-eyed young lawyer from Fairbanks who is the first native son to hold that appointive office. Mike Stepovich makes it clear that the filing fees are more than peanuts.

Buried treasure

For more than half a century, oil geologists have been poking into the Alaska soil. Drilling has been desultory and largely unrewarding. It persists because oil men generally affirm the belief of a distinguished geologist at Standard Oil Co. (New Jersey) who said in 1941 that, geologically, Alaska is one of the four great oil provinces in the world. (Events proved him right about the other three: the Middle East, southeast Asia, the Gulf of Mexico.)

On United States Naval Petroleum Reserve No. 4, created in 1923, oil and gas have been found, but both wells were capped some years ago. Last July, Richfield Oil Corp. brought in a discovery well on the Kenai National Moose Range south of Anchorage. Because of restrictions to protect the dwindling moose herd, Richfield hasn't yet been able to test the productive capacity of the well, variously estimated at from 400 to 900 barrels per day. Standard Oil Company of California, a partner in the Richfield exploration, is drilling a second well nearby.

Cash in the treasury

"In 1957," says Governor Stepovich, "16-million acres were leased for oil exploration, the vast bulk of that since the Richfield strike on July 23. At 25 cents an acre, that comes to $4 million. Under a 1957 act of Congress, Alaska's general fund gets 90 percent of that, or $3.6 million. Not many people realize that $3.6 million is equal to almost 10 percent of our annual budget—40 percent of our 1956 Territorial income tax collections."

Should oil production follow, the Territory would also receive 90 percent of the 12½ percent royalties.

With 20 million acres of Arctic slope opening up this fall under Seaton's order, the general fund apparently is in for another windfall.

Widening hunt

If the oil companies have any real optimism about Alaska oil, they're keeping it to themselves. Richfield and Standard of California have committed themselves to spend up to $30 million on their joint venture. Humble Oil & Refining Co. and Shell Oil Co. are probing into the Jute Bay area of the Alaska Peninsula. Phillips Petroleum Co. has spent $8 million in the Icy Bay region on the gulf. All the majors are at work. In a special study of the widening search for oil, the Anchorage Chamber of Commerce sees it as a $100-million investment—plus another $200 million for facilities if the search is successful.

Moose first

Restrictions on oil activity on the Kenai moose range illustrate the frustrations of territorial impotence. Even organized sportsmen have urged relaxation of regulations to permit orderly examination and development of the oil potential. But the welfare of 4,000 moose—10 percent of Alaska's total—prevails.

President Elmer E. Rasmuson of the National Bank of Alaska at Anchorage notes that almost 25 percent of the Territory's land mass is in reservation of some sort. In this respect, he says, "Alaska became the victim of an outdated conservation philosophy that was a sort of vicarious atonement for the waste of the motherland."

Bracing for it

Anchorage businessmen have given a good deal of thought to how they can brace for the rush of drilling that's expected to start this summer and what will happen to their town if a real oil boom gets rolling.

A couple of months ago they passed the hat along Fourth Avenue and collected $5,000 for an impact study. They engaged James Dalton, prominent Alaska mining engineer, to study the impact of the Williston Basin and other oilfields on neighboring communities. Nobody is spending the money before the oil starts to flow; it's just that the business community doesn't aim to be caught without orderly plans.

IV. READY FOR THE FUTURE

The passion for methodical preparation is the stamp of the new breed of Alaska frontiersman. Two years ago, in preparation for statehood, delegates assembled on the campus of the University of Alaska at Fairbanks and framed a constitution. Subsequently the voters elected 2 United States Senators and 1 United States Representative. If the statehood lightning strikes, Alaska won't waste a precious moment getting into Congress.

Lure for industry

Last spring, the Territorial legislature passed and Governor Stepovich approved a tax-incentive law to lure new industry. A business that qualifies may be exempted from all local and Territorial taxes up to 10 years—an exemption that extends in the same degree to the dividends it pays.

The measure was aimed primarily at processing industries that can exploit Alaska's vast potential of timber, hydroelectric, and other natural resources. It holds a lure also to build Alaska's $27-million-a-year tourist industry.

Pacific Northern Lumber Co., Portland, was first to qualify for tax exemption. It will build this year a $1-million sawmill and lumber kiln at Wrangell.

Also seeking to qualify is Alaska Lumber & Pulp Co., which is building at Sitka a $55.5-million pulp mill to be in production by 1960. The project is financed largely by Japanese capital, and its entire output is to go to Japan.

Cradle

The cradle of the new Alaska—the bridge between the fictional Alaska of yesterday and the bumptious Alaska of today, as well as the center of its preparations for the future—is the University of Alaska. Its president, Dr. Ernest N. Patty, is proud of its role. A distinguished mining engineer, Patty left the faculty for a successful business career, then rturned to his first love.

Abundance underground

Patty is a hard-headed realist. He acknowledges Alaska's abundance of mineral resources, but admits "we'd have a hard time if we fell back on our metals." Goldbearing gravels that once yielded $24 million a year now produce $7 million for lack of any price or tax incentive. At Goodnews Bay, Alaska produces 95 percent of the domestic supply of platinum. On the Seward Peninsula is the only known deposit of tin in the United States.

Alaska has excellent coal deposits along the rail belt. Tests are being run on some uranium ores. Chromite, mercury, iron, limestone, volcanic ash—you name it, Alaska has it.

On Patty's staff are two scientists who represent extremes in the Alaska economy, Dr. Allan H. Mick, director of the university's agricultural experiment stations and extension services, and Dr. Max Brewer, a permafrost expert who heads the school's Arctic Research Laboratory at Point Barrow.

Sunlit crops

In the warmth of the faculty lounge, with the outdoor temperature skidding toward minus 25° F. and an ice fog closing in, Mick's optimistic assessment of Alaskan agriculture isn't easy to accept. Yet there are, in the Matanuska Valley south of here, some 1,400 farm families whose prosperity attests to his words.

The Alaska farmer exploits the subarctic quirk of long summer daylight to stretch

his 4- or 5-month growing season to the equatorial equivalent of 8 months.

For a long time, Alaskan agriculture labored under the criticism that its produce was watery, flavorless. The reason was that farmers, with so much assistance from the sun, paid little heed to the need for soil nutrients. That day is past. Now the Alaska farmer is marketing quality crops.

In the past 10 years, says Mick, the farm value of Alaska's produce has almost quadrupled to 53.5 million.

Lonely research

Max Brewer and a handful of helpers man the lonely outpost of the university at Point Barrow. There, in cooperation with the Office of Naval Research and the Arctic Institute of North America, his Arctic Research Laboratory is poking into a variety of esoteric phenomena.

At the Barrow laboratory, and in eight satellite camps occupied at various seasons of the year, the Brewer group is concerned with physiological, botanical, zoological, oceanographic, geological, geophysical, bacteriological, glaciological, even archaeological research.

In summer they maintain a camp at McCall Glacier, 400 miles east of Barrow. In February, the oceanographic and biological groups land a light plane on the polar icecap 100 miles north of Barrow to measure depth of the ice and to measure the salinity and temperature of the underlying water.

V. DEFENDING UNITED STATES DOORSTEP

This is sensitive work, demanding scientists who are both rugged and dedicated. Brewer sounds an ominous note. "We're 20 years behind the Russians in Arctic research," he says, "and at the rate we're going we'll never catch up. As long ago as 1937 they demonstrated that they could land a four-engine plane on the icecap. Who is to say when they might find the ice a stable launching platform for missiles?"

That's a question for Americans to ponder. In the polar projection concept of world geography, the Arctic Ocean is the doorstep of the North American Continent.

In depth

Almost nowhere in Alaska are you apt to forget that. The armed services are there in depth under a unified command—the Alaskan Command—that antedates the consolidation of the services.

Besides their normal defensive role, the services are training men in the realities of combat under extreme weather conditions.

DEW line

Two of the components—the Alaskan Sea Frontier and the Alaskan Air Command—had vital roles in one of the great engineering achievements of all time, completed only last year. That was construction of the DEW line—the $500 million chain of distant-early-warning radar stations across the rim of the continent. The radar fence and the supporting "White Alice" communications system are operated by Federal Electric Corp., subsidiary of International Telephone & Telegraph Corp., under supervision of the Air Command.

While Western Electric Co., prime contractor on the electronic marvels, battled the technical problems involved, the Navy tackled the staggering problem of transporting hundreds of thousands of tons of materials to a forbidding seacoast that is relatively ice free only a couple of weeks a year.

Scant evidence of that labor is now visible. The mountains of material have been assembled into compact little electronic sentry posts, miles apart. Under winter's mantle of snow, they're scarcely visible.

Grapes in the snow

But you know they're there. Every day except Sunday Federal Electric sends a supply plane from Fairbanks to the Arctic coast. It carries mail, perishables, electronic gear, and other supplies to the technicians standing guard.

The supply mission is carried out by Interior Airways, a contract carrier. Interior's *Dewliner* deposits its cargo at two main stations along the coast, then lighter planes handle the redistribution to the substations.

You fly along the DEW line for a couple of hours in the half light of an Arctic winter afternoon.

Out of the gloom the pilot eases the *Dewliner* onto the frozen runway at one of the supply stations. You're invited inside to keep warm while the plane is unloaded. On the mess table, for between-meal snacks, are a bowl of fresh grapes and a tray of bananas.

Address of the Majority Leader, Hon. John W. McCormack, to the Fourth Degree Knights of Columbus

---

EXTENSION OF REMARKS

OF

HON. THOMAS J. O'BRIEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. O'BRIEN of Illinois. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and to include with pleasure the ringing American address made by our distinguished colleague and majority leader, Hon. JOHN W. MCCORMACK, at the banquet of the Fourth Degree Knights of Columbus, held at the Conrad Hilton Hotel, Chicago, Ill., on the evening of February 23, 1958.

Worthy Master McGillen; his excellency, Most Rev. Raymond P. Millinger, auxiliary bishop of the archdiocese of Chicago; right reverend and very reverend monsignori; reverend fathers; and one whom I deeply admire and the knowledge of whose honorable and trustworthy service is not confined to the limits of Chicago, but have spread throughout the United States, and I refer to Mayor Daley of Chicago; national commander of the American Legion, John S. Gleason; distinguished guests, and officers and members of the Marquette Province of the Fourth Degree of the Knights of Columbus:

If I read the mind of Bishop Hillinger correctly I know that he will always treasure the fact that this class of 800 new members inducted this afternoon was named in his honor, and that this splendid banquet is a special tribute to him.

I am so happy to be with you this evening. I appreciate very much the invitation extended to me by Worthy Master McGillen, through my dear and valued friend and colleague, Congressman THOMAS J. O'BRIEN, who is held in high esteem by all of his colleagues.

Like yourself, I listened to the excellent address of Americanism delivered by our brother knight, National Commander Gleason. I thoroughly agree with him when he said that, "It is too bad, without regard to religion, that every American could not witness the exemplification of the fourth degree of the Knights of Columbus with its ringing ritual and message of patriotism and Americanism."

Mr. Toastmaster, as I walk through the halls of the Capitol, or along the streets of a city, and see young men and young ladies, or parents walking with their children, I often ask myself the question, "What kind of a world will they live in? Will it be a world of peace? Will their enjoy the form of government we have? Just what kind of world faces them?"

And the answer immediately comes to me that the world they will live in will depend on what we do today; the manner in which those in the position of leadership perform their trust and their duty to the American people. For a sound leadership is necessary—a leadership of vision and courage.

As public opinion in a democracy is a powerful factor in forming governmental policy and action, it is imperative that our people be informed as fully as our national interest will permit.

If public opinion is formed as a result of emotional reactions, it could contribute to harmful results. If the people are informed and public opinion is sound, it will contribute constructively to the best interest of our country.

In the world today there are a number of basic considerations that confront us, and which we must face with courage. Some of them appear to me to be (1) the world is undergoing one of the most, if not the most, trying and challenging periods in the history of man; (2) there is no such thing now, or in the future, as military isolation; (3) that vicious and inhuman forces are determined upon world revolution and conquest; (4) that their ultimate goal is the United States of America; (5) that, from a military angle, the only thing the Communist leaders in the Kremlin respect is what they fear, and that is military power and strength greater than they themselves possess; (6) in this period of emergency, when neither war nor peace exists, it is vitally important that our leadership do those things that we can do and should do in the national interest of our country; (7) that while it is vitally necessary that we be strong from a military angle, it is also imperative that we be strong from a spiritual angle; (8) that if we are to err in our judgment, it is better that we err on the side of strength than on the side of weakness; (9) that we must recognize that military strength is relative in nature, and that the military strength and power of our country must be considered in relation to the military strength and power of the Soviet Union, that the Soviet Union is the present source of our danger.

For today, confronting us, are the forces of dictatorship in most vicious form, dedicated to world conquest, determined to dominate not only the body but the will and the spirit of man, by force and through fear to compel that spirit to forget its belief and faith in God and His law, or to be remodeled in the likeness of atheistic communism.

To some this is a period of frustration, of confusion, of fear, and of defeat. To others it is a period of faith and confidence in ultimate victory.

It is to millions of persons through the world, possessing deep and active faith, actuated by God's word, willing to make all necessary sacrifices, who will give the necessary strength and leadership that will bring about ultimate victory. The conflict in the world today might well be termed the war of love versus hate.

But, no matter how dark the situation might become, deep faith by individuals and nations may well be the sustaining influence between victory and defeat.

There is no place where what I have just said could be more effectively expressed than to the members of the fourth degree of the Knights of Columbus, the patriotic chapter of our great order.

For faith is affirmative, not negative. Possessing faith we fight for the spiritual truths and ideals we believe in, and in the world of today when we do that, we are most effectively combating atheistic communism.

UNIVERSITY OF MICHIGAN LIBRARIES

When we fight affirmatively, with God and His law as the origin of our thoughts and actions, dangerously sinister as it is, communism becomes "the lesser involved in the greater."

We are more effectively combating communism when we fight to put into active operation the spiritual truths and ideals in which we believe. For when we confine ourselves to fighting against something, we are on the defensive, and no war has ever been won strictly through defensive thinking or tactics. It, therefore, follows that, while it is necessary and imperative that our country be militarily strong, it is also necessary and imperative that our people be spiritually strong.

We hear and live again the clarion call of men and women who want freedom, "where law ceases, tyranny starts" or, as Patrick Henry said, "give me liberty or give me death." We are living again the days of the martyrs. We need again the spirit of the crusaders. For there are many martyrs in the world of today, and there are many Patrick Henrys as well. What has happened in Hungary, a little over a year ago, is powerful evidence of this fact.

The desire for liberty is not man-made, but comes to mankind from God himself through his natural law.

The spirit of those who fought and died for liberty in Hungary is not dead today. Who knows when in Poland, East Germany or elsewhere, in the future, there will be others who will be martyrs on the altars of religion and liberty.

The history of man shows that dictators come across the horizon of time, and suppress temporarily the God-given desire for liberty, but history also shows that they can never destroy that desire, and in the world of today that is and will be a powerful factor in our favor.

When the Hungary uprising took place, we had no policy to capitalize it. From our angle it is important in the event of an uprising in Poland, East Germany, or elsewhere that, unlike Hungry, we have a policy of an affirmative nature in their hopes and efforts for independence and freedom.

In viewing the world situation as it now exists, we must assess our weaknesses as well as our strengths. We must also assess the strength as well as the weaknesses of the Soviet Union. To do otherwise would mean that we are living in a dream world. It is quite clear through our Strategic Air Command and, if necessary, its ability to reach its targets with its weapons of destruction, that we are offensively powerful from a military angle, and that such offensive power might also act as a deterrent to attack, surprise or otherwise, as long as our intercontinental bombers can reach their targets in the Soviet Union.

While we have other powerful weapons and means of attack and defense, it is our Strategic Air Command that is our primary power.

On January 21, 1958, the Committee on Appropriations (in a report to the Congress) in discussing the overall superiority we still have said, "This superiority is explained largely by our great power in the Strategic Air Command. Our chief difficulty arises out of the fact that in the critical areas of space satellites and ballistic missiles, we are generally behind the U. S. S. R."

In the field of ballistic missiles it is the overwhelming opinion of competent officials and military men that we are behind the Soviet Union and, in this connection, I again quote from the same committee report, "We live in an age of every-increasing danger. In military strength the Soviet Union has been progressing more rapidly than the United States, which immediately after World War II was vastly superior, militarily, to the Soviet Union."

At the present time, the Soviet Union has perfected, with accuracy, and production, the intermediary ballistic missile, with a range of from 700 to 1,000 miles. We have not, as yet, perfected this missile, though we are on the road to doing so, but it will still take some time. In this field, we are behind the Soviet Union.

But, the real danger is in the field of intercontinental ballistic missiles, and while the Soviets have not as yet perfected this terrible means of destruction so that they can hit targets with sufficient accuracy, they are far ahead of us.

In addition, it is known, like ourselves, that they are exploring means of intercepting intercontinental bombers, so that if perfected on their part, very few, if any of our bombers could reach targets in the Soviet Union.

There are many other important activities that I could discuss—very important—such as biological, chemical and psychological warfare—the strength and power of our Army and Navy compared with the strength of the Soviets, but at this particular time and on this occasion, I confine my remarks to what appears to me to be the immediate danger that confronts us, effective ballistic missiles, capable of being fired from one continent to another—coupled with the Soviet defense against our intercontinental bombers.

In our case, due to the fact that the President has, and I consider it unfortunately so, on several occasions, notified the world, which includes the Kremlin, that we would not be the aggressor, which means that we would not engage in a surprise attack, that we must be prepared on all aspects of modern warfare. Personally, I feel it was unwise to let the world, particularly the potential enemy, know of our full thoughts and intentions. Let them do some guessing! The time could arrive when, for our own safety, we might have to move quickly and unexpectedly.

The main point I want to convey to you is that if the Soviet Union perfects the intercontinental ballistic missile before we do, and perfects a defense against our bombers—for a period of time, unless we at least catch up quickly—they will have a decided advantage over us.

In other words, unless we move quickly, there is likely to develop in the reasonably near future, a situation where the Soviets could hit American targets, and very few, if any, of our powerful bombers could get through to targets in the Soviet Union.

If that time should arrive, and many competent persons and military men I have talked with feel it can, then the question is "Will the Soviet leaders permit us to catch up with them?" As far as I am concerned, I do not believe that they will.

It is vitally important that we always be in position where we can reach targets in the Soviet Union—that is as long as the Kremlin adheres to dictator communism, carrying with it the avowed determination to dominate the world.

The question naturally addresses itself to you as well as to me, "Why are we behind the Soviets in these fields of science and technology?" There are a number of factors. In 1954, a subcommittee with which I served investigated the whole field of military research and development. If our recommendations had been followed, we would not be in the position we are today.

It is pretty clear that the main reason for our present predicament is due to management, which means leadership, on the governmental level. In support of this statement I quote from a letter, now public, written by Dr. Frederick L. Hobde, chairman of the Army scientific advisory panel, and president of Purdue University, to the Honorable Wilber M. Brucker, Secretary of the Army, dated October 30, 1957, a unanimous report of the panel, consisting of over 50 outstanding Americans, in which they said, in part: "The problem before the Nation is not simply one of money, or even men—these we have in substantial amounts and that which we do not have can be provided. Whatever failures there may be, they are primarily those of management—in which we have a share—which resulted in delays in decisionmaking and confusion in the direction of our technological forces. Despite rapidly developing pressures for immediate reorganization, a thorough diagnosis of our management ills must be made before remedies are prescribed."

In further support of what I have said, I again quote from the Appropirations Committee report of a few weeks ago: "One of the most heard of complaints is the frustration of scientists and research people, generally arising from inability to get decisions on work to be done. Almost endless layers of review are encountered."

In the same report the committee said: "We live in the days of ever-increasing danger. In military strength the Soviet Union has been progressing more rapidly than the United States, which immediately after World War II was vastly superior, militarily, to the Soviet Union." And the committee further pointedly said: "We should press forward toward an operational capability in these fields, and in any other fields in which we are behind."

The further question addresses itself to you and to me and to other Americans is what should and what can be done. It seems clear to me that:

1. Our Government should determine the nature of the danger from the Soviet Union.

2. With that knowledge, what we must do to meet that danger.

3. Then for those in leadership in our Government, both executive and legislative, to organize our powers to meet the same.

As Dr. Hobde well said in his letter to Secretary Brucker, "We have the brains—we have the facilities," and as I say, the American people will make all necessary sacrifices.

It is a question of leadship on the top level in our Government, with the appointment of the best qualified men to key positions of decisionmaking, and authority to carry out of these decisions, in coordinating brains and facilities and, in particular, the giving of direct leadership, if necessary, and strong action by the President himself. One thing is certain, we cannot afford any further delays in decisionmaking, and in seeing that those decisions are carried out.

We cannot afford to live in a dream world, in the world of today with atheistic communism bent on world domination, with slavery, persecution, imprisonment, death, and even martyrdom desulting therefrom. We cannot afford to let the cooing of the Soviet leaders deceive us.

Based upon my own knowledge, the next 1½ to 2 years will be important years, of a far-reaching nature in the history of our country and of the future world. What we do within that period might well be the turning point in our favor. What we fail to do in that period might well be the turning point in favor of communism.

Coming back to what I said at the outset of my remarks, What kind of a world do you think the young American of today faces? What we do in the next 1½ or 2 years may well determine how your children's children are going to live.

Under no conditions can we afford to have the Soviet Union have a distinct and decided advantage over us in any field of modern warfare where they can attack us without fear of retaliation, even for a brief period of time. There is no need for this situation to exist if strong leadership exists and coordinates the brains and facilities of our country. We have great men and women in the field of science and technology and in other important fields, who, if put to work as a team, with decisions made on

the high level and carried out effectively, can meet the situation. However, we cannot afford to delay because delay plays into the hands of the enemy. There already has been too much delay.

If these things take place, and with American public opinion aroused and insisting upon deeds and not mere words, I have every confidence of success, not only for ourselves, but particularly for our children and our children's children.

A Pilgrimage to Puerto Rico

EXTENSION OF REMARKS
OF
HON. A. FERNÓS-ISERN
RESIDENT COMMISSIONER FROM PUERTO RICO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. FERNÓS-ISERN. Mr. Speaker, under leave to extend my remarks in the Apendix of the CONGRESSIONAL RECORD, I include an article from the May 6, 1957, edition of Newsweek magazine which has recently come to my attention and which describes how the underdeveloped countries of the world have come to look to Puerto Rico for hope and inspiration as to what is possible for them to accomplish toward modernization of their industries and higher level of living for their people. I feel that this article is descriptive of Puerto Rico's role in this respect, and I recommend it as an article which will help to accent one of the ways in which Puerto Rico is helping the United States in its championship of freedom and progress within a free world:

A PILGRIMAGE TO PUERTO RICO—UNDERDEVELOPED WORLD FINDS OUT HOW IT'S DONE

An Indian woman in her sari and a young Arab in his galabia were among the visitors watching the water cascade over the spillway of the big dam near Trujillo Alto. "This is wonderful," said the Arab, and the Indian woman nodded agreement. It was not the size of the dam that impressed them. It was the fact that it had been built through local initiative in a country that only 20 years ago was one of the most backward in the world.

These two were typical of the thousands of visitors from almost a hundred different countries who have been swarming over Puerto Rico as observers, official and unofficial, for their own governments. Some have been students on grants from the Puerto Rican Department of State and the United States International Cooperation Administration. Others have represented the United Nations or the Organization of American States. Still others have represented private business in many lands, interested in Puerto Rico's surging development.

Among them has been an Algerian nationalist leader, wanted by the French, who came to seek answers for his own tormented and economically backward country; he went away convinced that a solution other than armed rebellion could be found. Another was an Indonesian newspaper editor who soon found that Communist stories of American imperial oppression were something less than the truth; he left swearing that he would set the record straight back home.

All of these people had come to Puerto Rico to see how a colony, acquired in war and speaking a language different from that of the conquerors, could be peacefully transformed into a flourishing commonwealth, one of the most prosperous States in Latin America.

Vice President RICHARD M. NIXON has called the island a "showcase of American cooperation." President José Figueres of Costa Rica called it "a link between North and South America."

It is Puerto Rico's Governor Luis Muñoz-Marín who has been the one man most responsible for making the island a showcase. In 1949, when President Truman announced "the bold new program" that would become known as point 4, Muñoz-Marín told him: "In the last 10 years we have begun to do the things you call for in your point 4. We have worked out techniques and have pretty much solved the basic problems. We have something to show the underdeveloped countries of the world. Send us their representatives and your technicians, and we'll teach them what we have learned."

Soon students and government officials were coming from countries with similar problems, from Egypt, Formosa, Iraq, Burma, Pakistan, India, Israel, Thailand, and Nigeria, and from the Latin American republics. When Tunisia became independent, it sent a delegation to study the island's commonwealth ties with the United States.

COLONIALISM'S ANSWER

The recent independence of Ghana also opened the way for study of the Puerto Rican experiment. One Ghana official said: "We can't blame our failures on British colonialism any more. You in Puerto Rico seem to have found the answer to our problems."

The most eagerly studied Puerto Rican innovation—and perhaps the most dramatic—has been the development of low-cost housing. A mutual-aid plan provides building materials and an experienced foreman, all for $300. The man who is going to live in the house must provide most of the labor.

Less tangible but of more far-reaching importance has been the economic formula worked out through the Puerto Rican Industrial Development Co., or "Fomento," as the islanders call it. Fomento has built or sponsored some 400 factories which it has subsequently turned over to private enterprise—a case of state socialism employed to serve capitalistic ends.

One thing that helps Puerto Rico's relations with underdeveloped countries is the fact that there are no racial bars or prejudices. Another is the very smallness of the island. As Under Secretary of State Arturo Morales Carrión says: "The United States is too vast for the people of newly independent states. They see great hydroelectric projects and multibillion-dollar campaigns and feel that this is impossible for them. Puerto Rico is in a scale of reference they can match. We achieved what the Communists promised but without resorting to Soviet methods or to the destruction of individual rights and initiative."

Our National Guard

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks, I should like to point up two letters received by me relative to our National Guard strength and its importance to our national defense structure.

In so doing, I add my strongest expression of support for the most serious consideration before any decision is reached which would have the effect of reducing the overall strength of the national guard, thereby eliminating a great many guard units.

I agree wholeheartedly with the Honorable George Docking, Governor of the State of Kansas, in his belief that we must maintain a balanced Defense Establishment, in spite of the progress in the missile program, and that the proposed reduction in the size of the Regular Army can best be offset by maintaining a strong National Guard.

An explanatory statement by Maj. Gen. Joe Nickell, Kansas National Guard, setting forth our comparative National Guard position, is certainly of great interest.

THE STATE OF KANSAS,
Topeka, February 10, 1958.

Hon. J. FLOYD BREEDING,
House Office Building,
Washington, D. C.

DEAR FLOYD: You have previously received a communication from my chief of staff, Maj. Gen. Joe Nickell, adjutant general, concerning the 10-percent slash in Army National Guard strength proposed by the President in the Federal budget for fiscal year 1959, and a proposed reduction in the number of National Guard units. This would reduce the nationwide strength of the Army National Guard by 40,000 men to a strength of 360,000.

The Kansas Army National Guard suffered a cut of more than 400 men under last year's national strength reduction from 437,000 to 400,000. The proposed new reduction would force this State to discharge an additional 650 trained men, and may cause 20 cities to lose units of which they are proud and in which the entire communities are actively interested. At the same time, the press reports the Russians continue to maintain 175 Army divisions, while we have only 15 divisions in active service.

At the governors' conference in Williamsburg last year we adopted a resolution favoring the Cordiner report which, it was reported, would save the Armed Forces several billion dollars a year in the cost of training technicians who are leaving the Armed Forces for more attractive pay outside the service. It appeared to us then, and it seems to me now, that favorable action on the Armed Forces pay bill as recommended by the Cordiner report would effect sufficient savings to maintain our National Guard and Reserve forces at present strengths. I believe that we must maintain a balanced Defense Establishment, in spite of the progress in the missile program, and that the proposed reduction in the size of the Regular Army can best be offset by maintaining a strong National Guard.

I urge you to do everything possible to maintain the fighting power of America's 27 National Guard divisions, and particularly the splendid Army National Guard of the State of Kansas.

Sincerely,

GEORGE DOCKING,
Governor.

STATE OF KANSAS, MILITARY DEPARTMENT,
Topeka, January 20, 1958.

Hon. J. FLOYD BREEDING,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN BREEDING: The President's budget has been submitted to the Congress and in the line item entitled "Army National Guard" in the Department of the Army section of the budget, the strength which the Army National Guard must be

UNIVERSITY OF MICHIGAN LIBRARIES

reduced to by the end of fiscal year 1959, June 30, is 360,000. This is a cut of 40,000 in fiscal year 1959 under the 400,000 floor which the President said would be retained under the guard in his public statement during the controversy of 6-month trainees last spring. The Army National Guard is presently being reduced from the 437,000 it had last spring to a maximum of 400,000, which must be reached by June 30, 1958, the end of the current fiscal year. All personnel in the 6-month training program must be included in these reduced strength allowances. The military press has reported this and also the fact that there will be a reduction averaging 20 percent in the number of National Guard units in the United States and in some types of units this reduction will aggregate 40 percent.

The present budget also provides that only $10 million of the $30 million appropriated and carried over last summer for armory construction and $3 million for nonarmory construction shall be released in fiscal year 1958. No construction funds are budgeted for fiscal year 1959 or fiscal year 1960, the explanation being that another $10 million of the current funds previously appropriated, will be made available in fiscal year 1959 and another $10 million in fiscal year 1960. There is no reference to the utilization of the $3 million for nonarmory construction.

To reach a strength of 360,000 by June 30, 1959, will seriously impair the efficiency of the Army National Guard of the United States, and to reduce the number of units will cause a tremendous problem for those communities in Kansas which have voted over $4 million in general obligation bonds in the past 3 years to provide the State matching funds for armory construction. Besides affording a continuing school and military training for the young men of these communities (Kansas has 64 cities which have guard units), the money return in Federal and State drill payments, minor local expenses and federally paid local caretakers make a sizable industry in many of our county seat towns.

The United States Army Reserve, which is budgeted for an overall strength ceiling of 300,000 by the end of fiscal year 1958, is reduced 10 percent, also, and budgeted for a strength of 270,000 at the end of fiscal year 1959; but since the current paid drill strength of the Army Reserve is only 205,000, it will mean a gain of 65,000 for the United States Army Reserve program during the year, according to the military press. The Army, it is said, will show the Armed Services Committees that the Guard has not made sufficient progress in signing up prior servicemen as volunteers and these men will be assigned to Army Reserve units. At the present time there is great resentment, on the part of young men who have completed 2 years of service under the Selective Service System, against being forced to discharge their entire reserve commitment. The 37,000 men now being released from the Guard program, together with the 40,000 to be released in fiscal year 1959 are all volunteers and if the gain of 65,000 in the Army Reserve is achieved through the enforcement of penalties against the prior servicemen assigned to the Reserve units, it is anticipated that you will receive many individual complaints in the coming year. For your closer consideration with relation to the affect this program is going to have in your Congressional District, I am attaching hereto a list of National Guard units and the towns in your district in which they are located and urge you to give some thought to which of the 3 or 4 cities, which are bound to lose units in your Congressional District, you would give priority in disbanding.

All of the official training reports and mobilization ready schedules indicate that the National Guard is in a high state of training, as a whole, in the United States and that is particularly true of the State of Kansas. National Guard units have been converted as to type many times in the past to meet the changes in weapons and tactics indicated as necessary by our military planners and conversion plans have been filed by Kansas, and I believe by all States, to convert the units to the new Pentomic concept. Many of our officers are now taking courses at the Missile School of the Army at Fort Bliss and some of the National Guard units are being converted to On-Site Niki installations. The National Guard is fully capable of meeting the challenge of conversion to any new structure of organization required in modern warfare.

I urge you to give the most serious consideration when this matter of reducing the overall strength of the Guard and eliminating a great many units reaches final consideration in the current session of the Congress.

Sincerely,

JOE NICKELL,
Major General, the Adjutant General.

Cardinal Samuel Stritch, of Chicago, Named Pro-Prefect of the Congregation for the Propagation of the Faith

---

EXTENSION OF REMARKS
OF

HON. ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. LIBONATI. Mr. Speaker, I wish to commend to the attention of my colleagues the naming by Pope Pius of Cardinal Samuel Stritch, archbishop of Chicago, as pro-prefect of the Congregation for the Propagation of the Faith. He becomes a member of the curia of the church in Rome, the first American ever to be so named.

The congregation is the seventh, in order, of the 12 congregations which govern the affairs of the Roman Catholic Church. The Pope is prefect of the first three, the congregations for the holy office, the consistory, and the oriental church.

The Congregation for the Propagation of the Faith originated in a commission of cardinals set up by Pope Gregory XIII to seek a reconciliation of the divergent eastern branches of the church.

SPREADS THE FAITH

The commission was expanded in its functions by Pope Clement VIII, and was created as a permanent consistory by Pope Gregory XV in 1622.

It was charged with the task of spreading the Roman Catholic faith throughout the world, and its jurisdiction today is one of the broadest in the church.

It has wide authority in the field of the church's missionary work, and in mission territories exercises the functions of other congregations of the church, as well.

The appointment brings the number of cardinals in the curia to 15. Previously these have always been Italian, French, British, Spanish, or Dutch. Only other non-Italian member at present is Cardinal Eugene Tisserant of France.

When the cardinals eventually are called on to pick a successor to Pope Pius, who celebrates his 82d birthday tomorrow, the cardinals are unlikey to choose anyone who has not had experience in the central government of the Catholic Church. Today's appointment will give Cardinal Stritch that experience.

CONGRATULATED BY CHICAGOANS OF ALL CREEDS

Chicagoans of all faiths reacted with expressions of pleasure and pride to the announcement yesterday that Cardinal Stritch, Roman Catholic archbishop of Chicago, has been made pro-prefect of the Catholic Church's Sacred Congregation of the Propagation of the Faith.

Cardinal Stritch said he received the news with surprise. Noting that never before has an American prelate held such an important office, the Cardinal declared modestly, "It is clear that Pope Pius XII in honoring me principally had in mind honoring the Church in the United States.

DALEY GIVES CONGRATULATIONS

Mayor Daley, joining other Chicagoans in saying he was delighted to see Cardinal Stritch honored, said, "I shall be sorry to see him go. The Cardinal has enjoyed the respect and admiration of everyone, and we are losing one of the Nations' great churchmen.

In Springfield, Governor Shatton said:

This is indeed a most fitting honor and distinction bestowed on Cardinal Stritch. The United States in general and the State of Illinois in particular is highly honored.

Among the thousands who sent their congratulations to Cardinal Stritch were the Reverend Dr. Paul M. Robinson, president of the Church Federation of Greater Chicago, and Rabbi Richard G. Hirsch, congregational director of the Union of American Hebrew Congregations.

PERSONAL LOSS TO FRIENDS

A leading layman in the Chicago archdiocese, Charles C. Kerwin, of Lake Forest, former president of Catholic Charities of Chicago and vice president and treasurer of the Catholic Church Extension Society, said the departure of Cardinal Stritch will mean a great personal loss to everyone who has known him.

At the same time, he said, he was overjoyed that Cardinal Stritch has received the great honor. Kerwin is a knight commander of the Order of Pius IX, one of the highest orders in the church.

Cardinal Francis Spellman, of New York City, sent this telegram to Cardinal Stritch:

My heartfelt congratulations go to your eminence on the great distinction of being the first American cardinal in history to be designated a cardinal in the Roman curia.

[From the Chicago Tribune of March 2, 1958]

TEXT OF STATEMENT

Cardinal Stritch issued the following statement after the announcement he had been elevated to the office of Roman Curia:

"When this news came to me, I was surprised and amazed. It never entered my mind that the holy father would think of me for such an important office in the Roman Curia, which assists his holiness in the government of the universal church.

"It is clear that his holiness in honoring me, principally had in mind honoring the church in the United States. Never before in history has an American prelate been called to such an important office. The

Sacred Congregation of the Propagation of the Faith, under the immediate authority of the holy father, is entrusted with the care of the foreign missions of the church.

CITES GROWING INTEREST

"The Catholics of the United States have shown a growing interest in these missions. Quite evidently, the holy father, in calling me to this office, wished to give another expression of his fatherly appreciation for this interest.

"At the call of his holiness I shall go to Rome and with God's help try to prove myself worthy of his confidence and of the great Catholic body of whom I shall be a symbol.

"To my clergy and people on this occasion I express my deep affection. They have been my support and edification through these 18 years. I know that I shall have their prayers in the discharge of the heavy responsibilities of the office to which I am called.

AWAITS OFFICIAL NOTICE

"I may say to them that I have not received the official document calling me to this important office. When I receive it I shall inform them in detail or what is involved in this call of the holy father.

"For the present, all that I know is that the holy father has called me to be the prefect of the Sacred Congregation of the Propagation of the Faith.

"The prefect is the esteemed Cardinal Fumasoni-Biondi, whom we remember as being apostolic delegate in the United States. It will be a great comfort for me to have at my side this great Cardinal, who, with the exception of his years as apostolic delegate in the United States, has been an outstanding official from minor to prefect of the Sacred Congregation of the Propagation of Faith."

TELLS LOVE FOR CITY

"His knowledge of the foreign missions, his great abilities and his understanding promises me some usefulness in helping the Holy Father in his great apostolate for the missions of holy church in these difficult times.

"May I add that after 18 years here in Chicago, despite my being from other parts, I am a Chicagoan and I love Chicago, its people and its warmth. It is my prayer that through the years which God will give me I shall be able to contribute my little part to making Chicago the world's greatest city, in which spiritual values will take precedence over material and humanistic considerations."

We, all the Members of Congress from the State of Illinois honor this gentle, quiet, firm, religious man of God; his interest in the aged and the poor by fostering, stimulating and providing arranged financing for the building of homes for their betterment as one of his outstanding accomplishments.

He venerated and served the so-called older parishes of the disappearing home neighborhoods, near the heart of the downtown commercial areas of cities. He helped modernize their structures and developed programs for the return of parishioners. His attainments have benefited God and country in every emergency, either in times of war or peace. He was always an American and a patriot. We ask God's blessing and bid him Godspeed in his new work to care for the needy, the sick, and the forgotton humans, in the missions of the world, that a new peace may enter their lives.

Analysis of H. R. 8002

EXTENSION OF REMARKS
OF
HON. JOHN H. RAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 17, 1958

Mr. RAY. Mr. Speaker, in accordance with leave heretofore granted, I wish to include in the Appendix of the RECORD the following memorandum, I have prepared with respect to H. R. 8002 which is scheduled to come to the floor on Wednesday, March 5. I hope the analysis and comments will prove helpful.

H. R. 8002 would amend section 201 of the Budget and Accounting Act of 1921—now section 11 of title 31 of the United States Code—that being the section which defines the President's function and obligation with respect to preparing and submitting his annual budget.

That bill presents two problems: First, Is the end result at which the bill is aimed a good one? and, second, Does the bill in its plan and phraseology provide a sound and practical procedure for attaining that end? The announced purpose of the bill is good—it is like saying one is against sin to say that one would like to strengthen the control which can be exercised by Congress over departmental expenditures and especially the unobligated funds carried over from previous years. Neither among proponents nor among opponents of the bill have I found any criticism of or opposition to that broad objective.

I have found, however, that many colleagues have not considered the second question. Since that is the field of controversy, a short analysis of the bill may be helpful.

The bill declares that it is "the policy of the Congress that estimates for proposed appropriations will be determined on an annual accrued expenditure basis"; that the amount of proposed appropriations shall, "to the maximum extent deemed desirable and practicable by the President, be determined on an annual accrued expenditure basis"; that the conversion to the use of the annual accrued expenditure methods "shall be accomplished in such manner and at such time as may be determined by the President"; and finally that the bill shall cease to be in effect July 1, 1961.

Under the circumstances which exist, it seems to me that this is a queer and illogical plan for the changes proposed.

For one thing, would it not be ridiculous for Congress, after considering seriously and approving a change in policy such as that proposed in the bill, to wind up by saying that the change should cease to be effective after 2 years? Surely a bill of this kind should not be proposed as a 2-year experiment. If the scheme of the bill is sound and advantageous, it should be proposed on a long-term basis. If it is not demonstrably sound the bill should not be enacted.

Even more important, the 84th Congress, by Public Law 863, gave the President authority to require the several departments to adopt accrual accounting procedures. H. R. 8002 would be effective only with respect to departments which have so changed their accounting system. To date the President has been amle to direct that change in only a few of the smaller departments. It is not expected that the Department of Defense, for example, can make such a change for another 3 or 4 years. Therefore, it would seem that if H. R. 8002 were to be enacted, there would not now beany substantial area of Government operations in which the bill could apply.

H. R. 8002 contains three sections. Section 1 would add 4 new subsections to section 201 of the Budget and Accounting Act. These four subsections are the provisions for the so-called annual accrued expenditure basis for appropriations. Section 2 is in effect a limitation of the scope of section 1. It provides some leeway for making contracts outside the limits set forth in section 1, and it states the rulemaking character of the bill. Section 3 contains the provision already referred to that the bill shall cease to be effective July 1, 1961.

Now for the details of the proposed basis for appropriations and some comments thereon:

The first subparagraph of section 1 attempts to define the reasons for the bill. It declares that revisions in the presentation of budget estimates and estimates for deficiency and supplemental appropriations are essential in order "to provide a more informative basis for the enactment of appropriations by Congress," but the bill does not provide for any information which the executive and legislative branches of Congress cannot get under present laws; "to reduce or eliminate the large carryover balances of appropriations from 1 fiscal year to another," but again these results are already within the existing power of Congress and the executive, and depend upon action by those branches of Government; "to bring about economy in Government expenditures," but the bill adds nothing to present law on the subject. The result described would come only by actions of the Congress outside of this bill.

The bill declares that, for the foregoing reasons, it is the policy of the Congress that estimates for proposed appropriations will be determined on an annual accrued expenditure basis. Since the three reasons quoted above are contrary to fact, the bill cannot be regarded as good legislation.

Section 2 of the bill attempts to define certain situations in which contracts may be made in addition to the amount of an appropriation authorized on the annual accrued expenditure basis. This is new law and provides authority for making contracts beyond the year covered by the annual accrued expenditure estimate. The section relates to technical matters which I am not qualified

to discuss, but I am informed by those familiar with the technical side of appropriations and contracting that there is serious controversy on whether or not such contract authority should be granted.

The bill has been widely publicized as a measure which would enable the Government to make savings which it cannot make under the present law. I find no basis for that assertion. In fact an Assistant Director of the Bureau of the Budget and one of the directors of the Citizens Committee for the Hoover reports have stated to me that the enactment of H. R. 8002 will not enable the Government to make any savings which could not be made under present law if the House committees and the Director of the Budget utilized their existing powers. The executive officers and the House committee have all the authority they need under the laws now in force. I have asked the Citizens Committee many times to give me a single case to which the foregoing statement would not apply, but on analysis, none of the cases submitted sustains the assertion of those who support the bill.

I submit, Mr. Speaker, that H. R. 8002 should not be enacted.

Cut in the National Guard

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose herewith a letter from Hon. W. M. Brice, Jr., the progressive mayor of the town of York, S. C., with reference to the cut in the National Guard:

TOWN OF YORK, S. C.,
February 28, 1958.

Re National Guard units,
Hon. ROBERT W. HEMPHILL,
Congressman, Fifth Congressional District of South Carolina,
Washington, D. C.

DEAR BOB: I understand that there is a move underway to cut the defense budget by canceling several of the National Guard units. I further understand that the two units located in the armory here in York will possibly be involved in the cut, if the cut takes place.

I fully realize that there is a great need in Washington for economizing. I also fully realize that the two units here in York mean a great deal to this community, as well as the Clover community. This past year the payroll of the 2 units located here in York amounted to between $65,000 and $70,000. As you can see, this was a tremendous benefit to the citizens and businessmen of York. We are certainly most interested in seeing the payroll continued, if at all possible. The armory that we have here in York is an extremely fine building, and would certainly be a bad thing if there was no one here to use it. The National Guard unit has also been used in York before to assist in cases of emergency. I am speaking here of the severe hail storm in 1955. If it had not been for the National Guard unit, the protection of property, especially in the business section of York, would have been extremely hard for our police to handle. The National Guard was called upon to help and they responded quickly. As you can see, it is a protection to York, as well as creating a payroll for York.

As you know, business conditions have been off considerably recently, and it does not appear that the situation will change tremendously in the very near future. I, therefore, can assure you that our businessmen would certainly feel the pinch if this payroll from our two National Guard units was cut off.

I fully realize that I have written you on numerous occasions with regard to legislation, but I feel that that is the only way you will know how the people of this community feel about certain pieces of legislation. We would appreciate your seriously considering this matter, and if you feel that you can do anything to help prevent the funds for our local National Guard unit or units from being cut off, we would certainly appreciate it.

With kindest personal regards, I am,
Very truly yours,
W. M. BRICE, Jr., *Mayor.*

The President Needs To Fight for a Better Trade Bill

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article:

[From the Courier-Journal of February 16, 1958]

THE PRESIDENT NEEDS TO FIGHT FOR A BETTER TRADE BILL

While defense and science have been capturing the headlines, the administration's failure to sell its trade program either to Congress or the people may have more fateful immediate consequences.

Unfortunately, even the bill Mr. Eisenhower has asked his supporters to fight for is far from perfect. It does ask for a 5-year renewal instead of the previous 1- to 3-year limits, because the European Common Market came into existence in January of this year. Within this framework, from 6 to 11 nations will adjust their own tariffs and trade programs, excluding nonmembers. The President must have sufficient authority to deal with the group on a more permanent basis than he has had heretofore.

But he has permitted tariff sympathizers to write into the bill some dangerously weakening amendments. The escape clause to which foreign trading nations have long objected are stronger than ever in the new bill. And there are some tricky provisions by which, in case of claimed damage to domestic industries, tariffs can be raised to prohibitive heights.

Senator DOUGLAS pointed out, in his first major speech on the bill, the importance of maintaining a United States influence on the European Common Market, and the great impetus the St. Lawrence seaway will give to import-export trade in the Middle West. But these voices of reason are small beside the massed trumpets of the china makers, the bicycle makers, the wool growers and processors, and similar industries which prefer to operate behind protection.

The importance that even friendly nations attach to our restrictive trade policies is obvious in the current Canadian election campaign. The Conservatives are campaigning on their determination to cut some trading and financial ties with the United States and their seeking out of alternative Commonwealth markets and investments. They blame their rivals, the challenging Liberals, for "putting all of Canada's eggs in one (United States) basket" and thereby causing the present rising unemployment.

These are hardly the times in which we can see our best and closest friends angrily seeking other partners and not be concerned. But the concern will have to be translated into bolder action than the administration has seen fit to invoke up to now.

Letter in Cleveland (Ohio) Plain Dealer Points Out TVA Achievements

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. EVINS. Mr. Speaker, recently a senior at Western Reserve University, of Ohio, wrote the editor of the Cleveland Plain Dealer a letter so cogently and pointedly refuting arguments against the Tennessee Valley Authority, one of our greatest national assets, that I feel impelled to call it to the attention of my colleagues of the Congress and others. Accordingly, I am inserting in the Appendix of the RECORD this concise and trenchant statement of facts on TVA's accomplishments. I commend the spirit of intellectual independence and the determination to seek for truth and make up one's own mind expressed and exercised by Miss Susan Sifritt in this letter.

The letter follows:

HUZZAH FOR TVA

To the EDITOR, PLAIN DEALER:

SIR: I am a senior at Western Reserve and for the past semester I have been studying in Washington on the Washington semester program at American University.

As part of the Washington semester, we are required to write a project which involves interviews as well as bookwork. My project was on the TVA, which someone on your editorial staff lashed into last Saturday.

I talked to the TVA in Washington, several representatives from the area, and several administrative assistants to Senators supporting TVA, as well as some who do not, and the United States Chamber of Commerce, an enemy of TVA's, and the National Association of Electric Companies, a lobby for privately owned electric companies. I have come to a conclusion supporting TVA.

Your arguments, the same as those used by TVA opponents, are so old they are hackneyed. They are also simply answered.

TVA's low power rates, either by competition or example, have caused low electric rates in the area surrounding it, but dividends paid by these privately owned companies have increased 6½ times, while the national increase was only 3 times. Both the stockholders and consumers have benefited economically outside TVA area.

TVA flood control (would there have been any if privately owned electric companies instead of TVA had built the dams on the rivers?) on the Tennessee River and its tributaries helps reduce crests on the Ohio and Mississippi Rivers, saving money on flood damage.

UNIVERSITY OF MICHIGAN LIBRARIES

And TVA farm test-demonstrations in 13 out-of-valley States are showing farmers more effective methods of farming and conservation. Does this not contribute to the economy outside the Tennessee Valley?

It is quite possible that TVA bought so much coal from Kentucky and Tennessee because, as is stated in the TVA Act, TVA is to help the valley economy. It would not be helping it if TVA bought most of its coal elsewhere. And what it does buy out of the valley area certainly contributes to the economy of those States.

The TVA, outside of its power system, uses Federal funds to pay for its flood control, navigation, agriculture and fertilizer and forestry research, etc. These Federal funds come from tax money. But if this money was denied TVA because it benefited only a region instead of the whole country, should not money for the West's reclamation projects, or for the Great Lakes' St. Lawrence seaway be denied for the same reason?

Of course not. Each region received Federal aid for projects which will help it, and each region's needs vary—what good would the St. Lawrence seaway do in Montana?

TVA needs to expand its power facilities to meet growing power demands from its consumers. The power system is self-supporting, as required by the TVA act, and with the exception of what it reinvests, pays all of its profits to the Treasury.

Had the existing electric companies in the Tennessee Valley made electricity available to the valley in 1933, which it did not even under REA, they might still be in business. But the successors to the Insull combine were more interested in milking its customers and lining its pockets.

The income of the valley is still below the national level, but so is that of the South. However, valley income has risen from $836 million in 1933 to $5.5 billion in 1950. In 1933 the valley people paid $3 million in Federal income taxes, in 1950 they paid almost $300 million.

TVA does not entice industry to the valley from the North with its low electric rates; not one example of this can be found. But the valley gets industry because it goes after it and because of the abundance of natural resources, including actual and potential hydroelectric power, and a large labor market.

Monopolies use 48 percent of TVA's electric power—this includes Aluminum Company of America, Du Pont, Monsanto, and Eastman. Perhaps the success of these private enterprises may be more dependent on public ownership than anyone has guessed—an idea not likely to appeal to the NAM.

Is your editorial policy toward TVA based on fact and reasoning or the electric companies' propaganda?

SUSAN SIFRITT.

A New Tax Cut Idea

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter I received from a constituent in Salem, Ohio, with a simple solution for putting more money into circulation:

FEBRUARY 19, 1958.

DEAR CONGRESSMAN HAYS: A simple solution to put more money in circulation and to cut down on time spent figuring out who gets a tax cut and how much:

Each day that Ike takes a holiday would be a tax-free day on income. There would be a great deal of money put in circulation as a result and perhaps some of the recession would be alleviated.

We all can't take the number of vacations he does, but we could sure have a lot of fun spending that money that we'd save on taxes in that time. It might be interesting to figure out what it would add up to for the average wage earner for a period of 1 year on a tax-free holiday basis.

Very truly yours,

ROSINA SCHELL.

The Unfairness of Labor's So-Called Scorecards

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the major portion of a column entitled "Labor Front" which appeared in the Bridgeport, Conn., Sunday Herald on March 2.

This column admittedly presents this Congressman in a favorable light. Of course, that is pleasing and gratifying. But, more important, it serves as an impartial voice protesting the insidious machinations of the political cosmeticians of the large labor unions who are charged with "making up" the type of faces they want to see worn by the Senators and Congressmen they purport to judge.

I have long protested against these so-called boxscores of voting records. They are totally incomplete. They are dishonest by design. They are as rigged as an election in Moscow. A Republican has as much chance of looking good in this distorted mirror as Quasimodo would have of getting on the list of the 10 best-dressed Frenchmen.

The bit of reporting and comment by Ed Murray is brightly written and to the point. Mr. Murray has not in the past been one to tear into the labor movement. He is able, honest, and writes with fairness and integrity.

If he is to be judged, he certainly would be high on the list of those who are labor's staunch supporters.

That the announced results of the United Auto Workers new scorecard should elicit this criticism from a labor editor, surely confirms the opinion that many of us have had for a good, long time regarding these and similar scorecards.

The only boxscore that counts is the unabridged voting record of each Congressman which shows all amendments, recommitals, and so forth, and which gives the full picture of the Congressman's stand on an issue. Taking just 1 vote out of some 5 or 6 on the issue can make a legislator look anyway the scorecard editor wants him to look.

The UAW scorecard flatly records me as voting for a move to cut $50 million from grants to States and cities for sewage plant construction.

The record will show that in the debate I favored the authorization. In 1956 I voted for an authorization of $50 million a year for 10 years for the program. In 1956 I voted for the first $50 million appropriation for fiscal 1957. When it was apparent that appropriations already granted were not being used since works progress was delayed, I voted to delay further expenditures until applications already made could be processed and the projects started.

When the House and Senate conferees approved a $45 million appropriation, I accepted it.

This explanation does not appear on the UAW scorecard. They merely state I was against sewage-plant construction by taking one vote of a series of actions—the one vote which would give the impression they seek to create.

On the matter of pay raises to Federal employees, I might say that I was assured this bill would be overwhelmingly approved. My presence was required in my district on the date of the vote. Prior to the vote I worked actively in behalf of the postal and Federal employees' deserved pay raise. Opposition had been diminished to a token. The raise was passed by a lopsided vote as I was sure it would. Does my absence on the day of the vote justify the UAW rating me as opposed to a Federal pay increase when I devoted months to assure passage of the bill? Why was I not scorecarded by the UAW on the postal pay-raise bills for which I voted. The Herald scorecard fairly recorded this vote. The UAW did not.

Mr. Speaker, I commend the newspaper column to the attention of my colleagues. Because parts of the column refer to Members of the Senate and to several of my colleagues in the House, I include the entire column with the exception of those paragraphs.

The article follows:

LABOR FRONT

(By Ed Murray)

CRITICISM ON SCORECARDS

In 1956 when Representative ALBERT P. MORANO won Connecticut Federation of Labor endorsement after a bitter fight he was denied financial support by the national AFL–CIO. MORANO's voting record, as compiled by the AFL–CIO committee on political education, was against him.

The Connecticut Industrial Union Council, which is now merged with CFL, supported MORANO's Democratic opponent, former State Senator Jack Stock.

MORANO was the only Congressman in the Nation to win local labor support and yet be denied financial aid. He raised vigorous objections, which the Herald at the time ran in full.

MORANO's major objection was that the COPE voting scorecards were rigged along partisan lines to make Republicans look bad and Democrats look good. He also complained that the votes considered were largely on issues of little interest to Connecticut voters.

It now appears that the Greenwich Republican may soon be raising a similar howl—and this time he may have at least a little more justification for his complaint than he did in 1956.

COPE hasn't yet published its scorecards, but this week the United Auto Workers published their own scorecard.

UNIVERSITY OF MICHIGAN LIBRARIES

MORANO fares only fairly well on the UAW scorecard. He shows 11 right votes and 7 wrong ones. This would not generally be considered enough of a score to merit labor endorsement.

But here's the rub: The Herald on October 27 published a story on the voting records of Connecticut's 8-man congressional delegation in which their votes were contrasted to the records of acknowledged liberals in both houses.

MORANO's record showed he voted with the liberal block on 9 key issues and against them only once. His 1 vote against the liberal block was strictly on a partisan issue—a resolution to investigate the administration's tight money policies.

The Herald's list paralleled on most issues the voting record compiled by Americans for Democratic action. But like all voting records, it was highly selective. An attempt was made to select issues which clearly separated liberals from conservatives on important issues and to duplicate as few issues as possible.

* * * * *

The Herald's original report on voting records was heavily weighted in the Senate by the civil-rights battle. The House votes were dominated by foreign-aid issues. In both the House and the Senate the Herald noted a lack of clear-cut issues, chiefly because many important measures never came up for final action.

The UAW researchers did a fairly good job on digging up additional issues, though MORANO and other disgruntled GOP's can reasonably argue that several issues reflect only the narrowest of partisan clashes.

There is at least one MORANO vote record by the UAW, however, which will probably count heavily against him in his chances of winning labor support.

MORANO was the only Connecticut Congressman to vote in favor of a move to cut $50 million from grants to States and cities for sewage-plant construction. Several Fairfield County towns are currently confronted with acute sewage problems.

MORANO will have a good complaint about his record on pay boosts for Federal employees. He voted in favor of hikes for postal employees. This vote was recorded by the Herald, but not by the UAW. MORANO, however, failed to vote on increases for other Federal employees, and this issue was recorded by the UAW.

The UAW scorecard is also open to general criticism on the grounds that it fails to show whether a vote in favor or against a particular measure is right or wrong. This makes it difficult for the reader to judge whether he agrees with the UAW's idea of right or wrong on the individual issues.

The sharp differences between the Herald and the UAW reports on voting records point up the weaknesses in selective voting records, particularly for a session of Congress during which there was little significant legislation. It's expected that COPE will publish its scorecards soon after the end of the second session of the 85th Congress.

In reporting on the full record of the Congress, COPE will have more issues to choose from and should be able to do a better job than either the Herald or the UAW did in showing the tenor of voting by Republican and Democratic Congressmen. But there will still be a need for voting records that are more cued to the interests of Connecticut union members than to the national interests of the Democratic Party.

Despite the limitation of voting scorecards, organized labor performs a tremendous public service in publishing them.

They give the average voter a vital aid in evaluating his Congressmen.

But the scorecards could be even more effective if the men who compile them could guard against the reasonable criticisms that have been made.

Manpower for the Armed Forces

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mrs. KEE. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a copy of my newsletter Keenotes which was released today:

KEENOTES

(By Representative ELIZABETH KEE)

What to do about manpower for the armed services is a problem which Congress and the country must face up to soon. Everyone agrees that the United States must maintain armed forces adequate to meet any emergency so long as the present stalemate between this country and the Russians continues. At the core of the manpower problem is the question of how the men are to be obtained for the armed services and how they are to be paid.

At the present time, we depend upon the draft and voluntary enlistments to fill the needs of the services. Turnover of personnel is high. The loss of trained personnel each year is not only a serious drag on the efficiency of the services but it is also extremely expensive.

It costs about $25,000 to recruit and train a man for duty with one of the services. If he serves only his draft period, or his short enlistment, this tremendous investment will be largely wasted.

The draft is a highly costly operation. Congress appropriates about $34 million each year to support the Selective Service System. The draft calls run about 10,000 men a month. Some experts contend the draft is a highly inefficient way of recruiting manpower in times of peace. It interrupts the lives of young men and, in many instances, delays if not prevents their college education.

An imposing array of experts in the field of defense manpower, both civilian and military, contend the problem can best be met by a more realistic method of paying men in the services. The pay scale should be based upon skill and ability and not upon length of service, these experts believe.

They offer convincing evidence to support their views. For instance, if highly skilled technicians, who are increasingly important to a defense system that relies more and more on missile and other intricate electronic devices, can be induced to choose one of the services as a career, the need for replacements will be greatly reduced.

The Cordiner report, named after the General Electric president who headed a Presidential commission, recommended pay scales for these experts based upon ability. The report recommends making the services attractive enough to keep the men from taking their skills, acquired at Government expense, to private industry at the end of enlistments.

Some men believe a revision of the pay scale, in line with the Cordiner report, would save $5 billion a year in the costs of recruitment and training. Perhaps this is high. But many experts agree that this proposed system would produce better-qualified men and do away with the need for expensive and inefficient recruitment and drafting.

At the present time a House Armed Services Subcommittee is engaged in a study of defense manpower. This highly important hearing is not attracting the headlines of the investigation into ECC or studies of missiles and other outer-space developments.

But the result of this hearing could, in the long run, be of utmost importance to the future security of the country. Out of the hearings may possibly come a manpower system that will not only produce the necessary trained technicians but can do so at substantially less cost to the taxpayer.

This manpower problem is one that deserves the close attention and careful study not only of Congress but of all our people.

Our Educational Needs

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. WIER. Mr. Speaker, under leave to extend my remarks, I desire to insert in the CONGRESSIONAL RECORD a letter from Mr. G. E. Kelley, executive vice president, Bay State Milling Co., Winona, Minn., in which he discusses our educational needs.

Mr. Kelley's letter follows:

BAY STATE MILLING CO.,
Winona, Minn., February 7, 1958.

The Honorable ROY W. WIER,
Member of Congress, House Office Building, Washington, D. C.

DEAR REPRESENTATIVE WIER: Since the Russian sputniks were launched, the press has carried many stories and editorials regarding Federal aid to education, especially in the field of science and higher mathematics, and I presume by now any number of bills in various forms have been introduced and undoubtedly many more will follow.

There has been a good deal of talk about large sums to be appropriated for scholarships since the President's statement on Federal aid to education. But let's face the facts. The 14 liberal arts colleges in Minnesota, as well as the University of Minnesota, are already crowded. In fact, most of the private colleges are bulging at the seams and even as early as last summer were forced to turn down many college applicants because of their crowded facilities.

I appreciate that some money is available for the construction of dormitories, but I also know that many colleges throughout the country and several in Minnesota need some financial aid in the construction of new science facilities. Many of these colleges are operating their science departments in outmoded, small, and dingy quarters. How can they possibly increase to any extent the number of their science students?

With just a few possible exceptions, most of our private colleges are already operating at a loss because they have been unable to increase tuition, board and room, and so forth, to meet the increased costs of operation. Therefore, it seems to me, that if Federal aid is granted to universities and colleges some provision should be made to not only take care of scholarships, but also to help in the construction of science buildings.

Here in Winona we have 2 of the 14 liberal-arts colleges of Minnesota—St. Mary's College and the College of St. Teresa. Up to about a year ago St. Mary's College science department was in the basement of one of their buildings and, because of these crowded quarters, they had to raise a certain amount of money among the local business firms and go into debt for the balance to put up a new science building. Even today, they do not have an adequate supply of the right kind of laboratory equipment.

Just a few weeks ago the lay advisory board of the College of St. Teresa (of which I happen to be a member) toured the present

science building which is now about 75 years old. The third floor of this building has already been condemned and the other two floors are in such condition that one wonders how they can conduct science courses with any degree of efficiency.

I am sure there are many other colleges in a similar situation. Shall appreciate it very much if you will keep some of these facts in mind when the various educational bills come up for discussion in committee and on the floor.

With very kind personal regards,

Sincerely,

G. E. KELLEY.

Reciprocal Trade and Foreign Aid

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MASON. Mr. Speaker, after more than 20 years' experience with foreign aid and the reciprocal-trade program, and after $60 billion of American taxpayers' money spent in foreign aid, is the world better off today than it was when Uncle Sam embarked upon these programs? Is the world more peaceful today than it was when Uncle Sam embarked upon these programs? Has Uncle Sam more real friends today than he had 20 years ago? Is world trade less restricted today than in 1934 when Congress passed the Reciprocal Trade Agreements Act?

Eric Johnston and Secretary Dulles say the world is more peaceful, that trade barriers are lower today, that the world is much better off. However, well-known authorities in the field of world trade and in the field of foreign affairs say just the opposite.

For instance, Dr. Clair Wilcox, formerly Director of International Trade for the State Department; Dr. Claudius Murchison, economic adviser to the American Cotton Manufacturers Institute; and Dr. Lee Coulter, a nationally known consulting economist, one of the best-informed men in America today on foreign-trade problems, all agree that the trade of the world today is more tightly regimented than it ever has been before in history in time of peace.

Eugene Castle, a very successful American businessman, author, and world traveler, took a tour around the world to see how America and Americans rated in world opinion after giving away over $50 billion in foreign aid. In his book, The Great Giveaway, he gives his impression and—to say the least—his impressions and his judgment of world conditions and the world attitude toward America and Americans is the exact opposite of the opinions of Eric Johnston and Secretary of State Dulles. Mr. Castle claims that a very large part of our foreign aid—American tax dollars—has been wasted and has accomplished very little toward establishing peaceful relations in the world.

Mr. Speaker, as a part of my remarks I include the following two editorials from the Chicago Tribune pertaining to our foreign-aid program, and the high-powered sales campaign that Eric Johnston has been drafted to conduct:

[From the Chicago Daily Tribune of February 27, 1958]

THE HUCKSTERS

The degradation of popular government has rarely been carried to such an extreme as we have witnessed in the Washington sales conference rigged by Eric Johnston at the behest of Mr. Eisenhower to "sell" foreign aid to a reluctant Congress and people. That the President himself lent his presence and voice to this vulgar attempt to substitute merchandising for the processes of legislation only evidences the depths to which we are being dragged.

Mr. Eisenhower himself exposed the nature of this attempted deception when he was moved to complain that, after 10 years of handouts on a colossal scale, the giveaway had so conspicuously failed to persuade the people of its merit that each year a "life-and-death struggle for its very existence" must be waged.

But, instead of acknowledging that the existence of doubts on such a widespread scale called into question the legitimacy of the program and its utility in achieving its professed aims, the President and the assorted windbags recruited from both parties to talk up foreign spending acted as if their only mission was to engage in a medieval ritual for exorcising an intruding devil.

The trick was simply to say that those who opposed the dissipation of the taxpayers' money were wrongheaded and immoral, meanwhile wrapping the vestments of righteousness about all who spoke in favor of foreign aid. Dollars were equated with peace, and spending with the well-being of unfortunates in the world's slums and stews.

In addition to browbeating to overcome logical objection, all the standard techniques of the huckster were called into play, as they have been from the start of foreign aid.

It has cost the American taxpayer $65 billion since the end of World War II.

Yet neither Mr. Eisenhower nor any of the orators on call ever came to grips with the salient point, which is that after this enormous drain upon the country nothing stays put. After $65 billion, we are no nearer peace. Our security, as we daily hear, is uncertain. The countries we have sought to buy as friends and allies are wavering and undependable, and it is doubtful whether they will stay hitched no matter how many times $65 billion may be spent in the effort to stabilize their attachment.

All of the obvious questions about the practical effects of foreign spending only served as launching pads for the same tired old arguments in defense of mutual security, which more accurately could be designated mutual insecurity.

First, there was the argument of dire consequences. If the spending were stopped, said Mr. Eisenhower, we should find ourselves encircled and isolated as more and more countries fell to communism, so that the burden of armaments and conscription would fall ever more heavily upon us and our prospects for survival would diminish.

This attempt to scare objectors into submission was coupled with the allied argument of great expectations. Our cash doles were buying peace, fortifying other countries to withstand Soviet expoitation, bringing hope to nations which otherwise might embrace suicide thru communism.

And, finally, there was the accustomed concluding plea to protect our investment, for everything so far done would fall apart unless the American people were reconciled to the endless continuation of the process of throwing good money after bad.

We have heard all this before. The war and post-war loans of 1917 and after were justified on the same terms. So was lend-lease, the Marshall plan, and everything that succeeded. Yet more than 40 years after the start of the process we stand on a platform so insecure that the only argument that can be made is to shore up the creaky thing with more billions beyond count lest we sink in the surrounding quagmire.

[From the Chicago Daily Tribune of February 28, 1958]

THOSE OPPOSED ALSO CAN SEND TELEGRAMS

Eric Johnston's 15 millionaires have exhorted 5,000 businessmen to wire money to Eric Johnston's foreign aid promotion effort.

There is a risk in this for Mr. Johnston's cause. Taxpayers who do not approve the $3.9 billion giveaway can also send telegrams, and we hope they do.

How about telegrams to the 15 millionaire cup rattlers? The telegrams could tell what the senders think of the current money raising effort for Mr. Johnston's Nonpartisan Committee for International Economic Growth.

Those 15 moneyed money raisers' names are: Ernest R. Breech of Ford Motor Co.; George R. Brown of Brown & Root; Abraham Feinberg of Julius Kayser Co.; Lamar Fleming, cotton merchant; William C. Foster of Olin Mathieson Chemical Corp.; Henry John Heinz II of J. J. Heinz Co.; Theodore V. Houser of Sears Roebuck; Eric Johnston, motion picture industry executive; George L. Killion of American President Lines; Frank Pace, Jr. of General Dynamics Corp.; William E. Robinson of Coca Cola; Nelson A. Rockefeller, heir to oil millions; Dr. Ethan A. H. Shepley, chancellor of Washington University, St. Louis, and corporation director; Joseph P. Spang, Jr., of the Gillette Co.; and Roger L. Stevens, New York real estate man.

Anyone who has any acquaintance or dealings with any of the men just enumerated might save a lot of money over the long run by investing in a few telegrams, lobbying against the lobbyists. Others can send their messages to chief spokesman, Eric Johnston, now working out of the office building of the International Association of Machinists at Washington.

Boston Globe Commends TVA as National Asset for Defense

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. EVINS. Mr. Speaker, the record of the TVA has won it many friends throughout the country and, indeed, the world. Among the latest commendations of the performance of this great national agency was an editorial in the pages of the Boston Daily Globe, one of New England's great newspapers, which briefly but pointedly commented on the annual report of the TVA for the past year. The editorial, which appeared in the January 2 issue, follows:

PROGRESS OF A DREAM

The vision of the late Senator George K. Norris of Nebraska, whose statesmanship led to the creation of the Tennessee Valley Authority during the great depression, is being vindicated, as that highly significant undertaking renders its annual accountings to

the Federal Government. This is especially true of its stewardship for fiscal 1956–57.

TVA, during that period, effectively controlled the worst flood in the river valley in 90 years—with enormous savings in property damage and personal suffering in the 7-State area affected. Though it continues to grow, with seven steam-generating plants under construction being paid for out of revenues received from power, demands for ever more power are growing also.

Simultaneously, the Authority is far ahead of schedule in repayments to the Federal Government on the investment—some $68 million ahead in fact. During 1956–57 fiscal year its power sales jumped by 12 percent. The trend of its rates has been steadily downward.

This excellent report, unfortunately, is not likely to end the struggle between the administration and Congress over TVA. The fact that two of President Eisenhower's nominees to the Authority come up for confirmation in the forthcoming session already finds storm signals flying. It is administration policy to curb further growth of TVA, curtail its functions, force the project to finance itself through revenue bonds and increase annual requirements for repayment on its debt. The unforgotten Dixon-Yates episode of 2 years ago, when an attempt was made unsuccessfully to interpose a private power combine in TVA operations, illustrates the policy.

TVA, as its latest report makes clear, is a national asset for defense and for the economic growth of a huge section of the South.

London: Facade and Reality

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. MULTER, Mr. Speaker, a very discouraging picture of the future of Britain has been presented by the columnist Joseph Alsop. He points out that the lack of vigorous imaginative American leadership during the last 5 years is in part responsible for the plight of our ally. Mr. Alsop's column from the New York Herald Tribune of February 24, 1958, follows:

LONDON: FACADE AND REALITY

(By Joseph Alsop)

LONDON.—In the pale sunshine, 13 years after the great victory, London hardly seems the same wounded hero of a city that it used to be for so long after the war.

The outward surface is more prosperous than ever. The magical London combination of green open space and crowded avenue, of intimacy and public splendor, of double polished glossiness and carefully preserved patina of age is also more magical than ever, because it is so unchanging in a fast changing world. And London is more than ever the most agreeable of all the great world cities for a foreign visitor.

These reflections on London's surface may seem more appropriate for a postcard for the homefolks, showing some such familiar tourist sight as the changing of the guard. Yet they are necessary, in order to put into proportion the fairly brutal thing that also needs to be said. In sum, this London with its rich and charming surface, whose shining courage so recently set an example to the world, is now a city that all but stinks of defeat.

The fact, if it is a fact, is of infinite importance to all the nations of the West. But judgments of atmospheres are unavoidably personal; and so I shall speak more personally in the present report than is customary in this space.

In the postwar years, I have made at least one visit of inquiry to London each year. In all that period, whether under labor governments or conservative governments, the essential London drama has been the same. It has been the drama of the British people grimly struggling to maintain Britain's historic role as one of the great world powers, after the fearful human and material and strategic losses of the Second World War.

It has been a pretty moving drama to watch, but now it seems to be coming to an end. There are just too many signs of the disarray that always, in every army, foretells the acceptance of defeat.

For example, the feature of British political life that has always most amazed me was the fact that any given moment, almost every one from the Prime Minister downward, at every level and in every sphere, somehow struck the same note. It might be a belligerent note or a friendly note, or any other kind of note. But it was always the same.

It used to make me feel like a geologist climbing about over an enormous rock, tapping with his hammer everywhere and always getting exactly the same "ping" or "pong" wherever he tapped. But all this is over now. The most extraordinary and discordant variety of ntoes is now to be heard, from the different leaders of the two major parties, from the civil servants and the ministers they are charged with advising, even among the higher permanent staffs of single ministries.

The cause of this wholly novel discord of ideas and attitudes is really simple enough. Britain today is squarely confronted with at least half a dozen major problems which Britain alone does not have the means to solve.

There is Britain's economic problem, which keeps Britain on a permanent brink of disaster. For example, approximately 22 percent of Britain's lifeblood, the hard currency revenue of the Sterling area, comes from two highly unstable ex-colonial countries, Ghana and Malaya.

Again, the loss of the Middle Eastern oil sources, which are now in ever-greater danger, will add a cruel billion dollars a year to the debit side of Britain's national balance sheet. A single individual, the Sheikh of Kuweit, contributes very nearly 10 percent of the new capital annually available in the Sterling area, which is desperately short of capital. And so the story goes.

There is Britain's strategic problem, which is insoluble because of the economic problem. For example, the so-called support costs which the Germans have been paying for the British divisions in NATO amount to less than $130 million. But because the Germans are refusing to pay these costs, the British government is thinking of cutting its NATO contribution beyond the point of acute danger, in a way that will prejudice all Britain's relations with the new Europe, and for a sum really hardly larger than the British pig subsidy.

There is the Middle Eastern problem, which looks like it is growing desperate. For example, the old Iraqi strong man, Nuri Pasha, was recently in London to repeat his anguished warnings that the Kremlin would soon play the anti-Israeli ace, which will in turn take every trick in the Arab pack. The leading British experts are now reluctantly convinced that Nuri's warnings are probably well founded. But in all the British Government I could not discover any man with any positive idea about parrying this prospective Soviet maneuver, which will be like a dagger thrust at Britain's very jugular.

One could continue the recital almost indefinitely, covering all the foreign policy problems involved in the approach to the summit conference, all the domestic political problems revealed by the Conservative Party's swinging defeat in the Rochdale by-election, and so on. But I have said enough to illustrate the tragic point I have been trying to make.

If it is a true point, it is tragic for America as well as for Britain; for Britain's defeat will almost surely mean the West's defeat. Worse still, we in America will have our own share of the blame for the tragedy. For vigorous, imaginative and courageous American leadership is now the most essential ingredient in the solution of almost all our allies' problems, and Britain's above all. And this essential American ingredient has been utterly lacking for the last 5 years.

Wearing of the Leek

EXTENSION OF REMARKS
OF
HON. HENRY ALDOUS DIXON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. DIXON. Mr. Speaker, there is an old Welsh saying, "Hateful is the man who does not love the land in which he was reared." So, with more than a few drops of Welsh blood, I must pay tribute in the Congress of the United States to the national symbol of my ancestral home, St. David.

As the arrival of March 17 has meant the wearing of the green for the Irish, for the Welsh March 1 has meant the wearing of the leek. This national flower of Wales was first worn in a battle against the Saxons on the advice of St. David to distinguish them from their enemies.

Much folklore is associated with our patron saint. Tradition has it that his birth was foretold 30 years earlier by an angel to St. Patrick. Some say that he lived to the ripe old age of 147 and a 10th century manuscript gives his death date as A. D. 601. But one thing is certain—during his life he towered among his fellows by his holiness, his wisdom and his eloquence to become the spirit of a vigorous nation.

Those who are Welsh may recall the tale of the bees that St. David blessed and sent to Ireland with their keeper, the monk Modomnoc. They kept so quiet during the trip that the sailors did not know they were there, but when they landed, they began at once to buzz around, build honeycombs, and make honey.

I like the comparison that has been made between these bees and the contributions that St. David's countrymen have made to America. Someone said: "When the Welsh settle in a place, they buzz loudly and contribute to their new home a certain tart and spicy sweetness—plus a sting when the occasion demands it."

As a sample of the honey the Welsh have contributed to America, there was Captain Jones who commanded the *Mayflower*, Roger Williams and William Penn who founded two colonies built on

UNIVERSITY OF MICHIGAN LIBRARIES

religious liberty, and Thomas Jefferson who voiced our Nation's fight for freedom from Great Britain in the Declaration of Independence.

The Trouble With Harry

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. CRETELLA. Mr. Speaker, I include an editorial from the New Haven (Conn.) Register on the subject of a recent speech made by a former President. This speech, as all his others, was made not as an effort to rally nonpartisan action but in the interests of pure political expediency. Mr. Truman's effectiveness is on the wane, for his utterances have taken on a complexion of such frantic contempt, libelous accusations, and sheer demagoguery that fewer and fewer people, except himself, can believe what he has to say.

I think the editorial which follows reflects the national indignation which has resulted from distortion of fact by an ex-President of the United States:

THE TROUBLE WITH HARRY

The trouble with ex-President Truman is that he has begun to take his "give-'em-hell" capacity too seriously. It is one thing to be frank and forthright as a politician—which is the most that Mr. Truman achieves. It is another thing to rise to the exceptional opportunities for national leadership which are open to every ex-President.

Mr. Truman has demonstrated strikingly for the Nation—and for Connecticut with its impending special session of the legislature—all of the weaknesses of a purely partisan approach to unemployment.

In his exultant attack upon the Eisenhower administration he has made it quite clear that the whole problem of national prosperity—and beyond it, the larger problems of expanding American strength and productivity in a dangerous world—is to be measured only in political terms by his standards.

It is clear that the prospect of 5 million unemployed Americans is hardly uncomfortable to Harry S. Truman—so long as he can blame their plight on the Republicans. It is clear that every other setback to American hopes and disappointment for American ideals has a certain cheerfully accepted value for Mr. Truman—so long as it can be attributed to the failures of Republican policy.

This may seem to be good politics. It is certainly full of the oportunism upon which Mr. Truman has built his career. But we seriously doubt that even the most worried, or the most embittered of today's presently unemployed people, will find in such an attitude the answer to their personal problems or the answer to national need.

Mr. Truman might have been expected to differ sharply with the Republican approach to Federal action in a period of recession. But it is disappointing to note that, once again, he has gone far beyond constructive fact and responsible alternative to indulge in inaccurate and reckless exaggerations.

If the Truman view prevails, it will be impossible to find a common course for a Democratic Congress and a Republican administration to follow in girding the country against its troubles.

But such a view cannot prevail. There are still too many men who—like ex-President Herbert Hoover—recognize that partisanship can never solve really serious problems, and who seek, accordingly, to find a basis for constructive and confident action by men of all parties when a national crisis must be faced.

Note on Trinity Partnership by Oroville Mercury

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. SCUDDER. Mr. Speaker, in its October 18 issue of last year, the Oroville Mercury had an interesting editorial entitled "Congress Getting Wise to the Socialists." As the Trinity partnership bills await action in the House Interior and Insular Affairs Committee, this timely article offers extra food for thought.

The editorial points out the movement during the last session to loosen the reins on TVA interest obligations. In effect, public power supporters were out to limit TVA interest payments to 40 more years, following which it could "freeload" without any effective controls. Fortunately, this cagy attempt was thwarted—and by a considerable majority in the Senate.

Is it not ironic that the public power faction refers to Trinity partnership as a "giveaway to private utilities," when it asks 160 million Americans to pay $101 million a year for electric bills of 5 million in the Tennessee Valley? If there ever was a giveaway this is it. And public power advocates are trying for a different kind of giveaway in opposing the partnership arrangement at Trinity—that is giving away $310 million worth of direct public benefits for the sole benefit of public power's principal pet, the preference agency. Public power is fighting Trinity partnership because the preference agency will not be able to get Trinity power any cheaper than 93 percent of the people in northern California.

It does not seem to make any difference to the preference pushers whether joint development of Trinity nets $310 million or $310 billion—their platform and line would be the same. It is time we did something to shatter both.

I respectfully include the editorial referred to above, from the Oroville Mercury, at this point in the RECORD:

CONGRESS GETTING WISE TO THE SOCIALISTS

Socialists in Congress had it figured out that a bill would pass during the recent session making it possible for the Tennessee Valley Authority to pay interest on the huge public money investment for TVA only for 40 years, then be free of congressional review and control.

The bill, however, was amended in Senate committee to provide that TVA must continue to pay interest indefinitely. When the bill reached the Senate floor a still more stringent anti-Socialist amendment was added providing that TVA must make a payment each year of $10 million to reduce the principal.

The TVA Senators were greatly agitated. But Senator GOLDWATER, of Arizona, pointed out that 5 million persons in the Tennessee Valley were asking the other 160 million Americans to pay $101 million a year toward their electricity bill. When the vote came only six Senators voted against the amendment. * * *

Thus it was seen that the country is getting tired of the constant nibbling by the Socialists whereby they force the rest of us to pay the bills of the lucky few.

That Senate vote, by the way, indicated that the partnership plan for use of Trinity project power may be successful.

Pensions for World War I Veterans

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks I would like to include a letter from Mr. George A. Schick, of Lisbon, N. Dak., on the subject of pensions for World War I veterans. The letter speaks for itself:

LISBON, N. DAK., *January 15, 1958.*

Hon. USHER L. BURDICK,
Washington, D. C.

DEAR SIR: This is in regards to pensions for World War I veterans, looking back we find all Civil War veterans were pensioned, also the Spanish-American War veterans were pensioned, and the World War II veterans got everything but a pension, and it wouldn't be too much of a surprise if they got a pension in the near future; but what has been done about World War I veterans? America took these men and sent them where she seen fit to face bullets, et cetra, they went and done their job. (Now they're the forgotten men) now we're even barred from the veterans' hospitals unless we're service connected, as you well know the youngest of these World War I veterans is over 60 years of age, and are passing out of the picture at the rate of over 240 a day. When is America figuring on doing something for these men?

Our President doesn't seem to be for giving these gallant men their right and just pension, but he sure has plenty to throw across the ocean, and for sputniks, raising Federal wages, and so forth, and what have you. I see where 1 farmer got around $200,000 just for not raising the staff of life (wheat), yet there is no money for these men that faced bullets that America might live. Most all of these men now are over 60 years of age. Some are still struggling along on farms; some in other business, etc. It is time they are retired and let younger blood take over.

We want a pension of $100 per month, and not to be barred from any veterans hospitals, and this pension is not to be counted against our social security or vice versa. We want $100 per month with no strings attached, so we can buy the bare necessities the remainder of our days, which isn't long any more.

World War I veterans are organizing all over the United States and our purpose is to get our $100 per month pension. Right in Lisbon now we have a membership of over 200, and that number is slowly growing. We have all agreed that the only way we can get our rightful pension is through the ballot box.

We want to thank you for the fine job you have done for the State of North Dakota, and also what you have done in the past for

World War I veterans, and we are counting on you as our representative to try and do something for these forgotten men, before there is nothing left to do but look over the tombstones that mark their graves.

GEORGE A. SCHICK,
A World War I Veteran.

A Bill To Amend the Social Security Act

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. HOLTZMAN. Mr. Speaker, I am today introducing in the House of Representatives a bill which will amend the Social Security Act, and provide a more liberal application of the law.

In the first instance my bill would remove the present limitation of $1,200 per annum on outside income that can be earned by those who are recipients of social-security benefits. In this day and age when the cost of living continues to spiral upward, and savings have been evaporated, it is most difficult for many of our elder citizens to make ends meet, and to provide themselves with even the bare necessities of life. The removal of the income limitation will enable them to live more comfortably and securely in their old age, without the fear of dependency on other members of the family, or on society itself.

The second provision of the bill would make full social-security benefits payable to men at the age of 60, and to women at the age of 55. The current requirements are 65 years of age for men, and 62 years of age for women. The reduction in this age limit would permit many of our working force to retire earlier than anticipated from the labor market, and thus make room for the thousands of younger men and women who must be absorbed into this labor market each year. Today many firms in private industry have a fixed policy against hiring new workers who are over 40, and yet have a firm policy of retiring workers who have reached the age of 65. Labor and management have been giving much thought and consideration to the problem of the older worker and his retirement, but there is need for further research which must be undertaken by industry, labor, and the employees themselves. By 1975 it is estimated that there will be more than 20 million Americans 65 years of age and over. The number of elder citizens in this country is growing larger each year, and it is the responsibility of the Federal Government to reevaluate and revise, if necessary, our programs for the welfare of these senior citizens.

The third section of this package bill provides for the elimination of the requirement that an individual must have attained the age of 50 before he is eligible to receive disability-insurance benefits. Under the present law many people who are disabled through no fault of their own must wait years before they reach the age of 50 and can apply for benefits. In the meantime they are forced to rely on relatives, friends or welfare agencies for their very existence. Removing the age limitation would permit a worker to file immeditaely for benefits after he has become disabled, and would in some small measure contribute to his support and that of his dependents.

The welfare of all our citizens, young or old, able or disabled, should be of primary concern to us, and I believe that this legislation, which brings into 1 package 3 major changes in the Social Security Act, would help us keep pace with the changing scene, and would certainly be a humanitarian act benefiting so many more of our people.

Strains on Our Canadian Ties

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Forrest Davis, which appeared in the Cincinnati Enquirer on Wednesday, February 19, 1958:

EATON, PREMIUM ORES CASE STRAINS OUR CANADIAN TIES

(By Forrest Davis)

WASHINGTON.—One sometimes wonders whether our unwieldy Federal bureaucracy has been sufficiently briefed on the oft-stated desire of President Eisenhower and his Foreign Affairs Adjutant, John Foster Dulles, to cultivate fair, seemly, and neighborly relations with friends and allies. The administration of mutual assistance, for example, is subject in some cases to delays hard to explain on the ground of normal bureaucratic procrastination.

Afghanistan is a critical point of United States-U. S. S. R. rivalry. The Afghan kingdom has waited with decreasing impatience for the International Cooperation Administration to process the joint endeavor to build a modern university at Kabul and an international airport on a strategic route from East to West. The fumble has held things up for a year and a half.

I cite this instance among others because our earlier ventures in Afghanistan have been deplored on the ground that they were not easily visible to Afghans. While Moscow was paving the streets of Kabul for all to see, we build a hydroelectric and irrigation system in a remote valley; an enterprise which is, by and large, a fiasco. There being no ready market for hydroelectric power, the plant's turbines have not yet been installed. Nor is the valley suitable to large-scale agriculture, the soil being saline.

A great university and an international airport could impress even the mountain tribes.

A more vexing problem in this vein confronts our Government and economy not in the far recesses of Asia but with our nearest friend and neighbor. Canada is essential to our security and well-being more than any other nation, yet by some perverse train of events our Government seems bent upon affording the Canadians ever fresh occasion for grievance.

No sooner had the administration yielded to Canadian remonstrances over surplus grain disposal policies that dried up the Dominion's usual wheat market abroad than we seriously curtailed our imports of Canadian petroleum. Pacific Coast markets have furnished the incentive for development of the great new oil fields of Western Canada.

These fields and their convenient outputs are important to us on three counts. First, their southward flow would not be subject to the hazard of a sea voyage in time of war. Secondly, Canada's oil wealth strengthens the economy of our most remunerative customer and oil exports help balance the trade settlements which run too heavily against Canada. Thirdly, United States capital is largely represented in the Canadian fields, capital which must continue to be invested in th Dominion to the benefit of both countries.

The disadvantage which Canadians feel exists against the United States feeds the buy-British campaign called into being by the Tory Prime Minister, John Diefenbaker. That campaign already has reduced United States exports and bids fair to injure our trade to the north even more. The campaign, moreover, is popular and much is being made of it in the current parliamentary campaign.

Into this troubled situation the Department of Justice has seen fit to inject another abrasive issue. The Department's determination to appeal the unanimous Tax Court decision of last April in the Premium Iron Ores and Cyrus Eaton income tax cases far transcends the interest of the Cleveland financier and his associates. It threatens the tax convention between Washington and Ottawa, under which the huge and profitable American investment in Canadian raw resources and industry has gone forward.

The Diefenbaker government has reiterated the protest of the St. Laurent government to our State Department against what the Financial Post of Toronto calls "an outrageous United States tax raid." Other Canadian newspapers have been no less forthright. G. C. Nowlan, the Dominion Minister of National Revenue, has called the attention of the Parliament at Ottawa to the grave consequences which would follow a successful appeal in the United States courts of the Premium and Eaton matters.

As matters stand it appears that the Department of Justice, acting for the Internal Revenue Bureau, having gained a deferral on February 17, intends bringing the case up next October. Meanwhile, the whole question of United States-Canadian tax relationships will be in suspense.

The Revenue Bureau's claim of something like $2 million from Cyrus Eaton and $2.6 million from Premium Iron Ores, Ltd., was disallowed last spring by all 18 judges of the United States Tax Court. The Justice Department had, in effect, demanded that all the judges be polled. Ordinarily, given the added weight of international expediency, the case would have been dropped.

Not so. In the face of the Dominion Government's protest and the full force of Canadian opinion, the Revenue Bureau and the Department of Justice insist upon treating the Eaton-Premium claim as just another attempt to wring money from unwilling taxpayers. It is such failures to coordinate policy on a high level, to restrain bureaucratic zeal in the interest of international comity that contributes to our reputation abroad as a brusque and ungainly friend.

On its international level the issue gets down to this: The Canadian Government holds Premium Ores to be a Canadian corporation subject only to Canadian taxation on its profits. Our tax people hold that because certain company transactions took place in Mr. Eaton's Cleveland offices, the United States Government is entitled to a tax bite. The Tax Court ruled with the Canadian Government's contention.

UNIVERSITY OF MICHIGAN LIBRARIES

The case against Mr. Eaton and his associate, William R. Daley and his wife, rests on a technical dispute, resolved in favor of the defendants last April.

Considering the present aggravated climate of the United States-Canadian relations and the necessity of negotiating a new tax treaty if the appellate court held with the Revenue Bureau, it would seem the part of wisdom for the State Department to use its good offices with the Department of Justice. There are sufficient causes of dispute more difficult of settlement—St. Lawrence Waterway toll subsidies, the adjustment of petroleum quotas, the prospect of larger import duties on lead, zinc, and other metals so that it would seem the administration should mediate this superficially minor but fundamentally dangerous difference.

Judge John J. Aponick New President Judge of Pennsylvania's 11th Judicial District

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader-Evenings News of February 27, 1958, upon the selection of Judge John J. Aponick to become the 16th president judge of the 11th judicial district of Pennsylvania, the court being located at Wilkes-Barre:

NEW PRESIDENT JUDGE

His commission having arrived and been recorded, Judge John J. Aponick of West Nanticoke will become the 16th president judge of the 11th Judicial District of Pennsylvania on Saturday, succeeding President Judge W. Alfred Valentine who retires tomorrow after a distinguished career as a lawyer and jurist.

The 11th judicial district, which now is limited to Luzerne County, included Wayne, Susquehanna, Bradford and Tioga Counties, as well as Luzerne, when it was created in 1811. It also embraced Lackawanna, which then was part of Luzerne. Subsequently, Pike and Monroe were added. At a later date, the district included Columbia, Montour, and Wyoming Counties.

From time to time, the district was rearranged and for a period Luzerne was part of the 13th judicial district.

The 11th judicial district had only one judge at the time it was established and he automatically became the president judge. Additional law judges were authorized in 1867, 1874, 1901, and 1913. The Orphans Court is separate and has its own president judge.

Judge Aponick follows in the footsteps of some of the community's most illustrious citizens. The list includes, in order of their service, the names of Seth Chapman, John B. Gibson, Thomas Burnside, David Scott, William Jessup, John N. Conyngham, Garrick M. Harding, Charles E. Rice, Stanley Woodward, John Lynch, George S. Ferris, Henry A. Fuller, William S. McLean, Jr., Benjamin R. Jones and W. Alfred Valentine.

Now serving his third term as a member of the bench, Judge Aponick takes on no small responsibility, for that invariably is the price of distinction in any line. The judiciary is no exception to the rule.

Judge Aponick is well prepared for his new role by education, experience and temperament. He has acquitted himself ably in the 2 decades he has been on the bench, carrying out his pledge to administer justice impartially. He has supplemented his legal attainments by service in other fields in peace and in war. His has been a well-rounded career, highlighted by an impressive record and a becoming modesty. That he is a worthy successor to Judge Valentine is perhaps as fine a compliment as might be paid to him.

Friends and neighbors, in offering congratulations, will wish him well in his new capacity.

Sacramento Union Tackles Another Federal Power Blooper

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. SCUDDER. Mr. Speaker, in the recent hearings on Trinity partnership legislation, Federal power supporters claimed that the Pacific Gas & Electric Co. was making unfair profits from the Central Valley project. This is untrue, and anyone with economic sense knows it is. Federal power has pulled another blooper in trying to cast a shroud of suspicion on the partnership bills pending before the House Interior and Insular Affairs Committee.

The Sacramento Union in its editorial of February 9, 1958, What Profits? shows why this latest Federal power claim is false. First of all, partnership opponents ignore the basics of State control over private utilities. They would like the public to believe that P. G. & E. and other utilities run rampant on rate charges for bigger profits. They do not specify that P. G. & E. profits are based on 6 percent of its plant investment. Thus, as the Sacramento Union points out, if the company "had a billion dollars invested in a plant, its profits would be calculated on that investment, whether it sold 5 billion or 10 billion kilowatts of electric energy."

It is obvious then that any purchase of power is an operating expense, and is not used in figuring out the 6 percent rate of return. Again, quoting from the Union, if the P. G. & E. "purchased $1 million worth of power from the Bureau of Reclamation and sold it for $2 million the extra million dollars would have to be passed along to consumers in the form of lower rates."

Unfortunately, the supporters of all-Federal development of the Trinity River project have sufficiently confused the CVP power issue in their efforts to prevent P. G. & E. participation at Trinity. We need more clarifications of the Sacramento Union caliber to dispel the haze around utility profits.

I respectfully include the Sacramento Union editorial, referred to above, at this point in the RECORD:

WHAT PROFITS?—BUREAU POWER SOLD TO P. G. & E.

A poorly informed Comptroller General of the United States told a committee of Congress last week that the Pacific Gas & Electric Co. was making too great a profit from the power it purchased from the Central Valley project. The P. G. & E., under California law, makes no profit on any electricity it sells, whether it is produced by a company generator or by some agency from which it is purchased.

Such profit as the P. G. & E. makes is based on 6 percent of its plant investment. If it had a billion dollars invested in a plant, its profit would be calculated on that investment, whether it sold 5 billion or 10 billion kilowatts of electric energy.

If it purchased $1 million worth of power from the Bureau of Reclamation and sold it for $2 million, the extra million dollars would have to be passed along to consumers in the form of lower rates.

Purchase of power is an operating expense only and cannot be used to determine the 6 percent (or less) which the company is allowed to make, under very strict California PUC regulations.

The only way the company can expand its plant investment is to get money directly from the people of this State who want to invest their money. And the only way they can induce people to invest money with them for this purpose is to perform in such a manner as to warrant the confidence of the people with money to invest.

The only place where the P. G. & E. is authorized to make any profit is on the rate of return against its capital investment—its physical properties.

In the Niche of Time

EXTENSION OF REMARKS
OF
HON. S. WALTER STAUFFER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. STAUFFER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the County Leader, Newtown Square, Pa., February 27, 1958, on our colleague, BEN JAMES, a member of the Pennsylvania delegation who will retire this year after five terms in the House. Those of us who have known BEN over the years feel the article is a well-deserved tribute to his long service to his district, State, and country:

IN THE NICHE OF TIME

The real effect of the retirement of United States Congressman BENJAMIN F. JAMES will not be felt until next year, when a successor opens quarters in the hoary Old House Office Building in Washington.

We were privileged to meet the big fella more than a year before he first ran for Congress, back around the waning months of 1946. At that time we were impressed with the idea that here was a man who could get things done. In fact, that was part of the first congressional campaign theme for BIG BEN in 1948.

Since his initial election in 1948—91,193 for the then Villanovian, to 56,116 for a guy named Snyder—BEN JAMES gained in local popularity just as he increased in stature and importance with the men in whose midst he toiled.

In 1956, Mr. James had 137,222 faithfuls pull the lever over his name. His Democratic opponent, a dude named Welsh, pooled 84,507. The plurality of the gettings-done gentleman had grown by 46,029 in five elections. His majority had kept pace,

UNIVERSITY OF MICHIGAN LIBRARIES

the gaudy 52,715 being 17,638 more than the majority over his 1948 opponent.

This continued increase in appeal can be attributed to one great factor: BEN JAMES could get things done.

BEN did not make all the local appearances for which political leaders requested. He was not a baby kisser. He did not make regular visits to the post offices, which were his domain, so to speak. He never permitted the use of his name in a trumped up or empty publicity story.

BEN had a quiet way of accomplishing things. He never promised anything concrete if there was even a remote chance that he could not produce. Many a person left his office inwardly believing his appeal would reap no rewards, only to receive subsequent news that everything had worked out as wanted.

Often times, after an appellant left his office, BEN would reach for the telephone and quietly call a friend in the particular department concerned with the request. He knows important people in every high Government office—and in many cases, knows them on an intimate basis.

Every letter opened in the Congressman's office is answered within 24 hours. If requested information is not readily available, the correspondent is so informed. He has a staff trained to his own standards: To get things done.

When community leaders were protesting the recent cross-country highway, BIG BEN told them how to organize and what to do. He arranged a meeting with the highest potentate in the Federal Bureau of Roads, and practically had a commitment even before the local leaders had their meeting.

Mr. JAMES never permitted the full story of that and similar accomplishments to be reported to his constituents with him in the hero role.

"No," he would say, "this is their story (meaning the local leaders). Let them tell their people all about it."

The same situation was repeated many times. His role in helping keep Westinghouse in Lester, get ship contracts for local yards, have benefits obtained for frustrated veterans, expedite local agencies in obtaining loan sand grants, and speeding up local post-office construction, has been, for the most part, known only to those with whom he actually came in contact. Tha tis the way he always wanted it.

Yet, with his reluctance to blow his own horn, Mr. JAMES could get pretty upset when someone who knew the facts, gave the credit elsewhere or ignored his part altogether. He also fumed when asked to do soemthing for anyone who was dishonest. Strictly honest himself ,he found it difficult to condone any other course. He did not like fakery in any form.

Regardless of whom the Delaware County voters send to Washington in BEN JAMES' place it will be some time before he is forgotten, either by his colleagues who looked to him for advice and counsel, or by his Delaware County constituents who never failed to receive an answer and never received a phony answer.

BEN JAMES, the printer, who rose from boy apprentice to the presidency and board chairmanship of one of the finest printing houses in America;

BEN JAMES, the township commissioner, who sought to help make his home community a better place in which to live;

BEN JAMES, the State legislator, who became a stalwart in ePnnsylvania governmental circles in his quest for better recognition of his home county;

And, BEN JAMES, United States Congressman, is on the threshold of becoming BEN JAMES, retired statesman, contented family man, and, perhaps, world traveler.

In this fifth life of BEN JAMES, he will be accompanied by Frieda, a wife whose lovliness, vivaciousness, and sincerity have had much to do with the success and public acceptance of her husband.

BEN JAMES has eereyd his community well. When this trem of Congress is over, he will have earned the comfort and esteem that will be his in retirement.

Alaska Statehood Editorials

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. BARTLETT. Mr. Speaker, the Fairbanks (Alaska) News-Miner of February 25 has performed a service by setting forth in its editorial of that day comments from 11 newspapers throughout the States advocating immediate Alaska statehood. Under leave to extend my remarks, I place the Alaska editorial in the RECORD:

COMMENT ON STATEHOOD

The Nation's press has taken up the cause of advocating action on Alaska statehood more insistently than ever before, although we have always had strong support from the fourth estate.

Here is a sampling of editorial comment which has appeared in the past few weeks:

Detroit Times: "Advocates of statehood for Alaska are predicting Congress in the new session will grant a place of equality in the American Union to the Territory so intimately related to the security and prosperity of the whole Nation. We hope they are good prophets, and that they will take a page out of their own experience as a guide."

Madisonville (Ky.) Messenger: "It is alien to the spirit of our institutions to keep a large group of Americans—well over 200,000 now and rapidly increasing—in the second-class citizenship of territorial status."

Montgomery (Ala.) Advertiser: "Alaska should be a state because that is the best way to strengthen and to realize the potentialities of a growing region that constitutes the closest approximation of a frontier with the Soviet Union anywhere under American laws."

New York Journal-American: "There is no sound argument against Alaskan statehood. There never has been one. This session of Congress can bring to itself the honor of fulfilling a historic obligation. By doing it, it will win the applause of the American people."

St. Petersburg (Fla.) Times: "This year is a good one for making two new states. Both could name Senators and Representatives in November along with the rest of the country. And the new states would have 2 years' experience as parts of the Federal Government before going to the polls to vote for a President in 1960."

Wilmington (Del.) Journal Every Evening: "Alaska has been ripe for statehood for years, and there have been indications that 1958 may be the year. In the House Speaker RAYBURN has proclaimed his powerful support for the measure, and in the Senate partisan considerations, which hurt Alaska's chances in other sessions, seemed to be giving way to a bipartisan feeling that both parties might gain by admitting Alaska."

San Francisco Examiner: "Prospects are more encouraging at this session of Congress than they ever have been that a bill admitting Alaska to statehood will be passed. It is a matter of simple justice and urgent national security that it should be passed."

Washington Daily News: "It is evident that if statehood for Alaska is brought to a vote in Congress this year its chances of passage are good. It's just as evident that opposition to Hawaiian statehood still is so strong it can kill the Alaskan bill if the two are tied together. Both Territories should be States. The cynical practice of playing one off against the other hurts both and adds nothing to the stature of those responsible."

New York Times: "There has been a shift in the statehood situation since 1953 as Alaska's political strength has grown and as Hawaii's leftwing elements have frightened off some former friends of Hawaiian statehood. There is no quarrel between the Hawaiian statehood advocates and the Alaskans. If Alaska gets through at this session Hawaii's chances at the next session will be improved. But the parliamentary attempt to tie the two together comes—let there be no mistake about that—from those who don't want either Territory to enjoy self-government that prevails in other parts of the Union."

Washington Post and Times Herald: "Both Republicans and Democrats seemed to have concluded not only that Alaska's cause is just, but also that both parties would benefit from early passage of enabling legislation. Interior Secretary Seaton has been a consistent supporter of statehood and last year suggested a sensible plan for protection of the Federal interests in Alaska that has become the basis of the present bill * * * the most promising course is to concentrate on passing the Alaska bill now, in full confidence that when Alaska finally assumes her privileges and responsibilities as a regular member of the Union, Hawaii will not be far behind."

It has been a long time since we've read an antistatehood editorial.

Catholic University Scientific Work Praised by Dr. Killian

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. McCORMACK. Mr. Speaker, the Catholic University of America is one of the outstanding institutions of higher learning in the United States.

Last week it took another important advance in its mission and objectives in the field of higher education, with the laying of the cornerstone for the new Keane physics research center located on the campus of Catholic University.

Among the prominent persons present at the cornerstone-laying ceremonies was Dr. James R. Killian, Jr., president of Massachusetts Institute of Technology, and special assistant for science and technology to President Eisenhower.

As carried in the Catholic Standard of February 28, 1958, I insert in my extension of remarks an address made by Dr. Killian on that occasion:

CATHOLIC UNIVERSITY SCIENTIFIC WORK PRAISED BY DR. KILLIAN

Two of our top priority objectives are to increase the amount and quality of our basic research and to augment the capacity of our graduate schools of science. This new cen-

ter will contribute to the fulfillment of these urgent national objectives.

It is, therefore, heartening to observe the steady achievement of American universities in maintaining this amalgamation of advanced teaching and research. The history of this great and growing institution is impressive evidence of this achievement. Catholic University pioneered in X-ray work as early as 1895 under Dr. Daniel W. Shea, and in aeronautical engineering in the early part of this century, under Dr. Albert Zahm and Dr. Louis Crook, and in recent years we have witnessed the building of an outstanding physics department under the leadership of Dr. Karl F. Herzfeld.

The building of this laboratory against the background of accomplishment exemplifies the will and the vitality of this university spirit and gives encouragement to all who feel optimistic about the future of American education. The Catholic University of America extends its influence over the Nation and the free world, with students from every State of the Union and from 58 foreign countries.

With these sentiments of congratulations and assurance, I wish for all who will work in this new center, students and staff alike, a full measure of the joyous experience of learning and creating, and I salute Catholic University for its vitality and its growing contribution to the Nation.

Great Plains Are Outlined

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. BREEDING. Mr. Speaker, there appeared in the Hutchinson (Kans.) News of February 26, 1958, an article entitled "Great Plains Are Outlined."

Mr. L. D. Wooster, secretary of the Western Kansas Development Association, describes, in the item, the distinct physical features and conditions which characterize the Great Plains area.

As a former president of the Western Kansas Development Association, I consider the article of considerable interest and have asked that it be reprinted in the CONGRESSIONAL RECORD of this date:

GREAT PLAINS ARE OUTLINED

HAYS.—What are the Great Plains? What are the conditions which cause it to be marked definitely? What are the chief physical features of the Great Plains environment?

L. D. Wooster, secretary of the Western Kansas Development Association, has answered as follows:

1. A comparatively level surface of considerable extent.

2. Predominantly a treeless region in contrast to the forested areas in the eastern half of the United States from which the early settlers came.

3. Subhumid climate. Precipitation below the average deemed necessary for the ordinary raising of crops.

4. Windy. Because of the relatively level, treeless surface of the land the winds have a more nearly unobstructed sweep across the plains. This increases evaporation.

5. The drier the climate the greater the likelihood of extremes of temperature—blizzards in winter and heat in the summer.

6. A sixth characteristic is a predominantly sandy soil.

Other factors effecting the manner of living at least in the case of western Kansas, are: (1) the altitude and the direction of the slope and lay of the land; (2) the rather numerous small streams, especially in the northwest section; (3) thick layers of sand and gravel forming great reservoirs for underground water; (4) native vegetation suitable and adapted to the foregoing factors.

Tribute to the Late John Minadeo, Heroic School Patrol Boy

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. HOLLAND. Mr. Speaker, Mayor David L. Lawrence, of Pittsburgh, Pa., proclaimed Thursday, February 13, 1958, as John Minadeo Day.

In this proclamation the mayor pointed out that this young boy, a school-patrol leader, sacrificed his own life on October 7, 1954, to protect his classmates from the pathway of a runaway automobile.

This young man, a native of Italy, emigrated to this country just 5 years before his act of heroism.

Johnny Minadeo was just a young boy who dreamed of America, and in the waiting period before he was permitted to enter the country with his parents he learned all he could about our great land. Upon his arrival he immediately enrolled at the Gladstone Junior High School, Pittsburgh, and his teachers stated his one ambition was to become a good American citizen because he was so proud to be here.

He was an outstanding student, and when appointed to the school patrol he accepted his responsibilities most seriously.

On the day of the accident it has been said by those who witnessed it, that he forgot all safety to himself to keep his classmates from being harmed.

It was through his heroic action that many were not hurt or killed. By his brave deed, he received although posthumously the honor of which he spoke so often to his teachers—that of being a citizen of the United States.

No school could bear a more honorable name than that of John Minadeo.

The proclamation follows:

PROCLAMATION

Whereas John Minadeo, a school patrol leader, sacrificed his life on October 7, 1954, to protect his classmates from the pathway of of a runaway automobile; and

Whereas this young man, a native of Italy, had emigrated to this country just 5 years before with his parents; and

Whereas his heroism has been recognized with the posthumous award of citizenship of the United States, the Carnegie Medal of Honor, and medals from the American Automobile Association and the Automobile Club of Milan, Italy; and

Whereas the memory of his devotion to duty and unflinching loyalty to the highest traditions of the school-safety patrols will be perpetuated through the dedication of the new John Minadeo School in his honor: Now, therefore,

I, David L. Lawrence, by virtue of the authority vested in me as mayor of the city of Pittsburgh, do hereby proclaim Thursday, February 13, 1958, to be John Minadeo Day in Pittsburgh, and urge our citizens to give appropriate recognition to the valor of a young man whose life embodied our best traditions of loyalty to his fellow men.

Done this day, February 11, 1958, at the office of the mayor, in witness whereof I have hereunto set my signature and cause the seal of city of Pittsburgh to be affixed.

DAVID L. LAWRENCE,
Mayor, City of Pittsburgh.

REMARKS MADE BY FRANK J. ZAPPALA, REPRESENTING THE ITALO-AMERICANS OF PITTSBURGH, AT THE UNVEILING OF A BRONZE PLAQUE IN MEMORY OF JOHN MINADEO, WHO DIED IN PERFORMANCE OF PATROL DUTY ON OCTOBER 7, 1954—CEREMONY AT JOHN MINADEO SCHOOL, 6502 LILAC STREET AND SHADY AVENUE, PITTSBURGH, THURSDAY, FEBRUARY 13, 1958, 2:30 P. M.

We have assembled here today to pay tribute to the memory of a lad whose courage, bravery, devotion to duty, and total unselfishness, symbolize everything that is sublime and noble. He died that others might live.

We have often heard the old adage, "Actions speak louder than words"—and by his actions, this boy of tender years but of stout heart, paid with his life in order that he might be worthy of the trust reposed in him by the school safety patrol; and in so doing, he not only lived up to the high ideals of this splendid organization, but he joined the ranks of immortal heroes.

At this point, I would like to give you a brief history of the school safety patrol. The school safety patrol came into being by virtue of the necessity of protecting and preserving the lives of children attending school, against the hazards and dangers of our ever-increasing traffic problems.

The patrol idea began in the early 1920's, and was soon adopted by a number of cities; then, encouraged by the American Automobile Association, it spread and developed into one of the most successful traffic safety movements in operation today, attracting worldwide attention, study, and emulation. Since the advent of the school safety patrol, community after community has reported no traffic fatalities in school areas, for periods up to 15, 20, and even 30 years.

It was shortly after World War I, when motor vehicle traffic increased enormously, that school and police officials and representatives of AAA Motor Clubs devised the pattern for school safety patrol activity which has been used by an ever-growing number of communities. It was in 1923 that the first patrols were organized in the West. Police and school departments, State automobile associations, and other civic groups have been sponsoring patrols as they were formed, ever since. Across the Nation, patrols number 662,000 in over 14,000 communities; and they serve us well—the job they do has played a vital role in reducing the traffic fatality rate for those in the 5 to 14 age group by 48 percent over the last 30 years.

The boys and girls who serve on the patrols are selected from upper grades. They are outstanding students. Being chosen for patrol duty is an honor for which pupils strive.

The patrol member must be punctual and pay strict attention to duty. The safety of schoolmates is a big responsibility. School children learn the rules for safe walking in class. The patrol boys and girls see to it that these rules are applied at school crossings every day. By constant repetition, good habits of safe walking are formed and in time become automatic. And usually, the lessons learned by the students at the school

UNIVERSITY OF MICHIGAN LIBRARIES

crossings, go with them in the event that they move to other areas where there is no patrol to remind them. Courtesy and caution are the keynotes guiding each student in the discharge of his duties. Patrol members are instructed to wait for a break in the flow of traffic before permitting children to cross the street. Where traffic is controlled by a police officer, the patrol member directs his classmates in conformity with the signal of the policemen.

When they are on their own, patrol members post themselves so that they are clearly visible to approaching vehicles, but they stay out of the path of moving traffic. When it is safe, the patrols direct the children across the street; in some cases, a police officer is assigned to train and work with patrol units in each community. This comradeship with the police officer, the sacrifice of time to serve others, are lessons in good citizenship at an early age, a vital part of the educational process.

The rewards of service in the school safety patrols last a lifetime, but the communities served by these boys and girls honor them while they are members of the patrol. Toward the close of the school year, many cities publicly honor the faithful service of their youthful traffic safety specialists—in some cases, by designating a day as School Safety Patrol Day and by holding parades and reviews. In other cities, the youngsters are rewarded with a special day of fun, such as a picnic or a theater party. National School Safety Patrol Day is observed annually in Washington, D. C. In May of last 29,000 patrol boys and girls, representing cities in the East, South, and Midwest, marched down Constitution Avenue before an estimated 125,000 spectators.

We thus see what an important part the safety patrol is playing in our modern educational system, and what splendid ideals and principles it fosters.

It is obvious that young John Minadeo possessed all of the requisites of a patrol leader, when he was chosen for this important post by the Gladstone Junior High School, where he had enrolled as a student; and, more particularly, when we consider the fact that he had been here but a short time, having come to the United States with his parents, from Montagano, Province of Campobasso, Italy, on July 16, 1950—barely 4 years before his tragic death. The fact that he had been singled out for this responsible position thrilled the boy, and he went into it wholeheartedly, determined to do a good job; he assumed the role of being his brothers' keeper with a zeal and fervor comparable to that of the early martyrs in the Roman arenas, or of the gallant soldiers and warriors on the battlefield. His consideration for others knew no bounds—and when on that tragic date of October 7, 1954, his sense of duty was put to a test by a runaway car, he met the challenge gallantly, bravely, heroically, unflinchingly; he set aside all thoughts of personal safety—he laid down his life, to save the lives of the comrades who had been entrusted to his care.

We hear a lot these days about juvenile delinquency, about young hoodlums who are the despair of their parents, of their teachers, and of the law-enforcement agents. We read of monstrous crimes committed by youngsters; gangsterism among the youth of our Nation appears rampant; and just about the time we are beginning to lose hope and see only the prospect of a bleak, criminal future, along comes a boy like John Minadeo to restore our confidence in our youth to clearly show us that boys like him are still in the majority; once again we realize that our future is safe in the hands of the citizens of tomorrow; we have proof positive that youth today is just as fine, just as noble, just as brave as in any other era; and that the criminal element, is, thank God, in the minority. John Minadeo was in this world a comparatively short time, but he did not live in vain; for after we are gone, we are not judged by the number of years that we spent on this earth, but rather by our deeds while we were here, regardless of the span of life allotted us.

While, as a father of children myself, I realize what the loss of this boy—their only son—means to his mother and father, I would like to remind them that their son left this world in a blaze of glory; that his heroism will long remain as a noble example of self-sacrifice and altruism. He has posthumously been honored by receiving the citizenship of the United States; the Carnegie Medal of Honor; a gold medal of the American Automobile Association; a medal of the Automobile Club of Milano, Italy. Moreover, and this is of tremendous importance, in that it shows that other countries are following the example of the United States—the Armando Diaz School, one of the foremost elementary schools in the city of Rome, Italy, has founded a platoon to function as school safety patrol, after the pattern of ours. This platoon is dedicated to John Minadeo and bears his name. Though he is gone, his work goes on.

The board of education of the city of Pittsburgh has displayed its gratitude and appreciation by dedicating a new school to his memory, which bears his name. And in keeping with this same spirit of gratitude and admiration, the Italo-American citizens of Pittsburgh formed the John Minadeo memorial committee, headed by such eminent men as Louis P. Bilotta, general chairman; Fiorentino DiGirolamo, chairman; Louis Carletti, treasurer; and James Settembrino, secretary. This committee in turn appointed me honory chairman and official speaker of this memorable occasion, which I consider a truly flattering and rare privilege. It was due to the untiring efforts of this group that the necessary funds were raised to enable them to commission one of the most celebrated artists in our midst—a sculptor of international renown, Mr. Frank Vittor—to execute a monument worthy of this noble undertaking; a memorial that will pay constant homage to this youthful hero, and which will be placed in the school auditorium in commemoration of his valor. The plaque, superbly sculptured by Mr. Vittor with rare skill and artistry, depicts the scene of the tragedy with admirable accuracy.

And now, I would like to address these last few words to Mr. and Mrs. Minadeo. While it does not bring back your boy, all of these honors, which have created a spiritual unity between the two great Nations he loved so well—the United States and Italy—who today have joined hands in paying public tribute to his memory, should be of great solace and comfort to you, his parents. In conclusion, I can only repeat, with awe and reverence, the words inscribed on the bronze memorial: "Greater love hath no man than this. That a man lay down his life for his friends."

REMARKS MADE BY LOUIS P. BILOTTA, GENERAL CHAIRMAN, JOHN MINADEO DAY, FEBRUARY 13, 1958, PITTSBURGH, PA., AT THE UNVEILING OF THE JOHN MINADEO MEMORIAL PLAQUE

In behalf of the fraternal and civic groups of Americans of Italian descent I have the honor to present to the representatives of the Pittsburgh School Board a replica of the plaque that is anchored to the wall of this magnificent school building. This school is a memorial to John Minadeo, a young Italian immigrant who died that other schoolchildren may live.

The plaque reads:

"JOHN MINADEO

"In grateful tribute, this school is dedicated to the memory of John Minadeo, a safety patrol boy of Gladstone Junior High School (Pittsburgh, Pa.), who on October 7, 1954, sacrificed his life to save the lives of his schoolmates from a runaway automobile. 'Greater love hath no man than this. That a man lay down his life for his friends'."

This boy achieved immortality at a tender age. Generations of future schoolchildren will read of his valor, his courage, and sacrifice. We hope they will draw inspiration from his sacrifice by learning the lesson of tolerance—by learning that America consists of many races, creeds, and nationalities—that all are good Americans if they are good citizens regardless of where their parents came from. America belongs to the descendants of those who came by steerage as well as those who came on the Mayflower.

In recent years we have seen what the combined talents of foreign born have meant to the security of our country. Dr. Enrico Furmi, of Italy, used the mathematical formula of Einstein, of Germany, and the atomic age was born. Dr. Teller, of Hungary, gave us the hydrogen bomb and Dr. von Braun, of Germany, gave America a satellite now circling the earth.

Eliminate the contributions made to America by foreign-born Americans in the arts, science, and inventions and America would be a fourth-rate nation.

Imagine what the opera would be without artists of Italian descent. Think what sports would be like without Negroes and sons of immigrants. A baseball boxscore reads like the League of Nations. The Fighting Irish of Notre Dame sounds more like the assembly of the United Nations. Even children of immigrants forget the contributions made to America by those who came from foreign shores. They enjoyed the freedoms and opportunities of this country but they also brought something that added to the strength and welfare of our country.

We hope there will never arise the need to call Federal troops to this school to protect the equal rights of children of all races and nationalities. We hope the sacrifice of John Minadeo will remind all of the needs for tolerance and brotherhood—that in this school—children learn together and they learn to live together.

Silver Jubilee of Rev. George P. Benaglia, C. S. C., President of King's College, Wilkes-Barre, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 21, 1958

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader-Evening News of February 24, 1958, commenting on the observance of the silver jubilee of the ordination of Rev. George P. Benaglia, president of King's College:

KING'S JUBILARIAN

The Reverend George P. Benaglia, C. S. C., president of King's College, who observed the silver jubilee of his ordination today, has had an outstanding career in a religious order where ability is the rule rather than the exception.

To serve as president of two colleges, superior of a seminary, and director of a foundation in the brief span of 25 years is impressive recognition for a clergyman, testi-

fying to his executive capacity, his intellectual attainments, and the respect he commands.

Many clergymen and laymen go through life without a comparable record of achievement or even one of the many honors he already has received. Having made this progress approaching his prime, there is no telling what the next quarter century may bring if he is spared to labor in the field of education.

Wilkes-Barre has had the good fortune to have had him for a resident since 1955. In the 32 months he has been at the head of King's, its progress has continued and the next year should witness another forward step when its new building program is launched under his supervision. His zeal is cloaked in a becoming mantle of modesty.

The community will join with the faculty and student body of King's in extending congratulations and best wishes on this important milestone.

The Quiz-Book Program

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include a brief summary of the activities known as the Quiz-Book Program, established by the Temperance League of Ohio, Inc., Mr. Lewis C. Berger, State superintendent. Mr. Speaker, it has been my privilege to attend several meetings of the winners of this program, and it is to be regretted that it is not possible for all Members of the Congress to be in attendance. Regardless of the pro or con on the temperance issue, I am sure everyone who is acquainted with the splendid work of the Temperance League would readily admit that this program makes better citizens for tomorrow. Mr. Speaker, I certainly recommend the reading of the Quiz-Book Program forwarded to me by my very good friend, Mr. Lewis C. Berger:

THE QUIZ BOOK PROGRAM

The Quiz Book Program of the Temperance League of Ohio, Inc., is a unique project for acquainting high school students with the fundamental facts concerning alcoholic beverages. According to Lewis C. Berger, State superintendent of the Ohio League, the plan is now providing instruction for more than 65,000 high school students every 2 years, in 57 of Ohio's 88 counties.

Classroom teaching by the student's regular teacher in a normal classroom situation is the central feature of this program.

The Quiz Book contains the authentic scientific facts about alcoholic beverages. These facts are presented in such a way that the student will realize the dangers in alcoholic beverages both for the individual and for society.

After gaining the approval of the local school administration, Quiz Books are supplied free of charge, in sufficient quantity that each student in the 11th and 12th grades may have one. They are used as text books in regular classes in those grades. The school administration decides the classes in which they will be used and the length of time to be spent on the subject.

Why 11th and 12th grades? Most schools on their own initiative have some temperance teaching scattered through the other grades, and other organizations often provide materials for such teaching. The Quiz Book program provides a summation and a look at the whole problem, individual and social, in one teaching unit.

To whet the interest, a contest feature is provided where it does not violate existing school regulations. By means of local school examinations, and a county examination for local school winners, a boy and a girl winner are chosen in each county where the program is used. The examinations are based on material in the Quiz Book.

The award trip is taken by all the county winners for a given year, traveling together and chaperoned by Temperance League personnel. All expenses are paid by the League to and from the winner's home. Beside providing an interesting and instructive trip just at the close of the school year, the trip provides some additional material of value in the field of temperance. For instance, previous trips have included tea at the Embassy of India, where His Excellency, Ambassador Mehta, has provided information about his country's experience in the gradual introduction of prohibition to that country.

Results: Many students make a decision for personal abstinence, or find a previous decision reinforced, as a result of this comprehensive look at alcoholic beverages and their effect on the individual and society. Probably more than half of the Quiz Book students would otherwise never have a chance at a complete review of the facts.

A second result is just as important. Whatever is done in the future toward controlling the liquor traffic must be done as a result of public opinion, and that public opinion should be rationally formulated on the basis of the known facts. As a result of the Quiz Book program, thousands of young people reach voting age every year having had access to such facts.

Jobs After 40

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a resolution adopted by Blackhawk Aerie, No. 952, Fraternal Order of Eagles, of Galena,, Ill., my home city. May it be properly referred to the Committee on Education and Labor, the committee having jurisdiction:

Whereas the Fraternal Order of Eagles is engaged in a nationwide "jobs after 40" campaign to eliminate age discrimination in employment as an unwarranted practice which is depriving many thousands of physically sound, skilled, and experienced workers of the means of a livelihood, and which is resulting in a tragic waste of manpower in the American economy; and

Whereas there is now pending in the United States Senate bill S. 3188, introduced by Senator RICHARD L. NEUBERGER, and cosponsored by nine other Senators, "to prohibit discrimination because of age in the hiring and employment of persons by Government contractors; and

Whereas enactment of such proposed legislation would provide employment for many competent workers now barred by age discrimination, and would set an inspiring example by Government for all industry for the adoption of similar policies: Now, therefore, be it

Resolved, That Galena Aerie of the Fraternal Order of Eagles hereby goes on record for support of bill S. 3188, and urges enactment of this pending legislation into law.

Adopted by Blackhawk Aerie, Fraternal Order of Eagles, on February 12, 1958.

LURAS E. WIENEN,
Worthy President.

Attest:

JOSEPH D. FEELEY,
Secretary.

Crusade for Peace

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MORANO. Mr. Speaker, I would like to take this occasion to introduce into the RECORD, a very remarkable statement by His Excellency Manuel A. De Moya, ambassador of the Dominican Republic to the United States, on the 114th anniversary of his country's national independence. Ambassador De Moya's statement is particularly remarkable for its evidence of his country's genuine spirit of friendship for the United States and its concrete expressions of desire to make the free world alliance a working partnership. If all of our allies were as sincerely cooperative and equally dedicated to our common problems, the United States would face the future with but little trepidation. Ambassador De Moya's message is one of great meaning which I hope will be studied by all who are genuinely interested in the problem of international cooperation. The United States has an obligation to translate into concrete action the generous offers of assistance and aid made by the Government of the Dominican Republic:

STATEMENT BY HIS EXCELLENCY MANUEL A. DE MOYA, AMBASSADOR OF THE DOMINICAN REPUBLIC TO THE UNITED STATES, ON THE 114TH ANNIVERSARY OF HIS COUNTRY'S NATIONAL INDEPENDENCE

The close bonds between the Dominican Republic and the United States which make our two countries truly good neighbors; nay, even more, real partners, cause the people of this Nation to rejoice with the people of our fair land on this, the 114th anniversary of the Dominican Republic's independence. Just as the American people share in our commemorating freedom's birth in our land in the year 1844, we too share in the joys of the American people. I wish, therefore, to devote a few words on this day of general rejoicing among Dominicans to two events in the United States within these recent weeks which have filled with joy and hope not only the hearts of the people of this country but also those of the Dominican people, as indeed of all the freedom-loving peoples of the world.

The first of these things, the successful launching of Explorer on its awe-inspiring trek through space, has brought to our lips prayers of thanksgiving to Almighty God for the power He has given the United States, the free world's No. 1 leader and that Nation to which we look not only as a mere good

UNIVERSITY OF MICHIGAN LIBRARIES

neighbor and partner but, frankly, as a big brother.

The other event upon which I look with rejoicing is President Eisenhower's having outlined in his state of the Union message a few weeks ago, a broad and concrete program for increased allied cooperation toward the goal of world peace. President Eisenhower proposed not only stepped-up military preparedness but called upon the Congress and the people of the United States to share their bounty unselfishly with their neighbors and friends in the free world. The President not only proposed continued financial assistance and military cooperation but he again demonstrated his genuine understanding of the weapons of peace. His overall program for waging total peace contains many dynamic and ingenious new proposals. One recommendation calls for the extension of the atoms-for-peace plan to a more inclusive science-for-peace organization. This holds great promise to the world for uniting the energies and talents of man and directing them toward the solution of the common problems of disease, poverty, and famine.

Both as an individual and as my country's Ambassador to the United States, I want to record my hearty and unstinting endorsement of the President's proposals. Believing that his proposals will be translated into action, I feel that we can all look upon the future with less uncertainty and less fear than before the state of the Union message.

The free world has been given a concrete outline of the United States' plans for waging total peace. In every capital of the world, the President's address has been studied and analyzed for its meaning to each particular country and its implications for the concert of free nations. Once again President Eisenhower has raised high his standard. He has indicated clearly his course, and has sounded a call to united action. Will the partners of the free world alliance respond selflessly and wholeheartedly to this clarion call? It is my fond hope that the allies of the United States will not merely tag along, but will take action to make themselves equal partners in deeds as well as in name.

One may ask, What action is there for us to take? My answer is that within the framework of the President's program there are innumerable opportunities for any nation to step forward and make a meaningful contribution toward the implementation of this program. Free world cooperation can be an actual crusade if each member nation of the alliance exercises its resourcefulness and initiative in spontaneous action. Without waiting for further prodding by the United States, we each can take steps toward the so needed pool of scientific information, knowledge and talent. Each country should look to its own scientific community and make an early determination of the action that is necessary for a greater cooperation between their native talent and its scientific counterparts elsewhere.

Rather than build our military establishment upon United States subsidies—a thing I am proud to be able to say the Dominican Republic has not done, each nation should follow the United States' lead in sensible economic planning in the best interest of military strength and international security. Uppermost in any such planning is the maintenance of an economic balance which will insure national security. In this connection I should like to call attention to the very poignant remarks of the able and distinguished Assistant Secretary of State for Latin American Affairs, the Honorable Roy R. Rubottom, in a January 14, 1958, speech in Miami:

"Now we recognize the need to maintain forces adequate to provide internal security and for the mutual defense of the hemisphere. The problem for any country, of course, is to determine how much is necessary to spend for these purposes. It might be argued that unnecessary expenditures play into the hands of Communist propagandists. Conversely, therefore, spending on productive private industrial capacity or public work would improve standards of living, thereby helping to develop a fundamental and lasting immunity to Communist subversion."

The President has asked for an expanded and more enlightened world-trade program. In so doing, he would be calling upon United States manufacturers to take a realistic look at their protectionist policies in the interests of the well-being of other nations' economy. Each country of our great alliance should impress upon its domestic producers the need for such a reevaluation in the interests of the strength of our concert of nations.

As has been the case in the last 10 years, the American people have been asked to provide extensive mutual aid and I accent the term "mutual." My accenting the term "mutual" relates only to the source of the aid. I do no mean to imply that the United States has not realized cooperation and added security from the contributions made by the recipient countries. However, there is no reason why the United States today need be the only source of assistance.

Fortunately, as a result of the American program, many of the free-world countries are in a state of economic balance and many have surpluses. It behooves each country to follow the United States leadership in assisting our less fortunate brethren. Let each country which is able to do so join the United States in aiding their less privileged friends. Such an idea would foster a more realistic spirit of cooperation and would stimulate individual national enterprise and initiative.

In determining any method for country-to-country assistance, it would be well to examine the changing nature of United States aid. During the last session of the United States Congress there was brought into being the Development Loan Fund which will make available governmental loan guaranties to support and encourage American private investment abroad. Not only is this a more intelligent economic approach to the needs of the free world, but the very theory underlying this program will stimulate the expansion of free enterprise which is the fountainhead and bulwark of the capitalist system. I know that this country's allies were comforted by President Eisenhower's new recommendation for a more extensive use of this fund. In his message, the President dealt with the fund in the following manner, and I quote:

"In proposals for future economic aid, I am stressing a greater use of repayable loans, through the Development Loan Fund, through funds generated by sale of surplus farm products, and through the Export-Import Bank. While some increase in Government funds will probably be required, it remains our objective to encourage shifting to the use of private capital sources as rapidly as possible."

It is my firm belief that the principle of mutual economic assistance, relying to a great extent on private initiative, will be well received by the nations of this hemisphere, and there can be no question of its need in certain areas in the American Republics. I have long felt that the most important single factor underlying national stability is economic strength. I can cite the experience of my own country which achieved political, social and military soundness as a result of economic vitality.

In 1930, when Generalissimo Trujillo was elected to the Presidency of the country, he fell heir to an impoverished land which had been torn by civil war for 80 years. Our national budget was a scant $8 million; today it is $150 million, the highest figure in all our history. Whereas we had before only three highways, today our entire territory is crisscrossed by modern roads, highways, and parkways. Likewise, hospitals and dispensaries which formerly could be counted on the fingers of one hand have multiplied so that adequate medical facilities are available in every nook and cranny of our land. Prior to 1930 illiteracy weighed down the efforts of our citizenry to improve their social and economic lot; today, with schools numbering thousands, we are well on our way toward its complete eradication and a true reign of culture. Our industries are thriving; and whereas formerly our population had to depend upon imports to satisfy its basic needs, today we are an exporting country.

There is no question in the minds of all Dominicans that largely through the efforts of Generalissimo Trujillo we have come in a short period of 27 years from chaos to stability, from war to peace, from poverty to prosperity. Little wonder, then, that all Dominicans continue to look to this man for leadership and guidance.

In short, the standard of living of the Dominican people spirals upward at a steady pace. As night follows day, national stability is the inevitable consequence of a thriving economy.

In this era of necessary interdependence between nations, it is in the interests of all countries to achieve uniform stability throughout the alliance. In my country our solid economic base has made it possible to raise the standard of living of our people, provide for a well-organized military, and assist the less fortunate citizens of other countries who have sought refuge in the Dominican Republic. In this regard we are justly proud of our foreign colonization program. One of the first groups to whom we gave refuge consisted of German and Austrian victims of Nazi persecution. Many of this group were Jews. In addition, there are colonies of Japanese and Spanish, and more recently a group of refugees from the Communist rape of Hungary settled in our land. All of these diverse nationalities are free to pursue their lives unhampered by discrimination or religious intolerance. This is but another example of what a country with a favorable economic balance can do for its neighbors and allies.

President Eisenhower, the architect, builder, and leader of the crusade in Europe has now designed a worldwide crusade for peace. A crusade is defined as a remedial enterprise undertaken with zeal and enthusiasm. A crusade is thus distinguished from other undertakings of man not by the objective of the endeavor, but by the manner of achieving the result. Free-world cooperation will never justly earn the appellation "Crusade for Peace" unless each participant approaches the common tasks with zeal and enthusiasm. The latter qualities are not usually associated with the act of following, but rather are singularly and noticeably associated with leadership. Each of America's allies should thus be persuaded to join her in the ranks of constructive leadership as an equal partner in the crusade. Should this come to pass, it cannot fail to change the national mental attitude of the allies toward the alliance, and breathe new vitality into its soul. The responsibility of leadership is both self-satisfying and productive of creativeness and ingenuity not found among those who follow. The cause of world peace will be immeasurably served by the selfless sharing of all allies in the many responsibilities of free-world leadership. The first test of allied response to this great challenge now confronts us. Will we, America's friends, neighbors, and allies, become her brothers, helpmates, and partners in implementing the President's crusade for peace?

I should also like to touch upon the military aspects of President Eisenhower's call for increased allied cooperation. It is heartening to the United States allies to learn

that this country no longer doubts or questions the value of, or the necessity for, utilizing the military strength of its friends. While we can never hope to match the United States military contribution, we can take pride in our participation and in its recognition by this country. As the President stated in his message, and I quote: "We are not alone. * * * because we are a part of a worldwide community of free and peaceful nations, our own security is immensurably increased."

In practical terms, what have the nations of the Organization of American States to offer America? I say that a secure Western Hemisphere is the basic requirement of American military security. The United States, through treaties and agreements, has established a far-flung and intricate system of military bases. What doth it profit the United States to arm Formosa, Okinawa, Spain, Iceland, if the Communists are successful in securing a base of operations in this hemisphere? Even assuming for the moment that the Communists cannot achieve this objective, the fast-developing Soviet military establishment has other means of bypassing United States overseas bases. We all know that in recent months the huge Russian submarine force has been deploying units throughout the Atlantic and Pacific approaches to this hemisphere. It is imperative for our mutual security that the island nations of the Caribbean and the other countries of the Organization of American States be closely and wholeheartedly alined with the United States.

The Dominican Republic has given of its sovereign territory bases for American missile and radar tracking stations. We have done so without seeking monetary compensation. In practical terms we realize the mutual benefit and need of such cooperation.

The ever-increasing military potential of the Soviet Union is not just a threat to the United States, but menaces our way of life if not indeed our very existence. The godless monolithic Soviet state with its all-pervading singleness of purpose can only be thwarted by a unified, genuinely interlocking alliance.

I am sure that I speak for all the Organization of American States nations when I say that we must and will generously and completely cooperate with the United States and all our neighbors in the interest of the continued freedom and security of this entire hemisphere. I hope that each sovereign member of the Organization of American States will respond eagerly and constructively to President Eisenhower's militant call for unselfish and unequivocal economic military and social cooperation among the nations of the free world. To wage total peace in order to avoid total war requires total cooperation among the enemies of the Red scourge. The crusade for peace awaits the crusaders.

Warning Given on Japan Dishes

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following clipping from a San Francisco paper of February 14, 1958, which I think is of interest in view of the reciprocal trade legislation which will be coming up shortly:

WARNING GIVEN ON JAPAN DISHES

The State health department yesterday urged caution in the use of imported Japanese dishes following the disclosure in Berkeley of two cases in which acid foods caused the brightly colored glaze to come off.

Although no illnesses were reported, Dr. Alvin R. Leonard, the Berkeley health director, warned that the accidental consumption of the glaze could possibly lead to lead poisoning. Symptoms include nausea, vomiting colic and diarrhea, he said.

He advised that suspected dishes be tested by immersion in white vinegar for at least 48 hours.

The dishes discovered in Berkeley, he said, came from a shipment from Japan in which the glaze was not properly fired to enable it to withstand usage. Applesauce and jello, he said, caused the glaze to disintegrate.

The State health department, advised that the dishes are available in many stores throughout the State.

One Remedy for the Recession

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 24, 1958

Mr. LANE. Mr. Speaker, how about supplies in reserve—by way of insurance—for civil defense?

There is a very small core of officials and volunteer workers who have organized to bring order out of chaos, and to provide relief services in the event of an enemy attack, but what have they got in the way of tools and supplies to do their job?

Some foreign observers have noted that Americans blow hot and cold. They recall the public's demand for an all-out space program to overcome the Russian's lead when the sputniks first orbited over our heads. But the public seems to have forgotten about this serious challenge, in its worry over unemployment.

Civil defense has long suffered from this lack of sustained public interest in its responsibilities and its needs, even though all of us would look to it for guidance and help, if we should be hit by a devastating enemy attack.

Civil defense must have a backlog of supplies that it can mobilize to take care of such an emergency.

Now is the time to prepare, and have that strength in reserve so that it will be ready, if needed.

The Evening Tribune, of Lawrence, Mass., aware that the Federal Government must take action to halt the decline in economic activity, makes the excellent suggestion that the Government should stockpile materials for Civil Defense, and in doing so, help to stimulate business and employment.

Under unanimous consent, I insert in the Appendix of the CONGRESSIONAL RECORD the following editorial from the February 18, 1958, issue of the Evening Tribune:

ONE REMEDY FOR THE RECESSION

If the powers that be in Washington are looking for a way out of the current recession, they might take a long, careful look at civil-defense stockpiling. It would help business and it would bolster employment.

The Federal Government is now spending about $40 billion a year on the military forces. It already has accumulated more than $7 billion worth of strategic and critical materials. Why not, then, other vast stockpiles to insure America's survival in the event of nuclear attack?

Survival, relief, and rehabilitation constituted a commonly used term not long ago as our military experts analyzed Russia's potential strength on land and sea and in the air. Then it died down as a summit meeting possibility, instigated by the Soviet top brass, entered the limelight.

The United States has been caught flat-footed many times in history. In the event of an attack upon it, there would be an immediate need for products and services essential for survival and relief. These would include food, water, shelter, and medical and sanitation supplies and equipment. Vast emergency engineering activity would be required for any number of essential projects. And in such an effort, the Nation would be forced initially to rely upon whatever resources survived attack.

Measures to decrease vulnerability to attack, and to increase ability to retaliate promptly, reduce the probability of attack. But only readily usable resources will be of consequence in the period immediately following a nuclear attack. In the recovery and rehabilitation period, stocks of strategic and critical materials would be of great value, especially because they represent stockpiled power, man-hours, transportation, and facilities.

If existing resources are not adequate, especially those which would take a long time to produce, positive steps should be taken to augment them, with Government assistance if necessary.

Sputnik and American Science

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 5, 1958

Mrs. GREEN of Oregon. Mr. Speaker, I have spoken before of the need for adequate, immediate support of basic, scientific research. It is a topic which cannot be too greatly emphasized or repeated.

There has recently come to my attention a paper entitled "Sputnik and American Science," prepared by Vernon H. Cheldelin, director, science research institute, Oregon State College. Professor Cheldelin sets forth with great clarity the challenge which faces America today in this field. I commend especially to the attention of my colleagues the graphic analogy drawn by Professor Cheldelin when he states:

Our technology has provided us with bigger and better pipes to draw off the water, and we have gone to the well so often that our reserves are nearly used up. What we need urgently now is a corps of well diggers, to provide us with new basic research information. It will be a long-range, continuing job and these diggers must be permitted to stay in the well to complete their work, without having to climb out every few minutes to deliver a pitcher of water to the

UNIVERSITY OF MICHIGAN LIBRARIES

corner drugstore or the local chamber of commerce.

Under unanimous consent, I insert the full text of Professor Cheldelin's paper in the CONGRESSIONAL RECORD:

SPUTNIK AND AMERICAN SCIENCE

(By Vernon H. Cheldelin)

The 1957 world series differed from all others. Not only did the Yankees lose, but the series also had to share the headlines with Sputnik I. Its appearance over America came as an unwelcome surprise, although its design had been described last June, and its signals were broadcast on the frequency previously agreed upon among the nations participating in the International Geophysical Year.[1] The initial surprise had barely begun to subside when we were jolted by the appearance of Sputnik II, with over half a ton of pay load hurtling above the earth. Then, if we needed further convincing that the Russians have scored an important technological advance, it was provided by the subsequent frustrations in our own satellite program. Even now, with our Explorer successfully launched, it is clear that we can no longer explain away Russian progress with the thought that they stole the information from us. For the first time since World War II, we are being forced into a complete reappraisal of our technology, our science, and our position in the world.

Americans have been asking themselves what is wrong. Certain immediate answers are obvious. Russia has caught and passed the United States in at least one area of technological achievement. Moreover, anyone who has cared to observe has seen this situation developing. Although exact figures are hard to obtain, it has been evident for several years that the annual production of engineers in Russia has consistently exceeded ours, aproaching double our number by some estimates.[2] The disparity has been made worse by the Russian emphasis on military development, while we have dispersed much of our technological potential into raising our standard of living.

Another fact, of even greater consequence, has emerged during recent years: our position in basic science is also in jeopardy. This distinction is not appreciated by most Americans, for we tend to confuse science and technology, regarding them as a single activity. Actually, basic research in science is the long-range, factfinding process that seeks to formulate general truths and laws, whereas technology involves the application of these truths to specific processes or inventions. Without basic science there can be no sustained technology; science is to technology what the fabled goose was to the golden eggs (no pun intended). Valuable as these eggs are, we are dazzled by them to the point that we forget the welfare of the bird—or even that she exists at all.

A few examples will help to crystallize the differences between basic research and applied research or technology. We may classify research problems into three groups, depending on the degree to which they are basic or applied in nature.

In the first, or applied group, the goals and the uses for the anticipated results are so direct, and the problems so clear-cut as to be immediately appreciated by everyone, with or without scientific training. Examples might be the growth of hybrid corn, the screening of anticancer agents, or the development of heat-resistant metal alloys. Problems in this class range from the most pedestrian ("50 years of continuous research have made our corned beef hash the world's greatest") to some that are very large and costly, such as the development of rocket fuels and missiles.

The second, or intermediate category finds the goals still clearly defined, but the road is generally recognized only by experienced scientists and technologists. In effect, the researcher says, "Yonder is our goal; this is the way we can reach it." Examples in this group would include such studies as the behavior of impurities in germanium crystals (which form the basis of transistor units for radio and telephone communication); or the nutrition of yeast and lactic acid bacteria (which has indirectly provided us with much of our modern information on vitamins and amino acids essential to life); or the structure of the nuclei of living cells (to the aid in the study of cancer).

The third, or truly basic, group includes such research as the formulation of Einstein's theory of relativity or Fleming's discovery of penicillin, where even the most experienced scientists cannot tell at the outset of their searches exactly what they will discover. These represent master explorations, where, as in the days of Lewis and Clark, the principal assignment is to chart the unknown, with the full confidence that whatever is discovered will be of value. Since the scientist is here working in virgin territory, the exact goal in this type of research cannot usually be defined. Who, for example, could have anticipated the connection between the theory of relativity and the atomic bomb? Or the birth of the antibiotics industry prior to penicillin's discovery? In both cases, we see the scientist making an unexpected discovery, realizing its implications, and making the results available for technological development.

It should be evident from the foregoing examples that all three types of research are essential to a nation's development. Yet, when the character of our national research effort is examined, it is apparent that the United States has historically been a leader in the applied, or technological area rather than in basic science. At least 90 percent of the money spent for research in America today goes into the first (applied) group above.

American technology has contributed to our preeminent position in the family of nations by making undreamed of advances in the quick application of basic scientific discoveries. With this emphasis on the applied side of science, we have produced the Edisons, the Fords, and the Firestones but have left the slow, painstaking gathering of basic information about the mysteries of nature to others—chiefly Europeans—so that they have developed the Newtons, the Darwins, and the Einsteins. Although there have been some notable exceptions, America has until very recent times been a "borrower" nation with respect to science, preferring instead to exploit the basic discoveries and build them into our industrial might. Valuable as this was, we nevertheless lagged for many years in the development of a powerful coterie of basic researchers. Compared to Europe, scientifically we have been in somewhat the same position as in the fine arts—the world's greatest consumer, but somewhat short on production.

Why did we not excel in basic science? Mainly because we never needed to. The laboratories of the European universities have for several centuries provided the world with basic discoveries, so that it has been consistently possible for us as a nation to reap the quick benefits of industrial application. Now, however, within a generation Western Europe has suffered two devastating world wars, with corresponding setbacks to her laboratories and her halls of learning. America thus finds herself in the new role of being not only the leading consumer of scientific ideas, but of having to produce new ideas to feed her own technology. In the relatively few years that have seen this transformation, we have not yet learned how to create the atmosphere that is necessary for the best development of pure science.

This transformation is difficult for us as a Nation. For one reason, our technology is too close to our science. The demands for technological advances travel so hard upon the heels of scientific discoveries that it has been frequently remarked that today's laboratory developments are already obsolete. Our agricultural, industrial, and military machines, and our medical arts have so accelerated their ability to transform the wonders of the test tube into mass-produced items for popular consumption that the scientists themselves do not have the opportunity to reflect deeply upon the problems that concern them. Indeed, they are often working with split personalities, one in the test tube, the other in the production plant. While the rapid development of scientific advances is both laudable and necessary, nonetheless the demand upon the research scientists to bring out results ever more quickly, has created a high-pressure type of atmosphere that is not conducive to the development of long-range ideas.

This symptom is manifested in other ways. Modern popular emphasis on the importance of science and technology generally stresses the applications, because these are more easily understood. The public, including the youths in our schools, has become increasingly aware of stereophonic sound, wonder drugs, and better things for better living through chemistry. Yet, useful as these things are, they give a distorted perspective to many young people whose natural curiosity might, under certain circumstances, lead toward studies of long-range problems, but who instead are diverted, usually through richer financial rewards, to the type of research where the dollar is always visible at the bottom of the test tube.

What, then, needs to be done? As a short-range consideration, several logical steps are seemingly being taken. The President has called conferences of scientific leaders throughout the country, and a science "Czar," Dr. James R. Killian, has been appointed. For the intermediate range, there will undoubtedly be Government funds diverted toward scholarships for worthy students, and for summer institutes, conferences, and other special training for college and high-school science teachers. For the longer range, we note widespread consideration of enrichment of school curricula to include more subject matter, particularly in mathematics and science.

All of these measures are important. Yet they are designed mainly to reinforce our technological potential. If science is to be aided over the long range, America must first realize and act on its position with respect to basic research. Scientifically, we are like a community that depends upon a well for its total water supply. Our technology has provided us with bigger and better pipes to draw off the water, and we have gone to the well so often that our reserves are nearly used up. What we need urgently now is a corps of well diggers, to provide us with new, basic research information. It will be a long range, continuing job and these diggers must be permitted to stay in the well to complete their work, without having to climb out every few minutes to deliver a pitcher of water to the corner drug store or the local chamber of commerce. This realization, that basic discoveries cannot be hurried, has long characterized the Europeans, and it is one of the principal reasons that their science has flourished in the past.

The task that confronts America, therefore, is not only to reinforce our technology, but also to expand our basic research effort as rapidly as possible. The extent to which we are capable of doing this is hard to estimate exactly, although comparisons

[1] D. H. Radler, Purdue Research Foundation Publ., 4, No. 2, 3 (1957).

[2] Chemical and Engineering News, 34, 5722 (1956).

with other countries are revealing. Surveys show that during the period 1953–55 the Russian emphasis on basic research was twice our own (14 percent of their total scientific manpower force versus 7 percent of ours).[3] (These figures for basic research probably represent the sum of groups II and III as presented here.) The discrepancy may be even greater now in view of the momentum that the entire Russian program has gained in recent years. England, which has been striving to regain its prewar scientific excellence, is now devoting a full 50 percent of its research effort to basic studies.[4,5] In view of the time required to train scientists (up to 8 years beyond high school) it would seem that a doubling of our basic research effort should be the immediate minimum goal. Based on the cost of the program in force in 1954 ($435 million), the additional bill for such an expansion would probably be about half a billion dollars per year—a small amount considering the size of our total defense effort.

Our eventual capacity to perform as well in basic research as we have done in technology will of course be limited by our ability to find and properly train talented young people. Since over half of our able students (those in the top 30 percent of their class) do not now complete college [6] it should be possible to enhance considerably our supply of college graduates through an expanded system of merit scholarships—even allowing for the fact that many who now drop out are women who may be less inclined to pursue careers in science. Beyond this, quality of product can be best insured by improved quality of instruction—through better training of our teachers and through greater attention in our schools to subject matter in the course offerings in many fields, including mathematics and science. The details of an improved education program for American schools are so numerous that they lie outside the bounds of this article, however, it cannot be emphasized too strongly that students entering European universities are at least 2 years ahead of ours in academic achievement. They have had 4 to 6 years of a foreign language, mathematics through calculus, 3 to 5 years of physical [2,7] and biological sciences, plus a heavy dose of literature and the humanities. They are, in short, already educated people, ready to undertake advanced studies in their specialties. Some real attention is imperative in order to shorten this lag in our training, particularly of those students who are able to handle an enriched course of study.

The excellence of European science has in the past included Russia. Contrary to popular American belief, Russian science has always been strong, in spite of the general ignorance of the population in 1918 and in spite of their absence of an industrial machine. What Soviet Russia has done during the past 40 years is to develop a technology to utilize her science. Recognizing this, it is easy to see that Russia is now as well equipped as we, both to advance scientific knowledge and to utilize that knowledge in the expansion of her technological empire.

To return to our initial considerations, the launching of the sputniks was a technological triumph, and the immediate crisis precipitated by them is a technological one. But, again in the light of our earlier discussion, we can develop our new technology only as we discover new basic information—we can draw the water only as we dig the well. We cannot, therefore, afford to enter a scientific race with Russia except on the soundest possible basis—one grounded in fundamental research. The 13 years of cold war that have already passed since 1945 may easily stretch to thirty, and the nation then possessing the advantage will be the one that has had the foresight to invest now in ideas for tomorrow's technological miracles. If in the meantime we can avert a holocaust—and we devoutly hope that this can be done—the dollars spent on basic research today can be viewed in the same light as the farmer views his investment, in seed corn or the lumber company in tree farming, as a true investment, repaid many times over in the market value of our national product. Our country can then continue to enjoy the magic of better things for better living through science and technology, which has come to be such an intergral part of the American dream.

Mr. President, Beware

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Advocate of March 1, 1958. The Advocate is the official publication of the Archdiocese of Newark and the Diocese of Paterson. I know all the Members will be interested in reading the article:

MR. PRESIDENT, BEWARE

Talk about a summit meeting between Mr. Eisenhower and the butcher of the Kremlin waxes and wanes. The more it waxes, the more wary we should become; the more it wanes, the happier and the safer we have reason to be.

It surely must be a demonstration of the earnestness, the sincerity, the depth of our American desire for peace that we should consider even for a moment another meeting between our President and the boss of Communist Russia. One has but to recall the sad, bitter record of such meetings in the past to forecast the complete uselessness—the great danger—of such a conference in the present. Teheran in 1943, Yalta and Potsdam in 1945—the very names bring a blush of shame as we realize how we were taken in, how we betrayed real friends and right principles for pseudogains that quickly vanished from our grasps. The world is still suffering—and will long suffer—from the folly of our participation in those wartime summit conferences.

Later experience indicates all too clearly that we had learned little or nothing about protecting our rightful interests, and about the futility of making—or trying to make—agreements with Communists. In 1953 an armistice was signed at Panmunjon between United Nations and Communist delegates in Korea, to bring to a belated close the war our brave soldiers—for reasons that have never been satisfactorily explained—had not been allowed to win. Almost at once the Reds showed their disdain for their pledged word, their contempt of those who had foolishly accepted it, by steadily increasing their military forces on the northern side of the armistic line, in direct violation of their agreement to the contrary. Only last year did the U. N.—and the United States—show a commonsense reaction to this breach of faith by an equal military buildup in South Korea.

Making still more unmistakably plain the utter uselessness of negotiating with Communists, the Chinese Reds dragged out for more than 2 years (1955–57) the discussions at Geneva relative to the release of Americans taken prisoner in the Korean fighting; at the end exactly nothing had been accomplished. One can but wonder how any patriotic citizen or administration could tolerate such shameful indignity heaped upon us in the guise of diplomatic negotiations; one can but wonder how Thomas Jefferson, Andrew Jackson, or Theodore Roosevelt would have handled a like situation.

Surely, when Mr. Eisenhower contemplates another summit meeting, he cannot be moved to seek one by the memory of any outstanding success he achieved at Geneva in July 1955. For that conference, like every other effort to do business with Communists, was a great mistake which benefited only the enemy cause. A much ballyhooed spirit of Geneva quickly faded in the cold atmosphere of red reality; of practical result, it produced—after 2 long years of discussion—January's agreement on cultural exchanges—an agreement that was made possible largely by our desisting from our rightful demand that the Soviets stop jamming our radio transmission of the very programs we were agreeing should be exchanged. (When, one wonders, will one hear of any concessions made by the Communists in order to reach an agreement?)

The latest (as of this writing) demonstration of the utter unfitness of Communists for decent human society came a week ago from North Korea. There the Reds hijacked a South Korean plane carrying 32 passengers and a crew of 2 Americans, and forced it to land in North Korea. They then used their unwilling guests as hostages in an effort to extort from South Korea recognition of their People's Democratic Republic. This is, indeed, hoodlum diplomacy.

We will do well to remind ourselves who is the prime agitator for a summit meeting. It is, of course, the godless regime of Soviet Russia, whose record of faithlessness in dealing with other peoples is without parallel in human history; whose armed forces in 1956 brutally crushed the aspirations for freedom of the brave Hungarians; whose leaders, without cause or justification, constantly carry on the most outrageous campaign of slander against us; whose agents in this country have enlisted the services of more than 1 million so-called Americans in a nationwide campaign of political subversion.

And why do the Reds want a summit meeting? Surely not for our benefit. Surely not for the sake of any agreement that might result; for the odds are calculated at over 375 to 1 that they will make no agreement, and at 13 to 1 that they will break any agreement they make—and these odds are based on their record of the past 15 years. No, we may take it as certain that they want a summit meeting only for what they will get out of it. In such a conference they see a tremendous propaganda advantage for themselves, especially in the appearance of respectability it will give to their blood-stained and bloodthirsty regime. In it, too, they see a gain for themselves in the relaxation, the optimism which it will induce in the free world, and which may lead us to let down our guard.

That we have at long last reached the end of our patient endurance, and attained a better understanding of the nature of the Communist peril, seemed indicated by Mr. Eisenhower's letter of February 15 to Premier Bulganin. This put-up or shut-up statement of the President is one of the finest American state papers of the last quarter century. It should do much to clarify the thinking of our own people. It should do much, likewise, to begin, at least, to convince the Red leaders that the Alice In Wonderland gullibility of the American people is no more. We pray to God that it may do both.

UNIVERSITY OF MICHIGAN LIBRARIES

This Eisenhower-Nixon Pact More Secret Government

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including an editorial which appeared in the Nashville Tennessean on February 28, 1958, entitled, "This Eisenhower-Nixon Pact More Secret Government." I know that all Members of Congress are interested in a correct and approved procedure for running the Government if the Chief Executive becomes disabled and will be interested in this editorial. It conforms to the remarks made by the Honorable JOHN W. MCCORMACK, the majority leader, in the House some days ago on this subject.

The editorial follows:

THIS EISENHOWER-NIXON PACT MORE SECRET GOVERNMENT

More government by secrecy is revealed in the cozy arrangement between President Eisenhower and Vice President NIXON as to how the Californian would run the Government if his chief should become ill again.

Some others in the official family have been let in on the arrangement, it was explained to a press conference. But the Congress, which has important responsibilities in this connection, and the people are left in the dark. They also should be taken into the President's confidence or know the reason why.

Surprisingly enough, even while making this announcement, Mr. Eisenhower said that the question "is something that Congress should take action on, and I personally think it probably requires a constitutional amendment, if it is going to be clearly corrected."

But because of the buddy relations between himself and the Vice President, he is going ahead on his own. His conscience is clear at the moment, he added, "but I still think it should be handled as something for all future cases."

Despite all this, he has by secret decree said how the question of disability must operate during the rest of his term. And he made it fairly clear that the final decision on when to take over should lie with the Vice President, though he may consult with the Cabinet.

We heartily agree with the President that the Congress has a prime duty in solving this issue, and that body should now see to the taking charge in behalf of the Nation. There is a need to clarify the meaning of the Constitution, which is not a duty imposed upon either the President or Vice President, or both.

Quite obviously, President Eisenhower does not relish a repetition of the situation in September when he was seized with a heart attack. On that occasion Mr. Sherman Adams took over in an unofficial way, with a consequent blow to public confidence. There were signs at the time that Mr. NIXON wanted to be the kingfish, but he was rebuffed both at the White House and the Denver sickbed.

Under the new plan, however, it is planned to make Mr. NIXON a real assistant Vice President with extraordinary powers regardless of what the Supreme Court might later say if this setup were contested.

This would indeed ward off an administrative vacuum, with Mr. Adams happily deprived of his glory. Furthermore, it may be admitted that Mr. NIXON is better equipped for the backstopping role than the present No. 1 aid whose record does not improve under close scrutiny. But the question of legality will not down.

Already the Constitution indicates that if the President is disabled the Vice Preisdent shall take over his duties and powers, but it does not say who shall declare that disability if the Chief Executive is so incapacitated as to be unable to do so. It does not leave such decisions to the Vice President, but able legal opinion supports the view that Congress can end the uncertainties.

Only as a matter of temporary expediency does Mr. Eisenhower defend his new arrangement. What is good enough for him, he concedes, might not be wise for his successors.

"Just place your trust in DICK and me," he seems to say, "and pass a law or amend the Constitution later on. We know our stuff. The secret arrangement is all written down and blueprinted, but it is not the public's business."

If the people are wise—and we believe they are—they will resent this Great White Father attitude and break wide open this strange secret of the Republican high command. They, above all others, have the right to know.

The Struggling Farmer and the Present Farm Program

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a reprint of a radio broadcast, prepared by the public relations staff of Farmers' Union Grain Terminal Association, St. Paul, Minn., on the struggling farmer and the present farm program.

The reprint is as follows:

"When the Farmer's Throat Is Cut, So Is Your Own." That's the title of an editorial appearing in the Lewistown (Mont.) Daily News. It's written by a publisher who is fed up with attacks on farm programs. He says, "Thumbing through a magazine the other day, we noticed an advertisement sponsored by the machine-tool firm, Warner & Swasey, of Cleveland, Ohio. It asked: 'Who is this generous uncle who pays all the bills?' The ad then went on to complain that Uncle Sam is 'going to keep farmers prosperous by having them do less work.'"

Now that didn't set very well with the Montana newspaper, and it had some plain talking to do. "Here, out in the open, is an example of the unceasing campaign being waged against America's farmers and ranchers by the national community of business and industry," the editorial said. "The firm of Warner & Swasey, as most other great industrial firms, will quickly defend the questionable practice wherein the Federal Government grants huge subsidies to industry through quick tax writeoffs in defense contracts. And, these industries which reap quick millions from Government contracts seem to be the very ones which squeal loudest over any assistance extended to the struggling farmer."

The Lewistown publisher says he doesn't find this situation amusing at all. And he adds that he doesn't know the solution to the farm problem. But, he says he does know this: "If the farmer is not prosperous, there can be no sustained national prosperity. Much of the current recession finds its impetus in our depressed farm situation, even as the great depression of the 1930's was rooted in the unsolved agricultural crisis."

Pointing to food costs, this publisher says that farmers are subsidizing the consumers, and not the other way around. "In this situation," he continues, "we find in Ezra Taft Benson, a Secretary of Agriculture who is well intentioned, but confused, and who appears to be hostile to the very segment of the Nation which he is supposed to represent and serve." With that, the publisher brings the matter right down close to home. He shows what the 22-cent-a-bushel wheat-support cut will mean in his area. He's checked and found that the cut means Fergus County ranchers will lose $651,868 this year, and that Judith Basin County will lose over $310,000. Central Montana can expect to lose $2 million as a result this year of Benson's wheat-price cut.

Then, the publisher turns to business. He says, "There isn't a businessman on Main Street in any community in central Montana, and most of all in Lewistown, who will not feel this pinch." As he puts the matter, "In Montana and in many another State, the price of wheat is the economic lifeblood."

We wish we had time to read you every word of this important editorial, but we don't. What we've given you are just a few of its highlights in telling the story of the vital stake business has in farm prosperity. It's good to see Main Street measuring up its tight relationship with agriculture, and setting out to do something about improving farm prices.

Address by John S. Gleason, Jr., National Commander of the American Legion

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mrs. ROGERS of Massachusetts. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following address:

ADDRESS BY JOHN S. GLEASON, JR., NATIONAL COMMANDER OF THE AMERICAN LEGION, AT THE 35TH ANNUAL NATIONAL REHABILITATION CONFERENCE OF THE AMERICAN LEGION, WASHINGTON, D. C., FEBRUARY 27, 1958

Chairman Bob McCurdy, Members of the Congress of the United States, distinguished guests, and my fellow American Legionnaires, tonight climaxes one of the most inspiring and memorable weeks in my entire life. The opportunity to meet with the Members of Congress, Government officials, military leaders, and other outstanding Americans who have honored us with their presence here tonight is always a great privilege. When to this experience is added the rich and heart-warming association with the finest group of veteran rehabilitation and service officers anywhere in the world, the occasion becomes a truly unforgettable moment in my life.

In years past it has been customary for the national commander, in his address to this banquet, to highlight the principal problems confronting the American Legion in the field of veterans rehabilitation. Tonight, however, I would like to deviate a little from tradition, for this reason.

After our appearance on Tuesday morning before the House Veterans' Affairs Committee, there is no member of the American Legion who had the privilege of attending that hearing who now has the slightest doubt as to how the members of that vital congressional committee feel about the veteran-benefit program.

We salute them for their courageous and informed defense of America's war veterans.

If we came here to Washington confused and concerned about expected attacks on veteran benefits, we are returning home confident and certain that the Members of Congress who know the needs of America's veterans and who have the heavy responsibility of fashioning the program to meet these needs fully and fairly are in the American Legion's corner.

Equally important, the American Legion is in their corner, too.

If they are willing to stand up and be counted the veteran's friend, then the American Legion must and will support them in the fight to preserve inviolate the present sound structure of veteran benefits.

There may be some who feel that if we can defend successfuly what we now have, we will have won a substantial victory. They are right to this extent only. The forces behind the expected attack on veteran benefits are powerful and influential. They are well organized and well financed. To defeat them will require our continued vigilance and effort, and will represent no small achievement.

Nonetheless, I submit that there is no victory in standing still. Especially is this true when conditions demand bold, decisive action, for example, to resolve the growing shortage of vitally needed VA hospital beds.

You service officers live with this mounting crisis. You know far better than I the number and kind of VA hospital beds needed now in your own communities and departments. But the address of Harvey V. Higley, former Administrator of Veterans Affairs, to our national convention in Atlantic City illustrates the growing gravity of this problem.

He noted, for example, that a 1,000-bed mental hospital is needed right now in Gainesville, Fla., and 250 additional general medical and surgical beds each for the VA hospitals in Bay Pines and Coral Gables, Fla. A 300-bed general medical hospital is needed to handle the increasing veteran population in southern Texas. Southern California urgently needs 500 additional general medical beds to care for its rapidly expanding veteran population. A 500-bed neuropsychiatric addition is required at Montrose, N. Y., while 250 additional general medical and surgical beds each are needed for the VA hospitals in New Orleans and St. Louis.

The examples I have cited, and they by no means cover all problem areas, reflect an immediate need for 3,300 new VA hospital beds.

The American Legion is confident that the Congress will act to resolve this crisis. But we are also certain that the Budget Bureau, if it follows past practice, will attempt to delay construction of necessary and authorized hospitals.

Such unwarranted and inexcusable Budget Bureau interference with the expressed wishes of Congress of the United States can no longer be tolerated. It has jeopardized not only the VA hospitals and medical program, but the authority and functions of the Veterans' Administration itself.

This is no exaggeration. The proposed VA budget for hospital and medical care, including construction and maintenance, for the fiscal year beginning next July 1 proves this. To save $6 million the Budget Bureau ordered a reduction of 1,000 tuberculosis beds in the average daily patient load. It is bad enough when this reduction must be made in the face of a rising incidence of TB in this country. But when it becomes an insufferable if not illegal usurpation of the constitutional powers of the Congress of the United States, then something must be done.

Despite the fact that the Congress has not yet had an opportunity to act on the VA's budget for the next fiscal year, the VA will have to begin shutting down TB beds on the 1st of April—just a little more than a month from now—to accomplish the directed savings.

To me this development dramatically demonstrates that the Budget Bureau has already decided what the Congress will appropriate for the VA hospital and medical care during the next fiscal year.

We, in the American Legion, seriously doubt that the Congress appreciates having its work done for it by the Budget Bureau. And we hope that you Senators and Representatives here tonight and your colleagues in Congress will take the first opportunity to let the Budget Bureau know how you feel.

The American Legion will back your hand.

Our effectiveness in supporting your effort to preserve and improve, as necessary, the present program of veteran benefits will be determined, to a great extent, by our membership strength. We know this, just as we know that the key to the success of the many positive and necessary programs carried out by the American Legion independently of the Government is membership.

We could not have this national rehabilitation conference, we could not maintain our second-to-none veterans' rehabilitation program without the strength in numbers and dedication of nearly 3 million Legionaires. And the same is true of our child welfare program, our program of national security, and such positive Americanism programs as American Legion junior baseball, Boy's State, and the oratorical contest.

If we are to remain a positive force for good in America we must maintain our membership strength. If we are to grow in our ability to meet the increasing needs of a growing America, we must have more members.

To help stabilize our present membership and strengthen the foundation for the future growth of the American Legion, our national executive committee, at a special meeting here in Washington last Saturday, authorized the establishment of a group-insurance program for our members.

Underwriter for this tremendous new privilege and opportunity for Legionnaires is the Occidental Insurance Company of California. The First National Bank of Kansas City, Mo., will be the trustee, and your national headquarters will administer the program.

I am not going to attempt to go into detail tonight and to explain how the program will operate, the benefits it will provide, requirements for participation, and other vital features of this plan. This essential information will be prepared and distributed to every Legionnaire as soon as possible.

For now, however, I would like you to know and to bring back home these essential facts about this group-insurance plan.

It is entirely voluntary. It is low-cost. The premium will be only $12 a year. In order to particiapte in the plan, an individual must be a member in good standing of the American Legion. To retain a policy, the individual must remain a Legionnaire.

I cannot predict what impact this plan will have on the future membership picture in the American Legion. But I can tell you this. We have received literally hundreds of calls in the Washington office since Sunday morning when the story on the adoption of the plan first broke in the Nation's press. And a substantial number of these calls were from eligible veterans who have not joined or no longer belong to the American Legion. They are interested in this plan. I am sure you are too.

If this plan encourages Legionnaires to renew their membership before the beginning of a new calendar year so that they will remain in good stand and thus be able to retain their group insurance, then it will have contributed tremendously to the strength of the American Legion. We will have enrolled our quota for the new year before the year ever begins. With this time-consuming difficult, and demanding task out of the way, we can concentrate on building the programs and privileges the American Legion offers our Nation and its war veterans. And if we can do this our membership problem will take care of itself.

There is another problem, however, of deep concern to the American Legion which will not take care of itself. That is the increasingly serious problem of unemployment.

Tonight, at this very moment, there are nearly 1 million veterans, including many American Legionnaires, in desperate need of a job. They have known the suffering and hardship of the battlefield, but I am certain that their present plight is far, far harder to bear. And for a very good reason. Now their families and loved ones are involved.

During the war, America's veterans, through their service and sacrifice, safeguarded and sheltered their wives and parents, sons and daughters. Now, those whom they would protect above all others, have been hit and hurt by their unemployment.

The man able to work but unable to find a job that will enable him to feed, clothe, and shelter his family knows a fear infinitely more demoralizing and destructive than anything he ever encountered on the battlefield.

A powerful enemy could not defeat him. But an impotent economy can.

We have to help America's jobless veterans somehow—and soon.

You and I, individually and as part of a concentrated post effort, must try to find jobs wherever possible for unemployed veterans in our communities. We must spearhead the drive for intensified interest and effort on the part of Government agencies and civic organizations in our communities to lick the unemployment problem. If this isn't enough, and it may well not be, then the American Legion must trigger into action the full resources of our Government to help jobless veterans find work and an end to their mounting despair.

This is veterans rehabilitation in the most fundamental and humanitarian sense of the word, for the finest kind of rehabilitation for any man is a full paycheck.

America's unemployed veterans don't want a handout. They don't want charity. They want to earn their own way. They want the dignity and pride, the sense of accomplishment and satisfaction that comes from honest, hard work.

If it is necessary to create such work, then this must be done. And if it is done, it must provide not only work for qualified veterans but lasting benefit to our Nation as well.

In my opinion, one of the most necessary and constructive employment-producing programs the Government could undertake would be to build the Veterans Administration hospitals needed by thousands of America's sick and disabled veterans.

Such a construction program would provide jobs for experienced, skilled veterans, and hospital beds for those in need of adequate medical care.

In serving this purpose and achieving this result, such a program would advance the high ideals and proud record of the American Legion's veterans rehabilitation program.

You service officers have made this program the finest of its kind anywhere in the world. Your dedication to the welfare of our Nation's war veterans, their dependents,

UNIVERSITY OF MICHIGAN LIBRARIES

and survivors, is an inspiration to me as it must be to every American Legionnaire.

We are proud and grateful for your service to the American Legion and to our programs of service for America's veterans. I know that each of you will continue to give beyond measure of your time, your effort, and your heart to our great program of veterans rehabilitation. For you know, as does every Legionnaire, that through this program we consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

Thank you for the privilege of being with you tonight.

Too Many Cooks at the Pentagon

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. PRICE. Mr. Speaker, there was a wartime tale about a messenger boy who entered the Pentagon, wandered lost through its vastness, and was made a colonel before he got out.

If this story were to be told today, it might be that the messenger boy became an Assistant—or at least a Deputy Assistant—Secretary of Defense before he emerged. There is a whole platoon of Secretaries and Assistant Secretaries quartered in the Department of Defense. There has been a multiplication of Secretaries and no evidence that the increase in numbers has been accompanied by an increase in efficiency and creativity of ideas to strengthen our Military Establishment. Many of these Secretaries have the authority to say "No" to proposals; they usually canont say "Yes."

Along with this expansion in the number of Secretaries has come a rise in the number of committees that are supposed to develop plans and advise the top officials. There are over 200 of these committees, many of them with overlapping membership.

A reorganization of the upper reaches of the Pentagon is essential. New developments in weapons, impending decisions about space exploration, and the demands these will make on strategic planning will require an organization capable of dealing efficiently with these problems.

Chairman CARL VINSON, of the Committee on Armed Services, has introduced legislation which would achieve this objective. Among the provisions of this legislation, H. R. 11001, is a reduction in the number of Assistant and Deputy Assistant Secretaries to 14.

The following editorial dealing with the cumbersome organization of the Pentagon appeared in the St. Louis Globe-Democrat February 28:

TOO MANY COOKS AT THE PENTAGON

Like the prophets of eld, Defense Secretary McElroy and some of his top aids repaired to the desert last weekend to discuss the Defense Department. Their soulsearching evidently led them to some firm conclusions.

On his return, Secretary McElroy indicated that the meeting had quashed the idea of a single Chief of Staff to boss the Army, Navy, and Air Force. "I don't believe that that point of view is having predominant attention," he told reporters.

Shortly after, he also announced that he would ask Congress for an extra $1.3 billion—maybe even $1.7 billion—to spend this year. Some of the money would go to buy more B–52 jet bombers and more jet tankers, K–135s.

We hope that the parley also found some way to streamline a Defense Department that has become topheavy.

As the Wall Street Journal pointed out the other day, the Office of the Secretary of Defense alone has grown in 10 years from a staff of about 100 to some 2,400.

We have not only a Secretary of Defense, a Secretary of the Air Force, a Secretary of the Army and a Secretary of the Navy. We also have a deputy Secretary of Defense, 9 under secretaries, 20 assistant secretaries, 13 deputy assistant secretaries, and shoals of lesser civilian brass.

Recent testimony before Congress showed that Navy's Chief of the Bureau of Aeronautics top man for the design and buying of Navy planes, has 107 staff seniors in the Department of Defense. Each and all of them can call him in to explain what he is doing, and review his work.

What compounds the situation is that this jungle of top civilian posts is filled by a succession of men who file in and out as fast as if going through a revolving door.

What is needed is an able, manageable Defense Department—perhaps with its own military planning staff—to set policy, and freer rein for the military services to carry out policy, without being halted at every turn by review committees and study groups that are simply blocks in the path of progress.

The evidence is overwhelming that, as of now, the Defense Department has too many in, out and hold baskets; too many officials reading and initiating reports and staff studies; too many committees studying, reviewing and buckpassing.

As Congressman Price of East St. Louis declared in despair the other day, over the delay in building an atomic-powered airplane:

"We have studied this proposal to death."

That is an inscription that would evidently fit the tombstone of many a Defense Department project.

We hope Secretary McElroy will be guided by the philosophy that 2 heads may be better than 1, but 2,000 heads may be worse than none at all.

Virgil M. Simmons

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. ADAIR. Mr. Speaker, Fort Wayne, Ind., and the Nation, recently lost a leading citizen in the death of Mr. Virgil M. Simmons, who died suddenly while on vacation in Florida. He was widely known and respected, with a very large circle of close friends.

Mr. Simmons was one who believed that each individual owed a portion of his time and talents to the affairs of government—and this, he, himself, practiced.

The Fort Wayne Journal-Gazette, of which he was president and copublisher, had the following editorial, which I ask leave to insert in the RECORD:

V. M. SIMMONS

The entire Journal-Gazette family is stunned with grief and shock today because of the sudden and untimely death of our president and copublisher—V. M. Simmons.

Mr. Simmons suffered a fatal heart attack early Wednesday morning in Fort Lauderdale, Fla., where he had gone to spend a winter vacation.

He seemed in his usual good health when he departed for Florida. His mind was filled with plans for the future of this newspaper.

He was looking forward with eagerness to the date when the Journal-Gazette would move into its new home on West Main Street.

It is hard for us to realize that our warm personal friend, our brilliant and dynamic leader, and our valued adviser on so many matters will be with us no more.

Mr. Simmons was widely known in the State and Nation. He commanded the respect of his wide circle of friends for his outstanding achievements in many fields.

He was a lawyer by profession, who turned first to governmental service, and then to the newspaper business.

Ten years ago, when he became president of the Journal-Gazette, and its copublisher with James R. Fleming, he quickly mastered the fundamentals of journalism. He had brought with him to this important job a wealth of experience.

He regarded the newspaper field not merely a business, but a high calling in public service. He was keenly interested in the welfare of Fort Wayne and the Tri-State area of which it is the center.

Mr. Simmons believed that it was possible to secure the elevation of the Nickel Plate Railroad tracks, when others were filled with doubt. He personally directed the newspaper campaign in the Journal-Gazette which preceded the final success of the elevation which was then Fort Wayne's most important civic need.

Every movement for the growth and betterment of Fort Wayne had his active support. He served on numerous committees to advance worthwhile projects, while supporting them in the Journal-Gazette.

Many of these projects already translated into reality are monuments to his memory.

Mr. Simmons was proud of his long friendship with the late Gov. Paul V. McNutt. He played as big a part as any other individual in making McNutt Governor of Indiana.

He then served under Governor McNutt and Gov. M. Clifford Townsend as chief administrative officer of the Indiana Department of Public Works and commissioner of conservation. Conservation was one of the great interests of his life and the State park system will forever bear the imprint of his wise administration and development.

V. M. Simmons was born in Bluffton, the son of the late Abram and Jennie Mast Simmons. He was educated in the public schools of this city and an Indiana University where he took his bachelor of law degree. He was also a member of the Beta Theta Pi Fraternity.

When just out of law school he was appointed assistant United States district attorney and served for 3 years. He was a member of the law firm of Simmons, Dailey & Simmons for a number of years, until he joined the McNutt State administration. In 1941 McNutt called him to Washington to serve as Administrative Assistant in the Federal Security Agency.

These are just a few of the multitude of activities which filled the life of V. M. Simmons.

He was a lifelong member of the Democratic Party and was gifted in the art of

politics. He served for 18 years as a member of the Democratic State committee.

It was his sincere conviction that when a party came to power it owed the public the best service which it was able to give. That, he held, was the best way to win elections.

He was a frank partisan. He fought the opposition with determination and skill. Yet, when the battle was over, he cherished no bitterness and no ill will.

For many years, no Democratic State convention was considered to have a quorum until Mr. Simmons arrived at the hall. He was also a familiar figure in Democratic national conventions, where he helped to perfect and carry out the necessary arrangements. Naturally, he was personally acquainted with the top figures of the party in the Nation. They liked the smiling, intelligent, accommodating Hoosier.

Now his action-packed career has come to a close—although we cannot bring ourselves to a realization that this is true.

There is widespread sorrow, all the more poignant because everyone regarded him at the height of his usefulness with many years of journalistic and community service ahead of him.

During his 10 years as president and copublisher of the Journal-Gazette this newspaper enjoyed a decade of the widest acceptance in its long history.

Those of us who knew him best can testify to the excellent qualities of his mind and heart. We testify to our affection for him.

No man we have ever known was more devoted to members of his family than our fallen chief. To them we extend deepest sympathy.

The Sporting News Hits the Nail on the Head

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 25, 1958

Mr. KEATING. Mr. Speaker, it would be a serious mistake for Congress to impose strangling antitrust restrictions on national team sports. Most people who understand these games know that any such approach would have drastic consequences.

Legislation I have introduced draws a vital distinction between the business and playing aspects of these activities. This distinction should not be confused by vague and unclear limitations which are nothing more than an invitation to litigation.

The Sporting News, often referred to as the bible of baseball, is an outstanding and respected sports publication. It knows the problems of baseball as few others do and has no ax to grind. The February 26 issue of this paper contains an excellent editorial in support of my basic position on sports legislation.

Under leave previously granted to extend my remarks, I insert this fine editorial.

The editorial follows:

JUST AN INVITATION TO LITIGATION

The Sporting News has nothing but respect for the congressional subcommittee which investigated organized ball and other professional sports in connection with bills designed to fix the status of those sports in relation to the antitrust laws.

But this publication must protest with all the eloquence at its command against House bill 10378, which Representative EMANUEL CELLER introduced late last month as the product of the lengthy inquiries.

We agree with Representative KENNETH B. KEATING, like CELLER a member of the subcommittee, that the bill as now worded invites endless litigation and would make the courts the arbiters of questions which could be settled by more specific language in the bill itself.

Fundamentally, of course, we're opposed to any legislation in this field, unless it would be the bill introduced by Representative OREN HARRIS, which would confirm by congressional action the immunity from the antitrust laws which was given baseball by the Supreme Court decision of 1922 and which the same Tribunal declined to withdraw in 1953.

The most recent inquiry was sparked by the Court's 1957 finding, in the Radovich case, that professional football is subject to the antitrust laws. Football people rightly argued it was absurd to snap the handcuffs on their game, while leaving baseball free to operate as it saw fit.

But why not achieve equality of status by bringing football up to baseball's favored position, instead of taking baseball back to share the gridiron game's distress? And distress it is, in spite of the pending House bill's exemption from antitrust coverage of such procedures and structural features as are reasonably necessary.

Those two words, as KEATING has pointed out, will be the cause of unlimited legal action if H. R. 10378 is passed by Congress in its present form.

Every individual or group with a complaint against professional sports will be able to challenge the reasonableness of sports laws and practices—and challenge them under the very antitrust laws from which the bill professes to give pro sports certain necessary exemptions.

To take a concrete example, would some former players who have filed triple-damage suits against baseball, on the grounds they had been unfairly treated as a result of the reserve clause, be less inclined to go to court if the proposed bill should become the law of the land?

At no point does this bill say the reserve clause is exempt from the antitrust laws. CELLER holds the opinion that the clause is reasonably necessary, but would this view be shared by every judge and jury who might be called upon to decide in individual cases?

CELLER believes the bill gives sports the right to reasonable control over television and radio broadcasts—but the bill actually says only that "the right to operate within specified geographic areas" is exempt from antitrust laws.

Can baseball count on every judge to agree with CELLER'S interpretation?

The language of the bill is far too vague to be effective. What may seem reasonably necessary to one man may seem pitifully unfair to another.

The bill which KEATING introduced is much more commendable on this score. It spells out at least some of the things its author considers reasonable.

But why should it be necessary to bring baseball—twice blessed by the Supreme Court—under the antitrust laws of any basis? Those laws were designed to protect the public interest against abuse by powerful corporations. They were designed, to put it another way, to keep down the cost of living. Is there anything in baseball's laws or practices which defeats either of these purposes?

Granted, there have been inequities. Baseball makes no claim to perfection. But between the authority of the commissioner and the organized influence of the players, it should be possible to work out difficulties within the baseball family. The minor leaguers are not so widely unionized as the major leaguers, but the president of the national association is a man whose integrity has not been questioned.

During such investigations as the Celler subcommittee conducted, much attention is paid—and rightly so—to matters which the Congressmen believe call for correction. But if it were practical to call in all the witnesses who would testify as to the great amount of good baseball has done, a more accurate picture would emerge.

Even without such testimony, the subcommittee must have been impressed by the honesty of purpose and the love of their game expressed by Ford Frick, Will Harridge, Warren Giles, and George Trautman. Convinced of their good intentions, why not give them further opportunity to eliminate what some may consider the "bugs" in the system?

Baseball is beset by many problems. Its leaders need all their time, energy, and mental gifts for the attempt to solve them. They should not be distracted by a law which threatens to keep them and their attorneys jumping between their offices and the courts. They should not be harassed by a legislative policeman, especially one whose duties and authority are so vaguely defined as they are in H. R. 10378.

The Desperate Need of the Newly Independent and Economically Poor Countries of the World To Achieve Fairly Rapid Technical and Economic Development Confronts the United States and Other Developed Countries With One of the Greatest Dangers and Opportunities of Our Time

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 26, 1958

Mr. JUDD. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include an article by Barbara Ward, noted British author and former foreign editor of the Economist, London. The article appeared in the New York Times of February 23, 1958.

The article follows:

THE GREAT CHALLENGE IS NOT THE SPUTNIKS
(By Barbara Ward)

The annual debate on foreign aid is about to begin in Congress; but it has been carried on for so many years, and the arguments in the controversy have been bandied back and forth so repeatedly, that there is real danger of staleness creeping into the whole discussion. Yet this, of all years, is the last in which to give the issue only tepid attention. Some of the ground may be familiar enough. But in two vital respects, the problem has taken on a new aspect and there is now fresh urgency to all the old arguments.

The first point is the scale of the Communists' entry into the field of foreign aid and their evident intention to stay there. In the last 4 years, the scope of loans and barter deals made by the Soviet bloc has steadily widened. From piecemeal offers, they have begun to develop what looks like a generalized strategy.

At the recent Cairo conference organized by the Afro-Asian Communist-front organizations, the Russian delegates took the opportunity to offer sustained aid without strings to all underdeveloped nations. As proof of their intentions, they could point to the $1.9 billion in economic and military aid which the Soviet bloc has pledged since 1955. Meanwhile, the scale of the Russian economy and the number of trained Soviet technicians available for service abroad are steadily increasing. There is thus every reason to suppose that future assistance will be on a steadily expanding scale.

As a general instrument of propaganda, the Soviet offer is designed to influence all backward but ambitious nations—and they include nine-tenths of the human race. If a state of "backwardness" begins where per capita annual income is below, say, $300, very few areas escape. Western Europe, the white members of the British Commonwealth, above North America—where the figure exceeds $1,500—are comfortably beyond the definition. But most of Asia and Africa—and large parts of Latin America—lie at the other extreme; annual incomes per head fall to $50 and below. It is at these levels that the desire to break out of the vicious circle of poverty breeding ever more poverty reaches revolutionary force. It is here that any policy of sustained capital aid from whatever source must find the most eager hearing.

But the specific programs of Soviet aid are not so generalized. They follow a more immediate strategy. Virtually all the nations which have received direct assistance in loans and trade deals lie along the geographical frontiers of Communist power. They have been occasional wider excursions—trade negotiations with Argentina, barter offers to the Sudan—but the bulk of the $1.9 billion has been expended along the periphery of the Communist world, from the Levant through Afghanistan and India and on into southeast Asia.

The nations on this fringe offer the Communists important entry points for both political and economic infiltration. All of them—virtually without exception—emerged from western colonial rule only in the last dozen years. Although Afghanistan, Iran, and Thailand were never formally taken over and Iraq attained a measure of independence in 1932, all the other states were still under British, French, or Dutch control as recently as 1946. To their peoples, the anticolonial theme of Russian propaganda is instantly familiar and, since Russian imperialism never impinged directly on them, the Russian pretense of disinterestedness, of aid without strings, seems plausible to many.

The Communists have, moreover, been able to play on anticolonial sentiment by underlining to Asian opinion the extent to which western aid has been geared to military programs undertaken in alliance with the West. In western eyes such arrangements as the Baghdad and SEATO pacts may look like reasonable local efforts at self-defense. But in Asia, where, in the past, alliances between local states and western colonizing powers often preceded colonial control, it is easy to arouse Asian suspicion that today's alliances could be the prelude to renewed colonial control tomorrow. Russia, in giving military aid, asks for no guaranties or alliances and is thus free to attack the western pacts.

Another Russian asset is the very urgency of Asian economic need. All these states face formidable obstacles. Only two of them—the oil states, Iran and Iraq—have sufficient capital for development. Even they lack trained technicians and adequate, educated leadership. All the others are caught in a dilemma: Their populations are so poor that they can barely save, but saving is the only escape from poverty. In these economies, where the beneficent spiral of saving breeding further saving cannot be set in motion, capital and technical aid are the first aims of policy.

The Russians, who face no annual open debate on the desirability or otherwise of foreign aid, who do not need to stress self-interest to secure popular consent at home for foreign spending, who can detail officials for foreign service in any field, who need make no precise economic accounting of strict profit and loss in their aid programs, have a capacity both for quick decision and for sustained effort which the Western system inherently lacks. In 4 years, they have come within sight of catching up with the whole Western effort of a decade. In the key countries along the Asian fringe, the amount of capital assistance provided by them has already outstripped the American total by about half a billion dollars.

But it is not simply the new Russian effort that is at issue. There is a second point to underline—the falling away of world trade in the wake of American business stagnation. It can be argued that in the last year the Communists have profited more by Western mistakes and incoherences than by their own direct action. For among the underdeveloped areas are to be found most of the world's primary producers. Jute and tea from the Indian subcontinent and Ceylon, rubber and tin from Malaya, rice from Burma, cotton from Egypt, the Sudan, and Uganda—these are some of the products which underpin the unstable economies of Afro-Asian countries, and in the last decade, an almost unbroken boom in world commodity prices, sustained above all by the high level of American economic activity, has done more than any foreign-aid programs, from whatever source, to create a surplus from which savings could be drawn.

But in the last year the picture has changed. World metal prices have fallen by 25 percent, fibers by 15 percent; since 1955—in the 2 years leading directly up to independence—Malaya's rubber prices have dropped by 50 percent. All in all, according to the latest United Nations figure, primary producers lost $600 million to $700 million in export income in 1957 alone. This figure is more than half the total of American aid given to the Asian fringe since 1949. Thus Russia is expanding its program of aid and barter just at a time when normal trading has fallen away and has caused acute embarrassment to the local governments.

This, in essence, is the new situation which underlies this year's debate on foreign aid. The old arguments—of Asian need, of the West's interest in stable conditions, of the risks inherent in leaving the fringe states wide open to Communist blandishments—are all vitally reinforced by Russia's notable entry into direct, sustained competition in the field of aid and by the evidence that the whole western trading position has been gravely weakened by the economic stagnation of the last year. In fact, the new conditions of 1958 might best be summed up by saying that, while the Russians have evolved a long-term economic strategy for the Asian fringe (and beyond it, for the underdeveloped areas everywhere), the Western Powers appear to have no general policy of any sort.

Their patchwork of aid is not related to any long-term plan for sustained development nor do they coordinate their individual offers. The assistance they give with one hand is canceled by the purchases they no longer make with the other. The domestic breathing space becomes a near hurricane by the time the effect of falling business activity at the center slashes export programs on the fringe. In short, if there is any assumption behind the foreign economic policy of the Western Powers, it seems to be that the program can proceed by fits and starts, from emergency to emergency, and that neither care, study, forethought nor sustained effort is really required. So long as this illusion prevails, the Communists, with their long-term aims and determination, are likely to pull steadily ahead of the West in influence and sooner rather than later may reach their target of effective control.

This outcome would be all the more tragic for being unnecessary. The ingredients of a sustained and workable economic strategy for the free world have been discussed and canvassed and clarified in the West for more than a decade. In particular, since President Eisenhower first proposed a special fund for long-term lending, the advantages of a consistent, long-term loan program have been thoroughly explored.

The aim in each backward economy is to reach the phase where internal savings become self-sustaining. At primitive economic levels there is no local surplus for saving, and capital-creating investments—in transport, in power, in improved agriculture—cannot be fully supplied domestically. For a number of years external aid at low rates of interest or in interest-free loans or gifts, is needed to get this basic capital equipment into position. Then, as local output rises, aid can taper off and domestic savings take its place. The expanding economies will attract private investment. The emergency will have passed and more nations will have been drawn into the magic circle of modernised, advanced, technical societies. Such a program has a shape and a purpose and is self-liquidating. But nothing of the sort is possible if aid may end from one year to the next. The sustained pattern is ruled out. The risk is that even the aid that is given will be wasted for lack of a proper context.

Yet, given the cooperation of all the developed countries of the West, the scale of such a program would not be extravagant—in fact, it is not much greater than the totals for economic and military aid given in a haphazard way today. One percent of the advanced nations' national incomes would provide between $4 billion and $5 billion a year, and such a sum, made available over a decade, would be sufficient to get country after country through the sound barrier of sustained investment. It is a sobering thought that such a sum is spent every 3 weeks on military preparedness.

A long-term aid program on these lines is not even an innovation. Each year of the first Indian 5-year plan was underpinned by releases from India's sterling balances held in London. The most triumphant effort of postwar diplomacy—the Marshall plan—applied the principle of sustained aid to Europe with complete success.

Moreover, at the end of the war, when the Western World was perhaps more alert to the economic perils of the future than it is today after the long, recent spell of prosperity, the prospects for a functioning world economy included such institutions as the World Bank and the International Monetary Fund, both precisely designed to see that shortage of capital and disturbances in trade did not impede the growth of world commerce and prosperity. The error at the time was to set up these institutions with resources too modest for the task ahead. The error today seems to be in no longer even recognizing the essential nature of their functions. It can be argued that the most direct and effective method of securing a strong revival of international trade and a sustained expansion of world resources at this time would be to triple the sums available to the World Bank for lending and to the Monetary Fund for strengthening the international currency system on which trade depends—and incidentally of ending the kind of massive currency speculation that disrupted Europe's economic stability so seriously last summer and fall.

No, it is not lack of knowledge or expertise or means or even experience that inhibits

the West as it confronts the new, sweeping scale of Russian economic competition. It is quite simply a paralysis of imagination, a crisis of energy and will. Yet, if the implications of this new challenge—both for evil and for good—do not stir Western minds and hearts, it is difficult to conceive what will.

The risks involve an almost apocalyptic disruption of the world's present relationships. To bring what remains of Asia under Communist dominance would give Russia control of the eastern Mediterranean, of the whole land bridge to Africa, of the shores of the Indian Ocean and of the sea approaches to Australia. Such an extension of control would inevitable alter the whole strategic balance of East-West military power.

The political consequences would be as dire. With India under Communist direction, all East and South Africa would fall open to Communist influence playing directly on the hundreds of thousands of Indian settlers in Africa and indirectly on the restive, race-conscious African masses. Europe would shrink to a beleaguered fringe of the vast Eurasian land mass. Japan would be a pitifully isolated appendage at the other limit.

The physical resources of the Atlantic world would, even in such conditions, probably be enough to sustain the economic life of the West. Not even middle eastern oil is indispensable. But there would be a vast disruption of trade, confidence, and growth if the bulk of the world's remaining markets and sources of supply came under the arbitrary control of the Communist forces. No doubt, they would continue to trade, but as Russia's satellites have learned, trade under such conditions is constantly at the mercy of politics. No stable economic relations can be maintained when crucial traffic may be cut off in a day as a means of political pressure.

Above all, the transfer to Communist allegiance of all the world's emergent peoples, the loss to western concepts of freedom of the ancient cultures of Asia, the passage of the great African Continent from the tyranny of tribalism to the despotism of the absolute state—such disasters would test to the breaking point the spirit and courage of the free world. The risk is that they would so deepen the confusion of western counsel, so damp the light of hope, give such rein to fear and extremism that western society might lose the inner strength to withstand the strain. If the shock of seeing China lost to communism could help to create in America the miasma of McCarthyism, what new demagogs might not be brought forth by the loss of so much more?

But if the risks of western inaction are immense, the gains to be secured from a successful western initiative are on a comparable scale. Economically it has always been an illusion that in our interdependent international economy the Atlantic nations could continue to expand their economies and grow and prosper in a world otherwise condemned to stagnation and penury. The growing techical capacity of the West needs the markets and supplies of the rest of the world not much less urgently than the world needs western capital and technique. To underpin the growth and prospects of others is the surest way of insuring our own.

Politically, too, there can be no doubt that the nations of free Asia desire, provided alternatives exist, to hold themselves free of Communist control. For all the Communists' talk of aid without strings, their aim is ultimate domination, and the Asian governments are quite shrewd enough to know it. Hungary is not forgotten, in spite of all the Communists' efforts to cover it up. The danger is that, with no alternative sources of assistance, Asian leaders may be compelled by popular pressure to depend more and more dangerously upon Communist support. But given western backing, they want what the West wants for them—independence and control of their own affairs.

Above all, a concerted long-term economic strategy would enable the Western Powers to recover their own confidence and effectiveness, to regain the initiative from the Communists, and to restore in the world that image of western power and purpose which was theirs when, in the hours of victory in 1945 or at the peak of the Marshall plan in Europe, they acted as a functioning partnership, pursuing not simple defense and security but a positive vision of an expanding, prosperous world.

The last 6 months, during which Russian sputniks in the skies and Russian propaganda below have circled the globe, while the West sits hunched up in economic stagnation and political perplexity, have been a trial and tribulation to freemen everywhere. Nothing could so break the spell of stagnancy and restore energy and hope as a fully thought out, fully sustained, and accepted strategy for worldwide economic growth. The risks of inaction have never been so alarming; the political rewards of vision can never have been so great.

Dulles and Summit Conference

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. HAYS of Ohio. Mr. Speaker, in view of my contention that we have a foreign policy on a day-to-day basis the following article by Constantine Brown from the Washington Evening Star on Thursday, February 13, 1958, is interesting. It shows how Mr. Dulles has vacillated on the subject of a summit conference.

The article follows:

DULLES AND SUMMIT CONFERENCE—STATEMENT THAT FOREIGN-MINISTER TALKS AREN'T NECESSARILY CALLED SURPRISING

(By Constantine Brown)

The new summit political boulevard, lined all the way from Washington to Geneva (the prospective meeting place) with Judas trees, is being rapidly constructed. The meeting last Tuesday between President Eisenhower, with Secretary of State Dulles at his side, and Soviet Ambassador Mikhail Menshikov paved the way for the heads-of-state meeting long sought by Boss Krushchev. What new proposals the Soviet Ambassador was able to give our two policymakers is for the time being a well-kept secret. But at the press conference which followed the White House meeting almost immediately, Mr. Dulles announced, almost as casually as if he had said that he enjoys salmon fishing, that he sees no need for a conference of foreign ministers, preliminary to a summit meeting. This reversal surprised not only the newspapermen present but also a number of Senators who last week precipitated a debate on the Senate floor proclaiming their confidence in the Secretary of State's policies.

Nobody in this country opposes a conference which could bring about a relaxation of tensions and an end to the cold war which started within a few months after V–J day. What the American people are opposed to is another conference such as those at Yalta, Potsdam, and Geneva.

At each and everyone of those top level meetings the free world suffered serious losses and Communist tyranny gained either territorial or propaganda advantages.

President Eisenhower and Secretary Dulles are fully aware of the trickery and lack of faith on the part of the men in the Kremlin, be they Stalin, Molotov, Bulganin, or Khrushchev. Their tactics may differ. But their goals are the same, the destruction of the free world and its leader, the United States. After the lamentable failure of the Geneva Conference in 1955, President Eisenhower realized how badly he had burned his fingers. As a result of that sad experience he declared on numerous occasions that the Russians must prove by deeds their desire to relax the world tension before he would attend another meeting of heads of states.

Nowhere in Secretary Dulles' statement at the Tuesday press conference is there any mention that this essential condition is still a prerequisite to a top level meeting. According to White House and State Department sources, we shall insist that a number of substantive matters such as the unity of Germany be accepted in principle by the Kremlin before final arrangements to meet with Khrushchev and Bulganin are agreed on. It is hoped that President Eisenhower or Secretary Dulles will make a public statement to that effect in order to reassure the people here and in the countries determined to continue to fight communism that we are not taking the tortuous road of appeasement.

In the present international confusion, only those provided with rosy lenses can detect a genuine unity of purpose between this country and its major European allies. In the event of a Soviet provocation leading to a showdown, is it generally but reluctantly admitted we can count only on our own capabilities and on those of the minor allies such as the Turks, possibly the Greeks, and some of the Asians (Pakistan, Thailand, the Philippines, Nationalist China, and Korea).

Whatever the real meaning of last Tuesday's statement by the Secretary of State may have been, there is no question that America's faithful minor allies got the impression that we are following a diplomacy of "off again, on again, gone again, Finnegan." Such a policy is not conducive to the deep confidence required of international alliances these days.

Senators who rushed to Mr. Dulles' defense last week because the Kremlin told us in thinly veiled words that "Dulles must go" were surprised at what appears to have been a change in his position. The Secretary of State had told them that the actual work for a summit meeting must be made by the Foreign Ministers behind closed doors. It is they who establish definite agreements. The finished product is brought before the heads of states who sign it at a ceremonial meeting where toasts are drunk for a lasting friendship. Unless Foreign Ministers are able to come to some agreements on substantive questions, there can be no point for the heads of states to get together. The position, many of Mr. Dulles' supporters in the Senate feel, now appears abandoned.

Warning No. 5

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MULTER. Mr. Speaker, the following item from the New York Herald Tribune of February 9, 1958, speaks for

itself; it is one of the many warning signs calling for immediate governmental action:

Business activity: The Herald Tribune index of general business declined for the seventh straight week, standing at 165.8 February 1 against 167.2 January 25 and 194.9 February 2, 1957.

Statement of Trinity County Delegation for Trinity Partnership Proposal

EXTENSION OF REMARKS
OF

HON. HUBERT B. SCUDDER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 25, 1958

Mr. SCUDDER. Mr. Speaker, a three-man delegation representing the Trinity County Board of Supervisors opened up the recent hearings held by the House Interior and Insular Affairs Committee on the Trinity partnership bills.

They felt strongly enough on this issue to sacrifice time and money in directly appealing their case to legislators who will decide the fate of Trinity power.

The Trinity County Board of Supervisors has long endorsed joint development of the Trinity River Project over any all-Federal proposal. Not the least of reasons behind their past resolutions was the fact that Trinity supervisors are aware that Trinity County will collect additional taxes from P. G. & E. if this utility builds the power plants—that should the plants be constructed by the Federal Government, Trinity County will lose out on an added $236,100 each year in tax income from this one utility.

The official hearing statements of R. W. Brandes, Moon Lee, and John H. Steppling tell the Trinity story. I request that all three be included at this point in the RECORD as they were taken from the Weaverville Trinity Journal.

The statements follow:

STATEMENT OF DELEGATION AT WASHINGTON HEARING

(By R. W. Brandes)

Mr. Chairman and members of the committee, my name is R. W. Brandes, and I live in Weaverville, Trinity County, Calif. Mr. Steppling, Mr. Lee and myself are here to testify before your committee at the request of the Trinity County Board of Supervisors on Public Law No. 386 and, more particularly, as to the partnership plan as recommended by the Department of Interior. I respectfully submit to you the following:

There are approximately 2 million acres of land that comprise Trinity County. Seventy-four and a fraction percent of this area is owned by the United States Government, and approximately 2 percent is owned by the State of California. This means that we in Trinity County have over 76 percent of our entire county exempt from local taxation. Our problem is and has been an adequate tax base to support our county. Our total county assessed valuation is just under $12,500,000. We do have a very difficult situation in endeavoring to run a county government with a tax base that is predicted on 24 percent of our entire land area.

We consider the development of power an industry, and if private enterprise were to develop this power it would create a new tax base that would be of tremendous economic value to our county. Therefore, this proposal represents a big industry in itself.

We must, because of the small area that constitutes our entire tax base, be always alert to all possibilities to increase this tax base. I was specifically requested by the chairman of the Trinity County Board of Supervisors to point out the following in respect to the original bill, H. R. 105, dated January 5, 1955, starting at page 5, line 7, section 4, and I quote as follows:

"The Secretary is authorized to make payments, from construction appropriations, to Trinity County, Calif., of such substantial additional costs of government as are incurred by it during the period of actual construction of the development and as are found by the Secretary to be properly attributable to and occasioned by said construction and to constitute an undue burden upon the county, including but not limited to (1) police, hospital, and welfare facilities, (2) the repair, maintenance, and replacement of existing roads, and (3) the establishment of new roads, meeting standards adopted by the American Association of State Highway Officials, which give access to the areas and communities adjacent to the project and reservoir sites, which roads shall include, though not be limited to, those giving the shortest practicable route from Weaverville to Lewiston, Weaverville to the vicinity of Trinity Center, and from the vicinity of Trinity Center to Tower House."

I now refer you to Public Law 386, approved August 12, 1955, and wish to quote as follows:

"That the Secretary is authorized and directed to continue to conclusion the engineering studies and negotiations with any nonfederal agency with respect to proposals to purchase falling water and not later than 18 months from the date of the enactment of this act report the results of such negotiations, including the terms of the proposed agreement, if any, that may be reached, together with his recommendations thereon, which agreement, if any, shall not become effective until approved by Congress."

It is primarily because of this clause that the Trinity County Board of Supervisors and many residents of Trinity County supported this bill.

Now the bill as passed does not provide us with assistance in police, hospital, and welfare facilities, all of which are of vital importance. It does and has, however, assisted us in the repair, maintenance, and replacement of existing roads. It also provides for an in-lieu tax, in that it authorized and directed the Secretary to pay to Trinity County annually on an in-lieu tax payment in an amount equal to the annual tax rate of the county applied to the value of the real property and improvement taken for project purposes.

However, we do lose tax base not gain because the aforementioned tax is to be paid on patented land acquired by the United States Government. This tax we have been previously collecting. However, approximately 44% of the total area which composed the Trinity River Diversion project was held by individuals as mining claims and we did collect a possessory interest tax on those mining claims upon which there were improvements. These taxes we will now lose, all of which adds to a net loss of tax base.

May I present the following figures: At present the annual tax paid to Trinity County by PG&E Company totals $161,000. Under the partnership plan, this amount would increase to an amount estimated to be $397,100. (This figure I secured from a representative of the PG&E Company). This is of course considerably less than the $2,562,000 paid to our neighboring county of Shasta this fiscal year, but it would nonetheless help us tremendously in overcoming the local problem of having 76% of our total area exempt from county taxation.

We in Trinity County understand that several incorporated areas as far down as the San Francisco area are interested in acquiring cheap power because they feel that the income they derive is important to their cities. Unquestionably it is and, in all probability, it would remove a tax burden from the taxpayers in their communities. However, we feel it would be at our expense, and taxwise it is my opinion that we are infinitely more distressed than most, if not all of these municipalities. I might further state that I am of the opinion that this could not be construed as being a democratic procedure, because if the power facilities were developed by the Federal Government it would prevent the county from collecting needed taxes that we would derive under the partnership plan in order to benefit a few communities elsewhere.

In the event you gentlemen should recommend the partnership proposal as recommended by the Department of Interior, it is my opinion that it would be the financial salvation of Trinity, the county of origin of the Trinity River Diversion Project.

BY MOON LEE

Honorable Mr. Chairman and Members of the Committee, I am Moon Lee, a third generation member of a pioneer family of Trinity County. I was born and raised in Weaverville and lived there all my life, near the site of the Trinity River projects.

I am one of the representatives of the Trinity County board of supervisors, also a member and past president of the Weaverville Chamber of Commerce, the North Fork Grange, and a delegate to the Inter-Chamber of Commerce of Northern California, of which I am a past president.

The interchamber comprises 6 counties—Siskiyou, Modoc, Lassen, Trinity, Shasta, and Tehama—and has 16 individual chambers of commerce.

The interchamber, the North Fork Grange, and the Weaverville Chamber have passed resolutions favoring partnership.

I worked with Hon. CLAIR ENGLE in securing the passage of Public Law No. 386. As you know, this law provides for diversion of much water from our county for the use of many people in other counties of the State to fulfill their needs.

We are giving up much water, a good natural resource, and we have a chance to be repaid.

The Secretary of the Interior, as Congress directed, offered to negotiate with any one Federal agency to purchase falling water. The negotiations with P. G. & E. have shown the biggest benefit to repay our county for our giving up this water.

The Trinity bill in section 4 says this, in part:

"Provided, that a first preference, to the extent of 25 percent of such additional energy, shall be given, under reclamation law to preference customers in Trinity County, Calif. * * *"

There are no preference customers in our county.

Only 2 months ago Congressman ENGLE appeared before our board of supervisors and urged the creation of a public utility district which would distribute this 25 percent of Trinity power. He told the board that this power would in effect be a $1 million-a-year gift to the county (Sacramento Bee, November 23, 1957).

The board chose to ignore Mr. ENGLE's suggestion and, instead, reaffirmed its support of the Trinity partnership proposal.

Forming a utility district and going into the power business is not practical in Trinity County.

The county has only 8,000 people spread over 2 million acres. It would be too expensive to build transmission lines for this.

Trinity County is much larger than either Rhode Island or Delaware.

Gentlemen, just put yourself in my position as a resident of the county in which this project is located. Wouldn't you come here today and urge a careful and thorough study in favor of the partnership plan?

We are not making this plea only for P. G. & E. or any other private agency. We are not interested in whether they make or lose money. We are interested only in what is best for Trinity County. We need this tax base. It would be a perpetual source of income to our county. It will always be there.

BY JOHN H. STEPPLING

My name is John H. Steppling. I am publisher of the Weekly Trinity Journal, fourth oldest newspaper in California—established in 1856 during the rough and tumble world of the Gold Rush Days. Down through the years, as a guide and principal outline of policy, is a statement originating in the first issue over a century ago and still on the masthead: Independent in Politics and Devoted to the Best Interests of Trinity County. Gentlemen, that is why I have asked permission to appear before your committee as, in my opinion, the proposed partnership would be in the best interests of Trinity County.

As an official representative of the Board of Supervisors of Trinity County, my remarks will pertain primarily to the county.

The county board has repeatedly gone on record favoring the partnership on the grounds of (1) increased tax base, and (2) would support private enterprise, an old American commodity. As men concerned with running the county government, they share the responsibility to establish a budget and set tax rates. In fact the board, as with most governmental agencies, is concerned with taxes and are constantly searching for additional sources of revenue to meet the expanding costs of government.

The offer of partnership by a private utility company in the Trinity River Division of the Central Valley project would bring hydroelectric plants within the borders of the county, plus substation and transmission lines. These facilities would go on the utility tax rolls, and subsequent taxes go to the county and to the schools and other special districts. The company's estimate of the cost of these facilities would be approximately $11 million. The partnership plan would add an estimated $236,100 to Trinity tax payments made by the Pacific Gas & Electric Co., bringing the total company tax payments to over $397,000.

Why is this important to Trinity County?

Our mountain county is located in the picturesque and colorful Trinity Alps. Geographically, it is a series of mountain ridges, interspersed with several small valleys, divided by the swift white-watered Trinity River plus high mountain lakes in old glacial cirques.

With a total land area of approximately 2 million acres, only 83,000 acres are nonforest. The county is impaled on one paved highway transversing east and west.

When the Journal was first started, gold was in its heyday. Millions of dollars' worth of gold has been taken out of its hills and valleys, but today at the pegged price of $35 an ounce, gold mining is unprofitable. Only one dredge is operating on the Trinity now. This dredge is working on land to be inundated by the Trinity project and will soon be another ghost of the things that once were. Mining for other minerals is negligible, with only sand and gravel the principal source of revenue for mineral production.

Timber is our big industry. Our species include white fir, pine, and a scattering of incense cedar. Following the close of World War II, with the tremendous demand for lumber, the virgin forest of Trinity County was tapped. In the decade following, we reached maturity as the sustained yield of approximately 260 million board-feet of timber has been reached. These figures include both public lands and the acreage owned by the Southern Pacific Land Co.

As of now we share with the rest of the timber-producing areas the brunt of a depressed lumber market. As Vic Rose, owner of the mill in Weaverville, said, "If it only would be as bad as last summer, it would be an improvement."

The Trinity River project, while of a temporary nature, has provided work for many hundreds, and has given the county and adjacent areas a considerable shot in the arm, economically speaking. The project is big news for the county, and always will be.

Our mountain valleys now support a limited agricultural economy; any expansion would be marginal.

Recreation is our only potential. A recent survey by the California State Department of Water Resources stated: "Without a doubt, recreation use will ultimately be Trinity County's largest economic activity."

All the products produced within the county and all the needs or wants of the inhabitants come and go over one State highway and its feeder lines. We cannot expect any large timber-processing industry to come to the county, due to this transportation problem.

But we do have water. The Federal Government with the Trinity River diversion is sending water from the Trinity drainage through an 11-mile tunnel to the central valleys of California. The California water plan envisages a series of dams across the Trinity and its tributaries and other rivers in northwestern California. This water is to be diverted to the thirsty areas of the State. Trinity County has the dubious feature to be not only a county of origin, but also a county of reservoir, with a series of lakes from its granite peaks to the western grassland.

We can't sell the water. But hydroelectric power can be generated and sold. There has been a proposal that the county form a public utility district and sell its 25 percent reservation of project power throughout the county. We don't want to. The efficiency of modern business precludes our mountain county of ever attempting to launch such a project.

The partnership proposal represents one specific industry with reasonable perpetual source of taxes needed for Trinity County to continue to function as a unit of government. As a public utility, it is efficiently controlled by State laws.

This is a rough thumbnail sketch of the county and of some of the economic factors affecting it. It is background for the opinion of the board of supervisors, and also my opinion, that the partnership will serve the best interests of Trinity County.

In conclusion, to review the basic advantages:

1. Bring industry to Trinity County.
2. Provide stable tax base for future growth.
3. Outlay alone would save the Federal Government an estimated $55 million. In this missile age all sources of tax moneys should be made available to support our national program of preparedness.

The United Nations, the Middle East, and the Missile

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. MICHEL. Mr. Speaker, for 60 years, the Creve Coeur Club of Peoria has commemorated the birthday of George Washington with a banquet and address by a prominent figure.

On this February 22 just past, I had the pleasure of again attending this banquet and the high privilege of listening to a most thought-provoking address by Sir Leslie Knox Munro, K. C. M. G., K. C. V. O., president of the 12th session of the General Assembly of the United Nations and New Zealand Ambassador to the United States.

The address, entitled, "The United Nations, the Middle East, and the Missile," follows:

THE UNITED NATIONS, THE MIDDLE EAST, AND THE MISSILE

I have chosen the title of this address "Is Peace Possible Through the United Nations?" with some deliberateness because I have the honor of addressing members of an important organization in the United States, many of whom may be expected to share the hopes and expectations that I know so many millions of Americans nourish for the United Nations. Many judge it by its foremost objective: its capacity to maintain peace. I have often said that I am almost equally concerned with those who expect too much of the United Nations as with those who expect too little.

I would like you to take a middle view of the organization's possibilities; to realize that, while the United Nations is indispensable for world order and peace, it is only an instrument of the nations and cannot do more than its member governments are willing that it should do. Even a majority, as the case of Hungary has shown, cannot do more sometimes than express moral disapprobation. So long as that is the case, every member state in this imperfect world is justified in insisting upon the fundamental significance of power. It will forget this significance at its peril.

The United Nations is not a supraworld organization, and, indeed, the nations have surrendered little of their sovereignty to it. For a very long time to come sovereign states based on nationality will continue; indeed, you will be aware that a section of the people of this country is very much concerned lest United States sovereignty should be diminished by treaties, and, after all, the United States is a member of the United Nations by virtue of a document which is in effect a treaty, ratified, of course, by the Senate.

Had a military force been created for the United Nations pursuant to certain enabling clauses of the charter, then the use of this force for the purpose of preserving peace would have meant a substantial diminution of sovereignty so far as the smaller powers were concerned. But the force could never have been used against any of the great powers save with the consent of that power, which of course would never have been given. Unfortunately, due to the intransigence of the Soviet Union the international force intended to be created by the framers of the charter has never come into being.

But we have not wholly failed. The Assembly has done something of what the Security Council has been unable to do. The Assembly, by creating the United Nations Emergency Force, has established a police force in the Gaza Strip and in the area of Sharm al Shaikh and thereby has preserved peace in 2 strategic places.

The principal body, or organ as it is called, for the maintenance of international peace and security was intended by the framers of the charter to be the Security Council. The members of the United Nations have agreed to accept and carry out the decisions of the Security Council made in accordance with the charter. You all well know that the work of the Security Council has been largely frustrated by the

Soviet's constant and indiscriminate use of the veto.

The very basis of the framework of the world organization was the hope and expectation that the great powers, principally the United States, the United Kingdom, and the Soviet Union, would maintain the unity which they had displayed in varying degrees during the last great war. So far as the Soviet Union was concerned that unity was far from always sure, but substantially it lasted until the defeat of Germany and Japan. It is fair to say that no one of these three great powers would have entered the new world organization without the right of veto in the Security Council. Mr. Churchill, Mr. Roosevelt, and Field Marshal Smuts all realized that if the United Nations was to have a chance of success, the Soviet Union had to be a member. The field marshal thought that there was a reasonable expectation that with the joint power and influence of the United States and the United Kingdom the Soviet Union would be reasonable and would not follow a policy divergent from that of its two great wartime allies.

It is the misfortune of the world that this expectation has not been realized.

I would not have the work of the Security Council altogether minimized in spite of Russia's constant use of the veto. Thus, when Soviet troops persisted in remaining in the Iranian province of Azerbaijan, the United States Government let it be known through its representatives on the Security Council that if these troops were not withdrawn the United States would take action. This was sufficient to persuade the Russians to effect the withdrawal.

Then, of course, there is the celebrated case in 1950 of the invasion of Southern Korea by Northern Korean troops. The Security Council was immediately summoned. Fortunately for the world, the Russians made a mistake on this occasion and deliberately absented themselves from this historic meeting of the Council. The Council was thereby enabled to pass a resolution condemning the attack as a breach of the peace and recommending joint action by the members of the United Nations for the purpose of repelling the attack and restoring international peace. You will note that in this particular case the Council acted by way of recommendation only. It did not carry out its policy by means of a decision, which in terms of the charter would have been binding on all the members. A recommendation has only a persuasive effect, but the persuasive effect was considerable and 16 member nations joined in halting the aggression, and under the leadership of the United States eventually, as you know, hurled the aggressors, who finally included the Chinese back beyond the 38th parallel.

Great as was the cost in life and treasure of the Korean conflict, the United Nation's victory over the Northern Koreans and the Chinese was both a success for the democracies and a triumph for the United Nations itself.

The Russians speedily realized their mistake in not attending the Council, and I am afraid therefore that any future action of the nature taken in 1950 would be met by a Soviet veto in the Council. Indeed, this is precisely what happened in 1956 when the Soviet Union so brutally intervened to crush the brave people of Hungary. A resolution of the Security Council calling upon the Russians to remove their troops from Hungary was countered by a Soviet veto.

However, the United Nations is not wholly stultified under such circumstances. On November 3, 1950, the General Assembly adopted three resolutions of which the most famous is called the Uniting for Peace Resolution. The essential part of this resolution provides that if the Security Council, because of the lack of unanimity of its permanent members, fails to exercise its primary responsibility for the maintenance of international peace and security in any case where there appears to be a threat to the peace, a breach of the peace, or an act of aggression, then the General Assembly shall consider the matter immediately. The object of the Assembly will then be to make appropriate recommendations to members for collective measures. If there is a breach of the peace or an act of aggression these measures will include the use of armed force where necessary to maintain or restore international peace and security. Of course, the General Assembly might not be in session at the time. If that is the case, the Assembly may meet in emergency special session within 24 hours of a request for its meeting.

The Russians were once in the habit of querying the validity of the Uniting for Peace Resolution, but when it was invoked against Britain, France, and Israel at the time of the Suez crisis and following the British and French veto in the Security Council, the Russians found it convenient to fall in with the procedure of the Uniting for Peace Resolution and voted with those who requested the British, French, and Israeli forces to leave Egyptian territory. You will know that Britain, France, and Israel were responsive to the request of the Assembly and, heeding considerable world opinion, did evacuate their forces.

Nothing like this happened with the Russians following their invasion of Hungary and their veto in the Security Council. They flouted and still flout the resolutions of the Assembly calling upon them to remove their forces from Hungarian territory. They flouted and still flout the resolutions of the Assembly pursuant to the uniting for peace procedure, ostensibly because these resolutions involve interference with the domestic affairs of Hungary.

I am aware many people say that the Assembly sanctioned a double standard of morality in its attitude toward the Soviet Union over Hungary in contrast with its action toward the United Kingdom, France, and Israel over Egypt. Let me, with respect to this, quote some observations made by the distinguished Canadian statesman, Mr. Lester Pearson, who took such a leading part in the Assembly in 1956 and 1957 over the crises in the Middle East and Hungary. This is what he has said:

"Undoubtedly there is a question of a double standard of morality involved. It is a perplexing and worrying aspect of the matter. But it is not the United Nations as a body but certain of its members who are guilty of trying to establish this double standard. The Assembly, as a body has followed the same procedure in regard to Hungary and to Egypt. It requested the U. S. S. R. to withdraw from Hungary and the United Kingdom, France, and Israel to withdraw from Egypt. The Russians treated United Nations resolutions with contempt, and the other members (even though their actions were in no ways comparable with the aggression of the Soviet Union) complied. Is the guilt for this varied response to be placed on the United Nations Assembly? Or is it, on the contrary, to be placed squarely on Russia, where it belongs?

"To attack the United Nations as an institution for failing to save Hungary from Russia is misleading and perhaps unfair. The attack is based to some extent on the erroneous impression that the African-Asian group refused to condemn Soviet action in Hungary after having denounced the British and French Governments over Egypt. It is true that some members of this group were slow to recognize the brutal nature of Soviet aggression and inclined to suspect a deliberate effort to divert their attention from Egypt. When it was clear to them, however, what was happening, the great majority of them strongly denounced Soviet action, and only the hard-core Arabs abstained from the condemnation which was voted.

"The reason the United Nations did not save Hungary was that it could not; not that it would not. The fault lies not in the Organization as such, but in the hard facts of Soviet policy and the cold war, with peace balanced precariously on the edge of the atomic deterrent.

"It would be rash, and might be fatal, if we tried on all occasions to take U. N. enforcement action in order to see that justice is always done without any regard to the consequences; or without, to be perfectly frank, any regard to the big blunt fact of the Red Army. We certainly must not become the prisoners of our fears, for if we do our diplomacy is doomed, and the future would be grim indeed. But neither must we indulge in threats and gestures which may provide an easy escape for our emotions, but cannot be followed up by effective action. In the case of Hungary, for instance, if we had intervened through the United Nations by force, the first victims would have been the Hungarians themselves, and the rest of the world might have followed into the abyss."

It cannot be too often emphasized that the United Nations is plagued by the division of the world between the Communist states and the democracies. The hard reality, which we would obscure at our peril, is that the United Nations must do its work in a divided world, a world in which mankind has for too long been without dependable safeguards against the catastrophe of total war.

As I see it—and my tenure of office as president of the 12th session of the Assembly has confirmed me in my belief—it is this division of the world and the ideological struggle from which it grows which remains the central issue, overshadowing all others. This division, with its complex of action and reaction, its combination of pressure and resistance, of threat and counterthreat, has, since 1946, reduced the effectiveness of the United Nations, particularly through the veto of the Security Council, and restricted the capacity of the organization to realize its charter potentialities. It has cast in jeopardy the security of the uncommitted no less than the contestants and made them all its victims. It has given local and regional disputes a universal significance, perpetuating old antagonisms, creating new ones, complicating the solution of every one of them. Its consequences are not circumscribed: they range beyond the domain of politics, multiplying controversy even at the limits of intergovernmental contract.

But its corrosive effects are most directly felt in the political arena. This has been so at all previous sessions of the General Assembly; and the 12th session has been no exception.

Painful as is the effect of the ideological division of the world which still persists, I hope that you will agree with me that we must still persist, both inside and outside the United Nations, to settle the many problems which produce such a state of tension today and which, unresolved, could lead to war. Principal among them is the question of disarmament. This has been discussed in the United Nations ever since its foundation. Disarmament was discussed year after year in the League, and it was discussed in other places before the First World War. The path of these discussions is strewn with failures, but these failures with their melancholy consequences are warnings to us, especially in the nuclear and spatial age, to persist in our endeavors.

I believe that the world organization will continue to be the best forum for a solution of the problem. Private conferences between the great powers will not thereby be precluded.

I make no apology for discussing the crucial question of disarmement, for the solu-

tion of this problem by the United Nations would be the prelude to peace. I shall commence with a statement of a famous Spanish scholar and statesman, Senor S. de Madariaga, made as long ago as 1932:

"When the animals met to discuss disarmament, the lion looked the eagle in the eye and said, 'We must abolish talons.' The eagle looked squarely back into the lion's eyes and said, 'We must abolish claws.' Then the bear said, "Let's abolish everything except universal embraces.' "

It is the question of universal embraces from the bear which is principally concerning us today.

The truth, the unhappy truth, is that our last session began with a deadlock on disarmament, and has ended—at least, as matters stand today—with a deadlock.

Disarmament has a long and discouraging history in the United Nations. Since 1946, except for a period between 1950 and 1952, when the Soviet Union boycotted the negotiating bodies because of its objections to sitting down with the Chinese representatives, the great powers have been trying, with varying degrees of persistence, to reach agreement on a system for the regulation of armaments.

One landmark in the negotiations was the formulation of the Baruch plan, in 1947, when the United States was the only possessor of the atomic bomb. This plan would have created an international authority having the sole ownership of fissionable materials and empowered to ensure that atomic energy was being used only for peaceful purposes. The Soviet Union, which was working to develop its own nuclear weapons, rejected the Baruch plan, principally, as I understand it, because it was unwilling to make the considerable sacrifice of sovereignty needed to make the plan work. Instead, the Soviet campaigned for a ban on the use of atomic weapons and the destruction of existing stockpiles. This campaign made no concessions to the western views on the crucial problem of control and inspection.

At the beginning of 1952, the General Assembly set up a new body to deal with disarmament. This was the Disarmament Commission, made up of the 11 members of the Security Council, plus Canada. In 1954, after the Assembly had recommended that the powers principally concerned meet in private in a smaller group, the Commission formed a subcommittee of five members, the United States, the Soviet Union, the United Kingdom, France, and Canada. The subcommittee has met each year; and each year the General Assembly has debated its reports, heard the proposals of the great powers and of other countries and called on it to resume its efforts to find agreement.

Each year, as nuclear armouries have grown, and with them the threat of nuclear annihilation, the pressure has mounted within and outside the Assembly for at least a first move toward disarmament.

This pressure was reflected in the work of the subcommittee, which met last year in London, practically in continuous session, for 5 months. A number of encouraging advances were made, and there was some narrowing of differences. These advances should not be minimized. But the meetings ended with the Soviet rejecting a set of western proposals for a balanced first-stage disarmament program. There was widespread hope that this immediate reaction might be modified after the western offer had been considered in more detail by the Soviet Union and examined in the General Assembly. As far as the Assembly was concerned, both the western powers and the Soviet Union, along with the great majority of United Nations members, were in agreement that disarmament should be accorded the first priority at the 12th session.

It was against this background, and in the expectation that a great deal of attention would be devoted to the subject that I referred to disarmament in my first statement as president of the Assembly. With your indulgence, I should like to recall, in part, what I said on that occasion:

"It seems pertinent to refer to the universal concern which has accompanied the world's latest and most awesome technological revolution. The advent of the nuclear age offers the greatest promise and the greatest threat in human history. It is natural that close attention should be devoted to strengthening cooperation in the use of atomic energy for peaceful purposes. * * * It is natural also that the problem of disarmament should be given a prominent place in the deliberations of this Assembly. Time is not on our side. It is not necessary for me to stress the urgency of the problem, nor to dwell on its formidable difficulties. Surely we must all share the conviction that the need to reach a sound and workable agreement, however limited it may be in its initial state, becomes more pressing with every increase in the enormously destructive power of modern weapons."

These sentiments, I think, found a ready echo in the Assembly, both during the general debate and in the Political and Security Committee, which discussed the disarmament problem for almost a month. I have been struck throughout by the interest and sense of responsibility displayed by the small powers in respect of this dominating and terrifying problem.

All the major explanations of policy put forward in the Assembly emphasized the frightful dangers of further delay in checking the armaments race. The diagnosis of the evil was made in the most compelling terms.

Manifestations of concern were by no means confined to the three nuclear powers; and spokesmen from all continents joined in urging the necessity of an accord on a problem which Mr. Krishna Menon, for India, described as one of human survival. The recognition that all countries, great or small, must share the consequences of failure to end the nuclear stalemate found eloquent expression in the speech Mr. Eban of Israel made in the Political Committee:

"Neither vastness of territory, nor remoteness of situation, nor the separating shield of oceans, now offers security to any nation in the event of general war. Every nation is bound to every other nation in a covenant of mutual vulnerability. To believe in the ultimate possibility of a disarmament agreement no longer requires confidence in anyone's good faith. It is necessary only to believe that all powers have an equal passion for survival."

Nor were the economic consequences of competitive armaments overlooked. The representative of Indonesia, for example, gave voice—to use his own words—to "the deep concern of a nation which feels acutely the negative influences of the armaments race. As an underindustrialized nation emerging from the wasteland of our colonial past, the continuance of the armaments race would mean not merely giving up the possibility of a higher standard of living but even giving up the possibility of achieving a decent standard of living for our people."

The Foreign Minister of Ireland pointed to the danger of war inherent in the potential threat which each of the two tremendous concentrations of power represents for the other and cautioned against undue optimism regarding the outcome of disarmament talks. He also said—and I should like to quote his words:

"Where there is a vital conflict of interests, or mutual fear of deadly violence, between 2 set of human beings, peace can only be maintained in 1 or 2 ways: By the acceptance of the rule of law or by the superior force of a third party. We are all now in the inescapable dilemma that we have no third party except the collective judgment of mankind represented in this Assembly; unless we now make rapid progress toward the rule of law, we may soon have drifted past the last opportunity to prevent the use of ultimate weapons."

The disarmament subcommittee, as I have indicated, broke up its talks in London without reaching agreement. The positions taken by both sides—the Western Powers and the Soviet Union—were reasserted in the General Assembly; and although efforts were made by a small group of delegations to have the Assembly avoid a choice between the two sets of proposals put to it, the Assembly endorsed, by a large majority, the program sponsored by the western group.

As I understand it, the basic point at issue is the Soviet demand for an immediate end to the testing of nuclear weapons, to be followed by a general disarmament agreement, which is in conflict with the western position that the suspension of tests should not be isolated from other measures of partial disarmament, particularly the stopping of the manufacture of nuclear materials for use in weapons.

The six points in the western plan, which the Western Powers regard as fair to the security interests of both sides and fully capable of control, are as follows:

1. A suspension of test explosions as soon as a partial disarmament treaty is concluded;

2. An end to the production of fissionable materials for military purposes;

3. The reduction of armed forces and conventional armaments to agreed levels;

4. A beginning in the conversion of nuclear stocks to peaceful uses;

5. Guaranties against the possibility of surprise attack;

6. The use of outer space missiles exclusively for peaceful and scientific purposes.

In the Assembly, the Soviet Union maintained its opposition to this plan, which, in its view, unnecessarily complicated the simple question of ending tests. In the Soviet opinion, an end of tests would remove a serious health hazard and make the resolution of other disarmament problems less difficult. The Indian delegation, and a number of others, also argued strenuously that an end to tests should not wait upon a disarmament agreement. In the debate in the Political Committee, Mr. Krishna Menon drew on a large number of scientific opinions to support his Government's belief that the genetic hazards of radiation made it imperative to suspend tests.

This approach attracted only limited support, although there was no lack of concern—and, indeed, the expression of much genuine anxiety—about the long-term effects on man and his environment if tests were not brought to an end. But the great majority in the Assembly agreed with the western view that the real danger lay, not in tests in time of peace, but in the possible use of nuclear weapons for war. The West was convinced that the suspension of tests should be linked with what one delegate aptly termed the more fundamental problem of arresting and turning back the morbid tide of nuclear manufacture. The essential need was to check the nuclear arms race. The suspension of tests, carried out as an isolated measure, would in fact tend to endanger the balance of security. Those powers which had nuclear weapons and which had tested them could go on making them. Nor would there be anything to stop other countries from building up their own supplies of these hideous devices and from bringing about the situation to which Mr. Dulles referred when he spoke in the Assembly about the spread of nuclear weapons promiscuously

throughout the world, giving irresponsible persons a power for evil that is appalling even to contemplate.

As the apprehension that the radioactitivy from tests might reach dangerous proportions, the western spokesmen reaffirmed their deep concern to avoid even the slightest risk. They believed, however, that the possible dangers to human health must be kept in true proportion, against the background of the total effects of radiation from all sources. A scientific committee had been set up by the Assembly to investigate the problem. Its report was due in 1958, and this was expected to answer many of the urgent questions that had arisen concerning radiation.

The second element of the Soviet response to the western 6-point offer was the proposal for an absolute and unconditional ban on the use of nuclear weapons for an initial period of 5 years.

This raises the vital question of control and inspection which, I believe, lies at the heart of the differences between the West and the Soviet Union. For the West, to use Mr. Selwyn Lloyd's words, "Sham agreements, paper declarations, vague promises, are no good." It seems to me axiomatic that the deepseated distrust between the two sides—distrust springing from the long and bitter experience of 10 years' tension between the democracies and the countries making up the Communist system—demands the imposition of foolproof and knaveproof controls as a fundamental precondition to any worthwhile scheme of disarmament. The history of the postwar years, in too many areas of crisis, weighs heavily against the acceptance of unenforceable undertakings. If disarmament, however limited, is one means of building confidence, it seems equally true that the first stages must be completed in the absence of confidence. To insist that controls are not possible without confidence, that inspection is tantamount to espionage, is to condemn future disarmament talks indefinitely to the arid realms of propaganda.

The upshot of the debate, as I have said, was the approval of the western program in the Assembly by 56 votes to 9. The opposition was confined to the Soviet Union and its supporters. Eighteen delegations abstained. The proposals to end tests unconditionally were defeated.

There was, however, another important, and disturbing, development. I refer to the Soviet Union's decision to take no further part in the work of the Disarmament Commission and its subcommittee as then constituted. Intensive efforts were made after this was announced to find a formula which would increase the size of the Commission (without making it unworkable) and persuade the Soviet Union to change its mind. After days of negotiation and maneuver, a proposal, which was widely regarded as the ultimate limit of concession, was presented to the Assembly. This would add 14 more members to the commission, bringing its members to 25. The new members were of varying political hues and they appeared to represent the varying views of the world community. Just before the vote, Albania presented an amendment designed to destroy the new balance and to add another 7 to the enlarged commission: 2 of these were eastern European countries and the other 5 uncommitted or neutral countries. This amendment wrecked the larger initiative: the Albanian proposal was rejected; the 25-power commission was established, but the Soviet Union reverted to its earlier insistence on a Disarmament Commission made up of the whole Assembly and announced that it would have no part of the new body.

The impasse, on substance and procedure, therefore seems complete. The 12th Assembly began in apparent deadlock; it seems to have ended in double deadlock.

These dispiriting developments, accompanied by the recent evidence of the Soviet Union's impressive technological advances will, I should imagine, strengthen the cynical in their belief that talk about disarmament will get nobody anywhere and will multiply the prophets of doom who have already, in their minds, written the world off.

My answer is again: we must persist. The stakes are survival or destruction.

For let me say to you, we are indeed entering upon a new and amazing time. A little over 300 years ago there was no civilized man in this northern continent to comprehend the message of another era which, since Columbus, has transformed our times. But now, here, everywhere, a man throughout the world, if he has even the beginnings of education, knows that because a sputnik has circled the globe, human beings have the capacity to emerge from the limited universe we know and reach the moon and perhaps the stars. Is not that extraordinarily wonderful? And does it not constitute a terrific challenge to our leaders today and to those, tomorrow, who will give us our leaders of the future?

What are we going to do with it all? And where, too, and when, will we deal with this overwhelming problem?

As for when, I think that there is not too much time to go. The advent of sputnik means that very soon an intercontinental ballistic missile can traverse its terrible course. Surely that is a miserable use of a great discovery.

Where can we solve the problem of the spatial age? Is there any other place than in the United Nations? Already, the resolution of the last Assembly has declared, among other matters, that a disarmament agreement should be reached which will provide for the joint study of an inspection system designed to insure that the sending of objects through outer space shall be exclusively for peaceful and scientific purposes.

The President of this country, in his message of January 12 to Mr. Bulganin, has proposed that the United States and Russia should agree that outer space should be used only for peaceful purposes. Mr. Eisenhower said very forcefully that we face a decisive moment in history in relation to this matter and now is the time to stop using outer space for the testing of missiles designed for military purposes.

I believe that the only arena, in which this tremendous question can be debated and resolved, is the Assembly of the United Nations. I do not mean, far from it, that there should be lack of preparation for deliberation in the Assembly on the subject. I have in mind something in the nature of the conference of atomic scientists who met at Geneva before the International Atomic Energy Agency was eventually established. I think that scientists and diplomats should have a preliminary meeting on the prospects of the spatial age as soon as possible, so that in the Assembly we may usefully consider, with the benefit of their expert deliberations, the future of man in a spatial world.

Break This Bottleneck and Case for Another Judge

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. LOSER. Mr. Speaker, I wish to call to the attention of the House a condition in the United States District Court for the Middle District of Tennessee, that is well-nigh intolerable.

An editorial in the columns of the Nashville, Tenn., Banner and a news article in the Nashville Tennessean point up the need for an additional judge in middle Tennessee.

Since the death of Judge Elmer Davies all the work in this division of Tennessee has been done by Judge William E. Miller. The March term of the court began yesterday with 252 new cases on the docket—civil and criminal. There is a heavy backlog of cases carried over.

Nashville and middle Tennessee are entitled to an additional Federal district judge and I commend the reading of this editorial and news article to the very distinguished and able chairman of the Committee on the Judiciary, the Honorable EMANUEL CELLER, and his great committee. They follow:

[From the Nashville (Tenn.) Banner]

BREAK THIS BOTTLENECK

The March term of Federal court begins Monday with 252 new cases on the docket—criminal and civil—for which trial dates must be set.

That is in the middle Tennessee district, with one judge, William E. Miller, presiding.

There are in the Federal building two court rooms—with all the appointments and physical fittings for two divisions, to halve the work (theoretically) for each. But there is only one judge because Congress still has not created the additional judgeships that have been promised.

The 252 new cases are that in fact. Extra to that is the heavy backlog of cases unfinished and carried over, some of them as much as 2 years old, because it is impossible for one judge to keep abreast of this accumulating litigation. There isn't time in a single court for that.

However efficient, however robust, however dedicated, there are limits to what any judge can do.

In justice to all concerned, Congress should break the House Judiciary Committee bottleneck where this needed law creating new judgeships is gathering dust. Chairman Emanuel Celler is not rendering a public service by sitting on that bill. It should be jarred loose and passed.

[From the Nashville (Tenn.) Tennessean]

CASE FOR ANOTHER JUDGE

(By Nellie Kenyon)

Federal District Judge William E. Miller will face a hopeless situation when he starts the March term of court. There simply isn't enough time to try all of his cases.

While Congress ponders the question of creating a new Federal judgeship for the middle Tennessee district, hundreds of cases are pigeonholed waiting for some solution.

It probably would take 3 or 4 years for one judge to try the nearly 400 pending civil cases, plus the task of keeping up with the influx of only the new criminal cases.

Judge Miller has initiated pretrials and motion days in an effort to alleviate the backlog. This has helped some, but it will take the creation of another judgeship to solve the problem.

The absurdity of the situation is reflected in the fact that there are only 126 days available for trying cases during the March term, yet there are 255 civil and criminal cases listed on the call dockets in the Nashville division alone.

HAS TWO OTHER COURTS

The district judge is required to hold court in two other divisions in the middle Tennessee districts, Columbia and Cookeville. It may be assumed that there will be at least

100 cases on the call dockets in these districts.

There are bound to be at least 355 cases on the March criminal calendar and civil docket in all three divisions.

It is reasonable to suppose that half of them may never reach trial.

But the fact remains that it is impossible for the court to try even half the cases in the 126 days available.

The only obvious alternative to the impossible situation is that many of the cases listed on the March criminal calendars and civil call dockets will have to be carried over to the October term. How many is anyone's guess.

Several income-tax evasion cases are on the March criminal calendar for a trial date to be set where pleas of not guilty are entered.

A civil trial especially set for first 3 days in April likely will require a couple of weeks to try. Two suits have been combined in this case to conserve time. They involve suits of $500,000 each filed by Edward Lamb, Erie, Pa., newspaper publisher and radio station owner, in damages against Pat Sutton, former United States Representatives from Tennessee; WSM, Inc., and National Life Insurance Co.; and against Sutton and WLAC and Life & Casualty Insurance Co. Lamb alleges slander resulting from a radio-TV talkathon conducted by Sutton during a political campaign.

Aside from cases on the March call dockets there is a backlog of some 400 condemnation cases, some pending for several years. These suits grew out of the Government's condemnation of land for Old Hickory Dam and other similar projects.

Foreign Aid Whingding

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. HAYS of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer on the foreign-aid whingding sponsored by Eric Johnston, which I think is worthy of reading:

FOREIGN AID WHINGDING

Washington reporters said they had never seen anything like it. Some 1,500 business and political leaders gathered in Washington for an all day and evening clinic on foreign aid, addressed by an all-star cast headed by President Eisenhower, former President Truman, Vice President Nixon, and Adlai Stevenson. It was like a Hollywood spectacular. And why not? For masterminding the affair was Eric Johnston, president of the Motion Picture Association of America.

It was openly and frankly a lobbying performance of great magnitude. Those who attended—at their own expense—and those who put up the money for the luncheon and dinner were told in no uncertain terms to go back home and talk up the administration's $3,900,000,000 foreign-aid program in an effort to put pressure on Congress to accept it.

After the meeting, the acting chairman of the House Foreign Affairs Committee, Representative MORGAN, Democrat, of Pennsylvania, said "a terrific job" would have to be done on the public and on Members of Congress if a substantial part of the program is to be salvaged.

Representative MORGAN is right. It will have to be a "terrific job" because large numbers of Americans are skeptical of the idea of foreign aid. They are wondering whether the $60 billion we have lavished on foreign aid since the end of World War II isn't enough and whether these handouts must be continued in perpetuity.

Why are people skeptical? For one thing they see us more and more becoming involved in entangling alliances. We give arms to Tunisia, and France takes offense. France bombs a town in Tunisia and the whole Arab world, as well as the Communists, accuse us of supplying the planes. Who can tell whether the planes used in the raid were bought from us by the French or given by us to them and what difference does it make if they were American planes?

In other words, the countries we have given aid to do not always remain friendly among themselves. Other examples are the Arab countries and Israel, Turkey and Greece, the Netherlands and Indonesia.

Moreover, there is no guarantee that the recipients of our aid will remain friendly to us. In some cases there is a suspicion of outright blackmail—"give us aid or we'll go Communist." And there is a great deal of skepticism about giving aid, especially military aid, to an outright Communist country like Yugoslavia. Finally, examples of foolishness and wastefulness are always turning up.

Some foreign aid will probably be necessary as long as it is our policy to maintain military bases all over the world. But Congress should not—and probably will not, in spite of Eric Johnston's spectacular—buy the entire foreign-aid package sight unseen. It should examine every project on its merits and approve only those it finds to be sound.

Samuel Cardinal Stritch

EXTENSION OF REMARKS
OF
HON. CHARLES A. BOYLE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. BOYLE. Mr. Speaker, at the suggestion of the dean of the Illinois delegation, Hon. THOMAS J. O'BRIEN, and on behalf of all of the Members of Illinois I take the floor to pay tribute to the most recent honor accorded His Eminence, Samuel Cardinal Stritch, outstanding religious prelate of Chicago. Our fair city is the seat of the largest Roman Catholic diocese in the United States. We congratulate him on his advance and wish him all success in his new role as the first American-born cardinal to be elevated to the Roman curia, the central government of the Roman Catholic Church. Cardinal Stritch was named pro-prefect of the Roman Catholic faith. This agency supervises the spread of the faith to the missionary areas of the world. That such a singular honor should be bestowed upon His Eminence is no mere coincidence. In our city of Chicago he has been called the cardinal of charity, stemming from his welfare efforts in orphanages and in hospitals of his archdiocese which treats upward of 200,000 patients annually. His energies and his efforts have added luster and stature as well as growth to the Stritch Medical School of Loyola University. His great devotion to the principles of education and higher learning have resulted in a woman's college and a Chicago high school named in his honor.

This man of unusual intelligence was ordained a priest at 22, and began a phenomenal rise, almost unheard of in ecclesiastical history. In 1917, he was made chancellor of the Nashville diocese; when 34 years of age, in 1921, he was appointed bishop of Toledo, Ohio, the youngest member of the church hierarchy in our country. In 1940, he was named archbishop of Chicago and raised to the rank of cardinal on December 23, 1945. Now, at the age of 70, His Eminence assumes jurisdiction of 25,000 missionary priests, 10,000 missionary lay brothers, and 60,000 missionary nuns on 5 continents, as well as 30 million Roman Catholics in Africa and Asia.

Cardinal Stritch with his demonstrated record of protector of the weak, guardian of the needy, and defender of the oppressed and their welfare will bring much intensity of purpose and love of hard work into an area which represents one of the most critical locations in the tournament for the battle of men's minds.

Pope Pius XII, the spiritual ruler of nearly half a billion Roman Catholics has done an honor to Chicago, to Illinois, and to the United States in singling out His Eminence Samuel Cardinal Stritch a true prince of the church, for such an honor.

Foreign Aid Farce

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. BEAMER. Mr. Speaker, in order that the Members of the Congress may learn the sentiments of Hoosiers on foreign aid, under unanimous consent, I include in the Appendix of the CONGRESSIONAL RECORD editorials from the Indianapolis Star and Indianapolis News dated February 28:

[From the Indianapolis Star of February 28, 1958]

FOREIGN AID FARCE

The most accurate description we've heard of the White House Foreign Aid Conference this week came from Representative GROSS, of Iowa. "Democrats and Republicans," said GROSS, "at each others' throats over the weekend, plan a temporary truce during which they will bury their hatchets in the taxpayers' heads."

He is so right. This bipartisan extravaganza, played with all the stops pulled out, from God to mother to country and back again, was nothing but a gigantic attempt to bamboozle Congress and the American people into abstaining from all criticism or examination of foreign aid.

Participants, dominated by New York bankers and exporters and special interests, were told by Eric Johnston, the President's stooge, that they were there for a schooling. But they got slogans, not facts. They got propa-

ganda, not debate. The top political figures of both parties joined together in a massive attempt to silence all questioning of the huge $4 billion foreign aid request for next year.

Adlai Stevenson said that foreign aid was more important than missiles or atom bombs. Secretary of States Dulles said one reason for keeping up foreign aid was because it employs 600,000 people. All speakers but one told us that in this shrinking or complex or dangerous world we have to support and defend 73 out of the 106 nations we have been aiding, or disaster will follow.

But nobody raised this question: "How come, after spending $70 billion during 10 years on foreign aid, the Soviet Union is stronger and more threatening, the United States is weaker and less supported by our allies?" Why, when President Truman says we need bold new ideas, do we stick with the same old foreign aid program that failed to provide the Nation with either security or strength? If foreign aid is so good why hasn't it made things better for the American people?

All the speakers agreed that the American people are willing to spend all the money needed for national defense. They also agreed that the American people are not willing to spend more money for foreign aid—so they must be sold. It doesn't occur to them that the people oppose foreign aid because it didn't achieve what its supporters promised. Instead they are trying to pump hot air into a punctured balloon that is so full of holes it could never get off the ground.

Nobody pointed out this fact, either: The State Department has $9 billion in leftover funds which could be spent for foreign aid this year. If we add $4 billion more that will make $13 billion available. Douglas Dillon did admit, when asked by one excited lady if the $4 billion would be enough, that it would provide all the money we could spend for foreign aid.

Every speaker stressed the point that the real problem abroad is not military, it is economic and political. Yet the administration budget proposes three times as much money for military activities as for economic. How come? Even if the State Department is kidding the people and Congress by calling some economic aid "defense support"—as seems likely—the bulk of aid is still military, not economic.

President Eisenhower calls those of us who stress these persistent facts "ostriches," and implies that we are somehow betraying our country for opposing a program that has failed, is wasteful, is mismanaged and costly. But wasn't it the President himself who said in 1952, when we elected him, "The United States cannot be an Atlas; it cannot, by its financial sacrifices, carry all other nations on its shoulders and we should stop giveaway programs." What happened since 1952 to persuade the President that the foreign aid program works? Are our allies united? Is Russia weaker? Is the United States stronger by comparison than 5 years ago? Adlai Stevenson says, "The Soviets are succeeding in India and the Middle East" and in other parts of the world. But they have spent only $2 billion since 1950 and we have spent $50 billion. If foreign spending makes us successful against the Russians, how does one explain these figures?

Dulles says we have to keep up foreign-aid spending because the Soviets are now increasing their loan and aid programs. Foreign aid prevents communism, he says. But if foreign aid prevents communism, then the Communists are preventing communism with their foreign aid. Why not let them take over our job of preventing communism and save all that money?

Of course, this sort of reasoning is ridiculous. But the whole argument for foreign aid is ridiculous. It is built on such non sequiturs.

We send military aid to Saudi Arabia and economic and military aid to Iraq and Iran. All three of these countries have oil running out of their ears. Why can't they pay for their own aid?

We send military aid to France to kill Algerians. We send military aid to Britain so the British won't have to finance their own defense. We send it to Germany which is today the richest country in Europe. The truth is that Western Europe is today richer than ever before in its history. The December Fortune in an article titled "Europe's New Age of Abundance" notes that productivity is rising faster in Europe than in America, that Europeans are today better off than at any time in history. Before the war they paid for their own defenses. Why can't they do it now when they have higher living standards than they ever had?

The truth, also, is that the ostriches in America are the people like President Eisenhower and his advisers who refuse to face these facts. They refuse to admit that this foreign-aid program is a failure when all the evidence proves it. They believe their own slogans and their own propaganda. If the President would pull his head out of the bureaucratic sand for a moment he could see this—as he saw it in 1952.

We don't believe the people of this country are going to fall for all this synthetic whoop-de-do about disaster if we don't continue foreign aid. But who is going to represent the people in this matter? We have only one party in Washington when it comes to foreign affairs. The people's only hope lies in Congress—in men and women there who refuse to be ballyhooed into burying their hatchets in the taxpayers' heads. Why not write them and tell them so.

[From the Indianapolis News of February 28, 1958]

ACTION, NOT DOLES

The big party is over, and the show now will hit the road. We're talking about Eric Johnston's Washington party Tuesday night and his program to mass-produce public support for a new $4 billion foreign-aid program.

Influential Americans who attended the Washington shindig heard such foreign-policy experts as Harry Truman give hearty support to a bigger and better foreign dole. Mr. Truman helped preside over the loss of China, the futile Korean war, and many associated disasters. The guests also heard Adlai E. Stevenson. His foreign-policy counsel twice had been overwhelmingly rejected by the voters.

They did not, however, hear about the latest instances of the scandalous rackets involving United States military aid abroad. That disclosure came Tuesday from the Democratic-controlled House Foreign Affairs Committee.

And, in the welter of wearying platitudes that are supposed to justify fantastic foreign handouts, they did not hear about the Indonesian situation.

Unless something is done—something besides making sales pitches for more of the taxpayers' money to spend on tiled bathhouses for Arab sheiks—Indonesia is going the way of China.

The Communists know this and are quite happy about it. The only thing that worries them is that, by some magic, the United States will find the courage to do what it did in Guatemala—give the rebels the tools they need to overthrow the Reds, and never mind the niceties.

The New York Sunday Worker reflects this fear by accusing the United States of already doing that very thing.

Conditions in Indonesia, however, do not indicate that the United States is doing anything but continuing to aid the Communist-swayed Sukarno regime while the government of the colonies tries to hold out in Sumatra.

Handouts from Washington and pious hand wringing in the liberal press are not going to save Indonesia. But undercover action for which the Central Intelligence Agency is supposed to be equipped could do the job.

The late John E. Peurifoy, hero of free Guatemala, would know how to handle this thing. And the outraged screams of the Reds and their dupes would be ignored.

Now is a time for action—real action to save Indonesia from enslavement by the Kremlin empire. No amount of aid to uncommitted nations could make up for the loss of this fabulously wealthy island mass.

Will it be action—or more doles and a new disaster of the first magnitude? History, an indifferent observer, will record the answer.

Cruise Ship University Proposed for Americans

EXTENSION OF REMARKS
OF
HON. ROBERT J. McINTOSH
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, March 3, 1958

Mr. McINTOSH. Mr. Speaker, on March 1, the Washington Post and Times Herald carried an account of a speech made before the Civic Committee of the President's People-to-People Program and the American Municipal Association's Committee on International Cooperation by Mr. Les Biederman, president of the board of trustees of the Northwestern Michigan College in Traverse City, Mich.

In his speech, Mr. Biederman outlined a plan designed to launch a floating campus that would take students to the historical and cultural spots about which they are studying. Mr. Biederman has worked extensively on the project and has met with widespread enthusiasm and cooperation. Congressman ROBERT P. GRIFFIN, Senator CHARLES POTTER and myself, together with many others have been privileged to assist in obtaining a hearing for this imaginative plan. We sincerely hope that the cooperation of Government agencies needed to transform the plan from a dream into a reality will be wholeheartedly extended.

Under unanimous consent, I insert in the RECORD the Post account of Mr. Biederman's speech:

CRUISE SHIP UNIVERSITY PROPOSED FOR AMERICANS

(By Jack Eisen)

A Michigan television executive suggested yesterday that a floating university be sent on world cruises to let American students become acquainted with the people of foreign lands.

Les Biederman, operator of a station in Traverse City, made the suggestion during a luncheon at the Sheraton-Carlton before the civic committee of the President's people-to-people program and the American Municipal Association's committee on international cooperation.

Biederman said one of the Nation's surplus ships could be manned with an operating crew only. Housekeeping could be done by the students.

The students would be chosen carefully, he declared, to assure that they would be hard working and would make a good impression on people of the visited countries.

In addition to spreading good will, the students would gain an insight into the history and problems of other peoples, Biederman declared.

Biederman said he and others are trying to mobilize support for the idea. He warned that the people-to-people program should stop talking and start doing. The program was organized by the President to increase personal contacts between Americans and others.

The civic committee's chairman, Mark Bortman, of Boston, said the group agreed to explore organization of the program on a regional basis throughout the United States. In this way assistance can be given to communities needing guidance on how to participate, he declared.

A Floating College

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. GRIFFIN. Mr. Speaker, Les Biederman of Traverse City, Mich., is a man of vision and a man of action.

When he saw the need for radio and television service in northern Michigan, he moved into the area from Philadelphia and, on a financial shoestring, soon built stations and service that are the marvel of the small-market broadcasting industry.

Seeing the need for a college in northern Michigan, Les Biederman, who had no opportunity to attend college himself, mobilized local forces and, with volunteer labor and donated funds, built a college at Traverse City. The institution, referred to in some educational circles as Operation Bootstrap, is now known as Northwestern Michigan College, and Les Biederman is president of its first board of trustees.

Last Friday, Les Biederman laid before the civic committee of the President's people-to-people program a proposal which could have far-reaching effects on our educational system and our international relations. The proposal follows:

A PROPOSAL FOR A DEPARTMENT OF INTERNATIONAL STUDIES AT NORTHWESTERN MICHIGAN COLLEGE

(By Les Bierderman)

The proposal is that Northwestern Michigan College procure from the Federal Government a surplus ship fully equipped for carrying pasengers (roughly 400) and faculty, plus supervisory people and crew. This ship would be made a department of Northwestern Michigan College.

This ship would leave Northwestern Michigan College at periods corresponding roughly to college quarters. When classes started on campus, classes would also start aboard ship. The ship, however, would be underway around the Great Lakes, through the Welland Canal and St. Lawrence seaway, en route to Europe.

This ship would provide a substitute for expensive college buildings, as it included dormitories, food facilities, refrigeration, barber shop, library, classrooms, and so forth.

This proposal provides essentially for three different programs to be carried on: undergraduate study, graduate study, and adult education.

Studies would be carried on 6 days per week, and perhaps 4 hours per day to conserve expensive time. The ship would operate 4 quarters annually. As a result, the program would equate slightly higher than a normal college program.

When the ship arrived in Europe, lab sessions would be carried on with adequate supervision, educational points would be visited, and other areas visited. Personal relations with people of foreign nations would be a part of the plan.

There would be a fleet of small buses in the hold, so that when the vessel was in harbor, students would be able to travel approximately 150 miles from the ship.

The proposal assumes this ship would have a specific tour plan, and would repeat this tour 4 times per year. The ship would be appropriately equipped with library and other instructional aids for this particular journey.

Students presumably would perform some work on the ship (other than actual maritime work) such as serving meals, working in the kitchen, and performing usual housekeeping functions.

This would be a pilot program. For this reason it must be equipped to assure success. If the program is successful, the plan could be expanded by other States and other colleges so that not less than 200 ships would be used similarly. Such ships are now tied up, and could be made available.

Operation of such a fleet would have important relations to national defense and national interest. It would keep our bottoms at sea, keep in service trained maritime officers, give our students an opportunity of foreign travel, and give foreign neighbors an opportunity of meeting American students.

The quality of the educational program can be very high with a maximum of rich experiences for the student.

Every device for keeping the cost down is important, particularly in this initial pilot program, so a maximum number of students will have this opportunity.

There are thousands of ships of every description currently in mothballs. These ships are controlled by the Maritime Shipping Board, the Military Sea Transportation Service, and the United States Navy.

An ideal ship for the pilot program would be a C–4 personnel carrier, presently controlled by the Military Sea Transportation Service, under Admiral J. M. Will. The General Hodges type would be an ideal.

One of the most interesting factors in this proposal is the encouraging attitude of people in high places that have some say about the availability of the ship.

Some think that a similar program was attempted before, but this is not the case. In 1928 there was a program headed by Dr. Greenbie called the Floating University. This was not operated by a college, but was a commercial venture. The ship was not used as a part of a college. Tickets were purchased on various ships, and from time to time the student body were separated. It was a tour to circumnavigate the globe, rather than a program of particular studies. The library consisted of a collection of 500 volumes dealing with the entire world. Reference may be made to a thesis of Dr. Greenbie in the Library of Congress under the title "Educators Beyond Their Depth."

There are many ways to actuate this program, but much must yet be done. It is essential to have the cooperation of the other colleges and universities in the State. These institutions have generally indicated their interest. University of Michigan, Michigan State University, Wayne University, Northern Michigan College, and others.

It is essential to provide a good supervisory setup for proper recruitment of faculty, and to keep the ship properly supplied with materials and personnel.

It is essential to develop a program of publicity so potential students may know of its existence and its advantages, facilities, and other factors.

It is essential to have some financial subsidy. It is the opinion of the writer that existing foundations should be interested. It will take roughly $250,000 to provide the necessary facilities and working capital. From this point on, the proposal should be self-supporting.

Job Freeze

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 3, 1958

Mr. BEAMER. Mr. Speaker, there are some 4,000 homes in the 5th District of Indiana that have expressed a desire for natural gas for heating purposes. Under the Phillips case decision of the Supreme Court, the 18-year policy of the Federal Trade Commission and its interpretation of the Natural Gas Act were reversed. During that 18-year period, Indiana began to receive increased quantities of natural gas which was both more efficient and cheaper to the consumer than artificial gas had been.

Now, there are a few people who apparently are prompted by prodding and misrepresentations from one labor union leader to oppose the enactment of a Natural Gas Act that would bring better and less expensive natural gas to more Indiana consumers.

Equally, and even more important, this Natural Gas Act would bring more employment to citizens of Indiana. If Indiana industries are unable to secure their natural gas requirements then they may follow the policy of many manufacturers and move their plants to those States that produce natural gas in quantities sufficient for their requirements.

As one example of loss of employment resulting from lack of natural gas to one city, Indianapolis, I include under unanimous consent, an editorial from the Indianapolis Times dated February 20, 1958.

JOB FREEZE

Sometimes emergencies such as this week's extreme cold wave have a certain value in that they show us our shortcomings, some of which can be corrected.

This week more than 6,000 Indianapolis workers have been unemployed, not because of any lack of work to be done or any fault of theirs or their employers. Ordinarily this would seem fantastic, especially in these times when every worker needs all the money he can earn. We don't know how many thousands of men and women elsewhere in Indiana were similarly out of work because of failure of gas supplies for industry * * * and in the Middle West, which depends heavily on one pipeline, Panhandle Eastern, the

emergency unemployment must have run into hundreds of thousands.

This wasn't the fault of our local Citizens Gas and Coke Utility, nor do we think it suggests remissness on the art of Panhandle Eastern, their supplier. The local gas utility has rated capacity for 100 million cubic feet of gas daily. It comes both from the Panhandle area wells of the Southwest and from artificial manufacture here. It would be impracticable to expand artificial facilities here, since natural gas is much cheaper. Citizens Gas, its local lines taxed with overcapacity consumption of some 110 million cubic feet of gas daily during this cold spell has favored home consumers, as it should, by giving them gas which such industries as Ford, Chrysler, RCA, Link-Belt, etc., normally would have used. These plants had to close, meanwhile, and are only now reopening.

Thus, by simple arithmetic, we arrive at the conclusion that if Citizens Gas had been able to draw on only 10 million more cubic feet of capacity, this cold weather shutdown might have been avoided.
